

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

How the Carters Became Famous for Their Sunday Evening Suppers

By Jessie E. Sinclair

IT'S a sort of habit with friends of the Carters to drop in on them sometime Sunday afternoon and stay for supper.

Of course, they are lovely people, Mr. and Mrs. Carter—jolly, hospitable, always glad to see you, congenial with young and old. Mr. Carter is a man who can talk interestingly and entertainingly on any and every subject. And Julia Carter is the most whole-souled and big-sisterly woman I know, and it's a joy to get off alone with her and tell her your troubles and get her always practical advice.

But there is another attraction about the Carters that I'll confess is possibly the strongest of all.

Julia Carter is the most versatile, resourceful and successful hostess in our town. You can drop in on her any day in the week and any time of day, and if it is anywhere near mealtime, she's sure to make you stay. And then, presto! There's a treat for you such as you'd ordinarily have to go to an expensive restaurant to get.

We used to wonder what delicious dainty was coming next, for she'd rarely have the same thing twice. And we didn't know for a long time how she was able to vary her menus so delightfully.

But one Sunday evening when all the dishes were washed and the crowd of us, women only, were on the front porch waiting for the men to come back from their walk, somebody popped the questions that had long been in our minds.

"How do you do it, Julia? Where do you get all these treats you have been giving us? How do you always manage to have something good on hand, no matter what the day or time of day?"

"Well, I'll tell you, girls," she replied. "I'm a disciple of Frank E. Davis of Gloucester, Mass. Very likely you've seen his picture in some of the magazines. He's a wonderful seafood man right down there where the fishing smacks come in fresh from their trips to the fishing banks and deep sea fishing grounds.

"I've met Mr. Davis myself—have been through his plant in Gloucester—and I tell you, he's a character. That man is as much an expert as a business man. He and his father and all his ancestors for 300 years have been born and lived all their lives in Gloucester, where nearly every man has something to do with the sea. Somehow about 30 years ago he got the idea in his head that *someone* ought to give *inland folks, too*, a taste of the true, fresh-from-the-sea flavor in seafoods. And he made up his mind that *he* was going to be the man.

"So he's built up a really unique business. He puts up the most delicious sea treats in such a way that there is something about them that no other similar foods seem to have—a freshness, a sweetness and a true deep-sea tang that I've never been able to find anywhere except right down in Gloucester itself.

"Of course some like one thing best and some another, but I *must* say I like every single thing Mr. Davis puts up. But if you want to just *taste* before you *buy*, it happens he has a special little assortment that he offers at a special price that includes, I believe, fourteen different tid-bits. I remember I tried that assortment first, after I came back from my

trip, and since then I've just kept my pantry stocked with three or four cans of each thing.

"That's what you girls have been having here for some time past. Mr. Davis sends along a mighty interesting and attractive little cook-book, too, with over a hundred recipes in it, so that you don't need to have the same thing twice in a good long time."

Well, I tell you, folks, it was a revelation and has been a godsend to me.

I sent right on for the assortment Julia spoke of—it's called the "Special Get-Acquainted Offer." And I had the same experience as Julia—I liked every single morsel. So I've followed her plan right through. I keep several cans of each kind on hand all the time.

And now I never have to worry in a pinch, or any other time. If company drops in unexpectedly, I'm ready for them in no time with a delicious lobster, shrimp, crab meat, unny or salmon salad—you see there are half a dozen or more different salads alone I can make if I choose. Or I can take the same foods and fix them à la Newburg or stewed or fricasseed or creamed or several other appetizing ways.

If I want a nice soup, I can have a real New England clam chowder. And I can have codfish soufflé or sardine rarebit or kippered herring or fish flake timbales.

And if we are to go on a picnic or take a motor trip, goodness, I can make a dozen kinds of tasty sandwiches and do it in a jiffy, without going out of the house.

Best of all, every one of these dishes is as different from the "store" kind as day from night. That man Davis is unique. I believe he actually knows how to put up the clear, clean, exhilarating sea ozone itself with his seafoods. There is something fresh, pure and sweet about them that just *proves* to you he's taken them practically right from the water, prepared them on the very shore and preserved for you what you can't usually get in any other way than going right down to Gloucester and eating at a skipper's table. And you ought to see John dig into them—it does my heart good.

Excuse me for raving, but I can't help it. Mr. Davis wrote and asked me as a customer to say just a few words about his lovely foods and here I've gone and written a book,

nearly. I musn't forget, though, to tell one other important thing about that "Special Get-Acquainted Offer." Mr. Davis sends it out, charges paid, east of Kansas, at *his* risk. Think of that! When the postman delivers it to you, you pay him only \$3.65 for the entire assortment. And then you try two of the foods—any two you like. If you are the slightest bit disappointed, you can send the rest back and Mr. Davis will refund your \$3.65.

Here's the assortment you receive: 1 can shrimps, 1 can tunny fish, 1 can fresh lobster, 1 can royal Chinook salmon, 1 can clam chowder, 1 can lobster sandwich filling, 1 can fish flakes, 1 can Norway sardines, 1 can California sardines, 1 can kippered herring, 1 lb. salt codfish, 1 can fresh codfish, 1 can "Down East" clams, 1 jar boneless herring, combination can opener and New Seafood Cook Book.

All you need to do to get the assortment is to fill out the coupon that will be printed with this article. You don't need to send a penny. And remember, you don't take a bit of risk. Mr. Davis will send back every cent if you are at all dissatisfied.

P. S.—Mr. Davis has authorized me to say to readers of this magazine who fill out the coupon right away that as a special inducement to them he'll include, besides the fourteen items that ordinarily make up the assortment, a can of his famous Finnan Haddie. That's just one extra treat, folks. Frank E. Davis Fish Co., 59 Central Wharf, Gloucester, Mass.

FRANK E. DAVIS FISH CO.
59 Central Wharf, Gloucester, Mass.

I would like to try, at your risk, your Special Get-Acquainted Assortment. Please send me, all charges prepaid (east of Kansas) the package of sea products listed above. And please be sure to send the extra FREE can of Finnan Haddie. I agree to pay the postman \$3.65 in full payment on delivery. It is understood, however, that if after trying any two packages I am not completely satisfied, I can feel perfectly free to return the other packages and my \$3.65 will be immediately refunded.

Name

Address

Town State

If you are likely to be out when the postman calls, you may send cash with order. Mr. Davis's guarantee protects you just the same.

Recent Dutton Books

An Astounding Tale of Adventure Beasts, Men and Gods

By FERDINAND OSSENDOWSKI

DR. OSSENDOWSKI, a Pole whose life had been that of a scientist, a Professor, a prominent public official in old Russia, was forced to fly from Bolshevik assassins into the wild life of the Yenisei forests, in a sub-arctic winter with practically no outfit but an ax, a rifle and some cartridges. His story of a marvellous journey of thousands of miles, of hairbreadth escapes, and of visits to the inmost sanctuary of "the living Buddha," is told with obvious sincerity, with the lucid precision of a scientist, and with a restraint that is amazing.

DR. ALBERT SHAW, Editor of The Review of Reviews, says of it: "I consider it the most extraordinarily interesting manuscript I have passed under my eye for years."

Price, \$3.00, postage extra.

Exceptionally interesting importations

The Prime Ministers of Britain, 1721-1921

By CLIVE BIGHAM

During the two centuries which have elapsed since Walpole, who was first called Prime Minister, there have been thirty-six holders of this office, and they represent a fascinating study in character. In this useful and entertaining volume Mr. Bigham gives a brilliant biographical and character sketch of each. Handsomely illustrated from photographs. \$3.00

Queen Elizabeth's Maids of Honor

By VIOLET A. WILSON

Intimate pictures of the Court and its frequenters in the days of the great Elizabeth with entertaining biographies of the various members of the circle of beautiful and accomplished girls from the best families in England with which Elizabeth surrounded herself. Illustrated with twelve portraits, nearly all of which are gathered from inaccessible private collections. \$6.00

Up Against It in Nigeria

By LANGA LANGA

A fascinating record of the author's thirteen years' experience as a political officer in West Africa. He introduces the reader personally to the toilers, official and commercial, who have faced the despondencies, the dangers and the changing fortunes of that interesting land. Well illustrated. \$5.00

My Balkan Log

By J. JOHNSTON ABRAHAM

This book recounts, with the characteristic vividness of the author of "The Surgeon's Log," his intimate experiences with a surgical unit in Serbia during the first months of the war. It is a story of stark realism, interspersed with humorous flashes and brilliant bits of description of strange places and strange people. With numerous illustrations. \$5.00

Europe and Beyond

By J. A. R. MARRIOT

A preliminary survey of the half century from 1870 to 1920. A sequel to this brilliant writer's "Re-making of Modern Europe," invaluable for the reader who wishes to bring into right proportions his knowledge of foreign politics, or to review the background and probe the diplomatic origins of the World War. \$3.00

The Gain of Personality

By W. CHARLES LOOSMORE

Author of "Nerves and the Man"

A popular psychological statement of the practical value of personality in every walk of life. \$2.50

Any bookstore, or if not, they can be had, postage extra, from

CONTRIBUTORS' GALLERY

OSCAR S. STRAU'S, one of the most useful and distinguished servants of the Republic, is welcome to the pages of *The Outlook*. He obviates the necessity of our giving any biographical data in his column by telling his own story.

PROFESSOR BRANDER MATTHEWS was a classmate of Oscar Straus at Columbia. The friendship of Columbia's veteran Professor of English and Mr. Straus is touched upon in a later chapter of the reminiscences.

CONRAD RICHTER has contributed stories to a number of magazines, including the "American," "Ladies' Home Journal," "Everybody's," and the "Saturday Evening Post." "The Laughter of Aeneas," perhaps his best-known story, was reprinted in braille for the enjoyment of the blind.

IN this issue Harold Vinal makes his debut as a contributor to *The Outlook*. Mr. Vinal is the editor of "Voices," a journal of verse, published in Boston.

ERNEST G. DRAPER is President of the American Creosoting Company. He is a member of the Industrial Relations Committee of the New Jersey Chamber of Commerce, and of the Advisory Council of the American Association for Labor Legislation. He is a trustee of Ballaudent College, Washington, D. C., and of the Brooklyn Museum. He was graduated from Amherst in 1906.

VINO SPERANZA is, despite his Italian name, very much of an American. He was born in Connecticut in 1872, and educated in the College of the City of New York and at the New York Law School. For fifteen years he was general legal adviser to the Consulate-General of Italy, and has been a member of the Law Commission of the Prison Association of New York State. But of most importance, in the light of his *Outlook* article at least, is his association with the State Immigration Commission and his former directorship of the Prison Association of New York, established by the Society for Italian Immigrants. Mr. Speranza's article on immigration is the first of a series of three which *The Outlook* intends publishing shortly. The other two are by Miss Natalie De Bogory and Mr. Charleston Beals.

ROBERT D. TOWNSEND, of the *Outlook* staff, and Rollin Lynde Hartt, who is at present on the staff of the "Literary Digest," review the strike situation. Mr. Townsend's name has been associated in our readers' minds with his reviews of modern novels in our Book Table; his contributions to the interpretation of current life from week to week have been hidden under the usual anonymity of the editor.

WHAT IS YOUR SUBJECT?

We have compiled, from the best articles, treatises and special contributions to past and future issues of *The Walhamore Company*, Complete Business Service—and from over 600 magazines and publications, the following SPECIAL WALHAMORE EDITIONS—each loose-leaf, up-to-date and complete with cloth binder. Sent prepaid on receipt of price. New features added to your binder monthly.

Subject	Title of Walhamore Edition	Price
Journalism—222 Places to Sell Manuscripts		\$1.00
Accounting—36 Accounting Problems Solved by O. V. Wallin, C.P.A. (Ind.)		\$1.00
Administration—60 Things An Executive Should Know		\$1.00
Advertising—100 Advertising Plans Outlined		\$1.00
Federal Taxes—326 Federal Tax Rulings Analyzed		\$1.00
Parcel Post or Mail Order—500 Things to Sell By Mail		\$1.00
Salesmanship—72 Ways to Put Across Sales		\$1.00

Check off your selections and pin as many Dollar Bills to this advertisement as you want copies of the WALHAMORE EDITIONS—or send money order or check. Every copy worth five times the price to you in your particular line of work. Money refunded if not fully satisfied after 3 days' examination.

ADDRESS ALL ORDERS TO

THE WALHAMORE COMPANY, Publishers
LAFAYETTE BUILDING PHILADELPHIA, PA.

Y. M. C. A.,
Cedar Rapids, Ia.

Residence of Robt. Sinclair,
Cedar Rapids, Ia., in which
Hot Water System was
changed to Adsko Heating.

Adsko Graduated
Radiator Valve
gives positive
control.

Economical Heat Control For Every Type of Building

Adsko Heating saves 20% to 30% of all fuel cost and gives perfect heating comfort in hotels, Y. M. C. As., office-buildings, factories or residences.

Low pressure steam or vapor can be supplied from any make of individual boiler in each building or from a central steam plant supplying a group of buildings through underground mains. Hot water systems can easily be changed over to Adsko Heating.

With Adsko Heating there is one positive control of steam at each radiator by the Adsko Graduated Radiator Valve; another positive control by an Adsko Regulator at boiler or at intake main, to maintain constant pressure.

The Adsko Valve admits proper amount of steam to use any desired portion of the radiator depending on the weather. No air valves, radiator traps, return traps, vacuum pumps, or other complicated devices need be used with Adsko Heating. Their cost is saved.

Write for Bulletin No. 158-O, describing Adsko Heating. Name of architect and heating dealer appreciated.

ADSCO HEATING

FOR WINTER VACATIONS

Voyages De Luxe

To the sunny, romantic lands that edge the Mediterranean or the brilliant isles beneath the Southern Cross (West Indies)—the winter playgrounds of the world. The White Star Line announces the following sailings for discriminating winter travelers:

MEDITERRANEAN

ADRIATIC

24,541-ton

Jan. 6 and Feb. 24, 1923

LAPLAND

18,565-ton

Jan. 18 and Mar. 10, 1923

Egypt with its pyramids, its caravans, its crowded bazaars; the Holy Land, easy of access; Athens, of classic history; the southern coast of Europe—famous ports lying at the edge of a magic blue sea, flower- and vine-clad hills, mediæval fortresses; changing scenes and sounds at Monte Carlo—color, action, sentiment, warm and pulsing life!

Itinerary: Madeira, Gibraltar, Algiers, Monaco (or Nice), Naples, Alexandria (for Egypt and the Nile), Haifa (for Jerusalem) and Athens (Phaleron Bay). Optional shore excursions.

WEST INDIES

Including Havana and Panama Canal
Healthful Romantic
Utmost Comfort

The famous White Star Liner **MEGANTIC** (20,470 tons displacement), Premier steamer to the tropics—of admirable construction for tropical voyages. Every detail—shore excursions, auto trips—planned by a Cruise Department of 25 years' experience.

Rates \$250 upwards

Duration of each cruise 28 Days

Sailings:

Jan. 15, Feb. 17, Mar. 22, 1923

Itinerary: From New York to Havana, Haini, Santiago, Kingston (Port Antonio), Panama Canal (Panama City), La Guaira (Caracas), Trinidad (La Brea), Barbados, Martinique (St. Pierre), St. Thomas, San Juan, Nassau, Bermuda.

Write for attractive color booklet. Address Cruise Department for West Indies; Mediterranean Department for Mediterranean.

The Outlook

SEPTEMBER 6, 1922

INTERCHANGEABLE MILEAGE AND BUSINESS

HOW will the business of the country be stimulated; how will the revenues of the railways be affected; and what percentage of increase will there be in travel by rail, as a result of the bill signed by President Harding a few days ago, directing the Inter-State Commerce Commission, after notice and hearing, to require railways to issue interchangeable mileage books or scrip coupon tickets?

These are the interesting questions which are raised in connection with this bill, urged by the commercial travelers' associations as a means of getting more salesmen out on the road, thereby helping to improve business conditions generally. The Inter-State Commerce Commission, which is directed by the bill to fix "just and reasonable rates" to be charged for such interchangeable mileage, as well as to make other regulations governing its issuance and use, will hold hearings on the subject the latter part of next month, having set September 26 for this purpose.

While the railways did not make any strong opposition to the passage of the bill, they are known to be doubtful as to whether there will be sufficiently increased percentage of travel to make up for the losses they will sustain through the reduction in rates which, it is expected, will be granted to purchasers of the interchangeable mileage, and which was the real object sought in the bill.

The rate which has been suggested tentatively for these books is 2.5 cents a mile, as against the present basic rate on most of the railways of the country of 3.6 cents a mile. It has been estimated by railway officials that they will have to increase their passenger business by more than forty per cent in order to make up for the loss of revenue suffered through this rate reduction. The New England roads, a large percentage of whose receipts is derived from their passenger traffic, would have to see a particularly large gain in this class of business in order to make up for the loss through reduced rates. In addition, increased expenditures by the roads will be necessitated; and there seems to be much doubt as to whether the net revenues of the roads will be improved. The carriers of the country have not

(C) Harris & Ewing

PRESIDENT HARDING SIGNING THE MILEAGE SCRIP BILL

This bill authorizes interchangeable mileage books for use over the different railway systems

been earning the dividend rate to which they were entitled under the Transportation Act; and any measure which is likely still further to reduce their earning capacity must be given most careful consideration before it is finally put into operation through direction of the Inter-State Commerce Commission.

The Commission, therefore, is expected to go fully into the question of the rate to be charged for the interchangeable mileage; whether it shall be transferable or non-transferable; what rules and regulations shall be required for the issuance and use of these tickets; and to what baggage privileges holders of such tickets shall be entitled.

As indicated by Commissioner Esch, of the Inter-State Commerce Commission, when he appeared at the hearings held on the bill before the House Committee on Inter-State and Foreign Commerce, the Commission did not show itself strongly in favor of this legislation. He said they had hoped to find it possible to reduce fares and freight rates "in such a manner that all our people could enjoy the benefits of such reductions." He declared that the reduction in fares to a special class, as the purchasers of interchangeable mileage tickets would be, materially reducing the revenues of carriers, would make it more difficult to order a general reduction in passenger fares which might be

enjoyed by all of the people and not merely by those who by reason of financial conditions or otherwise are able to invest a considerable sum of money at one time in railway fare.

REMEMBER THE HERRIN MASSACRE!

THE other day a Mexican paper ironically proposed that Mexico should control the United States in the interest of humanity and law. One of the reasons adduced was the Herrin massacre. If Americans do not want to be considered lawless by Mexicans, it behooves them to insist, and continue to insist, that the slaughter of twenty-three men in the Herrin mines last June should lead to the indictment and trial of its perpetrators.

Every move in that direction is of public interest. The State of Illinois is not unaware of the ill fame attaching to this crime, and through its Attorney-General, its State Chamber of Commerce, and its press is urging action. Through State effort a special Grand Jury has at last been impaneled in Williamson County, and as an aid to non-partisanship in feeling neither miners nor operators were included in the panel.

The circuit judge's charge to the Grand Jury, as summarized by a newspaper correspondent, was in part "a defense of this county and its law officers,

a challenge to critics everywhere, and an exposition of the law."

It is to be hoped that this judge added a vigorous injunction to the Grand Jury to pursue murderers unflinchingly.

THE KU KLUX AND POLITICS

THERE has been much discussion as to the influence of the Ku Klux Klan in the political situation. Sensationalists have been inclined to exaggerate it. In National matters it is practically nil; in the East and the Southeast it is negligible; in the West and Southwest it has had local effects in different ways, but has not acted consistently or for definite issues.

An example of this was seen the other day in the announcement that in Texas Earle Mayfield, "Ku Klux candidate," as the newspapers called him, had won in the "run off" primary for the United States Senatorship which followed the first primary, in which six candidates engaged. An examination of the facts shows that his Ku Klux support was only a minor matter. The Ku Klux candidates for State offices made a poor showing and were defeated by large majorities. The prohibition issue was prominent in the State campaign. Mayfield was "dry." His opponent, Ferguson, was "moderately wet;" and the fact that when Governor he was impeached and removed from office told heavily against him. If the Texas primary showed anything, it was that Mayfield was the stronger man personally, and that the prohibition sentiment is still strong in Texas. It is even intimated that the Democratic situation is so unsatisfactory in Texas that a good liberal Republican might have a chance.

There have been some queer developments in the Ku Klux Klan. Thus in Georgia it has been alleged that Negroes were being asked to join, and in New York it has been charged that the Negro "Moses," Marcus Garvey, had been approached by the Klan. There are many indications that the Ku Klux is soon to pass away as a disturbing element. Yet not many weeks ago newspaper accounts stated that "a crowd totaling nearly 30,000 from Chicago and northern Illinois gathered to witness the initiation of nearly 3,000 new members into the secret council of the Ku Klux Klan. The ceremonies were performed in an immense field three miles northwest of Springfield. Similar ceremonies, celebrating the initiation of tens of thousands of new members, have taken place in other parts of the country."

Officially the Ku Klux has promised not to wear its regalia in night raids and disclaims any intention of regulating supposed evil-doers by violence. As a terrorizing agency it is practically dead.

But its attractiveness to the great class of "joiners" is strong, for it combines mystery and publicity uniquely; it is a "secret society" which, as the Chicago incident above quoted shows, thrives on flashlight photographs and press notices.

A NAVY ON THE SCRAP HEAP

THE "scrapping of navies" is a new industry in the world. In the past the business has been of the single-order variety; it has never been carried on in a wholesale manner. "The old order changeth," however, and now the breaking up of battleships and cruisers and destroyers is to be performed on a grand scale. A beginning already has been made.

While the naval treaty which was signed by the United States, Great Britain, France, Italy, and Japan at the Washington Conference on the Limitation of Armaments has not yet been ratified by all the Powers signatory thereto, the United States already has sold two of the old battleships which were on the list of capital ships to be scrapped and is preparing to ask bids within the next sixty days on five other vessels of the same class.

The two battleships which already have been sold are the Maine and the Missouri, with the exception of the Wisconsin, also on the junk pile in the yards of Henry A. Hitner's Sons, in Philadelphia, the oldest vessels of the larger fighting class in the Navy; and it is stated that both of them would have been disposed of even if there had been no naval treaty. Nevertheless they are among the twenty-eight American battleships listed for scrapping in the

treaty assented to by the five great naval Powers in Washington on February 1 last. The five other battleships on that list which, it is announced, are to be put up for sale in the immediate future are the Georgia, Rhode Island, Nebraska, Virginia, and New Jersey, all of which have seen seventeen years of service. The Maine and the Missouri, of 12,500 tons each, had been in the Navy for almost twenty years past. The Wisconsin, sold previous to the Armament Conference, had seen more than twenty-one years of service.

In addition to the battleships, a large number of other vessels have been sold recently by the Navy, although not as a result of the naval treaty. Many of them were old and useless and would have been sold anyway, while others were disposed of because of the post-war paring down of the Navy and because of the necessity for economy.

Most of the vessels recently sold by the Navy for scrapping have been bought and are now in the Delaware River yards of the Henry A. Hitner's Sons Company, in the northern suburbs of Philadelphia. This concern, the principal one in the United States engaged in the business of navy scrapping, now has in its possession quite a formidable modern armada. It includes, in addition to the three battleships named, two cruisers, eleven torpedo-boat destroyers, four monitors, eight submarines, about one hundred and forty sub-chasers, several colliers, tugs, and mine planters.

In all, it is a fleet with a tonnage of approximately 125,000. As navies go nowadays, this doomed navy is perhaps not large, but there are important nations with navies much smaller in tonnage. At the beginning of the European War the smallest of the Great Power navies was that of Italy, which was of 285,460 tonnage, not much more than twice the tonnage of the "Hitner Fleet."

The great part of navy scrapping, not only for the United States, but for the other nations signatory to the Five-Power Treaty, still remains to be done; and when the full fleet of heavy-tonned capital ships which are to be discarded upon final ratification of the naval treaty are thrown upon the market this new-born industry of turning battleships wholesale into the crucible for peacetime purposes will receive a new impulse and make some of the short-lived navies thus formed formidable indeed.

A PIONEER IN PUBLIC HEALTH SERVICE

IT is natural that public interest in Dr. Stephen Smith should be centered in the fact that when he died the other day he was within a few months of com-

ART knows no class distinctions. No two men in civilized society could be farther apart in environment and tradition than a New England farmer and a royal prince of Europe; and no two men could be more distantly removed from the stage type of artist with flowing tie and bohemian tastes. Yet John Lillie, farmer, of Dorset, Vermont, and Prince Eugen of Sweden have in common the love of art and the gift of creating beauty with paint and canvas. As a landscape painter each is among the most interesting and original of contemporary artists. Next week *The Outlook* will publish an article about John Lillie by Zéphine Humphrey. Week after next *The Outlook* will publish an article about Prince Eugen by H. G. Leach. Each article will be illustrated with reproductions of the artist's paintings.

THE GLIDER "AMERICA" IN THE CLOUDS, UNDER THE GUIDANCE OF EDMUND T. ALLEN

pleting his hundredth year and that his life was notable, not only for its longevity, but for its continued activity. In our interest in this fact perhaps there is a little danger of not laying sufficient emphasis on the value of Stephen Smith's contributions to the cause of hygiene and the public health. In addition to a long and notable career as a physician, he began over sixty years ago to take an earnest and active interest in those matters which were then astonishingly little in the public mind. A writer in the New York "Herald" thus depicts the condition of things in New York City in 1851, when Dr. Smith entered Bellevue Hospital:

New York was a foul city. It was as bad when the Civil War was over. There was no health department, no tenement supervision. The streets, many of them not drained, reeked with garbage. Animals ran loose. The butchers operated where and as they wished. Cholera came and killed thousands. Smallpox was epidemic every five years. Typhus arrived with the immigrants and ravaged the tenements. The so-called "health wardens" were ginmill keepers, payroll grafters.

In the reforms that followed Dr. Smith took an active and efficient part. He was a leader in the forming of a Citizens' Association in 1864, over which Peter Cooper presided. The report made by that association has been summarized as follows:

There were 495,592 persons living in tenements or cellars, at an average density of 247,000 to the square mile. Scattered among these tenements were 173 slaughter-houses, under no sanitary supervision whatever. More than five hundred places were designated by the inspectors as "plague spots," one of them being Washington Market and another Castle Garden. In two days the inspectors found 644 and in two weeks more than 1,200

cases of smallpox, with not the slightest attempt at seclusion of the patients.

Out of the agitation which followed this report came the establishment of the first Department of Health of New York City. From that time on Dr. Smith was prominent in all municipal and National health efforts, and when the National Board of Health was organized in 1879 he was made a member by President Hayes. Add to this that he was the first President of the American Public Health Association, that he did a great deal to make the administration of hospitals and nursing efficient and modern, and that these were only a few of his notable contributions to the public health, and it will be admitted that his ninety-nine years of life were as full as any one man's could be of earnest work for the welfare of the people.

NEW GLIDING RECORDS

WHEN The Outlook printed Lieutenant Tinker's article "Statesmanship Run Wild," it presented the latest news as to the achievements of the Germans with motorless airplanes. That article stated the surprising fact

that a German had succeeded in remaining in the air without a motor for twelve and a half minutes. That article appeared in The Outlook for August 16. Since then German aviators have apparently proved that a man in a glider under proper atmospheric conditions can keep aloft indefinitely. If there is any limit to the time which a man can remain in the air in a glider, it would seem to be the limit of human endurance. First came the news of a German remaining aloft an hour or more. This feat of Herr Martens aroused extraordinary enthusiasm among the spectators. Then came the news of Herr Hentzen's feat of keeping up for two hours and ten seconds, as we reported last week. Since then Herr Hentzen has added an hour to his record. More than that, other fliers have remained in the air for periods far exceeding the one which was a record less than a month ago. These German fliers not only keep in the air, but remain perfectly still like a kite, or soar in great sweeping curves or with sharp dives.

Not less extraordinary is the fact that some of these gliders have succeeded in landing on points higher than those from which they started.

Still further, in these tests in Germany, a Dutch aviator, Herr Fokker, the designer of the famous Fokker airplane used by the Germans during the war, glided aloft for three minutes with a passenger.

The French trials which have been taking place have resulted in no such sensational results. Edmund T. Allen, the American who took part in the French trials, has in the meantime gone to try his luck in Germany.

A special despatch to the New York "Evening Post" says that the feats of the Germans are the result of six years of experimentation, involving studies of the flight of birds with moving pictures of birds on the wing. One of the results of this experimentation was the discovery of the use which a bird made of its head in flight. Study of these birds' heads convinced the Germans that the birds

Kadel & Herbert

HAULING A GLIDER TO THE TOP OF THE HILL AT CLERMONT-FERRAND DURING THE INTERNATIONAL CONTEST

felt the air with their heads, and were thus enabled to adjust their muscular movements to the air currents. As a consequence, this despatch by Samuel Dashiell says, the Germans went to work to devise a method of sensitizing a man's face, and they succeeded in doing so by the use of a liquid; so that "the pilot becomes endowed with a kind of sixth sense." That, at least, is the story which this correspondent gets from a German aviator. The experiments are said to be continuing at Magdeburg and do not come under the control of the Allies. One may believe this German aviator's story or not; but the records of the flights that the Germans have made seem indisputable.

ONE LAW FOR ALL

SOME weeks ago a terrible thunder-storm and a gale swept over Long Island Sound in the vicinity of New York, and put in jeopardy the lives of thousands of men, women, and children in one of the municipal parks that skirts the waters of the Sound. Indeed, some lives were lost through the capsizing of boats and the destruction of a great Ferris wheel. Competent observers afterwards said that if reasonable attention had been paid to the manifest signs of an approaching storm no lives would have been lost at all.

This incident illustrates an easy-going attitude of too many Americans towards correcting economic or political disasters. In spite of black signs and the warnings of the weather-wise, they go on about their daily occupations, playing or working, until the storm breaks and catches them. This, we think, is the situation in which the country stands with regard to the coal and railway strikes.

At the present moment there is scarcely a railway in the United States that is running its trains on time; freight and commodities are delayed in transit. The country has about used up its surplus stock of mined coal, and not enough is now being mined to make up the deficiency. We may find ourselves next winter, not only freezing, but in the midst of an industrial and economic chaos of suspended industries and high prices that will work greater hardships than were endured even during the war. So far as we can see, the only remedy which the employers and the strikers propose is that they should be let alone to fight it out among themselves. This seems to us to be not only unreasonable but intolerable. An industrial war has been going on since the first of April in which the passions of less than five per cent of the popula-

tion of the United States have been permitted to endanger the social and economic welfare of the other ninety-five per cent, and really nothing much has been done except to talk about it.

There are three courses of action which ought to be begun at once.

The first course which ought to be taken is to call into immediate play the executive power of the National Government. The duty of the executive branch of the Government is to enforce the laws on the statute-books, and in an emergency like that of a panic, or a great epidemic, or a great riot, to take over certain functions of administration that in ordinary times are left to private effort. The President of the United States ought immediately to use every power of the Government to establish law and order and to protect men who are willing to run the railways and mine the coal in doing their work. If the executive branch of the Government does not possess all the powers that it ought to have in this emergency, the legislative branch should immediately confer those powers.

The second course of action is legislative, and it is here that the phrase at the head of this article, "One Law For All," should be, as it were, the slogan. Thirty-two years ago, after a long period of public agitation and public education, a Federal law was passed, known as the Sherman Anti-Trust Law, which declares illegal "every contract, combination in the form of trust or otherwise, in restraint of trade or commerce among the several States, or with foreign nations." Criminal penalties are prescribed for persons found guilty of entering into combinations in restraint of trade. This law was aimed at the pernicious power of organized capital. Under the Clayton Act, the Federal Government has specifically exempted organizations of labor or of farmers from the operations of this law against combinations in restraint of trade. This provision of the Clayton Act should be repealed, or modified, so that every organization or conspiracy, whether of farmers, of teachers, of lawyers, of bricklayers, of coal miners, of railway workers, or of bankers, for the purpose of restraining trade, should be written down on the statute-books as criminally illegal. This is what we mean by one law for all. Nor would such a course of legislation be, as Mr. Gompers speciously argues, an attempt to enslave men. Such a law would not prevent the individual from quitting work, or groups of individuals from quitting work. It would simply forbid an organized combination to destroy an industry and by violence or intimidation to restrain those who desire to work from doing so. The danger of trade

unions to-day is not that they are demanding exorbitant wages. In most cases we do not think their demands in the direction of increased wages are exorbitant. What is dangerous is that these demands are backed by an organized attempt to restrain industry from going on until it pays to the wage-worker the profits which he thinks he ought to have. Where is the essential difference in equity, or in its effect on society, from the organized attempt of capital to restrain trade so as to increase profits? The organizations of capital are localized; trade unions should be localized. Organizations of capital are forbidden to create artificial monopolies; trade unions should be forbidden to create monopolies. Organizations of capital are in the eyes of the law criminal when by corruption, bribery, or secret contracts they attempt to restrain trade. Trade unions should be made criminally liable for similar conspiracies. We do not say that a law or laws extending the principle of anti-trust legislation to trade unions would be simple to draw. There is a difference between control of commodities and control of services. But we do say that the analogy between the controlling of organized capital and the controlling of organized labor is very plain.

The third course of action is ethical and educational. As long as capitalists and laborers are taught by their leaders and by experience and practice to consider themselves as living in two hostile camps we shall continue to have industrial crises, although their terrors can be somewhat mitigated by executive and legislative control. More than forty years ago an English political economist, Arnold Toynbee, maintained the theory that organization of labor is inevitable and desirable, but that organization should be not one between all laborers in competition with an organization of all capitalists, but groups of laborers and capitalists organized together and competing with other groups of laborers and capitalists. In fact, however, laborers and capitalists have developed an industrial scheme on the lines which Toynbee condemned. The result is that we have an industrial community divided into two antagonistic and usually hostile sections. A few men in our time are beginning to discard this method of class organization, and are endeavoring to substitute a co-operative for the military scheme of industry. They are endeavoring to promote co-operation between the capitalists and laborers in one organization to compete on the basis of service and efficiency with other similar groups of laborers and capitalists. This, as we understand it, is the essential principle of the Shop Committee Plan. It is this plan which

has such notable sponsors as Mr. Mitten, of the Philadelphia Street Railway Company, and Mr. Atterbury, of the Pennsylvania Railroad. In the scheme which prevails in American industry at present the employers and the workmen inevitably look exclusively after their own interests and are more or less suspicious of each other. On the other hand, if capitalists and workers were so organized that the welfare of the combination depended upon the good will and industry of both laborers and capitalists, the tendency of the industry would be continually to bring the men together.

If the executive branch of the Government will courageously suppress violence and protect the right of every individual to work when and where he pleases under the regulations of the general law; if the legislative branch of the Government will see to it that regulatory law applies to individuals and groups with an even hand and without fear or favor; and if American industrial leaders, both capitalistic and laborite, will constantly preach and practice the doctrine of co-operation in industry, we shall secure, not only more comfort, but more justice.

A FLEXIBLE TARIFF

SOME questions which divide parties involve moral choice. Some involve choice between political principles. Some are merely questions of expediency. It is because the tariff question has been one involving virtually no moral or political issues, but only an issue of expediency, that it has never become a fundamental issue in American politics and has never been settled. Such feeling as it has aroused in the minds of the voters has been occasioned by resentment at its burdens or by the desire for its benefits. So far as its benefits or burdens have been inequitably distributed, the tariff question has raised a question of justice which involves a moral choice. In so far as one tariff law has tended in the direction of free trade by extending the free list and lowering the general scale of duties or another law has tended in the direction of a Chinese wall by reducing the free list and by raising the general scale of duties, there has been injected into the question some suggestion of political principle. For the most part however, the tariff has been discussed and decided upon from time to time in accordance with what has seemed to those in authority to be for the time being the best practical adjustment of conflicting interests.

As we pointed out last week, this task of carrying out a policy of expediency is fraught with political disaster for the

party in power. It almost invariably causes dissatisfaction to every interest that is looking for a benefit from the tariff, for it is bound to bestow on each interest less than is demanded. At the same time, each benefit received by a specific interest is as well a burden to the consumer. One party may choose to try to lessen the burden of the consumer and risk the wrath of those who expect to be beneficiaries, while the other party may choose to meet the expectation of the different interests and risk the remonstrances of the burdened consumer. The difference between the parties on the tariff issue is almost wholly a difference in the nature of their constituencies and not a difference of principle. Each party in turn passes a tariff law to please its own constituency and is duly punished. It is natural that the parties have become tired of this procedure and have sought some way of avoiding the ill consequences of tariff legislation.

There has therefore grown up in recent years an agitation for what is termed a "scientific tariff." If Congress can only escape political responsibility for the tariffs it enacts by persuading the people that the effect of the tariff is due, not to any policy on the part of the politicians, but to "science," it will be relieved of a great load, and the several members of Congress will find their political pathways freed from many pitfalls.

There have been several devices proposed for formulating such a scientific tariff.

One of these devices is to adopt a measuring rod according to which the various schedules can be fitted into the tariff structure. Such a measuring rod has been proposed by both Republicans and Democrats in the phrase "the difference between cost of production here and abroad."

Another device, closely connected with this, is that of a tariff commission. Such a commission, in fact, has been created and has served as a fact-finding body.

Those party leaders who have believed in establishing a tariff that would meet the difference in cost of production naturally have turned to the tariff commission to get information as to what the cost of production is here and what it is abroad. Some publicists and students of politics would empower the tariff commission to fix tariffs much as the Inter-State Commerce Commission is empowered to fix railway rates.

The latest proposal, which has been adopted by the Senate, has been to put the task upon the President of the United States.

There are special reasons for this latest proposal. In the first place, Congress does not represent the whole country; it represents only the sum of all its parts. In tariff matters this is a vital distinction. Each Congressman or Senator must look at the tariff question from the point of view of his constituency. As a consequence, there is no one in Congress whose duty it is (except as he may make it his conscientious duty as an American citizen and patriotic public servant) to look at the tariff from the point of view of the Nation as a whole. In our Government it is only the President of the United States and those under his authority that can be expected to do this. It is therefore only the President or some man or body of men responsible to him that can so administer the tariff as to destroy it as a local issue, and it is only by the destruction of it as a local issue that the tariff can cease to be the hobgoblin of political parties.

In particular a reason for placing this responsibility upon the President exists in the present international situation. Tariffs calculated upon the cost of products abroad would be very uncertain owing to the instability of exchange. The attempt by the House of Representatives to avoid this by calculating tariffs according to valuation in the American market has encountered strong and reasonable opposition. If the tariff is really to be stable, paradoxical as it may sound, it must, under present circumstances, be made flexible. It must be made adjustable to the changing factors in international trade. To provide such flexibility is beyond the power of Congress; for that legislative body cannot be all the time in session amending schedules. It can secure this flexibility only by intrusting the determination of tariff rates, within certain fixed limits, to some administrative authority; and the natural authority to turn to is the President. Of course the President would not personally determine those rates. He would act upon the information and advice of the tariff commission and of his other counselors; but the au-

has sent an estimate of
NORTHCLIFFE
which will be printed
next week

thority and responsibility would be the President's.

The people of the United States are not, and are not likely to be, in favor of free trade. They are not in favor of a Chinese wall tariff. They want a tariff that will provide revenue and protection. It is idle to denounce particular tariff measures for particular sins, since any substitute tariff is going to be also denounced for its particular sins. Such criticism of the tariff in detail furnishes no guidance for public opinion. Even less illuminating is general denunciation of a measure as a tariff of abomination—as the present tariff bill has been called. Either Congress, employing its own committees for investigation and drafting measures, must provide such regulation and adjustment as expediency for the time being indicates, leaving the tariff as the troubler of politics, or else it must intrust this adjustment and regulation to an administrative body under the authority of the Chief Executive. Is there any other alternative?

IS IRELAND LEADERLESS?

THOSE who fear that the deaths of Michael Collins and Arthur Griffith may prove fatal to the cause of the Irish Free State do less than justice to the strength of that cause. Yet it is true that the progress already made would never have been achieved but for the courage and insistence of these two men; for they stood so high in the regard of all Irish patriots that their word carried weight. When Collins and Griffith said that the London treaty paved the way to self-government, Irishmen believed them. So the strength of the Dominion plan grew and the dream of absolute independence faded away.

"Ninety per cent of the people of Ireland are for the Free State," says ex-Governor Glynn, of New York, "and the threats of fanatics and slaying by gunmen cannot alter this fact." And Archbishop Mannix cabled from Australia that the death of Collins emphasizes the need of an arbitrament of reason. Moreover, the discussion as to fit successors to the dead leaders has brought out the fact that there had been formed under them a group of serious and well-equipped men who are working steadily at practical problems of government and organization. Mr. W. T. Cosgrave, who now temporarily heads the civil side of the Provisional Government, is such a man. There is quiet resolution in his reply to a despatch from Winston Churchill, of the British Ministry, who had declared that his Government had full confidence that the treaty plan would be faithfully

International

MICHAEL COLLINS (LEFT) AND ARTHUR GRIFFITH, DEAD LEADERS OF THE IRISH FREE STATE

and resolutely maintained. Mr. Cosgrave said:

President Griffith and General Collins had selected and attracted to whole-hearted co-operation with them a number of colleagues, some of whom you have met. The Government so formed has stood, as you know, with unswerving consistency to the programme of carrying into full effect, in accordance with the declared will of the Irish people, the treaty which was entered into between our plenipotentiaries and recommended by President Griffith and General Collins as offering the fairest hopes to our much-tried people. We, their colleagues, have the same faith and stand by the same policy, and, though overwhelmed with sorrow, take up the same task with the same determination and confidence.

It has been a weakness of Irishmen that, while they have been able to die for a cause, they have rarely shown ability to govern. Now, under the moderate and reasonable terms of the Free State, they have the finest opportunity conceivable to develop that capacity. If the draft of a Constitution now being drawn up by the Free State leaders and the British Government follows liberally the lines of the London treaty and makes it clear that the Free State in all essentials will be as self-governing as is the Dominion of Canada, it will be endorsed by the bulk of the people of Southern Ireland, and the most promising political era of Ireland will begin.

The hope of the Insurgent forces now infesting the Free State is not to defeat its army, but to make the condition of Ireland so bad that Great Britain must intervene and the old order of resistance and general turmoil be resumed. Their "war" has resolved itself into a series of local skirmishes and attacks from an-

bush such as that which resulted in Collins's death. In fact, although this killing has been called a cowardly assassination, it was as near to a military engagement as most of the insurgents' so-called battles. Collins with other officers in uniform was inspecting military positions near Cork when the ambush was sprung by a superior force, and a brisk fight ensued in which Collins played his part bravely. The whole affair was typical of the guerrilla fighting now carried on by De Valera's desperate followers.

No other man's death, not even Griffith's, has affected the common people of Ireland so deeply as that of Collins. His was a romantic and adventurous personality; he was intrepid, resourceful, and devoted to his country. Other men might be suspected of treachery or self-interest; no one has dared to call Collins a traitor, and no one is surprised when the Prime Minister of the Government which had once put a price on his head speaks of him as "a leader of great energy and devotion and a man of remarkable personal charm."

When one remembers that the population of Ireland is somewhat less than that of New York City, it certainly induces the feeling that Ireland has had too much turbulence for its size; the world is decidedly tired of reading of rancorous partisan fighting, sectarian hatred, and the warfare of assassination. The majority of the people want quiet and—as an Irishman might say—are willing to fight to the death for it. The opportunity for peace and prosperity was never better than now if only the workers of the people can prevail against the intolerance of the comparatively few "bitter-enders."

ONE LAW FOR ALL

A REVIEW OF THE ECONOMIC, POLITICAL, AND SOCIAL RESULTS OF THE GREAT STRIKES

I—THE HISTORY OF THE STRIKES

BY ROBERT D. TOWNSEND

THE strike of the coal miners began on April 1; the strike of the railway shop men on July 1. In the first case, therefore, five months have been spent in argument, debate, and attempts at an agreement; in the second case two months have elapsed. As August ends in neither case does there seem to be immediate prospect of complete or satisfactory settlement. From week to week and month to month we have had proposals, counter-proposals, public remonstrances, Governmental urging, and yet the public, which, after all, is the party most deeply involved in the injury, has been fed upon hopes only. As Don Marquis, in his "Sun Dial," remarks of the anthracite strike: "Every paper we pick up we see that the miners and operators are still hoping for peace. We hope that hope will warm a house next winter."

The cost of this summer of labor troubles to the workmen, to the railway and mine owners, and to business at large has mounted into hundreds of millions of dollars. So far as business and the household are concerned, the prospective loss in the coming fall and winter will continue indirectly even if the strikes are now settled promptly. Probably one reason why the public have until recently been somewhat apathetic about the conditions is that they have not been directly injured seriously as much at this time of year as they would be in the full tide of railway business and when a supply of coal is absolutely necessary for business as well as for the home. Lately, however, the people and the Government have realized that action is needed, but are still debating as to what must be done. It is a good time to recall what Mr. Roosevelt said to the leaders of mine strikers and operators in 1902: "The evil possibilities are so far-reaching, so appalling, that it seems to me that you are not only justified in sinking, but required to sink for the time being, any tenacity as to your respective claims in the matter at issue between you. The situation imperatively requires that you meet upon the common plane of the necessities of the public."

THE RAILWAY STRIKE

The railway strike resulted from a decision of the United States Railroad Labor Board by which a wage reduction was ordered, while, on the other hand, the practice of sending repair and construction work into shops not owned by the railways was disapproved. It is odd, at this distance of time, to note how

completely these two issues have gone out of the discussion, which now turns almost solely on the question of seniority. The reason is that public and press were so strong in their declaration that the proper course of the railway men was not a strike but a request for a new hearing that the unions soon showed willingness to resubmit the question of wages to the Railroad Labor Board.

Their claim was that the wage cut was not fairly arranged; that the total reduction of wages (put at about \$110,000,000) was excessive in comparison with the cost of living, and that particularly the minimum wages for some classes of shop work and maintenance work were below the needs of American workmen—some of the maintenance-of-way men under the schedule arranged would receive less than twelve dollars for a normal week's wages. The labor members of the Railroad Labor Board declared that the majority report was made "with no consideration of human needs."

Whether the decision was fair or unfair, it was the outcome of the work of a Governmental board authorized to deal with the questions which had been submitted to it. The Railroad Labor Board, established under the Esch-Cummins Transportation Law of 1920, has nine members, three each representing the railways, the workers, and the public.

The recognition of the fact that the shopmen were on the wrong track in striking rather than attempting to reopen the case and the apparent probability that peace would be reached at an early date held the maintenance-of-way men from carrying out a strike which the vote of the local unions had authorized.

The fact that the strike affected only one large class of railway workers, the shopmen, has made the strike a peculiar one, in that the general service of the roads has continued. It has not been perfect by any means, but freight has been carried and passengers have been taken care of. This is one more reason why public exasperation has not led to an early settlement.

The claim that was made by some local railway unions, that their members were in danger because of bad equipment and that others were endangered by the presence of guards in the railway yards, has never been sustained. Its object was to force the great railway brotherhoods into the fight. There never has been evidence of any serious danger or annoyance to the union men from these sources.

One result of this agitation, however, aroused the country to indignation and denunciation. President Harding, in referring in his recent address before Congress on the labor question to this matter, declared that the desertions of transcontinental trains in the desert regions of the Southwest "have revealed the cruelty and contempt for law on the part of some railway employees who have conspired to paralyze transportation."

The single proposal made by the President in his recommendation to Congress which applied to the railway situation was that of asking that Congress should give power to the Railroad Labor Board to enforce its decisions. In view of the power exercised by the Interstate Commerce Commission and the recent decision of the Supreme Court which makes unions responsible for failure of their members to obey the law, it is hoped that relief from future railway disputes between the men and the executives may be found in such legislation.

For the last month the conflict in the railway strike has waged almost solely over the question of seniority. The decision of the Board did not touch upon this point. But the railways at once gave the strikers warning that they were in danger of losing their seniority privileges, and thereupon the unions refused to consider any settlement which did not secure to old workers those privileges. The pensions and retiring payments by the roads to old employees were not involved, with a few possible unimportant exceptions. The seniority rights relate to the men's relative standing in the distribution of desirable and profitable positions.

Logically, the railways are clearly right in holding that when the men deserted their work they were bound to take the consequences of their acts. The roads also clearly have a duty to those employees who have retained their positions during the strike and to those newcomers who have proved efficient and loyal.

President Harding at first tried to induce the railways to restore seniority rights unimpaired to returning strikers, but without success. He then withdrew that effort and urged both sides to submit the matter to the decision of the Railroad Labor Board. An interesting résumé of public and official opinion on this question of seniority will be found in the issue of *The Outlook* for August 16, in which, in reply to the request of *The Outlook* for an expression as to public sentiment, a number of Governors

of States and editors of influential journals in various centers discuss the points involved. The Outlook itself commented: "The strikers felt that the wrongs they were suffering were so great that the only remedy was war. When a man makes war, he must take the consequences of his act."

As the discussion continued, it became evident that the solution sought must be something which would take into account both the strong feeling of the strikers that their experience and skill should count in the grading of men for promotion and also the just feeling of the railways that the non-strikers and new men should be protected. It certainly does not seem beyond the power of common sense and tolerance to come to an agreement on this point.

But effort after effort has been made, and up to the time of this writing in vain. The leaders of the brotherhoods took a hand in this effort to reach a compromise settlement, but on August 24 the proposal made by them was rejected almost unanimously by a conference of railway executives. The brotherhoods peace plan would allow the Railroad Labor Board to adjust the relative standing of employees when a dispute arises and to provide that all strikers should be "reinstated in the position of the class they originally held," except those guilty of violence. The executives point out that the phrase just quoted, in their opinion, would imply acknowledgment by the railways that the men returning to work should be senior to those who remained and to the new employees, and that the Labor Board would be bound by the meaning of the quoted phrase. The result was that the railway executives unanimously rejected the proposals of the brotherhoods, and the dispute near the end of August is to all appearances no nearer settlement than before.

THE DUAL COAL STRIKE

As with the railway strike, so with the dual strike of the United Mine Workers in both bituminous and anthracite fields—the difficulty in reaching a settlement seems more and more not to be so much on the question of wages, the nominal cause, as in fixing the method of deciding that and other questions now and in the future. It is because the disputants in the soft-coal field have partly yielded on the latter point that district or local agreements have been signed and that soft coal is being mined in increasing quantities.

In brief, the miners want National agreements, the operators district agreements; the miners want contracts renewed from time to time after bargaining between unions and operators; the operators want to provide a method of arbitration in which outsiders should take part.

When the unions struck five months ago (technically speaking, the anthracite men did not strike, but stopped work during conferences), the issue was

whether wages should be cut, kept as they were, or raised. The demand for a raise was preposterous; the men didn't expect to get it. The argument for reducing was that coal industries must take their share in the general deflation needed to put business on a sound basis. The public generally accepted this belief; the men insisted that present wages were not beyond a fair living wage. The soft-coal men laid weight on the un-

Marcus in Forbes Magazine

"PUTTING OUT" THE FIRE

From Joseph B. Hayn, Buffalo, N. Y.

steady conditions of work. To many miners 150 days was a year's work. The public agrees that over-production and over-manning has produced a bad industrial state in the soft-coal field.

Conferences, suggestions, pleas from the President, have not yet brought settlement into view in the anthracite field. Meanwhile anthracite is not being mined, cold weather is near; the condition of things is alarming.

The Cleveland agreement, which has helped the bituminous situation, allowed operators to open their mines on the wage scale of April 1 and to make contracts up to next April 1. The United Mine Workers in this field abandoned their contention for National collective bargaining. Only 60,000,000 out of 400,000,000 tonnage was actually covered by the agreement, but the movement has spread. It provides for resumption of work at the old wage scale of March 31 last, with the check-off of union dues and the appointment of an advisory fact-finding commission at a joint conference in October to report on a new contract to another joint conference in January, 1923, which will endeavor to settle finally the basis for agreement for April 1, 1923.

Well-informed judges of coal conditions believe that the soft-coal dispute has been broken. They attribute the spread of the Cleveland agreement idea

to the eagerness of operators to sell coal at high prices instead of letting the non-union coal producers get the top of the market. They believe that the mine workers were influenced in this settlement by the hope that it would lead to unionizing coal districts now non-union.

The worst feature in the history of the strike in the soft-coal district has been the planned and cold-blooded slaughter of strike breakers at the mines in Herrin, Illinois, regarded callously by the people of the place, and as yet unpunished. President Harding, in his address before Congress, spoke of this as "a butchery of human beings wrought in madness."

The anthracite situation has baffled all attempts of settlement up to near the end of August. Both sides seem indifferent to the issue of humanity. One caustic critic avers that the men are interested in high wages, the operators in high prices, that both will probably get what they want and "Mr. Peter Public will pay."

The latest failure to agree was the breaking off of a conference between miners and operators at Philadelphia on August 23. The operators proposed to use the present Anthracite Conciliation Commission as a body with arbitrary powers to determine the wage scale, with provision for three outside umpires to decide in the event of deadlock. This was rejected by the miners in pursuance of their fixed policy of rejecting any outsiders as arbitrators, as that would commit them against the ultimate use of the strike as an economic weapon. Even "recommendatory arbitration" was refused flatly.

The settlement in the bituminous field was helped by the fact that the non-union bituminous coal mines were in operation and the owners and miners were profiting by the high prices due to the strike in the unionized mines. The continuance of the strike in the anthracite field, on the other hand, is made possible by the fact that the whole anthracite field is organized, and that practically all men whom the law allows to mine the coal are members of the union, so that there are no men who can legally take the strikers' places.

Congress is moving quickly on some at least of President Harding's coal measures. The House on August 23 passed a "fact-finding bill" in accordance with the President's wishes, including the exclusion of miners or operators from the proposed commission, all of whose members should stand for the general public interest. It then took up a bill that, if passed, will give the Government power to buy, sell, and regulate the sale and distribution of coal. Already Secretary Hoover, the Inter-State Commerce Commission, and the Government authorities generally, have taken measures to control (so far as the laws allow) the priority of coal shipments and its fair distribution, and to prevent profiteering in the desperate emergency that will be on us in a few weeks. Home-

owners have been advised to arrange to use bituminous coal for fuel when possible. A Federal Distributer, Mr. H. B. Spencer, has been appointed.

There has been a growing and now urgent call from the public for the establishment of a permanent National Coal Commission to take up the work of any "fact-finding" commission and to provide such regulation of the industry as will prevent such strikes and disputes as those still going on. The Outlook has long advocated such a step. Bills by such men as Senators Calder, Frelinghuysen, and Borah and ex-Senator Kenyon have been introduced and "shelved."

The coal business is the people's business. The joint telegram from five State Governors to the President suggesting that the Government might find it necessary to seize and operate both mines and railways is a sign of the times. Twenty years ago President Roosevelt planned, but did not threaten, to do that very thing if the coal quarrelers did not listen to reason; he had a general selected to command the troops and to operate the mines like a receiver in bankrupt proceedings.

If we are to have normal economic conditions, there must be recognition of the fact that the people's interest in fuel

is basic and must not be ignored. Two months ago President Harding summoned fifty operators and miners to the White House. He said to them: "You should settle this matter in frank recognition of the mutuality of your interests. If you cannot do that, then the larger public interest must be asserted in the name of the people, *for the common good is the first and highest concern.*" We italicize the last clause and commend it to the earnest attention of all disputants and wranglers. We repeat what we said a month ago. "Supreme over every other interest is the interest of all the people."

II—STRIKES AND THE NATION

AN INTERVIEW WITH THE AMERICAN PEOPLE

BY ROLLIN LYNDE HARTT

THE OUTLOOK asks: "Is the settlement of the coal strike merely a temporary armistice, and will the battle break out again? If so, when? Have the unions in the coal and railway industries strengthened themselves or weakened themselves? Is the public more sympathetic now or less sympathetic than it was before the strikes with the trade-union idea in all industries? Are the trade unions as a body, as William Allen White says, a parcel of fools in this contest? Have the coal operators and railway managers shown a disposition to deal fairly with leaders and to compromise on reasonable terms? Has private ownership of great public utilities been strengthened or weakened by the contest? Has this contest tended toward or away from Government ownership and operation of public utilities? Has the policy of the Government under this Administration shown weakness or strength in our Governmental structure? What legislation, if any, does this situation call for from Congress and the States?"

In order to answer these questions, it has been necessary to interview the American people—a thing less difficult than might appear.

They speak through their 2,500 newspapers. All those papers come regularly to the editorial rooms of the "Literary Digest." There all reports and editorials bearing on the labor problem are brought to one desk. For a dozen years and more they have been examined by one man, Mr. William Carman Roberts—a brother, by the way, of Charles G. D. Roberts and a cousin of Bliss Carman. During the absence in Europe of Mr. W. S. Woods, Mr. Roberts is serving as editor-in-chief, though added responsibilities have not prevented him from continuing his patient, thorough, and wholly unprejudiced study of public opinion regarding the strikes. I have interviewed Roberts and, through Roberts, the 2,500 newspapers which—am I not right?—speak for the American people.

WHAT do these strikes mean? Are they warnings of new dangers? Have they the sympathy of the people? Do they constitute oppression through a new form of monopoly? The Outlook, believing that these questions are of vital interest, formulated them in more detail and asked Rollin Lynde Hartt to seek in the organs of public opinion answers to them.

IS IT AN ARMISTICE?

Is the coal-strike settlement merely a temporary armistice? "The best informed observers," says Mr. Roberts, "expect the battle to break out again. At no distant date, either. Run your eye over this clipping from a trade paper, the 'Black Diamond.' Although that paper seemed to welcome the strike, as it 'was going to bring many miners to their senses,' we now read, 'The public can look for a repetition of the struggle next year. A temporary surrender to the miners' union was thought best to prevent our population from freezing next winter and to avoid industrial paralysis that was slowly but surely being felt in all parts of the country. He who fights and runs away lives to fight another day.'"

THE STRENGTH OF THE UNIONS

Have the unions gained or lost strength? "It is too early to judge of the effect on the railway unions," says Mr. Roberts, "but—in point of morale, at least—the coal miners appear to have gained. Let me quote you a sen-

tence or two from a labor journal published in Minneapolis: 'The union has won one of the most notable labor triumphs of the United States. In view of the previous power, pride, and arrogance of the employers, this result is remarkable. Nothing has happened in a generation so calculated to inspire and strengthen organized labor.'"

THE VOICE OF THE PUBLIC

But what, meanwhile, of the sympathies of the public? Mr. Roberts answers: "Never in my whole experience have I known strikes to be so generally condemned. As a rule newspapers are inclined to side with the 'under dog.' This time, with the exception of the labor press, they have been almost unanimous in denouncing the strikers, as the strikes appeared selfishly inopportune, coming just when a return of prosperity was in sight. The railway strike especially invited censure. The railway unions, so the papers have been declaring, assumed that 'the sacred right to strike' was greater than 'the sacred right of the Government to act for the greatest good of all the people.' For instance, here is the Washington 'Post' telling us that 'in flouting the efforts of the Labor Board to avoid a strike the shopmen have flouted the Government of the United States for whom it speaks and the American people whom, as an agency of the Federal Government, it represents.' And here is the Philadelphia 'North American' declaring: 'A circumstance that has had a powerful influence in turning sentiment against the unions is that they fully recognized the jurisdiction of the Labor Board when it increased the railroads' pay-rolls to the extent of \$600,000,000 a year, and repudiate its authority only when it reduces wages on the same principle on which it raised them.' The public still believes in unionism, still thinks trade unions necessary to keep the balance. Moreover, the public recognizes that in the recent struggle they have shown re-

markable restraint. The Herrin affair was an exception, of which the unions bitterly repent. The 'United Mine Workers' Journal' said at the time, 'God knows the miners' union would not have had this thing happen for a million worlds.' And yet it is clear that, however steadfast the public's belief in trade-unionism on general principles, both the miners' and the railway unions have lost ground."

ARE THE UNIONS FOOLISH?

As to William Allen White's assertion that the trade unions were a parcel of fools in this contest, Mr. Roberts resists a natural temptation to recall that Mr. White recently inaugurated a new series of the "Martial Adventures of Henry and Me" by posting placards announcing his daily percentage of sympathy with the strikers and forcing "Henry" (Governor Allen, of Kansas) to order his arrest for so doing. Disregarding all that, Mr. Roberts says: "On the whole, the press has been too busy reckoning with the seriousness of the strikes to consider their folly. Mr. White's remark was called forth by the 'cruelty and cowardice' with which trainmen 'left helpless people at Needles and Seligman on the desert in midsummer without food or shelter save the little mite the wayside towns provided.' Like the Herrin affair, this was an exceptional case. Like the Herrin affair, though in a lesser degree, it invited condemnation and received it."

THE STAND OF THE MANAGERS

Have the coal operators and the railway managers been fair? Have they shown a readiness to compromise on reasonable terms? Not all of them, apparently. "Certain papers have thought they were a little too conscious that the strikers lacked the support of public opinion, a little too anxious to 'smash' unionism, and, in certain instances, too outspoken in their refusal to yield ground. Here is a clipping about President Loree, of the Delaware and Hudson, who said the other day: 'Reports that peace is coming in the railroad strike are all bunk. You can quote me as saying I stand where I have stood from the start, solidly against any surrender, and it would be a surrender on the part of the roads to give back to the strikers their seniority.' This same cutting tells us that 'W. W. Atterbury, of the Pennsylvania, said Mr. Loree expressed the views of all the Eastern roads. "He speaks for the bunch," were General Atterbury's words.' Moreover, Mr. Loree is said to have said, 'Peace talk has done the roads more harm than good.'"

HAS PRIVATE OWNERSHIP LOST GROUND?

Has private ownership of great public utilities been strengthened or weakened by the contest? "As concerns the coal industry," says Mr. Roberts, "a considerable proportion of the correspondents and editorial writers incline to favor

something like Nationalization, perhaps temporary, perhaps partial, though recognizing that when coal mining has once become the Nation's business it may stay so. One editorial writer remarks that 'as an independent, self-regulated industry, old King Coal is having his last chance.' However, I detect little, if any, enthusiasm in the effort to find a substitute for private ownership. The effort appears to spring from what might be called emergency opinion. Then, too, it is offset by an effort to keep us from 'seizing things.' How should we manage them after they were seized? You notice that the Grand Rapids 'News' remarks: 'The Government represents all the people. If it takes control of the coal mines, it will not pay without question the wages the miners demand. The Government would be concerned first of all in securing a steady supply of fuel for everybody. There would be no right to strike against wages or conditions then. Strikes would be little short of rebellion.' On those terms, where should we obtain miners? That difficulty is not overlooked by the press. In the case of the railways, you remember that the New York 'Times' said lately that, 'even if Congress should authorize the President to commandeer the roads, it could not give him power to compel men to work on them if they were unwilling to do so.'"

HAS NATIONALIZATION GAINED?

The Outlook asks if the contest in the coal and railway industries has tended toward or away from Government ownership of public utilities. "Among the railway employees," says Mr. Roberts, "there is a pronounced leaning in that direction. See how the New York 'Times' puts it: 'Their view is that Government operation of the railroads would permanently erect the unions into a privileged class, receiving higher wages than their fellows and given a political power which could be used to terrorize Congress and intimidate the Administration.' But popular opinion, as reflected by the press, is radically opposed to such a measure. People have not forgotten our war-time experience with Federal control, and, for that reason partly, they oppose Government ownership of the coal mines. However, one recognizes a general demand, summed up in the sentence I have marked in this cutting from the New York 'Herald,' that the coal industry 'be put on a sound economic and solid business basis, under private ownership and management but at the same time under Government sanction and regulation.' That nothing short of thorough reorganization can prevent trouble is fully appreciated. See what the 'Survey' has shown in an article signed by two Government geologists. That during the last thirty years the bituminous mines have lost three working days out of ten. That, although 'the most that has ever been burned or exported in a year is 550,000,000 tons,' our mines 'are

developed to an annual capacity of 750,000,000 tons—the 'chief cause of intermittency.' As Messrs. Tryon and McKinney, the geologists I have quoted, tell us, 'the over-development is the result of free competition playing on a resource so widely distributed as to be almost a free gift of nature.' So it is not the managers' fault. 'Without concerted action of the kind forbidden by the anti-trust laws, they cannot control the economic forces that surround them.' And now let me read you a few paragraphs from an editorial in the New York 'World':

"Bituminous mining in the United States hardly deserves the name of a business. It is a chaos, and a bloody one. Because of seasonal production and uneven demand, there are nearly twice as many men in mining villages as are needed. Because there are too many for the jobs on hand and because they are isolated from communities that might furnish other employment, the miners can't enforce their demands under normal conditions. With surplus labor keeping wages low, the pits will show a profit in a good year even when run without modern machinery.

"They are so run, and according to the Federal Trade Commission, they do show a fair profit. At the same time a majority of the men are poorly paid upon an annual income basis and often desperate. When they strike, they are met by the solid facts that there is not enough money for higher wages and that there are not enough orders to run more than sixty per cent of the mines. They are met also by the autocracy of the mine-guard system, established to handle desperate employees.

"There is no final solution except a complete reorganization of bituminous production. Until that is done it will be necessary to restrain both sides from violence in a dreary series of conflicts ever menacing civil warfare. One after another, strikes will recur, bringing violence with them if continued, so long as coal is mined in this country as it is mined now."

"Have I made my point clear? What the people want is not Government ownership, either of railways or of coal mines, but successful, because scientific, Government regulation. They approve when such a paper as the San Antonio 'Express' declares that, coal being 'just as essential to National life as the transportation system, further Federal regulation is inevitable.'"

MONOPOLIES OF MONEY AND MEN

The Outlook's question, "Has this contest tended toward or away from monopoly?" seems to Mr. Roberts somewhat vaguely worded. "You mean the One Big Union?" he asks. "And a corresponding unionization of capital? Then a fight between the two, with no mercy on the consumer? In that case, I may say that it is a question not at all widely discussed in the press. However, on the labor side, there are labor journals."

deal with it more frankly than is usual, and they have been led to do so during the strikes, though not wholly because of them. Over the announcement of the Supreme Court's decision making labor unions suable there was deep resentment. The New York 'Call,' a Socialist paper, termed this 'the most staggering blow ever aimed at the organized working class.' Though declaring it would be 'as futile as was the crucifixion of Christ,' the Minneapolis 'Labor Review' saw in it an 'attempt to abolish the unions.' The Seattle 'Union Record' said, 'It is pie for the direct actionist who preaches that Government is designed solely for the purpose of keeping the working class in a state of subjection to employers.' It was then that the Indianapolis 'Union' asserted: 'The Reds and Bolsheviks will thrive on such decisions. They say triumphantly, "Didn't we tell you the courts were against the worker? Join the One Big Union and kick the bucket over. Seize everything." But observe. Even here the point is made indirectly. There is nothing like 'Who says so? We do!'"

THE GOVERNMENT AND THE PEOPLE

Has the policy of the Government under this Administration shown weakness or strength in our Governmental structure? "There has been criticism of the President," says Mr. Roberts, "but not of our Governmental structure except by Socialists and Radicals. And when critics of the Administration assail Mr. Harding the Democratic New York 'Times'—I had the cutting in my hand a moment ago, let me take it up again—as I was saying, the New York 'Times' remarks: 'Those who accuse him of hesitancy and weakness should in fairness point out what warrant of law he has for doing otherwise than he has done. The fault lies, not in him, but in the happy-go-lucky spirit in which Congress has permitted the country to drift into seeming helplessness in the pres-

ence of a Nation-wide strike. There ought to be remedial and safeguarding legislation. But it is foolish in the extreme to fancy that this can be framed overnight or put into effect in a panicky state of mind.'"

THE CURE

This brings us squarely in front of The Outlook's concluding question: What legislation, if any, does the situation call for from Congress and the States? In reply, Mr. Roberts quotes the very general assertion that we must provide the Labor Board with "teeth." It has none whatever at present. The "New Republic," he reminds us, has been saying: "The law grants the Board no power to enforce its decrees. Public opinion is its only police, and publicity its only weapon of punishment." Also, he reads aloud from an editorial in the Philadelphia "Evening Public Ledger," which declares: "The Transportation Act is working badly, and in its labor provisions it is working very badly. The Labor Board which it created is based on the mistaken principle that the wages problem can be artificially segregated from the general financial problem. Experience has now confirmed what was freely predicted in 1920, that since wages are so large a part of costs, wage policies must be regulated by the authorities that regulate the other aspects of railway finance. The immediate trouble has arisen through failure to recognize this fact." When discussing the President's demand for legislation to make the Labor Board's decisions binding, Mr. Roberts takes up a clipping from the Philadelphia "Bulletin," which contends that what the Board should have, in order to prevent strikes, is "the power to compel arbitration of railroad labor disputes"—a concrete suggestion, but offset by the Norfolk "Ledger-Dispatch's" remark that "no decision of the Labor Board could compel a man to work."

The President demands "a National investigation of the coal industry, so as to provide constructive recommendations

for legislation to govern its conduct," and Mr. Roberts tells us that, while the Brooklyn "Eagle" predicts that "the fact-finding commission will amount to nothing," a number of influential papers warmly approve. Among them is the Philadelphia "Public Ledger," which, so Mr. Roberts points out, believes that "the proper sort of commission would in the end do more than prevent labor troubles at the mines; it would put coal mining and distribution upon a scientific basis, and at the same time bring down the price of bituminous and anthracite coal."

But perhaps the most important step toward the prevention of strikes in both the coal and the railway industry has already been taken. Recalling once more that the Supreme Court's decision in the famous Coronado coal-strike case pronounced "such organizations suable in the Federal Courts for their acts" and declared that "funds accumulated to be expended in conducting strikes are subject to execution in suits for torts committed by such unions in strikes," Mr. Roberts quotes an attorney for the American Federation of Labor as admitting that, accordingly, if the railway unions strike, they will be liable under the Sherman Anti-Trust Act for conspiracy in restraint of trade.

It is not surprising to find that Mr. Morris Hillquit calls the decision "a serious blow to organized labor," or that Senator La Follette complains, "It is most ominous in what it foreshadows." From their point of view, both gentlemen are right. Labor has enjoyed special privileges hitherto. Under the Clayton Act it has been free to conspire in restraint of trade, whereas capital could not. At last we have arrived at something "ominous"—namely, one law for all. From a file of clippings Mr. Roberts selects an editorial that recently appeared in the Ohio "State Journal" and concludes with this brief but significant sentence: "If Government has the right to exercise control over organizations of capital, so has it over those of labor."

THE REVISION AND ENRICHMENT OF THE BOOK OF COMMON PRAYER

SPECIAL CORRESPONDENCE

BY THE REV. E. CLOWES CHORLEY, D.D.

HISTORIOGRAPHER OF THE PROTESTANT EPISCOPAL CHURCH

FOR some time past the various parts of the Anglican Church have been engaged on a revision of the Book of Common Prayer. The work has been completed in the Canadian Church and is approaching completion in England and Scotland. The last revision of the Prayer-Book in the American Church was begun in 1880 and completed fifteen years later. In response to a widespread demand, the General Convention of 1913

appointed a commission of liturgical experts, including laymen, "to consider and report such revision and enrichment of the Prayer-Book as will adapt it to present conditions." The Commission has already made two reports, resulting in the addition of new prayers for Courts of Justice, for the Army and Navy, for Memorial Days, and for Religious Education. The third report will be presented at the General Convention which

opens on September 6 at Portland, Oregon.

The Book of Common Prayer has long since ceased to be the exclusive possession of the Episcopal Church. It is the common heritage of all English-speaking peoples and the basic source of the liturgies of all Protestant churches. Any changes, therefore, are of more than passing interest. There is, moreover, a natural hesitancy about revising a book

so interwoven with devotional life and worship. It would be fatally easy to mar its unexampled beauty of phrase and spirit. At the same time, it must be remembered that it does stand in need of adaptation to present conditions. The thirty years since the last revision have witnessed radical changes in theological ideas. The old order of religious thought has changed and yielded place to a new and larger vision. Christian conceptions have been liberalized, and sooner or later the new thought must find adequate expression in our liturgies. In the main, this has been the purpose of this revision.

It must be recognized that the Prayer-Book, as it now stands, is more or less saturated with distinctively Hebrew and mediæval phrases and outworn theological ideas which not only mean nothing in these modern days, but are also well-nigh repellent to enlightened people. The opening sentence of the Office of Baptism has long been a rock of offense to parents who bring innocent little children to be baptized and also to the officiating ministers. To have to read, "Forasmuch as all men are conceived and born in sin," echoes a discarded dogma and is an insult to the sanctity of marriage—so much so that many of the clergy have long refused to read it. The revision omits the phrase entirely. For the old and now meaningless prayer:

O merciful God, grant that the old Adam in this child may be so buried, that the new man may be raised up in him,

this substitute is offered:

O merciful God, grant that like as Christ was raised up from the dead by the glory of the Father, even so this child may walk in newness of life.

In the same service such sentences as "being delivered from thy wrath and eternal death," and "may crucify the old man, and utterly abolish the whole body of sin" are omitted, and omitted not merely because the phraseology is antiquated, but also because the doctrine therein has been discarded.

The same thing is equally true of the exaggerated expressions of penitence which, especially in the Litany and Penitential Office, were put into the mouths of worshippers. The recurring refrain, "miserable sinners," in the opening sentences of the Litany is omitted, as is also the phrase in the Penitential Office, "who are vile earth and miserable sinners." In the Collect for Good Friday the prayer, "Have mercy upon all Jews, Turks, infidels and heretics," which very properly has been deeply resented by the Jewish people, is happily changed to read, "Have mercy upon all who know Thee not as Thou art revealed in the Gospel of thy Son."

The suggested changes in the Marriage Service have been widely heralded in the daily press, especially the recommendation to omit the word "obey" now required from women. The purpose is

to make the marriage vow identical for both the husband and the wife. Another change is the omission of the sentence "with all my worldly goods I thee endow," and in the final prayer Isaac and Rebecca are no longer to be held up as shining examples of fidelity in the married state.

As befits its hallowed associations, the report handles the Burial Office with commendable reserve and makes as few changes as possible, but it does succeed in imparting a more hopeful tone to the whole service. In the opening sentences the comforting and beautiful words of our Lord, "Let not your heart be troubled," are added. In the familiar passage from the Book of Job the very doubtful words, "and though after my skin worms destroy this body, yet in my flesh shall I see God," are omitted so that the whole passage will read, "I know that my redeemer liveth, and that he shall stand at the latter day upon the earth: whom I shall see for myself, and mine eyes shall behold, and not as a stranger." One can only regret that the word "vindicator" was not substituted for "redeemer." In the committal of the body to the grave the words, "Forasmuch as it hath pleased Almighty God, in his wise providence, to take out of this world the soul of our deceased brother," are eliminated and the sentence will now read, "Unto Almighty God we commend the soul of our brother departed, and we commit his body to the ground."

Two important changes are recommended in the service of Holy Communion. One concerns the title which now reads, "The Order for the Administration of the Lord's Supper, or Holy Communion." The new suggested title reads,

THE DIVINE LITURGY,

being

The Order For

The Lord's Supper, or Holy Eucharist,

commonly called

THE HOLY COMMUNION

Opposition to this change has developed so strongly that it is not likely to be adopted. The other change is the proposed permission to omit the stated reasons for the observance of the Ten Commandments when they are read at Holy Communion. It is proposed to print them in this fashion: First the commandment itself; then, in an inset, the reason for observance. For example:

THOU SHALT NOT TAKE THE
NAME OF THE LORD THY GOD IN
VAIN for the Lord will not hold him
guiltless that taketh his name in vain.

The officiating minister may read the whole as of yore, or he may omit the inset. However forceful the reasons for obedience here set forth may have been in the Mosaic dispensation, they carry no appeal to the thoughtful modern mind, and the Commandments gain in strength and dignity by their omission.

The report abounds with admirable suggestions for the enrichment of the

Prayer-Book. One such is the provision of a simple but beautiful Office for the Burial of a Child. It has already been widely used and is universally approved. Its keynote is, "Suffer the little children to come unto me." The Commission has also taken a bold, but not overbold, step in providing prayers for the departed. Protestants revolted from such prayers at the Reformation, because they had grown so material and so many abuses followed in their train. But during the Great War, with its attendant losses of fine young lives, such prayers were largely used by the clergy and bereaved parents to their great comfort. They were not found in the Prayer-Book, and recourse was had to other books of devotion. Two of three such prayers are now proposed for insertion in the Burial Office. One may be quoted:

Remember thy servant, O Lord, according to the favor which thou bearest unto thy people, and grant that, increasing in knowledge of thee, he may go from strength to strength in the life of perfect service in thy heavenly kingdom; through Jesus Christ, our Lord. Amen.

Other suggested new prayers are for A State Legislature; for The Increase of the Ministry; The Church; Schools and Colleges; Social Justice and for Every Man in His Work. To the Family Prayers Newman's "Support us, O Lord, all the day long of this troublous life" is added as well as a tender prayer for the absent members of the household. How admirably these prayers have been chosen and how applicable they are to our modern social and National life may be judged by this prayer For Our Country:

Almighty God, who hast given us this good land for our heritage; We humbly beseech thee that we may always prove ourselves a people mindful of thy favor and glad to do thy will. Bless our land with honorable industry, sound learning, and pure manners. Save us from violence, discord, and confusion; from pride and arrogance, and from every evil way. Defend our liberties, and fashion into one united people the multitudes brought hither out of many kindreds and tongues. Endue with the spirit of wisdom those to whom in thy Name we entrust the authority of government, that there may be justice and peace at home, and that through obedience to thy law we may show forth thy praise among the nations of the earth. In times of prosperity fill our hearts with thankfulness, and in the day of trouble suffer not our trust in thee to fall; all which we ask through Jesus Christ our Lord. Amen.

As befits so important a task, the revision is proceeding very slowly. Nine years have been already given to it, and, at the earliest, it cannot be completed until 1928, though some portions will be available at the close of this Convention. But, when finally complete, the new Prayer-Book will be in the best sense a treasury of devotion.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER I—EARLY YEARS

THE Outlook considers itself fortunate in being able to present to its readers the reminiscences of Oscar Straus, which begin in this issue. It congratulates itself, not because Mr. Straus is distinguished as a statesman and Government official, although he has this distinction; not because the autobiography is full of entertaining anecdotes of Presidents with whom Mr. Straus has been intimately associated, although the autobiography has this delightful quality; not because Mr. Straus's story of his life throws some light on solutions of perplexing political and social questions confronting the country, although the autobiography is very illuminating in this respect; but because this Jewish Ambassador from a Christian Democracy to a Mohammedan Absolutism is an outstanding manifestation that the great human process going on in this continental Republic of ours is the formation, not only of a new kind of national life, but of a new kind of racial life.

Mr. Straus was born in Germany, and came to this country when he was about four years old. But he is as completely an American in culture, in temperament, and in point of view as if his ancestors were Puritans

who came over in the Mayflower to Massachusetts, or followers of King Charles who came over to Virginia to escape the consequences of that misguided monarch's folly.

As the title of his narrative indicates, he has been a Government officer under four Presidents. As a lawyer he is a recognized expert in international relations. Although he is proud of being a Jew, he is a champion of religious liberty, and it is significant that one of his first books was a life of Roger Williams, a Baptist and a pioneer of religious liberty in colonial times.

What is going to become of this great melting-pot that we call the United States of America is perplexing to contemplate in the present industrial crisis, with the contents of the pot boiling like a maelstrom at white heat. It sometimes seems as if the only result could be a cracking of the pot and the tumbling out of all its contents to destruction. If this catastrophe is to be avoided, and if the mess is to be cooked into a homogeneous and well-done product, it can only be by the kind of Americanization in politics, in religion, and in education for which Mr. Straus stands.—THE EDITORS.

IT has been permitted me to do useful work and to have interesting experiences. Happy opportunities have been afforded me for public service. Of these I write.

Perhaps in chronicling the experiences of a life which at many points touched vital affairs and the most interesting personalities I may be able to add something to the record of men, movements, and events during those decades still absorbing to us because they are so near.

The story is one of service at home and abroad, of personal relations with four American Presidents, with diplomats, labor leaders, foreign rulers, leaders of finance and industry, and some plain unticketed citizens who were the salt of the earth and certainly not the least of those whom it was a privilege and a pleasure to know.

In these reminiscences few things will afford me greater pleasure than the references to my family—to my father Lazarus, my mother Sarah, my brothers Nathan and Isidor, the last my late lamented guide, philosopher, and friend, who was lost with his wife on the ill-fated Titanic. They were noble in death as in life.

The greatest pleasures first, then—my family.

The Palatinate of Bavaria was the home of many generations of my maternal and paternal ancestors. By industry and thrift they had become landowners and dealers in grain. Commerce was their livelihood, but learning and culture their life. Though none of them had attended universities, they were all only and widely informed in Hebrew and German literature.

In the little town of Otterberg,

my father was born in 1809. It was two years after the Great Sanhedrin in Paris, in which his grandfather had played a prominent part. His grandfather was Jacob Ben Lazarus—Jacob, the son of Lazarus. (Until 1808, when the Palatinate under Napoleon became the French Department of Mont Ténérre, Jews in that section had not used family names.)

The Great Sanhedrin, a convocation famous in modern Jewish annals and in French history, was created by Napoleon's decree of May 30, 1806. From the Department of Mont Ténérre my great-grandfather went as a deputy to this parliamentary assembly which was to justify Judaism and Jewry to a world and a France which oppressed and restricted them. The reactionaries had been making the Jews the scapegoats in their campaign against the advancing spirit of liberalism. Thus the cause of the Jews was linked with the cause of liberty itself.

Napoleon himself was at first prejudiced against the Jews, regarding them as usurers and extortioners. He soon realized, however, that the characteristics which affronted him could not be imputed to Judaism, but were due rather to the Jews' restricted rights, civil and industrial, and to their general unhappy condition. It was made manifest to him that in Bordeaux, Marseilles, and in the Italian cities of France, as well as in Holland, some of the most useful and patriotic citizens were Jews.

A FOREFATHER IN DIPLOMATIC RÔLE IN NAPOLEON'S COUNCILS

With his genius for capturing the imagination, with his unflinching sense for the historical attitude, Napoleon issued

his famous decree summoning the Assembly of Notables of the Jewish Nation to meet in Paris the following July to formulate their grievances and confer with Napoleon's commissioners relative to improving their status. It was called the Sanhedrin, after the famous parliamentary bodies of ancient Israel.

So one hundred and eleven delegates assembled from all parts of the great Napoleonic Empire, speaking French, German, and Italian, and formed the Sanhedrin. Among the deputies was Michael Berr, afterwards the first French Jew to practice at the bar; Abraham Furtado, son of Marrano or Crypto-Jewish parents from Portugal, a member of the family from which the wife of the first Benjamin d'Israeli was descended, and one of the ancestors of Sir John Simon; Avigdor of Nice, Israel Ottolenghi, an ancestor of the late War Minister of Italy; Saul Cremieux, Olry, Hayem Worms.

Many of the delegates were themselves well known; others achieved a posthumous glamour in the deeds of descendants who have since won distinction in French history and in the annals of Jewry. They assembled with a full consciousness of their responsibility. The purpose was to win for French Jews the removal of occupational restrictions and civic discrimination. It was a monumental task.

My great-grandfather evidently played an important part in the diplomacy which this unprecedented council involved, for he represented the Department of Mont Ténérre and was a member of the sub-committee of fifteen delegated to meet the commissioners appointed by Napoleon; he was a member of another committee to which the

The three Straus brothers came to America in 1854 with their mother and sister. Their father, who had preceded them, met them at the dock. In the above group the autobiographer is in the center, Nathan Straus on the left, and Isidor Straus on the right. Isidor Straus and his wife were lost in the Titanic disaster when that steamship on its maiden trip in 1912 struck an iceberg and foundered

Assembly intrusted the delicate task of preparing the groundwork of discussion with the commissioners; and subsequently he was appointed to the Committee of Nine which the following year presented to the Great Sanhedrin the conclusions which had been formulated and agreed upon by the Assembly and helped to secure their adoption.

The Sanhedrin and the first Napoleon had become a memory, and Europe was experiencing a new cycle of oppression and revolution, when my father reached maturity.

The Revolution of 1848 was a heroic effort of the liberal forces of Europe to achieve constitutional government. Its failure in Germany caused a general exodus of participants to other countries. A host came to the United States, including such men as Sigel, Schurz, Stahl, and many others who later gained eminence as Generals in the Civil War. Americans in spirit, having made their sacrifices basically for American principles, they constituted a valuable acquisition to American citizenship.

Those who remained, who were prevented by circumstances from emigrating, were subjected to all those petty annoyances and discriminations which a reactionary government never fails to lay upon people who have revolted and revolted in vain. My father was only locally prominent in the revolutionary movement, and, though not actively prosecuted, was made to feel that emigration was the only means of relief.

Paramount also were the economic circumstances in which he found himself after the Revolution. Before the event a landowner and grain dealer on a large scale, he was now reduced financially, even in debt. Assuredly, a place where

reactionary and triumphant officialdom delighted in annoying one was not the scene for a retrieval of fortune. He wanted a new field for his enterprise.

In 1852 he left for America.

GETTING A NEW START IN DIXIE

Like the prudent man he was, he went alone, to establish himself first, if only in a small way, rather than allow his family to exchange the comparative security of their familiar surroundings for the doubtful insecurity of an unknown land.

"Go South," was the recommendation of former acquaintances whom he met after landing in Philadelphia. Acting on this suggestion, he went on to Oglethorpe, Georgia, where he met some more acquaintances from the old country. Through them he made a connection with two brothers Kaufman, who plied the peddler's trade. They owned a peddler's wagon, with which they dispensed through the several counties of the State an assortment of dry-goods and what were known as Yankee notions.

For my father this was indeed a pioneer business in a pioneer country, yet it was not like the peddling of to-day. In the fifties the population of the whole State of Georgia was only about 900,000. Because of the existence of slavery there were on the large plantations often more colored people than there were whites living in the near-by villages. The itinerant merchant, therefore, filled a real want, and his vocation was looked upon as quite dignified. Indeed, he was treated by the owners of the plantations with a spirit of equality that it is hard to appreciate to-day. Then, too, the existence of slavery drew

a distinct line of demarcation between the white and black races. This gave to the white visitor a status of equality that probably otherwise he would not have enjoyed to such a degree.

Provided only, therefore, that the peddler proved himself an honorable, upright man who conscientiously treated his customers with fairness and made no misrepresentations regarding his wares, he was treated as an honored guest by the plantation owners—certainly a spirit of true democracy. The visits were made periodically and were quite looked forward to by the plantation owners. The peddler usually stayed one night at the house of his customer, and took his meals with the family.

Another ideally democratic feature about these sojourns was that spirit of Southern hospitality which, even in the relationship between the wealthiest and most aristocratic family and the humble peddler, permitted no pay for board and lodging, and only a small charge for food for the horses. The peddler, in turn, usually made a gift to either the lady or her daughter. Often he provided himself with articles for this purpose, but usually on one visit he would find out what might be welcome and on the next visit bring it. The bonds of friendship thus made are, I venture to say, hardly understandable in our day.

In the course of these wanderings my father came to Talbotton, a town of some eight or nine hundred inhabitants, the county seat of Talbot County, and about forty miles east of the Alabama boundary. Talbotton immediately impressed him so favorably that he selected it as the next home for his family. It had an air of refinement that pleased him; here were gardens with nicely cultivated flowers and shrubbery, and houses that were neat, well kept, and properly painted. Upon inquiry, he found further that there were splendid schools for both boys and girls.

There was another factor which doubtless caused father to be favorably impressed with Talbotton; it was court week when he arrived, at which time a town has a more or less festive appearance and is at its best so far as activity is concerned. Then there was a third factor that influenced him to settle there. Before doing business in any county peddlers were required to go to the county seat to buy a license. At Talbotton this license was very high, and my father doubted that his business in Talbot County would warrant the expense. The idea occurred to him to utilize the presence of the many strangers in town to test the possibilities of the place by unpacking and displaying his goods in a store. An interview with Captain Curley, the only tailor in the town, developed the fact that the store he occupied was too large for his needs and he would be willing to share it with my father. So this arrangement was promptly made, and at a cost less than the expense of the county license for itinerant merchandising.

house in Otterberg, Rhenish Bavaria, in which Oscar S. Straus was born, December 23, 1850

The experiment proved most satisfactory. In a few weeks the stock was so depleted that my father proposed to his partner that they rent a store and settle in Talbotton. This they did. My father then prepared to go to Philadelphia to get a stock of goods. His partner counseled against this. There was a merchant in Oglethorpe who up to this point had supplied them with all their merchandise; they would need to refer to him for credit, and they were still indebted to him for the stock in hand; also he would probably not approve of their settling down in a store instead of peddling. The new store offered large display space in comparison with the wagon, and the partner doubted my father's ability to get enough credit in Philadelphia to make a proper display. Still another obstacle: The line of merchandise that was to constitute most of their stock was what was then known as dry-goods and domestics. This business was entirely in the hands of the Yankees, and the most difficult one in which to gain a foothold, especially for a German immigrant without capital.

Having opened the store, my father toiled long hours to make it prosper. But it was two years before he could send for the family.

DEACONS DUELED WITH KNIVES

Three years previous to this my mother had suffered a paralytic stroke. The long, trying trip to America with four small children called for courage and resource to an unusual degree. The oldest child, Isidor, was nine years old, my sister Hermine seven and a half, Nathan six, and myself three and a half years.

We arrived at New York September 12, 1854. My father met us at the dock. Yellow fever was raging in Savannah, the port through which we had to pass to reach Talbotton, so we were compelled to wait in Philadelphia until it was considered safe to proceed.

Talbotton was on court days filled with visitors and wore a holiday air. Sometimes the liquor flowed a little too freely among the visitors, and knife and pistol fights followed. In one case two deacons of the same church alternated until one slashed the other to death with his knife.

After considerable delay the murderer was tried, but because of his high standing in the community he was acquitted, doubtless on the plea of self-defense, and he got off scot free.

This all left a deep impression on my young mind and made me a prohibitionist long before I knew the meaning of the word. In the North when boys got to fighting they used their fists; in the South they used, besides their fists, sticks and stones, and consequently it was a more serious and dangerous affair. If in the North one boy cursed another or called him a liar it would not necessarily lead to a fist fight; in fact, it usually stopped at recrimination. In the

South that kind of quarreling meant a serious fight.

I think because of these facts the Southern boys were much more guarded and polite to each other in speech than was customary among Northern boys. Perhaps much of the so-called Southern politeness had its roots in the use in boyhood of milder terms in case of disagreement.

CIRCUIT RIDERS CHARMED BY BIBLICAL ERUDITION

On the whole, though, the town itself was for those times an enlightened and moderately prosperous community. Our family was received with kindness. We quickly became accustomed to our new environment. My mother and father soon enjoyed local fame for different excellences—mother for the trimness and skillful cultivation of her flower and vegetable patch, father for his Biblical erudition. While housewives admired the horticultural skill of my mother, circuit-riding ministers went into long theological discussions with my father. Ours was a hospitable home, though modest, and never a circuit rider came to Talbotton but he had dinner at our

house, after which the discussions commenced in earnest. If a text was in question, my father always had his Hebrew copy of the Old Testament at hand and was ready to translate passages literally for their information.

I was thus fairly brought up on theological discussion. From my earliest days, it seems, I have been so situated as to be made aware of denominational controversy. At the table in my parents' home I saw and listened to representatives of every Christian creed. In college I figured, but as an olive-branched neutral, in the feud between "Evidences of Christianity" and the non-Episcopalians. And later years saw me in Turkey as the American diplomatic envoy, defending the representatives of Christian churches from the hostility of the Turk.

My brother Isidor and my sister were immediately sent to school, and my second brother and I were likewise sent as soon as we arrived at school age. We were the only Jewish family in the town. This aroused the curiosity of those who had never met persons of our race or religion before. I remember hearing a man express the doubt that we were

Oscar S. Straus, from a photograph taken in Talbotton, Georgia, when the future diplomat was six years of age

Jews: He stated with some assurance that all Jews had black hair and dark complexions, while my father was blond and blue-eyed.

My father sent Nathan and myself to a Sunday school at this time. Here we heard the Bible read and were taught principally from the Old Testament. Our teacher was a gunsmith who had more piety than knowledge. What he lacked in erudition he made up in good intentions. But long talks with my father formed the backbone of my religious instruction.

FIRST LESSONS IN ORATORY

In 1863 our family moved to Columbus, Georgia. A great, a tremendous city, I thought—blocks of brick houses, a broad Main Street, 12,000 inhabitants. The public school had not yet been established in Georgia. Off I was sent to schoolmaster Flynn's private institution of learning, where I was taught the three R's, Latin, and elocution—a great deal of the last. For, South and North, it was the great oratorical period. Like the rest, I practiced before the mirror and under the trees. Though my first piece before the school assembly was an avowal of undying courage, a recital of John Adams's "Sink or swim, live or die, survive or perish, I am for the Constitution," I could not resist stage fright. I sank and swam—lived and died—survived and perished—with shaky knees.

Flynn was no rod-sparer and child-spoiler, so I was not sorry, a year later, when his school was discontinued, to study under Dr. Dewey, who was less severe and had wider sympathy and culture. Under him I began Virgil and afterwards Horace.

There were no public libraries there, and few individuals excepting professional men had many books. The standard assortment consisted of the Bible, Josephus, Burns. A few had Shakespeare's works.

Aside from my school readings I was not bookish. Boys of my age led an outdoor life there. Barefoot nine months of the year, each of us the possessor of a shotgun, we hunted wild fowl and rabbits in season and out and indulged passionately in all the seasonable sports, top-spinning, marbles, ball-playing—the last not in the form seen to-day, but a game called town ball.

COFFEE MADE OF SWEET POTATOES

Our home was comfortable, wholesome, hospitable, and our wants so few and simple that I felt as happy and independent as any child of the richest. My mother was an excellent manager, and on very moderate resources the house shone with cheerfulness.

Life in the South, except among the owners of large plantations who entertained on a lavish scale, was simple. A simple life has its advantages in inducing self-help and in not making one unhappy because of the absence of those things which are regarded as luxuries.

I recall that in our part of the country coffee was unobtainable except when a few bags arrived on a ship that had run the blockade. Our mothers found a palatable substitute by cutting sweet potatoes in little cubes, drying them in the sun, then roasting and grinding them as one would the ordinary bean. This made a palatable drink colored like coffee and without the harmful stimulant of caffeine. When salt gave out and candles became scarce, ingenuity came into play. Every family had its smoke-house for curing meats, and the earth floors of the smoke-houses were found to be permeated considerably with salt from previous curings; so a method of extraction was devised. Candles—each family knew how to make them from a mixture of fat and beeswax melted and poured into tin molds. We children helped our mothers make those candles. They gave a soft light for our living-room and for our studies at night.

Children of my age lived largely upon corn-bread and molasses, which never ceased to be plentiful.

IMPRESSIONS OF SLAVERY

As a boy brought up in the South, I did not question the right or wrong of slavery. Its existence, like any other custom or institution, I regarded as a matter of course. The grown people of the South, whatever they thought about it, would not, except in rare instances, speak against it; and even then in the most private and guarded manner. To do otherwise would subject one to social ostracism.

We heard slavery defended in the pulpit and justified on Biblical grounds by leading ministers. With my father it was different. I frequently heard him

discuss the subject with the ministers who came to our house, and he would point out to them that the Bible must be read with discrimination and in relation to the period to which the chapters refer; and it must not be forgotten that it is the history of a people covering more than a thousand years; and that even then there had been no such thing as perpetual bondage, as all slaves were declared free in the year of jubilee.

Looking backward and making comparisons between my observations as a boy in the South and later in the North, I find there was much more freedom of expression in the North than in the South. Few people in the South would venture to express themselves against the current of dominant opinion upon matters of sectional importance. The institution of slavery with all that it implied seemed to have had the effect of enslaving, or, to use a milder term, checking, freedom of expression on the part of the master class only in lesser degree than among the slaves themselves.

In our town, as in all Southern communities, the better families were kind, especially to their household slaves, whom they regarded as members of the family requiring guardianship and protection, as if they were children. And the slaves addressed their masters by their first names and their mistresses as "Miss." My mother, for instance, was "Miss Sara." I recall one of our servants pleading with my mother:

"Miss Sara, won't you buy me? I want to stay here. I love you and the white folks here, and I am afraid my master will hire me out or sell me to some one else."

At that time we hired our servants from their masters, whom we paid an agreed price. But, as the result of such constant pleadings, my father purchased household slaves one by one from their masters, although neither he nor my mother believed in slavery. If we children spoke to the slaves harshly or disregarded their feelings, we were promptly checked and reprimanded by our parents. My father also saw to it that our two men-servants learned a trade; the one learned tailoring and the other how to make shoes, though it was regarded as disloyal—at any rate, looked upon with suspicion—if a master permitted a slave boy or girl to be taught even reading and writing. When later we came North, we took with us the two youngest servants, one a boy about my age, and the other a girl a little older. They were too young to look out for themselves, and, so far as they knew, they had no relatives. We kept them with us until they grew up and could look out for themselves.

Where the future ambassador went to school in Talbot County, Georgia

(NOTE.—The second chapter of Mr. Straus's autobiography will appear in next week's issue of The Outlook.)

FRIDAY NIGHTS

BY HAROLD VINAL

ON Friday nights there's wind in the chimney
And wild gulls flying overhead.
What's wind to me or the flying gulls,
Lying alone in a sheeted bed?

On Friday nights the sea is strong
And the sound of water under the piers.
What's the sea to me and the pounding water
Or the cry of birds in my ears?

Let the wild gulls go over, over,
Crying, crying, this autumn night,
Let the wind moan loud in the chimney—
I'll not look at the bleak moonlight.

Once you were here a-lying beside me,
Your smooth fingers on my brow.
But what's autumn and gulls crying
Or the sound of water to me now?

"OVER THE HILL TO THE RICH HOUSE"

BY CONRAD RICHTER.

IT seemed a trifle cocky and amusing for a flivver to turn into Millionaires' Row. The house in question, a club-like block of buff brick, with garage to match, stood cool and impressive behind a formal lawn.

As a matter of fact, the man in the flivver was neither cocky nor a millionaire, although the number of servants in his house proclaimed the latter. He was merely Martin, of Martin & Co., jobbers in paper and twine; a stocky, round-headed man who wore his hair clipped in summer and his overcoat in winter.

Every one at the office swore by him. There were few who at one time or another had not been given a lift home in his flivver sedan.

But he was in no such favor at the house he was now approaching. Peter, his wife's chauffeur, rolled the garage doors for him with a superior expression. The same indefinable something lurked in the bland face of the butler as he unchained the side door.

"The lady about, Oliver?" queried Martin, in his cheerful, business-bred democracy.

"Madame is not down as yet, I think, sir."

MARTIN nodded a chin chiseled by long arguments with competition, hung his inexpensive hat on the glittering newel lamp, and started vigorously up the wide padded stairs. Behind him with a shrug, Oliver lifted the hat gingerly to the antlered rack overhanging the massive hall table.

At the same moment in the upper hall the door to a bedroom opened and Mrs. Elisabeth Martin emerged, suited, hatted, and gloved. She stopped, a trifle surprised to see her husband home from the office before five-thirty. He met her glance of modulated doubt with hearty enthusiasm.

"Got some news, Bess. Came home a little early to celebrate. Saved around twelve thousand to-day on a rotten market! The way things are now, that's something to brag about."

His wife's face showed perfunctory appreciation.

"That is—something." She hesitated, her eyes revealing first the thought behind them. "I must confess I have felt like a beggar recently. The Steeses have bought the Temple antiques. They are going to store their own lovely furniture. Imagine that wonderful old home furnished with those priceless things!" Her voice became bitter. "And we do not even own a stamp collection."

Her husband glanced soberly past her into the bedroom beyond, from which the perfume of her bath came luxuriantly. Certain of the eagerness had left his eyes. His voice, however, remained strong.

"You've got to realize, Bess, that a jobber doesn't have margin enough to make a million. In fact, just now, with his warehouse full and the market going the wrong way, his margin is against him." His eyes forcibly regained their buoyancy. "But nobody can say it isn't a great spring day. They called it summer down at the office. What do you say to running out to the farm a couple days and loaf around, I've been plugging pretty hard. Guess you have, too. Do us good."

Mrs. Elisabeth Traylor Martin's face revealed traces of slight irritation.

"I cannot understand, George, why you persist in remaining so stubbornly attached to that place when you know how it annoys me. We are really quite beyond the 'farm stage,' although you don't seem aware of it. I have been always thankful Mrs. Steese has never seen it. I can imagine her secret amusement at your red barn and whitewashed house. There is no effort to keep it from being terribly common."

"Why, that's the best part of it," protested her injured husband. "It lets us get this house and the help off our back. We're free. Nobody expects us to dress up or not to chop wood or help milk the cows or feed the stock—or dry the dishes, if we want to."

For a second he thought he had aroused a latent spark in his wife's eyes.

"Remember," he pleaded on, "when we started housekeeping in that two-room apartment on Second Street. Remember how our writing-table couldn't hold all the dinner dishes, so you had to put the bread-plate and sugar-bowl on the foot-board of the bed. Remember how when company came somebody had to sit on the fancy cushion on the high trunk and somebody had to sit on the bed. Those were happy days, Bess!"

"They were ridiculously silly," replied his wife. "We were so simple-minded we didn't know what pleasures we were missing. Any one can be happy if they wish to be ignorant. If you feel an incurable tendency toward the country, George, why not buy a place like the Merrills? You remember the big hedge along River Road. The house is Elizabethan, with a wonderful casino for teas. There is room for the servants and quarters for the gardeners. The Riverside Country Club is right aside. You can golf. The greenhouse and flowers are simply gorgeous. I am sure, if we bought, Mrs. Merrill would propose my name to the Garden Club. George, Junior, should never feel ashamed to invite his friends there."

"Good Lord!" said her husband. "He isn't ashamed to ask them out to the farm, is he?"

"Let us hope so," devoutly commended his wife.

"I can't believe that, Bess. There's fifty times more fun for a boy on our farm than the slick Merrill place."

"Perhaps for a boy when you were one," informed his wiser half. "Not for a boy to-day."

"If there's an animal that doesn't change," declared Martin positively, "It's a boy."

Downstairs on the library's white mantel a clock chimed. His wife drew back a hurried coat sleeve, then hastened to the head of the stairs.

"Oliver! Tell Peter to come!" She glanced back to her husband. "I shall return later to help Laura pack. The Ellises have asked me to Elliswood for a special house party. I have

George, Junior." She plucked a hair from her skirt. "If you care to run out to the Merrill place next week, I will try to go along. I know you will rave when you see it." At the sound of the rolling garage door she gave a dainty gesture of gloved adieu and gracefully descended the noiseless stairs.

THE car door clashed. The noise of the motor was subsequently lost in the stream of traffic on the street. Martin remained glancing out of the three slender landing windows to the grim gray-stone wall of the old Muhlenberg house next door. Mary, the upstairs girl, came blundering in from the back hall, humming a little Gaelic song she had learned in County Clare thirty years before. He did not glance up or around.

Later the sound of fresh young voices from the drive roused him. They were in the front hall by the time he descended the stairs—George, Junior, and another boy from the Select Hill School; Herbert, his first name was. He lived a few doors away in a brand-new Colonial pile. Martin greeted them with unaffected heartiness.

"Well, boys, how does a day like this strike your blood? How'd you fellows like to run out with me to the farm to-morrow morning?"

There was little of the expected boyish whoop. Martin saw the other youth inspect him almost brazenly from head to foot.

"How'd we go?" wondered his own boy without much enthusiasm.

"Well," replied his father, jocularly, "my Rolls-Royce ought to hold a couple lightweights like us."

Now he was nearly certain it was insolence in the eyes of the strange boy. His own son scorned him passively.

"I don't see what you want us to get shook up in a tin lizzie all the way out there for! There's nothing special going on, is there? I'm not crazy over just hiking around some old fields. Are you, Herbert?"

"I'm not!" observed that youth with cold finality.

Martin looked slightly jolted.

"You don't want to drive horses, or jump in the haymow, or go fishing, or chew birch bark, or look for a phœbe's nest on a day like this!" he demanded, incredulously.

George, Junior, looked to his friend. That young man slightly curled the corner of his mouth. The father played his last card.

"Well, look here. How about getting Mrs. Hopple to make fresh strawberry ice-cream. How's that?"

"Oh, Lord, dad," said George, Junior, "I had only two ice-cream sodas to-day! Besides, I'm going out to Herbert's country place to-morrow. They have a garage with four cars and a boat-house with a thirty-foot launch." He turned with sudden interest to his companion. "You said you'd make Thomas show me 'un the electric!" The Herbert

front door. Neither seemed aware of the convention of saying good-by.

THE father's face was expressionless as he listened to them go. He awoke to find Oliver standing smoothly before him.

"Martin & Co. wish to speak to you, sir."

Martin glanced at his watch. It was five-forty. Who at the office wanted to talk to him now?

"This is Martin," he answered in the little booth at the end of the hall, an upright coffin that reeked with expensive cigarette incense. "Oh, howdy, Ed? . . . Six wires in one hour, Ed! They must have had a powwow. . . . I'll say so. Six cents is some drop. . . . I guess we'll have to let her drop. What's the loss? . . . I said, what's the loss if we do lose something? What's a hundred thousand dollars? . . . No, I'm not crazy, Ed. I was. . . . I said, I was crazy. I'm not now. I guess I don't understand myself, Ed. Cheer up. If I'm not worried, you got no reason to be. See you to-morrow. Good-night." He hung up. Somehow the world seemed better, his back a bit eased from the long unsuspected strain.

MRS. Elisabeth Traylor Martin returned to the buff-brick home in Millionaires' Row a day earlier than she had anticipated. Her husband heard her soprano voice greet Oliver briefly at the front door. He was surprised to find himself so calm. A week ago, under a similar crisis, he would have been wanting to pace the room. Now as he heard the quick steps to the library he had to force himself to lay down his magazine.

"Hello, Bess!" he greeted kindly, rising. "Have a nice time?"

There was no reply from the white, frightened-looking woman. Swiftly she closed the door to the broad hall, then advanced unsteadily to the other side of the richly lighted birch table.

"It can't—the paper this morning couldn't—if you're taking it like this!"

He bowed his head in simple emotion.

"Martin & Company's failed, Bess. My fault principally. Paper's been too high. We carried too much stock. When the drop came, we couldn't unload." He made a crude reluctant gesture. "You got to be brave, Bess. I asked Harry Trine to buy the farm, so the Hopples would have a decent landlord."

"Not everything, George?" agonized his wife, piteousness in her eyes.

He brought down his head the infinitesimal part of an inch that was necessary. With a little cry she dropped into the high wing-chair by the white fireplace. Daze, horror, humiliation, reproach, self-pity chained her face. Presently she rose and managed to walk from the room. Standing by the library table, he could hear the key turn in her lock upstairs.

She did not come down at any time during the following day, but, to his eminent relief, appeared for breakfast the third morning, pale, bitterly resigned to the inevitable. The meal, for

the most part, was eaten in silence. The father never remembered seeing George, Junior's, young quantity of self-assurance so scattered and subdued. It was as if he had suddenly become aware of higher powers in the world than his own.

In the hall, later in the morning, she asked whether they could not leave the city. It did not matter where—just so they should meet no one she knew. She also wished she might be permitted to escape the harrowing details of the sale, the humiliation before the servants and neighbors.

He assured her on both counts earnestly. Without comment she started upstairs. As if on second thought, she turned on the landing and gave him the ghost of a rallying smile. It lightened for him much of that gray day.

To his slight surprise, George, Junior, instead of accompanying her, preferred to remain by the sinking ship. It was to be the first auction of his young life, and his intimate rôle in the proceedings was too rare to be wasted. The red flag especially excited his boyish interest. Young Herbert from the Colonial pile was not in evidence.

The servants in a body attended. Peter, the only married one of the group, bought a few trifles, to the whispered applause of the others. Once Martin thought he saw Mary dab at her eyes, but he wasn't sure. She stood a little apart from her companions. The prices paid seemed like some harsh burlesque. He was thankful Bess was not there to be tortured.

It was late when he and Junior said a final good-by to the house, now cold and unfamiliar in bare walls and floors. The boy had insisted upon remaining without supper until the end. His unfettered young eyes had missed nothing. As piece after piece of furniture, long intimates of his young life, were knocked down to strangers and carried out, he seemed to grasp the deeper meaning and extent of his family's misfortune. Once or twice Martin found his eyes on him with that mute understanding that comes from the unknown to grip the hearts of companions in distress.

"What are you going to do now?" he whispered in the trolley *en route* to the small hotel where his mother awaited them.

"Oh," said his father, with an effort toward his old heartiness, "I guess I can find a job some place."

THEY unearthed a small, sordidly furnished apartment in Elverson, a thriving little city thirty-two miles east. The apartment was on the third floor. When the wind was from the east, it brought to their nostrils the acrid taste of a cigar factory; from the west, smoke from a tall stack several squares distant. The apartment curtains and bed-linen were hardly immaculate in consequence, and the window-sills persisted in cinders. But George, Junior's, mother informed her husband, far rather than

the hourly dread of being pitied or snubbed in Pennver.

Though times were none of the best, Martin's experience found him a ready job, covering city and outlying suburbs for a local house of paper jobbers handling everything from scented stationery to butcher paper. His commissions were small at first, and several of his wife's gowns disappeared into the maw of a second-hand dealer. She deprecated the act with the assurance that she would not need them now. Nevertheless her husband knew that under any woman's skin the parting with dainty loveliness would hurt. The following Saturday noon he stopped at a little white candy kitchen on the avenue. When she glimpsed the unmistakable box under his arm, she gave an impulsive little girlish cry. Later he noticed George, Junior, with a lump of caramel in his cheek, regarding him with a degree of respect never quite attained before.

Their first pay barely met expenses. The mother of the household announced with traces of bridal resourcefulness that something would have to be done. Why not let George, Junior, help, at least for the summer? Martin nodded. He might be able to land the boy a job in the paper house at eight dollars a week. At the sound of eight dollars a week the eyes of the boy's mother gleamed.

George, Junior, himself was not averse to the idea. The romance and adventure of a daily job palled after a little, but he confided to his mother he "would rather work any day than lay around that hot apartment."

June grew steadily warmer. Now they knew why their apartment had been so fortunately found vacant. No other on their floor caught such a blast from the afternoon sun, and there were no awnings to shield. On the Fourth of July they packed a lunch and ate it by the goldfish pond in City Park. Their sense of appreciation, it seemed, had never been so keen, the shade of cool trees so grateful, the green freshness of grass such a miracle. They stayed until dark to see the fireworks. A shower deluged the trolley on the way home. The breeze felt like paradise when they got off at the corner. It was good to open the apartment windows and let through the fresh, rain-washed air.

JULY remained hot, and the early days of August in the city grew unbearable. The fourth evening Martin came home early. As he stepped from the trolley he had the feeling of having lived this moment before. As he mounted the last flight of stairs the sensation persisted. His wife, in shirt-waist, bareheaded, pocketbook in hand, had emerged from the apartment, visibly intent on grocer or delicatessen. She stopped, surprised to see him before six o'clock. He met her glance of doubt with open enthusiasm.

"Got some news for you, Bess.

Couldn't resist coming home a little early to celebrate. I sold two tons of super to a printer not four blocks from here, and eighteen reams of M. F. My commission alone's forty dollars. Boss was so tickled he gave it to me in cash."

"Forty dollars, George!" She retreated in excitement to the apartment and counted the four ten-dollar bills he placed in her hands. "We'll put it away at once toward the house!" She gave a little girlish cry of admiration. "How did you do it, George?"

"Oh, I talked up our paper like a Dutch preacher." His eyes shone. One arm imprisoned her. "What do you say to taking a run out in the country for a little vacation, Bess? I've been plugging pretty hard. So have you. It'll do us both good. Junior can go along."

She strove to resist the instant glow that had appeared in her eyes.

"I know it would be—heaven to get away. But the house—"

"Don't you be afraid of the house!" enthused her husband. "I promise you we'll be able to afford a little one by next summer. Waiting till then'll only make us appreciate it right. Besides," he added, "we can't very well get out of it now. I called Hopple up this afternoon, and he and his wife made me promise to bring you and Junior out. They didn't want to take anything, but I insisted on seven dollars a week. They've had blankets on their bed every night this week. He's going to start cutting oats about Friday. They've got four fresh Jersey cows and their garden's full of green peas and new potatoes."

"Oh, George!" weakly capitulated his wife.

"Maybe he'll knock off some board if George and I help him in the field," speculated Martin.

IT had been a torrid day, and Junior looked washed out as he came in at five-thirty. Some interest appeared, however, when he found his father home before him, talking portentously to his mother over the supper stove.

"Well, kid!" greeted Martin. "How does a day like this strike you? How'd you like to run out to the farm with your mother and me?"

There was a skeptical stare from the youth.

"Your boss ought to leave you off if you call him up at the house to-night," suggested his father. "That is, if you want to drive horses, or chew tea leaves, or look for wild hens' nests—and maybe go in swimming."

The boy's tiredness magically vanished.

"Jiminy, dad! Where'd we get the coin?"

"I talked with Mrs. Hopple over the phone to-day," went on the father. "She said maybe she'd make fresh peach ice-cream."

"Gosh!" sputtered the boy. "Say, you call up Old Man Earl, will you, dad? Tell him I got to go—just got to! I'll

go along down to the drug-store and give you his number. Come on. Be a sport! Will you, dad?"

Martin did. Later, after supper, they gathered around the ironing-board—Mother Martin actively to prepare, the useless male members of the household to talk of the morrow. Movies were forgotten. For nearly an hour Martin enlarged on his boyhood adventures on the farm. It was late when the bags were packed. The last thing Martin heard as he fell asleep was the sleepless voice of his son wanting to know if Kettle Creek was "over your head."

Seven-thirty the next morning the Martin family ensconced itself luxuriously on a pair of blue-plush seats in a day coach bound for Pennver. Junior sat ahead at an open window, hair and wash tie flying in the breeze. Frequently he turned to radiate on some passing sight. He need have no fear of his mother missing anything. Her window also was open, her shirt-waist fluttering deliciously in the grateful draft. The fresh odors of midsummer fields and woods, the romantic spice of railway ties simmering in an August sun, came even as far as Martin, who sat beside her. Before them passed a vision of God's cool green hills dotted with hardy upland homesteads. The faint blue wall of a mountain stood far beyond.

FIVE priceless days in the fresh Eden of Hopple Farm had already passed when Mr. Trine, the owner, drove up. After dinner the two old friends, Trine and Martin, sallied out for a walk to Big Sandy Spring. They had hardly reached the rear of the barn when the attorney turned to his companion with pent-up feeling.

"I want to take back that fool promise I made not to come up to Elverson to see you."

"What's the matter with you?" demanded Martin, with slow wrath hardly befitting his station. "You have my power of attorney, haven't you?"

"Your blamed 'Government bonds!' complained the other. "They touched par last week. I sold them, as you said, and the money's been lying in the bank at a measly three per cent."

"Three!" swallowed Martin. "Well, that's good. Just let it stay there—unless you know some place you can get two."

"Listen, George—" began the attorney.

"Doggone it, Harry! The proposition was that *you'd* do the worrying over the money. That's what you're getting paid for."

"That's all right. I'm not complaining," hastened the lawyer. "I just want to give you my free honest opinion that it's over my head and ears when a man comes and pays seven dollars a week board on his own farm."

"I never knew it was criminal to be happy," asserted Martin, unmoved.

"Maybe *you* are," granted Trine, reluctantly. "How about your wife? What

do you think she'd say if she found out her beggar husband was worth between eighty and a hundred thousand dollars?"

"If you ever advertise the fact!" began Martin in a cold, hard voice.

"I'm not going to advertise anything," declared the attorney. "It only shows the weakness of your position. You know you're deceiving her. You're depriving her of comforts a woman likes. You're depriving your boy of his youth."

"Either of them look particularly de-

prived of anything when you saw them

a little while ago?" wondered Martin.

"I understand you have him working in a warehouse," went on the other. "A boy his age ought to go to school—and then college."

"He certainly can," agreed Martin. "High school next month. And if he wants to go to college, nobody's going to stop him from working his way through." He took his old friend by the

arm. "Don't you worry about him, Harry. I'm not any more myself. He's got a first-rate show now to be a man. God willing, he's going to get the rest of it." With a steady hand he lighted the cigar Trine had given him. "And the wife's going to get the finest little one-woman house in the suburbs you ever saw. She's crazy for it. So am I. Stick around till to-morrow, Harry, and I'll show you how a young man like me can pitch oats."

WHERE AMERICANIZATION GETS RUBBED OFF

BY GINO SPERANZA

IN the vast field of inquiry into the processes of Americanization (a field of numberless *incognita* and not a few mirages) Europe-bound shipping at this time of the year offers interesting opportunities for study. Especially is this true of an Italian transatlantic liner, such as the one that brought us here from New York, with its long passenger list of *Americani* returning to their native land or on a pleasant tour of Italy; for these *Americani* are not at all secretive in their views and opinions, and whatever they have acquired of good or bad through transplantation to America is easily observable. It need hardly be said that such a ship-load is in no way an "immigrant cargo" presenting scenes of pathos; far from this, steerage and stateroom decks seemed to sparkle with an atmosphere of success and contentment.

Everywhere aboard the "language of the country" was "Newyorkese," the imperfections in English being due, not to alienage, but to a very rapid assimilation of the American tongue "as she is spoke." The clothes also, though they varied from Grand Street to Fifth Avenue cuts, were all indubitably of American make. Indeed, the Americanization had proceeded so far that one even heard an occasional request at breakfast for grapenuts and shredded wheat, and when an order for pancakes resulted in the presentation of an omelet practically the entire first-class laughed at the tenebrous ignorance of the ship's Sicilian cook. There was one *Americano* in the "swell set" who might have served as the perfect model of "Material Success" for a poster artist, so happily satisfied did he seem with his diamond-bespangled life and his cabinful of American trophies. Here was an illiterate but wealthy contractor on a triumphal tour of Italy, with well-laid plans to dazzle and jazz the little village of his birth by an exposition of all he carried from America. Each day he and his family donned new clothes; each day our eyes would rest on some new object of luxury taken out of Stateroom No. 1 (how he loved to have stateroom "Number ONE!"); one day a brand-new

phonograph with all the Caruso disks, and the next day an endless succession of the latest American song and jazz hits; or the new sun would rise on an impeccably perfect smoking set—the longest amber cigarette-holder on the American market, followed by a meerschau pipe with a bowl to hold a thousand dreams; and on every other day—a little tentatively this, as if one were slowly training for "the grand manner"—the latest evidence of American success: large, round-rimmed glasses such as stare at us from the oculists' shop windows. Years ago the Italian resorted to gold teeth to prove—at least to his countrymen—that he was completely Americanized; to-day the oculist's art supplants or co-operates with the dentist's in the decorative Americanization of the alien.

All this was evident on shipboard; all this, and much more; for there were many of the second and a few of the third generation with us, including high school boys who could play baseball but who had never heard of the game of *pallone* and high school girls from suburban towns rigged out in perfect similitude of the real New York flapper. And yet, after all is said, only a self-illuding optimist could be convinced by this Americanization. The substratum, the underlying personality, the real character of ninety-nine per cent of these *Americani* was distinctly *Italic*; more than that, it was individually Genoese, Sicilian, or Neapolitan, as the local strain might be, persisting, often unconsciously, from generation to generation, in outlook and manner of thought. Nature works slowly, though it occasionally jumps, and even the span of several generations of American environment is as but a moment in the process of assimilation. Environment makes surface changes, remarkable surface changes, but these are as nothing to the persistence of inherited racial and ethnic qualities and tendencies. This is the basic fact so often neglected by professional "Americanizers" who want "quick effects" from their labors. Take the matter of loyalty to America, for example; it would be hard to find such unassailable patriotism for the United

States as filled the hearts of the people on that ship, a patriotism almost overbearingly proud of everything American; yet indefinitely, or even darkly in the back of almost every mind there, the idea of the *patria*—that vague yet tremendously cohesive sentiment which binds large groups of men into nations and which constitutes the imponderable force of a well-knit state—the idea of the *patria* as an intellectual and historical patrimony in all of them was *Italia*, not America. This does not mean disloyalty or any lack of the sense of allegiance to the United States, but it confirms the unescapable fact of racial instinct which Americanization cannot overcome except, possibly, in decades of assimilative processes, if at all. "You are an American?" asked a New York born Italo-American of an old New Yorker who was on the same ship. And to an assenting reply came the further query: "But you are a *real* American, are you not?" And that, somehow and indefinitely, made all the difference for the others on board. The old New Yorker, though a fellow-citizen, was at once, and almost instinctively, recognized as not "in the family;" as one who could not be counted on to always "understand," not even if the old New Yorker spoke Italian and knew Italy a hundredfold better than the high school boy born in Passaic of Genoese parents! Indeed, the New Yorker, however estimable and agreeable, was a "false note" in the ship's harmony, a restraining factor on the rest, who had hoped that, on an Italian ship at least, they could be "themselves again."

Among the other passengers there was a Sicilian family of the well-to-do agricultural class: silent, proud, and well-mannered in a fine primitiveness. The father was returning from a three years' visit to his *Americani* sons in Ohio; with him were a daughter in good American clothes, and her mother and a maiden aunt. I asked this proud, somewhat mediæval character his impressions of America. "*Grande paese*," he said, adding ungrudgingly, despite his insular pride: "I really believe that in *civiltà* America is ahead of Sicily." The greatness of the country, its democ-

racy, and especially the good will and courtesy of our people, had made a distinct impression upon him, even though he could not see why we were so crazy as to call *neve* "snow." Why, why call it snow, which meant nothing to him? But he was grateful, very grateful, for the opportunities which America had given his two sons; they were very successful out there in Ohio, they were men of property and position in the new land, and he understood why they would not come back to Italy with the family. "But," he added, slowly, as his dark, Moorish eyes looked out on the ocean as upon unescapable fate, "*ritorneranno, certo ritorneranno*; they will certainly come back." Yes, they all "come back," some perhaps only in spirit, but they all come back "to the race;" they all eventually cast off the new idols, and think in the old, old ways. And the old man gave me the history of his town, an ancient history of which he was proud. "My *paese* was first called Aquila, but an earthquake destroyed it hundreds of years ago; over its ruins a new town was built, and this too was destroyed by an earthquake, all except a church where there were wonderful pictures of the nativity of the Virgin. But after this second earthquake a great prince who

lived in Palermo and was our feudal lord gave all his holdings in our part of the island to the people because he had an affection for them; and the prince's brother, who was a very learned monk, planned a new city, a marvelous plan such as had never been thought of before—a hexagonal city! And the people wished to call it the town of Michele, for that was the prince's name, but the monk, who was a holy man and saw visions, said: 'No, call it rather Gran Michele, for I know it will grow into a great city.' And the prophecy came to pass, for the town grew and grew, always in large hexagons, until now it counts all of thirty thousand souls." I asked if the people were happy. "Yes," he answered, gravely; "they are all well-to-do *Americani*, and own land, and have the best schools in Sicily, and eight churches, and good water."

I thought then, as I had so often thought before, whether Americanization of that kind—this schooling of the lives of those who come to us only to return—is not more worth while, and certainly more effective, than that highly artificial "Americanization" through the forced absorption of such aliens into our body politic by naturalization or into our body social through legislating them

into our standards of living. This latter form of Americanization is, even in the second generation, the thinnest of veneers, which rubs off under a very little wear and tear; it is a veneer which even when thoroughly worked in and highly polished, as in the case of our Germanic population, gets pretty badly cracked under severe knocks, as we have seen on some occasions during the war. It may be urged that the other kind of Americanization is too altruistic and too ideal for practical and political purposes. Yet it has created in certain parts of Europe, and notably in southern Italy, "spheres of American influence" such as no diplomacy under the old dispensation, and no mandate under the new, can ever hope to achieve. These returned immigrants, these ardent *Americani*, have made us known in Italy as no propaganda, no exchange professors, and no diplomatic "penetration" could have done. And it is the simple, direct, every-day human knowledge of our ways and of our views such as these immigrants bring home that constitute "understanding," that kind of human understanding which is the only basis for and the only real assurance of international peace.

Naples, Italy.

A PLEA FOR THE PLATITUDE

BY BRANDER MATTHEWS

IT is greatly to be regretted that we do not know the name of the man who boldly declared that "Grover Cleveland was the greatest master of platitude since George Washington." It would be amusing to inquire whether he meant this for a compliment to Cleveland or for a reproof to Washington. It would be interesting to ask him also whether he was prepared to allow that a practical politician at the head of the commonwealth ought to be a master of platitude. If the unknown utterer of this pregnant saying was willing to admit this, he would find himself in the comfortable company of that shrewd student of affairs Walter Bagehot, who held that a statesman was likely to be most useful to the community when he combined common ideas and uncommon ability.

One of Cleveland's more recent successors in the Presidency of the United States was accused of talking about the Ten Commandments just as if he had received them as a direct personal revelation to himself. Now there is no denying that Theodore Roosevelt was wont to talk in this fashion. And why not? As a matter of fact, the Ten Commandments had come to him as a direct personal revelation; for so they must come to every one of us who is ready to receive them and to take them to heart. In the case of Roosevelt, as in the case of Washington and Cleveland, that

which was foolishly meant as a reproof turns out to be really a compliment. There can be no more imperative duty for the chief of state in a democratic republic than to reiterate the eternal verities. It is his privilege also to profit by the megaphone which destiny has put at his lips to cry aloud these imperishable truths and thus to force them upon ears that might otherwise refuse to listen. It may be charged that when a leader of men is insistent in asserting again and again that honesty is the best policy he is lowering himself to the inculcation of the obvious. But if this is just what he believes to be needful at the moment, he has no right to shrink from saying once again what many have asserted before him. Stevenson hit the center when he suggested that, "after all, the commonplaces are the great poetic truths."

Perhaps there is small risk in declaring that we Americans have a lust for novel ideas; and we listen with jaded credulity to all who get up in the market-place to proclaim a new gospel. Yet we are all aware that what is new is not likely to be true and that what is true is very likely to be old. We all know this, and yet we are often impatient with those old fogies who abide by the ancient landmarks. We are prone to laugh at the mossbacks brave enough to risk the reproach brought against the katydid, which has the habit of saying

"an undisputed thing in such a solemn way." The undisputed things are always in danger of being neglected, and they need to be said afresh to every generation in the special vocabulary of that generation and with whatever of solemnity we can command. The wisdom of the fathers must be restated for the benefit of the children, and yet again for the guidance of the grand-children.

Just as it is a certain evidence of juvenility to shriek out an accusation of plagiarism whenever two plays happen to have a casual resemblance of situation or whenever two poems chance to have a superficial identity of phrase or of cadence, so it is an assured sign of immaturity to sneer at the political leader who reasserts the principles which he deems permanent and essential for the common weal and to scoff at him as a dealer in platitudes and as an expounder of commonplaces. No commonplace can be staler than the plain statement that two and two make four; and yet on occasion there may be wisdom in reminding the public that two and two cannot be forced to make either more or less than four. "Commonplace," said Lord Morley (in words that sound almost like an echo of Stevenson's), "after all, is exactly what contains the truths which are indispensable."

The brief speech which Lincoln delivered at Gettysburg nearly sixty

ago is now accepted as one of the masterpieces of English prose, withstanding comparison with the address on a similar occasion that Thucydides put into the mouth of Pericles. It is as perfect in its lofty dignity of sentiment as it is in its lapidary concision of style. But there would be little difficulty in proving that it contains nothing new, since the thoughts that sustain it are as self-evident as they are sincere. They are the ancient thoughts which demanded to be voiced again then and there. The stones of this sublime structure are commonplaces, recognized as such long before Lincoln was born, long before Columbus set sail on the Western ocean. These well-worn blocks Lincoln chose for his own use with his unerring skill; and he cemented them together once again by his own personality.

Hamlet's soliloquy, "To be or not to be," is a mosaic of sentiments and of opinions familiar to every one of us from our youth up and already phrased in all sorts of fashions in every tongue, living or dead; nevertheless that monologue, compounded as it may be of commonplaces, bereft of all novelty, glows and burns with the inner fire of Hamlet's soul at that awful crisis of his fate. It propounds, once for all, the mighty question we cannot help putting to ourselves when we also find ourselves in the valley of the shadow. And when the time comes for any one of us to face those questions we shall not cavil at their antiquity, for then they will erect themselves in front of us with a new-born challenge.

It may be acknowledged frankly that the Gettysburg speech and Hamlet's soliloquy are extreme cases. The savor of a stimulating individuality is likely to be lacking from compositions as fundamentally unoriginal as these two are seen to be when they are reduced to their elements. A commonplace is effective, and therefore not merely to be pardoned, but even to be praised, only when it is a personal rediscovery of the speaker, when he unhesitatingly believes himself to be speaking out of the fullness of his own feeling. At the moment he may not know, and he surely does not care, whether or not the things he is called upon to speak have ever been uttered before; and he is well aware that this does not matter at all, since these things have come to him fresh from his own experience, hot from his own heart. Then the platitude is redeemed and transfigured by poignant personality, as when the fabled Scotchman asseverated earnestly that "Honesty is the best policy," adding by way of explanation, "I hae tried baith." What can be more commonplace than "honesty is the best policy"? It is the tritest of truisms, but it came to the mouth of that man from the depth of his own soul. He had no doubt but that he was lighting a torch for the feet of those that wander in darkness.

Deprive commonplace of this note of rediscovery, by which the old is made

new of its own accord, and it is the abomination of desolation. A sequence of platitudes peddled from a platform by an uninspired speaker who refuses to rely on his actual feelings, who never had an idea of his own, and who is seeking to say only what nobody will dispute—this cannot fail to be stale, flat, and unprofitable, even if every single commonplace of which it is compacted may contain an inmitigable truth. It is the prevalence of speechmaking of this sort, so threadbare and so colorless that it seems insincere, which revolts those who demand that a man shall reveal some evidence either of emotion or of cerebration before they will listen to him. This attitude is natural enough, but it brings with it a double danger. First of all, it tempts us to disregard the truth which may be clothed in the most offensively insipid commonplace; and, second, it allures us away into the primrose path of paradox.

The commonplace is not always to be accepted at its face value. It may not be true now, whatever it has been once upon a time; and it may even never have been true, but only plausible and specious. There is no virtue in the commonplace itself, and there may be vice in it. Its value resides wholly in the truth which it may contain and which each of us must appraise for himself. But, as the truth is not necessarily inherent in a platitude, neither is it necessarily inherent in a paradox. Even Mr. Shaw and Mr. Chesterton, if pushed to the wall, would probably be willing to admit that there are some paradoxes which are not true. They might be ready to accept the definition of a paradox as a truth-serving its apprenticeship.

That is what a paradox may be, no doubt; it may be a peremptory challenge to a commonplace which has ceased to sheathe the verity, even, if it has not yet worn out its welcome. The paradox of this quality, however, is not really a paradox; it is only a pseudo-paradox, it is a new shape of truth; and by that very fact it is condemned to become a commonplace in its turn, whenever it shall have ousted the platitude it is attacking. This pseudo-paradox, which sooner or later will inevitably issue from unthinking lips as an impregnable platitude, is never merely a commonplace reversed. To turn a truth upside down is not to turn it inside out. To stand a truism on its head is profitless; and there is no stimulus to clear thought in the glib suggestion that "dishonesty is the best policy" or that "procrastination is the guardian of time." An infelicity of phrase-making like this may have an evanescent glitter, yet it is but the crackling of thorns under a pot. It may amuse babes and sucklings for a little season to be told that the devil is not as black as he is painted, since he possesses at least the Christian virtue of perseverance. Verbal fireworks are attractive only to the very young. The writer whose pages coruscate with un-

expected inversions of accepted beliefs and who exhibits himself as a catherine-wheel of multicolored paradox is likely soon to sputter out in dark and in silence. If Mr. Bernard Shaw has any abiding value as a stimulating thinker, this is in spite of his flamboyant method of expressing himself and not because of it. Sincere thinking is likely always to utter itself simply and modestly.

A French critic has asserted that men may be grouped in three classes so far as their attitude toward the truth is concerned. First of all, there is the immense majority, assured that the wisdom of the past will be the wisdom of the future and glad always to hear again the accepted commonplaces. Second, there is a youthful minority, weary of these traditional statements and avidly relishing any paradox which seems to pierce the crust of convention. Third, there is the little knot of those who are in the habit of doing their own thinking and who are ever ready to receive a novel idea on probation, to weigh it cautiously and to test it thoroughly, with willingness to accept it ultimately and to make it their own thereafter if it approves itself. It is from this small company that new ideas come into being and get into circulation. The members of this third group have to be won over before any novelty has a valid chance of acceptance; and when at last they have been taken captive the members of the first group will slowly, very slowly, and after violent opposition, follow in their wake. The chosen few carry the flag to the front; and trailing after them comes the immense majority which gives solidity to the body politic, changing its mind only by almost imperceptible degrees. And the second group, the youthful minority, with its delight in disintegrating paradox, is almost negligible, because it lacks intellectual sincerity. Its puerile protests against the platitudes which buttress the social organization merely irritate the immense majority, while they evoke only tolerant contempt from the wiser men who do their own thinking. The youthful minority is puffed up with pride at its discovery that elementary truths are commonplace. But bread and beef are the commonplaces of diet, none the less wholesome, and indeed none the less welcome, because they lack the spice of novelty. Man cannot live by paradox alone. If the staff of life chances to be contained in any paradox, then this is not a true paradox, and then also it is on the way in its turn to become a platitude. It was Boileau who remarked that "a new thought is a thought which must have come to many, but which some one happens first to express," and this is perhaps the source of Pope's "What oft was thought, but ne'er so well exprest." If we insist on escaping from the fenced field of the commonplace, we cannot complain if we find ourselves landing in the thorny hedge of freakish unreason.

AN ITINERANT MERRY-GO-ROUND IN NEW YORK CITY

PHOTOGRAPHS BY HENRY HOYT MOORE

Did you think that nothing short of the thrills of movies or gliders could excite the sophisticated imaginations of Manhattan kids? Well, the same old medieval sorcery of the merry-go-round still persists. There's a spell about the hand-organ and a mesmerism about spinning round and round that no youngster can resist

Both in the dingy tenement streets of the lower East Side and in the broader avenues near Central Park the approach of the merry-go-round is an event. The tickets are cheap enough—a cent apiece—to enable ragamuffins to ride. And the ride is beguiling enough to make little millionaires drag their French nurses then and there to the merry scene

THE BOOK TABLE

FICTION

HERETIC (THE). By J. Mills Whitham. The Macmillan Company, New York. \$2.

The author presents a singular character in Raymon Verne; as a boy he is a "natural bone-setter" and becomes a manipulative surgeon, to meet with fierce opposition from the regular profession. Later his genius turns into other directions, but success never crowns his ideals. The novel has originality and intellectual force, but is not definitely planned.

HIS GRACE GIVES NOTICE. By Lady Troubridge. Duffield & Co., New York. \$1.75.

Clever in its early pages and in the character of the footman who is a duke, commonplace in the later working out of plot.

HOUNDS OF BANBA (THE). By Daniel Corkery. B. W. Huebach, Inc., New York. \$1.50.

Nine short stories by an Irish writer new to America. Mr. Corkery belongs to a generation younger than that of the exponents of the Irish renaissance, and this book is concerned with the life of contemporary Ireland. Specifically it treats of Ireland in revolution, and of life in the Republican army. Despite a finely dispassionate attitude toward political issues, perhaps even because of it, Mr. Corkery has given the noblest interpretation we have yet received of the current of thought and feeling in Ireland to-day. It is not, however, for this that his book is notable. Its true distinction lies in a poetic beauty and an exquisite artistry that flood each brief narrative.

BIOGRAPHY

ADMIRALS OF THE CARIBBEAN. By Francis Russell Hart. Houghton Mifflin Company, Boston. \$3.

Three centuries of adventure in the Caribbean Sea regions are here summarized in the life stories of Sir Francis Drake, Sir Henry Morgan, Admirals de Pointis du Casse and Vernon, and Lord Rodney. The chapters are scholarly, well considered, and readable.

PRIME MINISTERS AND PRESIDENTS. By Charles Hitchcock Sherrill. Illustrated. The George H. Doran Company, New York. \$2.50.

No less than fifteen Prime Ministers and four Presidents of European countries, four British Dominion Premiers, and eleven eminent statesmen and diplomats of Japan cross the stage of the present volume.

Mr. Sherrill is a keen observer and is able often to describe a man in a very few words—for instance, the Rumanian Take Jonsescu. He is, we read, "a clever writer and a keen judge of just how political cats are going to jump. . . . He is certainly a most engaging talker, and in the easy flow of his remarks one frequently sees through to a rock-bottom of studied wisdom, in which, however, he seems to take less pride than in his skill at deft turns of policy. . . . There is no denying that Rumanians of this type are unusually pleasing in manner, and especially is

this true of Jonel Bratianu, more than once Prime Minister." Such a book should have had an index, for its value as a book of reference is even greater than its charm as a volume of description of notable men.

Aside from the personal element, two impressions gained by General Sherrill in his journeys are of wide interest. One is that, in the opinion of every European politician, "all his country's woes, economic or otherwise, would be cured by giving it a piece of neighboring territory." Another impression is that "all of Europe west of a line, so drawn as to leave to the westward Great Britain, France, Spain, and Portugal, has no effect upon the vote in America, while the countries to the east of it, from the North Cape to the tip of Italy, strongly affect our vote."

STORY OF A COMMON SOLDIER (THE). By Leander Stillwell. The Franklin Hudson Company, Erie, Kansas.

A soldier of the Civil War fights his battles over again in this book, and does it well. The stories, homely as they are and appearing in a homely setting, "ring true," and the book will take its proper place in the literature of personal narrative dealing with the great American conflict.

DRAMA

IMAGE AND OTHER PLAYS (THE). By Lady Augusta Gregory. G. P. Putnam's Sons, New York. \$2.

Of the four plays contained in this volume, three are in the *genre*, lying midway between comedy and farce, that Lady Gregory has made distinctively her own. Her art, despite a deceptive surface of simplicity, is the product of a sophisticated observation and a facile dramatic technique. She writes of Irish peasant life as one keenly aware of its incongruities, its humor, and, occasionally, its pathos, but conscious always of an amused superiority to the characters who people her plays. The fourth play draws upon spiritualism for its theme in an effective but unconvincing fashion.

HISTORY AND POLITICAL ECONOMY OF AMERICA AND THE BALANCE SHEET OF EUROPE. By John F. Bass and Harold G. Moulton. The Ronald Press, New York. \$3.

This work of collaboration deserves wide reading. To Mr. Bass are due, no doubt, the elaborate and painstaking assemblage of facts and figures and the large amount of first-hand observation one might expect from a foreign correspondent whose reputation for trustworthiness is first rate. To Professor Moulton is probably due the credit for the systematic arrangement of the text, the thorough editing of the volume, and the proper presentation of material upon which discussion and argument may be based.

The present volume seems tinged with pessimism. Not that its pessimistic interpretations are necessarily destructive. On the contrary, where the authors tear down the present structure of international economic relations so that they

may examine its weaker parts definite proposals are made for correction. While there is not the slightest suspicion of distortion in order to establish a predetermined result, their book is based upon circumstances which are assumed as actual and perhaps known, but to which not all the spectators may be inclined to agree.

In setting forth their programme of policies, the authors declare that domestic production must be increased in every country, that balanced international trade and the gold standard must be restored, that international budgets must be balanced.

To this end what must Europe do? The authors reply: "Reduce reparation demands and cancel inter-European war debts, eliminate tariff and trade barriers, and restore international transportation routes; abandon governmental support to national combinations for export trade and foreign exploitation; repudiate the bulk of the issues of paper currency and domestic bonds." What must the United States do? The authors reply: Cancel European indebtedness to us, lower our tariff duties, contribute part of our gold reserve to maintain the European gold standard, make loans for purely reconstructive purposes, and finally, reduce armaments.

TRAVEL AND DESCRIPTION

ITALY OLD AND NEW. By Elizabeth Hazleton Haight. E. P. Dutton & Co., New York. \$2.50.

The somewhat commonplace title of this book fails to do justice to the lively, imaginative, and pleasantly learned style of the author. Her book is full of the joy of the devoted lover of Italy and of the famous characters of Roman and later Italian history. The book will be a delight to discriminating visitors to Italy.

LABRADOR. By Wilfred T. Grenfell. The Macmillan Company, New York. \$2.50.

A new edition of an authoritative book about a land that increasingly attracts the attention of explorers and prospectors. Dr. Grenfell's new chapter about the conservation of Labrador's resources is interesting and timely.

TRANS-MISSISSIPPI WEST (THE). By Cardinal Goodwin. D. Appleton & Co. \$3.50.

Professor Goodwin gives us in this book a detailed and impersonal record of the Western expansion of the United States from the time of the Louisiana Purchase to that of the Mexican Cession. These fifty years constituted a vital period in the growth of the country, and this period is here succinctly described.

POETRY

WILLOW FOLLEN. By Jeannette Marks. The Four Seas Company, Boston. \$2.

This is Miss Marks's first volume of verse, and it is a most excellent entrance into a field wherein she assuredly deserves a place if not by strength of thought and inspiration at least by verbal felicity and a delicate feminine touch that is always distinguished and

DU PONT

His visions have crowded the highways of commerce!

A NEW figure has come into the world's commerce . . . a year by year looms as his helping hands reach deeper into the world's essential in Chemical Engineer... strange mingling of the man of science with the manufacturing expert . . . a chemist who has forsaken his test-tubes for the lathes and vats of the world's industrial plants.

This is the man who, more than any other, has crowded the highways of commerce, and in the past generation made the Zulu and the Eskimo brothers in the world's market-places. For it is he who has brought to the manufacturer's assistance, in a *practical* way, the chemist's slowly-won mastery over Nature's elemental substances.

It is he who, applying chemistry's discoveries, has made available new substances, new uses for long-used substances and uses for products that once were waste, and has invented processes less costly and less wasteful . . . It is he who has intensified the world's production, lowered costs and driven the carriers of commerce to the far corners of the earth seeking the raw materials industry needs, or carrying to market its finished goods.

* * *

HOW the Chemical Engineer has quickened the pulse of commerce is well illustrated by the history of the du Pont Company. For a century after its founding in 1802, the du Pont Company was a manufacturer of explosives . . . nothing else.

come into the world's new personality that larger in importance reach deeper into the dustries. He is the and truly he is a abilities . . . a coupling

But its founder, Eleuthere Irénee du Pont de Nemours, was himself a chemist, and the making of explosives, even in his day, called for the services of the chemist. As dynamite was invented and other high explosives came into use, increasingly higher types of chemical knowledge were needed. So it was only natural that in the early years of this century the du Pont Company came to have a very extensive chemical staff.

It was a staff of Chemical Engineers, men who knew manufacturing as well as chemistry, and so in the course of research looking to the improvement of du Pont explosives, they came upon other products alike in their chemical structure, that might be manufactured from the same or similar basic materials or by machinery and processes with which the du Pont Company was familiar.

And the results are sometimes surprising to those who look only at the products, which seem so unrelated, and do not consider the origin of these products. "For," says one, "what have dyes to do with explosives?" What, indeed, except that the raw materials from which explosives are made, are the same that are needed for making dyes!

So, too, for the same reason, the du Pont Company came to make Pyralin for toilet articles and numerous other things; and Fabrikoid for upholstery, luggage, book bindings and half a hundred other uses—for these products contain many of the same raw materials.

Paints and Varnishes now carry the du Pont Oval, because this field of effort is also one in which the knowledge of the Chemical Engineer can be effectively applied.

The du Pont Oval also guarantees the purity and excellence of many chemicals, some of vital importance to industry, others invaluable in modern surgery and medicine.

This is one of a series of advertisements published that the public may have a clearer understanding of E. I. du Pont de Nemours & Co. and its products.

E. I. DU PONT DE NEMOURS & COMPANY, Inc., Wilmington, Del.

Save the Enamel of Your Teeth

COLGATE'S Cleans Teeth the Right Way

"Washes" and Polishes—Doesn't Scratch or Scour
IT IS A DOUBLE ACTION DENTIFRICE:

- (1) Loosens clinging particles.
- (2) Washes them away.

Sensible in Theory

Colgate's Ribbon Dental Cream cleanses without disturbing Nature's balance. Avoid dentifrices that are strongly alkaline or appreciably acid. Colgate's helps to maintain the right mouth conditions.

Correct in Practice

Harsh drugs and chemicals harm tissues. Colgate's Ribbon Dental Cream does not contain them. Authorities agree that a dentifrice should do only one thing—clean teeth thoroughly. Colgate's does this, and is the safest dentifrice for habitual use.

THE most valuable part of a tooth is its surface—the thin coating of enamel that is Nature's protection against decay. Are you tearing down with gritty tooth paste the only defense your teeth have against decay? Every time you scratch them the injury is permanent.

COLGATE & CO.
Est. 1806
NEW YORK

Colgate's cleans teeth thoroughly—no dentifrice does more. A LARGE tube costs 25c—why pay more?

Truth in Advertising Implies Honesty in Manufacture

"THE SHORN LAMB"

By

Emma Speed Sampson

Author of

"Mammy's White Folks"

The old-time darky and the witching little "shorn lamb" are very much alive in this colorful romance of Old Virginia and the new South.

(THE BOOK TABLE—Continued)

sincere. Her moods, mainly inspired by nature, are fresh and authentic, and they are handled in a naïve and tender fashion that makes them well worth their inclusion in book form. Nothing more can be asked of poetry than the sincere and exalted betrayal of one's self. If Miss Marks never climbs very high, at least she is mistress of that undoubted plane to which she does rise. She knows her limitations, and within them she composes a volume of tender minor poetry that is extremely enjoyable to read. The majority of Miss Marks's poems are in free verse, and, while it is generally unwise to quote but part of a piece of work, space here allows only the quotation of the first two verses of "Sea Gulls" as an exhibition of her work in this medium:

Sea gulls I saw lifting the dawn with
rosy feet,
Bearing the sunlight on their wings,
Dripping the dusk from burnished
plumes;
And I thought
It would be joy to be a sea gull
At dusk, at dawn of day,
And through long sunlit hours.
Sea gulls I saw carrying the night
upon their backs,
Wide tall spread crescent for the
moon and stars—
The moon a glowing jellyfish,
The stars foam flecks of light;
And I thought
It would be joy to be a sea gull!

SCIENCE

COMPLETE OUTLINE OF SCIENCE (THE).

By J. A. Thomson. Vol. III. G. P. Putnam's Sons, New York. \$4.75.

The third volume of this important work maintains the standard set in the previous volumes and makes a still more popular appeal, dealing as it does with psychic science, biology, meteorology, and various phases of applied science such as electricity, wireless telegraphy, and aviation. The chapter on psychic science by Sir Oliver Lodge will arouse antagonism in some quarters because of what may be called its "receptive" attitude toward clairvoyance, psychometry, and even "dowsing."

MISCELLANEOUS

MEMOIRS OF A CLUBMAN. By G. B. Burgin. E. P. Dutton & Co., New York. \$5.

An amusing book of literary and social gossip by a London journalist and man of the world. Stories about Barrie, Jerome, Baker Pasha, Conan Doyle, and many other well-known men enliven the narrative.

PUPPET SHOW OF MEMORY (THE). By Maurice Baring. Little, Brown & Co., Boston. \$5.

An English journalist and critic with an astonishing memory for details gives us in this book his recollections of men, women, and events covering a period of forty years. There are innumerable anecdotes, some of them inconsequential, many of them highly significant, in connection with noted men, but all breathing the irrepressible vitality of a strenuous personality. The reader who likes to dip into a book at odd moments will find in this one considerable entertainment.

CAN UNEMPLOYMENT BE REDUCED?

BY ERNEST G. DRAPER

PRESIDENT OF THE AMERICAN CREOSOTING COMPANY

BUSINESS men are proverbial opportunists. When skies are clear and winds are fair, they crack on sail until their industrial barks groan under the straining canvas. Let a sudden squall come up, and their alarm is exceeded only by their surprise that such an unlucky, fortuitous circumstance should catch them unawares. Canvas rips, masts snap, and once in a while the whole precious cargo goes to the bottom. But the captain usually conceives himself as the very last one to be blamed. So certain is he of his own innocence that, once the storm is over, he is eager to jam on sail again just as though periodic squalls were as infrequent as earthquakes.

We all know now that we have been through the greatest economic storm our civilization has ever seen, and most of us feel that the skies are definitely clearing. But whereas a few months ago, when all seemed black and uncertain, we were ready to listen to any one who had something to say on the increasingly grave problem of unemployment, it is much harder to invoke real interest in the subject to-day, because to so many business men the problem seems solved of its own accord. It will not be until the next depression hits us that we shall realize all over again how little we have done to attack the evil at its roots. Yet since some time we shall have to deal directly with this slow poisoning of our industrial fiber, there can be no harm in stating briefly how necessary is the cure and what we could do to hasten it.

What are the stakes involved in reducing unemployment? They cover the tremendous material waste in these periodic wrenches of our industrial machinery, to say nothing of the spiritual waste involved. We are just beginning to realize that the high peaks and low hollows of seasonal trade, followed by orgies of hiring, firing, and hiring again, are infinitely more expensive than more or less stabilized production.

According to the Federal Census for 1900, over 6,000,000 persons were unemployed during the year 1899 for periods varying from one to twelve months. The American Association for Labor Legislation has estimated the total annual loss of wages of these workers at over a billion dollars. This loss of a billion dollars had to be underwritten by society in some way, either through public or private relief, loss of savings of the unemployed, or permanent crippling of the physique of those unemployed, which in turn lessens the productive power of the country.

We are also beginning to sense more vividly than ever the deep-seated power of unemployment to breed labor unrest. Some authorities go so far as to prophesy the virtual collapse of unhealthy restlessness on the part of the workingman if only he can feel a real tenure in his job. The experience of Whiting Williams, a former vice-presi-

dent of the Hydraulic Pressed Steel Company, who deliberately went to work as a laborer to learn what was on the worker's mind, confirms this prophecy. He writes: "When we regularize industrial processes and when we make it possible for men to get out of their daily jobs the same sort of satisfaction that keeps you and me going on ours—in the overcoming of difficulties and the solving of problems and getting into our souls our sense of worth and a certain amount of recognition from our friends—then we are going to find men desiring less and less of these strange Utopias that worry us and trouble us and make us wonder what kind of minds these men can have."

The stakes involved, then, in reducing unemployment are tremendous. They are so great as to challenge the very best of effort on the part of every one in touch with the situation. This effort is peculiarly an obligation of the employer, because, after all, he is not only as interested, for material reasons, as the employee, but no real advance short of compulsory legislation or ultimate revolution by the workers can be made without his co-operation. But, besides employers, the whole rank and file of society is concerned. It is deeply concerned, for the simple reason that every member of the community is either directly or indirectly affected by its existence.

Unemployment can undoubtedly be reduced, and reduced permanently, first, by attacking the problem in a personal way through the effort of individual employers, and, secondly, by attacking the problem in a public way through the adoption of various expedients to be mentioned later.

How can individual employers reduce unemployment in their own plants? The best answer to that question is to cite the experience of employers who have already done it. The Dennison Manufacturing Company, of which Henry S. Dennison is President, has adopted various means to regularize production in its plants. A recent statement by its personnel department shows how seriously and intelligently this problem is being met. It says:

At the plant of the Dennison Manufacturing Company a marked reduction of seasonal employment has been effected by the application of certain clearly conceived principles. These principles were not put at once into sudden and complete operation, but were given a practical try-out, and were extended first in one direction and then in another, as conditions made possible. In the nature of things, any very considerable reduction must be a matter of gradual development. It is, indeed, going on here to-day, with the goal far ahead of present attainment; but results so tangible have been secured that the means through which they have been achieved are no longer untested. The five principles applied include:

1. Reduction of seasonal orders by

Choose a safe antiseptic

IN SELECTING an antiseptic you want one that will halt bacterial development—yet one gentle enough to do no injury even to the most delicate tissue.

Listerine has proved itself efficiently safe for half a century. Its scientific combination of essential oils and essences with a saturated solution of pure boric acid (one of the most wholesome and healing agents known to medicine) furnishes you an ideal antiseptic protection.

You take no chances with Listerine. Yet you *know* it is doing its work and doing it well.

Here are some of the many uses Listerine serves:

Some of its many uses

A safe, unirritating antiseptic for cuts, wounds and scratches, affording protection against infection while Nature heals.

As a gargle for sore throat to ward off more serious ills.

As a spray in nasal catarrh.

A safe and fragrant deodorant in matters of personal hygiene.

As a mouth wash to correct unpleasant breath [halitosis]

Delightful after shaving.

Effective in combating dandruff.

Useful in many skin disorders.

Read carefully the booklet packed with every bottle of Listerine. It suggests many other household uses to which Listerine is adapted.

Always have a bottle near at hand in your medicine cabinet.

Lambert Pharmacal Co.

Saint Louis, U. S. A.

CAN UNEMPLOYMENT BE REDUCED?

(Continued)

getting customers to order at least a minimum amount well in advance of the season.

2. The increase of the proportion of non-seasonal orders with a long delivery time.

3. The planning of all stock items more than a year in advance.

4. The planning of interdepartmental needs well in advance.

5. The building up of out-of-season items and the varying of our lines so as to balance one demand against another.

Besides these methods of decreasing the pressure of seasonal demands and evening out the inequalities we can meet seasonal employment by conforming ourselves somewhat to it. We can balance the decrease in work of one department against the surplus of another. We can transfer operatives not needed in one line to another where there is work on hand. In doing so we make it a rule to transfer our operatives to the same off-season work each time, so that they will develop proficiency in these off-season trades.

Some of the same expedients have been adopted by the Hills Brothers Company, importers and packers of dates. Originally the demand for dates was confined to the fall and early winter, and particularly to the holiday season. By judicious advertising as well as sales effort the season for eating dates has been lengthened, so that now dates are considered appetizing (as they should be) from September to June. Even so, it is inevitable that a peak of demand will exist in the early fall. To meet this demand a cold-storage warehouse was erected into which is placed the daily production. Plans are so made that packing these dates continues month in and month out at a comparatively even rate, but, as sales fall off in the summer, a surplus is built up and held in the cold-storage warehouse ready for instant release when the fall demand becomes insistent. As a result of this system, the regularization of employment has been remarkable. The whole factory morale has been strengthened by the avoidance of hiring and firing wrenches, which were so upsetting under the previous conditions.

Although numerous other examples of this nature could be given, their number is pitifully small as compared with the number which might be given if only the requisite amount of foresight and planning were used by all employers alike. To grant that all business is more or less seasonal is not to grant that deep hollows of production must always remain deep. Probably ninety per cent of all business to-day could become more effective as well as more regular in the employment of its workers if the peaks were left alone and persistent, careful thought were given to the question of leveling up the hollows. Efforts to regularize employment are not charitable in the sense of being undertaken without hope of pecuniary reward. They are efforts that spell at the same

time economic security for the worker and larger profits for the employer.

It will be necessary to do more than enlist the private efforts of employers in their own plants, however, in order to solve the problem of unemployment in any complete way. In the first place, our cities can help greatly, and in a twofold way. All public work requiring a large percentage of labor can be held off every year until that time in the year when the average manufacturer's business is slack. Such an expedient will tend to iron out the yearly seasonal wave of unemployment. There are also the waves of panic years which strike us with disheartening regularity every ten years or so. As provision against these a special reserve fund can be built up to be spent upon the erection of needed public work in times of severe business depression.

The Federal Government should do its part also in sharing this burden. In 1921, for instance, it has been estimated that \$158,000,000 of National funds were available for road building. Appropriations for Federal buildings, rivers and harbors, post offices, etc., could be held down to the minimum for several years, and then be expanded with safety when periods of stress threaten. Combating unemployment by these methods is nothing new. So long ago as in 1913 the International Conference on Unemployment adopted the following recommendations:

1. That public works be distributed, as far as possible, in such a way that they may be undertaken in dull seasons or during industrial depression.

2. That budget laws be revised to facilitate the accumulation of reserve funds for this purpose.

3. That permanent institutions be created to study the symptoms of depression in order to advise the authorities when to initiate the reserved work.

4. That such work as land reclamation and improvement of the means of communication, which would tend to increase the permanent demand for labor, be especially undertaken.

5. That, in order to secure the fullest benefits from the reserved work, contracts should be awarded, not as units, but separately for each trade.

There remains to be mentioned one more vital way of warding off unemployment. That is the adoption by States of compulsory unemployment insurance. Just how such a plan would be worked out is beyond the scope of this article, but it is fair to say that various workable plans have been suggested, in particular a very carefully considered one by the American Association for Labor Legislation. The main points of this plan include the taking out of insurance by the employer, all details as to rates of disbursement, amount of premiums, and the like to be under the supervision of a State board on which would sit representatives of the State, employers, and employees. In addition there would be established by the State at important centers of population governmental employment agencies so that the freest possible interchange between employer

nd employee would exist. There are many other important features of the plan, but the simplest way to characterize it as a whole is to say that in its own field it would operate much as the workmen's compensation laws now operate to cut down the number and severity of accidents.

The opponents of such a plan are numerous, including a majority of employers and, curiously enough, Mr. Gompers, of the American Federation of Labor. It is Mr. Gompers's opinion that such insurance will make pensioners out of unemployed laborers, that in hard times it will create a class who will look upon the State as a huge charitable agency, and that this attitude will gradually break down the keenness and aggressiveness for which union labor has been so well known in the past. This argument seems beside the point if we conceive the plan in mind, not as an effort of the State to dole out charitable payments in time of stress, but as a working, every-day buffer against the irregularities of employment, the whole burden of which will rest upon industry itself. It is no more a "charitable" act on the part of a worker out of employment to accept unemployment insurance than for the same worker to accept accident insurance when he breaks his leg. In either case the worker is insured against the calamitous effects of not being able to work through no fault of his own, and the bill for this insurance is paid by that particular company which is, to some extent, responsible for the worker's unemployment.

Of course the chief objectors to this plan will be among the employers. Their first comment undoubtedly is that it adds one more burden to overhead expense. This is the same objection that was made during the fight for workmen's accident laws, and, in fact, for almost any laws that appear to add to the cost of doing business, no matter how salutary their effect in other ways may be. It is a selfish objection—but, more than that, it is a weak objection, for it is not true. The enactment of this law in focusing the attention of employers upon methods to combat unemployment (and thus cut down the amount of their insurance premiums) would undoubtedly have the same effect upon unemployment as a similar law has had upon accidents. It would diminish unemployment, and diminished unemployment would mean stabilized industry, more even production, and thus freer opportunities to increase business profits.

These are some of the ways by which the problem of unemployment can be effectively attacked, not only during the depressing days of bad times, but during every day of any year. With the exception of the plan for unemployment insurance and regular grants by the Federal Government, they are all ways tried before, and tried for the most part with success. There can be no lasting results, however, unless our efforts remain permanent. We have diagnosed the disease. What we must do now is to apply the antidote.

W. L. DOUGLAS

BY THE WAY

A NEWSPAPER man tried to draw out Henry Ford about his ambitions for the Presidency. "Would you undertake," he asked Mr. Ford, "to run all the railroads and mines of the United States; to lower the rates and prices according to your principles of good business; to increase wages, to reduce working hours, to add greatly to the service, and to bring a happy ending to the labor wars, without resorting to military force—if . . .?" "If what?" "If I undertake to get you the job?" the interviewer ended weakly. "I didn't ask you to get me a job," was Mr. Ford's effective counter.

Shooting has a strong hold on the average Englishman, and he apparently doesn't count the cost where game is considered. At least this is indicated by the following advertisement in the London "Times." It also indicates the financial difficulties of owners who have to receive "paying guests" to meet their expenses:

Grouse Driving in Aberdeenshire.—Guns Wanted as Paying Guests. In 26 days' shooting last year the bag was 3,663 grouse, at least four days' driving per week; everything found except ammunition, loaders and wines. Price for September £175, or £50 per week.—Application is requested to the owner. Very good prospects this year. Bag should be over 6,000 grouse.

A letter from Russia to Minneapolis had stamps attached to it in sheets, so a daily paper says. Altogether, the stamps were valued at 200,000 rubles. This, however, owing to the great depreciation of Russian money, amounted in value to only about ten cents in American money. Before the war 200,000 rubles were worth \$100,000.

The extra sleeping-car equipment required by the railways for recent conventions, sporting events, and reunions gives an idea of the relative numbers and popularity of various organizations. For the Knights Templar Conclave held

MEMORIALS THAT INSPIRE

*"My voice shall with thy future visions blend,
And reach into thy heart when mine is cold."*

The most fitting place for a memorial is in a hallowed church interior, and the most expressive medium is beautifully carved wood. Many examples of appropriate memorials are illustrated in our book on this subject. Let us place a copy in your hands if you desire suggestions.

BY THE WAY—(Continued)

at New Orleans 284 extra sleeping cars were used; for the Investment Bankers' Association, 22 cars; for the Rotary Clubs' convention, 167 cars; for the advertising clubs, 38 cars; for the Kiwanis clubs, 23 cars; for the automobile races at Indianapolis, 95 cars; for the United Confederate Veterans' reunion, 117 cars; for Derby Day at Louisville, Kentucky, 218 cars; and for the Shriners' convention, 688 cars.

People who are skeptical about the accomplishments of parrots will be interested in the following advertisement which appears in an English weekly:

African Grey Adult Male Talking Parrot.—A wonderfully smart speaker, wonderful human voice, says every word distinctly, many long interesting sentences, hundreds of short sentences; a real clever mimic; no vice or swearing; whistles six tunes, sings part two songs; lovable tamper, finger and shoulder tame. Heard talking or sent approval, with his cage, £25.

A house organ argues that printers must give up their old presses and get new machinery if they wish to possess any advantage over their competitors. It illustrates the point thus:

George Bernard Shaw says somewhere that when you give a certain degree of education to everybody, it ceases to be education at all. A man who knows what everybody else knows is an uneducated man, the educated man being one who knows what other people do not know. This is true in the sense that knowledge or skill which is in the possession of every one has no market value.

What is true of human skill and accomplishments is also true of machinery.

An illustration of the gallantry of the native African comes from a British hunter who writes to "Country Life":

"Now here is a curious thing about Africans. If one acquires, say, a lot of meat, he tries to get it into the charge of his wives as soon as possible. While he remains in possession everybody cades from him: friends, relations, everybody of similar age, the merest acquaintances, all seem to think that he should share the meat with them. But once the meat is handed over to his wife it is secure. Whenever any one asks for some, he refers them to his wife. That ends it, for nobody will cade from a woman."

"Collier's" lately asked its readers to name the man in American life who most aptly fitted this description in "Hudibras":

He could distinguish and divide
A hair 'twixt south and southwest
side, etc.

Two of the lines of this famous quotation were seized most aptly by one reader to characterize William J. Bryan "His latest outburst against Darwinism, says this reader, "is rather interesting since

He'd undertake to prove by force
Of argument a man's no horse."

How Walter Camp Put Joy Into Living

Famous Yale Coach shows How to Keep Fit in 'Ten Minutes' Fun a Day—His "Daily Dozen" Exercises Now Set to Music on Phonograph Records

Walter Camp,
Originator of the "Daily Dozen"

THOUSANDS of men and women—once flabby-muscled, low in endurance, easily fatigued by ordinary mental or physical exertion—are to-day facing their daily work with new ability and new energy. They are no longer nervous. Their bodies have been rebuilt; their endurance has been strengthened; their minds are clearer—all through *ten minutes' fun a day*.

To-day, "that tired feeling" is something practically unknown to them, for they have built up a new supply of life. They have increased their efficiency, they eat better, sleep better, feel better, and have found a new pleasure in living.

These people owe their improved health to the fact that they devoted a short time each day to a new scientific system of physical development. And the remarkable part of it all is that while they were thus building up their bodies—they exulted in the exercise. It was not drudgery, it was fun!

This remarkable system of body building was devised by Walter Camp, the famous Yale football coach. People who have used it say they think it is the best method they have found of keeping fit. According to physical culture experts who have studied it, this new method will often accomplish in *just ten minutes* more actual good than a half hour spent in strenuous gymnasium exercise.

Mr. Camp has embodied the complete system in twelve simple movements which are known as the "Daily Dozen."

The "Daily Dozen" were first used as a much needed substitute for the tiresome setting-up drills used in training camps during the war. Their immense value was quickly apparent and before long members of the Cabinet as well as other prominent men were relying on them as a guard against physical breakdown due to overwork.

Since the war, the "Daily Dozen" have been making thousands of busy men and women fit and keeping them so. And now the exercises are proving more efficient than ever. For a wonderful improvement has been effected in the system. Here it is:

With Mr. Camp's special permission, the "Daily Dozen" exercises have been set to music on phonograph records that can be played on any disc machine.

A chart is furnished for each exercise—showing by actual photographs the exact movements to make for every one of the "commands"—which are given by a clear voice speaking on the record. The most inspiring music for each movement has been adopted. A fine, rousing tune, such as the great Sousa melody, "The Stars and Stripes Forever," has a wonderful effect. It is elating; and it adds spirit to an activity that was monotonous before this invention.

Another reason for the wonderful effectiveness of the "Daily

Dozen" is because they are based on natural methods of body-development. Take the tiger in the zoo. He is caged in, removed from his natural way of living—just as we, through the centuries, have grown away from our natural way of living. Yet the tiger keeps himself in perfect physical condition—always. How?—by constantly stretching and turning and twisting the trunk or body muscles. And that is where Mr. Camp says we must look after ourselves! It is on just this principle that he has based his "Daily Dozen."

Try the Complete System Free—For Five Days

You cannot fully appreciate the real joy of doing the "Daily Dozen" to music until you try it. So we want to send you, absolutely free for five days, the "Daily Dozen" on phonograph records and charts illustrating the movements. These full-size, ten-inch, double-disc records playable on any disc machine contain the complete Daily Dozen Exercises, and the 60 actual photographs accompanying the records show clearly every movement that will put renewed vigor and glowing health into your body—with only ten minutes' fun a day. A beautiful record-album comes free with the set.

No need to send any money. Simply mail the coupon below and get Walter Camp's "Daily Dozen" on phonograph records. Enjoy the records for five days, and if for any reason you are not satisfied, return them and you owe nothing. But if you decide to keep the records, you can pay for them at the easy rate of only \$2.50 down, and \$2 a month for four months until the sum of \$10.50 is paid. Thousands of people have paid \$15 for the same system but you can now get it for only \$10.50 if you act at once.

Simply mail the coupon and see for yourself at our expense, the new, easy, pleasant way to keep fit. You'll feel better, look better, and have more endurance and "pep" than you ever had in years—and you'll find it's fun to exercise to music! Don't put off getting this remarkable System that will add years to your life and make you happier by keeping you in glowing health. Mail the coupon today. Address Health Builders, Inc., Dept. 69, Garden City, N. Y.

FIVE DAY TRIAL COUPON

HEALTH BUILDERS, Inc., Dept. 69, Garden City, N. Y.

Please send me for five days' Free Trial at your expense the Complete Health Builder Series containing Walter Camp's entire Daily Dozen on five double-disc ten-inch records; the 60 actual photographs; and the beautiful record-album. If for any reason I am not satisfied with the system, I may return it to you and will owe you nothing. But if I decide to keep it, I will send you \$2.50 in five days (as the first payment) and agree to pay \$2 a month for four months until the total of \$10.50 is paid.

SEPTEMBER 13, 1922

THE RAILWAY STRIKE AND THE FEDERAL INJUNCTION

NATURALLY, great commotion has been caused in labor circles by the issuance of the sweeping injunction by Judge Wilkerson, of the Federal District Court in Chicago. It restrains the striking railway shopmen, their unions, and the labor unions affiliated with them in the American Federation of Labor, from interfering directly or indirectly with the operation of the railways. This of course is a temporary injunction, and arguments to make it permanent are to be held this week. This action of the Government, taken at the instance of the Attorney-General, brings up anew the often-debated question of the application of court injunctions to labor questions, or, as the labor leaders call it, "government by injunction."

There is no question that there have been acts of lawlessness and violence against railway property, and therefore against inter-State commerce, and it is probably true that acts of intimidation, violence, and threats have been used against railway workers who would not strike or others who have taken the places of strikers.

It might be said that the criminal law should be sufficient to restrain and punish these acts, but it has been well established that where such acts amount to conspiracy the use of injunctions is lawful and right. This was clearly shown in the Chicago railway trouble of 1894 by President Cleveland, who declared that abundant proof had been found that there had been resistance to Governmental functions both as regards the transportation of mail and the operation of inter-State commerce and that "conspiracy existed against commerce between the States." The conviction of Debs for disobeying a Federal injunction issued on just these grounds was unanimously sustained by the United States Supreme Court.

The present injunction is attacked by the labor leaders, not merely because they are bitterly opposed to the application of the injunction to strikes, but also because, as they allege, it forbids things that are not illegal. They would argue that where the acts forbidden are criminal under the law the restraint should come through the ordinary criminal procedure, so that this injunction would duplicate existing powers to deal with

crime. They would further argue that, if things not now illegal are forbidden by the injunction as illegal, we should have what they call judge-made law. In this case their complaint rests chiefly on the fact that, in addition to forbidding violence, intimidation, and the like, the injunction practically forbids strikers and unions to induce others to strike or to refrain from taking strikers' places by "entreaties," "arguments," and what is generally known as "peaceful picketing." Whether this exceeds the proper function of injunctions remains to be seen when the matter goes before the higher courts.

Broadly stated, the argument against excessive use of the injunction is that it puts the power in the hands of individual judges to define what is illegal and to inflict punishment under the guise of penalties for contempt of court and without the intervention of district attorneys or juries. Under this view it is declared that in cases of acts committed outside the court-room the accused should have a jury trial. The sound view of this matter seems to be that injunctions have their proper uses in criminal as well as in civil cases, but that by their nature they are also subject to abuses and should be carefully guarded by definition and law. Years ago, when this question was under active discussion, The Outlook stated editorially: "It is an abuse of the injunction to use it for the purpose of preventing a body of workmen from doing an act which they have a legal right to do, such as to unite in leaving their employer's employment or to persuade by peaceful means others from entering that employment." And in another instance The Outlook remarked: "Power should not be denied to the courts to prohibit and prevent wrong-doing; that power should be rather increased than diminished; but it ought not to be exercised without previous notice and hearing, save in very exceptional cases."

What the practical effect of the injunction will be on the present strike is a matter of some doubt. So far as it tends to prevent intimidation, interference with the mails, attacks on any employees (strike-breakers or not), or threats of any kind, it will receive the approval of all good citizens. It has lately been claimed by the railway executives that the places of the strikers were being

filled and that many of the strikers were coming back to work. If this is so, the injunction may prove a hindrance to an early settlement rather than otherwise. At all events, the country at large is practically unanimous in believing that the shopmen should have followed the example of the maintenance of way men and have shown a willingness to resubmit the questions involved to the Railroad Labor Board. And it is equally true that such steps should be taken by Congress and the Government as would make it impossible for the country to face every little while the threat of a general railway strike which would tie up the business of the country and produce almost inconceivable conditions of living, traveling, and carrying on of work.

THE ANTHRACITE STRIKE ENDS

AFTER five months of diplomacy and conference, an agreement has been reached between the hard-coal miners and operators. Final confirmation by a tri-district convention of the United Mine Workers remains to be secured, and almost surely will be before this is read.

The terms of this treaty are satisfactory to both the contracting parties; to the miners because they retain their old wage scale, will have plenty of work, and have had their way in that the agreement affects the whole hard-coal industry, pushes forward the date for new contracts to August 31, 1923, and rejects any outside arbitration; and to the operators because they can now easily sell all the coal they can put on the market at high prices—and they have duly warned consumers of a high-price era by asking for a "mandate" (apparently by silent consent) approving the settlement on a high-price basis.

But how about the third party to this controversy—the silent bystander, upon whose shoulders the war cost is to be dumped? One estimate puts the cost of the strike at two billion dollars. The shortage of anthracite is about 40,000,000 tons. The resumption of actual coal production and distribution will be slow. It looks as if the consumer pays in two ways—in money and in discomfort. He is to get his coal on a hand-to-mouth basis, to use unfamiliar and undesirable substitutes, perhaps to endure actual suffering. Organized labor claims a great victory; the coal operators, hard

and soft, see a fine selling season before them; neither side has made much of a pretense of caring for the public interest.

The time to make such a ruthless labor war impossible in the future is while indignation is still hot. Congress should push the legislation before it, so as not only to provide a fact-finding commission which should put the hidden things of the coal industry into the light and, if possible, curb profiteering at the expense of home and factory, but should also provide a permanent National Coal Commission. The last (with the important omission of the word "permanent") is included in the terms of the strike settlement. Such a Commission should have effective powers, as should also the Railroad Labor Board. The lesson of this summer's strike is that Governmental regulation must prevail if Government ownership is to be avoided.

THE HERRIN MURDERS

Two months after the atrocious wholesale murder of workers in and about the Herrin mines the course of justice has proceeded so far as to obtain from a Grand Jury one individual indictment, that of Otis Clark, a union miner, charged with the murder of Mr. C. K. McDowell, superintendent of the Lester Mine—a crippled man who was first beaten up and then deliberately shot after surrender.

What really happened in Herrin was the result of a conspiracy to murder entered into by a considerable number of men. If possible, indictments should be procured on this basis. Inadequate as the results so far attained seem, it is a tribute to the courage and insistence of the Illinois Attorney-General, Edward J. Brundage, that even one man faces trial. He has been threatened with political ruin for insisting that Illinois should free itself from the disgrace of letting lawlessness and murder go unpunished. Whatever happens or fails to happen, he at least has done his duty.

The head of the Illinois miners' union, Frank Farrington, declares that the union will defend all members indicted by every possible means and that he appreciates the "magnitude of the agitation which is Nation-wide for convictions." No one is "agitating" for conviction of innocent men, but otherwise Mr. Farrington is right. The country is watching Herrin; it knows that a great crime was committed; it will not be content until the guilty are brought to justice.

GREETING TO BRAZIL

BRAZIL celebrates her one hundredth anniversary of independence on September 7. The nations of the world will join with her on that date in mak-

ing the occasion worthy of such a historic event. The United States, which has always enjoyed a close and growing friendship with the great Republic of South America, will be ably represented at the opening of the Centenary commemoration by a special mission headed by Secretary of State Hughes. When the United States celebrated its Centennial in 1876, Brazil sent her Emperor Dom Pedro II to convey her message of good will and congratulations. He was the only chief of state present on that occasion, and this Government and people have not forgotten the high tribute which it implied. President Harding expressed a desire to return in person the visit of Dom Pedro, but was unable to leave the country at this time; and so sent his chief Cabinet adviser to express for him the interest which this country feels in all that pertains to the welfare of this Republic of the South.

Along with the Brazilian centenary exercises there will open also in Rio de Janeiro on September 7 an international exposition, at which the principal countries of the world will have extensive governmental as well as industrial displays. This Exposition will continue until March 31 next, and possibly for some months longer. It is believed that this will be one of the most interesting and most attractive world expositions which has ever been held.

With wonderful natural opportunities to start with, located in what is conceded by all travelers to be one of the most beautiful cities in the world, where a spacious bay of unsurpassed grandeur with a surrounding wealth of tropical color and richness of verdure adds greatly to the setting, the Brazilian Government has done everything possible to make the coming Centenary Exposition one that will be unique and worthy of lasting remembrance. In the generous preparations which she has made for celebrating her hundredth anniversary she deserves the praise of the world. In making these plans she has shown an energy, a determination, and a progressiveness which must call forth highest commendation.

To all that nature has given Rio de Janeiro as a show place *par excellence* for exposition purposes, there will be added magnificent lighting effects, the latest that electrical artists can supply; and for this purpose alone the Brazilian Government has made a large appropriation. Those who recall what was done at San Francisco and at some of the previous world fairs in this country in the way of brilliant illumination may be prepared to see new and even more striking results at the Brazilian Exposition. Reduced steamship rates, which have been put into effect by the United

States Shipping Board vessels, have made it possible for thousands of persons from the United States to make the trip to Brazil, and there seems to be no doubt but that those who make the voyage will be well repaid.

THE EXHIBIT OF OUR GOVERNMENT

THE United States Government in the building which it has erected, and which later is to be the home of the American Embassy, has placed exhibits showing the varied and interesting activities of its different departments. The effort has been made by those in charge of the preparation of these displays to have them of educational value as well as attractive. The Department of Commerce, for instance, will show some of the important work being done by the Bureau of Standards and the Bureau of Fisheries. The Treasury Department will have a public health exhibit, and also portray some of the most interesting operations of the Bureau of Engraving and Printing. American forestry methods and developments in road building will feature the series of exhibits from the Department of Agriculture. The Geological Survey of the Interior Department, and the Engineers' Reproduction Division of the War Department, will co-operate in giving a display of how surveying and charting of the earth's surface are accomplished.

Mine rescue work, safety devices which are employed, and other features will be included in the exhibit which has been sent by the Bureau of Mines. The War and Navy and the Post Office Departments; the American Red Cross; the Veterans' Bureau, with the work being done in vocational education; the United States Bureau of Education and educational institutions throughout the country; the Library of Congress—all these branches of Governmental activity will be clearly and compactly shown to the people of Brazil as well as to visitors from all other sections of South America, Europe, and other parts of the world who will be at Rio de Janeiro.

In addition to the Government exhibits, many manufacturing and business concerns in this country have sent samples of their goods, to be shown in a separate building which has been erected especially for the purpose. In other buildings the manufacturers and merchants of Great Britain, France, Italy, Japan, Belgium, Portugal, Argentina, Uruguay, and other countries are displaying the products in which they believe the people of Brazil will be interested and for which a market exists in the big South American Republic.

Brazil began her independence as an Empire one hundred years ago, when

POSTER OF THE BRAZILIAN CENTENNIAL EXHIBITION

Dom Pedro I at Ypiranga, on September 7, 1822, formally declared the nation to be independent, and became a Republic in 1889. Brazil has always been on friendly terms with the United States. Brazil's federal Constitution is closely modeled on that of this Republic; and in many other ways the close relations between the two countries have been manifested. The friendship between the United States of Brazil and the United States of America has grown with the passing of the years. This country, Government and people, sends to Brazil heartiest congratulations on the progress of a century and sincere wishes for its future happiness and prosperity. Our participation in the Brazilian Centenary should constitute another link binding the two nations closer together.

HOPES FOR CUBA

It is encouraging to note that Secretary Hughes, on the eve of his departure for his South American trip, issued a statement regarding the present state of affairs in Cuba which declares that what has been done indicates substantial progress toward a solution of the unhappy state of affairs which has been described pretty fully in *The Outlook*. It has been due to the activity of General Crowder, the representative of the President in Cuba, and to American firmness in declaring that reform was imperatively necessary that the new measures of reconstruction have been formed.

These measures, Secretary Hughes tells us, are five in number. Mr. Hughes believes that combinedly they

will stabilize financial and business conditions and take much that is objectionable out of the political life of the island. The measures provide for the consolidation of departments on a business basis, for a better system of accounting, more responsibility in expenditures, and for the amendment of the judicial code to make the removal of members of the judiciary easier when there is cause for their removal, and the contracting of a foreign loan to pay the floating debt of Cuba and to make a start on necessary public works. A special commission is to be created to deal with the question of public indebtedness, and the Civil Service Law is to be modified so as to enable the executive to reorganize and improve the service.

These plans are all well designed for the improvement of Cuba's conditions. The bills have already passed the Cuban lower house. It remains to be seen whether the spirit of political dishonesty and of graft in governmental and business matters can be so reformed as to make the application of this legislation thorough and satisfactory.

THE TURCO-GREEK WAR

GREECE has ample reason to lament its own folly in restoring Constantine to the throne and reversing the policy of Venizelos. It was impossible for the Allies, whom Constantine had deceived and trifled with in war time, to feel enthusiasm over Constantine's claims against Turkey in the after-war settlement. So the Turks under Kemal and the Greeks under Constantine have been left to fight the matter out, with varying results.

At the end of August, after a long period of cessation of the fighting, came news of a positive reverse for the Greeks. They were forced to evacuate important points in Anatolia, to abandon their plan of occupying Angora, and to show their military inferiority to Kemal's well-organized army of 100,000 men.

It may be, as the Greeks claim, that the Allies granted too much to Turkish greed for territory in Asia Minor and that conflicting interests among the Allies have led to the growth of a dangerous situation in the Near East. But, if so, Greece is largely to blame for allowing herself to be led by such a proved double-dealer as the time-serving Constantine.

What effect the recent renewal of hostilities on a large scale and the repulse of the Greeks will have on the projected conference at Venice to bring about the ending of the Turco-Greek War remains to be seen. It is not impossible that it may be postponed or abandoned. The

Turks, who have already been given too much, are now sure to clamor for more.

A VICTORY; NOT A TRIUMPH

THE primary elections in California and Texas provided politicians, both amateur and professional, with food for thought and talk.

The newspapers have offered many explanations for the slump in Hiram Johnson's usual majority. It was with the purpose of securing the first-hand testimony of a progressive Californian that we telegraphed Mr. Chester Rowell for his own views on the subject. Mr. Rowell's distinguished career as journalist, politician, lecturer, and holder of important public offices entitles his opinion to great weight. In many past campaigns he has stood shoulder to shoulder with Senator Johnson.

In reply to our query, Mr. Rowell has telegraphed us as follows:

"The nomination of Senator Hiram W. Johnson by 70,000 majority at the California primaries was a victory rather than a triumph. Large as the majority is, the pre-election betting odds showed that it is much less than was expected by careful practical observers on either side. The chief significance of the result is a personal tribute to Senator Johnson. Its meaning on issues is much more confused.

"Senator Johnson himself characterized it as 'the same old fight against the same old gang.' In part it was. Some remnants of the old reactionary group opposed him for the same reasons. Others of the same group supported him for new reasons. Also many progressives who do not agree with him on present issues supported him from loyalty to the old fight.

"His irregular party record was the basis of the opposition of some orthodox partisans. Others objected to his alleged alliance with Hearst. To these mostly conservative groups were added many progressives who disagreed with Johnson's irreconcilable attitude toward the League of Nations, and especially the Four-Power Treaty. He himself charged that these opponents were actuated by personal disappointments, but many of them were beyond possible suspicion of personal motives.

"Senator Johnson's recent activity in securing for California products the highest tariff rates ever known also gained him many conservative supporters who would normally have been against him. All these composite groupings on both sides make it impossible to give the result any clear significance on single issues, beyond the conclusion that not enough of those Californians who disagree with Senator Johnson on inter-

Paul Thompson

EARLE B. MAYFIELD, OF TEXAS

national issues regarded that difference as important enough to vote against him on it.

"Primarily it was a personal victory. The people voted for Hiram Johnson because he is the man they want."

MERELY A CHOICE OF EVILS

FOR first-hand information of the Texas situation we appealed to Professor John Lomax, of the University of Texas. Professor Lomax is a Democrat. He is a Mississippian by birth, but he has been a resident of Texas for many years. He has been secretary of the University of Texas since 1910. If it is not too much of a digression in the midst of an item of political news, we should like to observe that any one who has failed to

read Professor Lomax's compilation of cowboy songs has missed a very valuable chapter of American literature. But if we start discussing cowboy songs, there will be no room left for Professor Lomax's admirable summary of the Texas situation, which he telegraphs us at our request:

"Six men, including the present Senator, Charles A. Culberson, made the race for the Democratic nomination for United States Senator from Texas. Earle B. Mayfield, backed by the Ku Klux Klan, led in the first primary, closely followed by James E. Ferguson, who advocated the return of light wines and beers. In 1917 Ferguson was impeached and expelled from the office of Governor of Texas. The discussions between these two men in the second primary run-off, held August 26, were characterized by personal abuse, Mayfield attacking Ferguson's record as Governor, and Ferguson retorting with statements that Mayfield was a prohibitionist only in theory. Mayfield refused to discuss the Ku Klux Klan issue.

"In a total vote of about 525,000 Mayfield received a majority over Ferguson of 50,000. Of the 100,000 who voted in the first primary and not in the second a large number declined to cast their ballots for either candidate. Of the six original candidates they felt that the two least desirable men had been chosen for the run-off. Mayfield's nomination cannot be construed as an indorsement of the Ku Klux Klan. Rather, it reflects an unwillingness of the people to be represented in the Senate by an impeached Governor. Furthermore, four other candidates for State office backed by the K. K. K. were defeated by large majorities. Mayfield was also strongly supported by women and other ardent prohibitionists.

"Local Ku Klux Klan candidates in Dallas, Houston, Beaumont, Austin, Waco, and other centers were victorious, but in the race for Senator the Ku Klux Klan issue was subordinate to prohibition and to personal animus against Ferguson.

"It is generally conceded that Mayfield, partly because of his Klan affiliations and partly because of doubt of his ability, will run far behind other men on his ticket. There is little chance, however, for a Republican to win or for the Republicans and Independent Democrats to fuse and elect a man. The Republicans will make their final choice of a candidate on Sept. 7. If they succeed in finding a representative man who will satisfy the thousands of bitterly chagrined Democrats, they will doubtless poll the largest vote the party has received since Texas came into the Union."

Certainly the choice of the Lone Star

HIRAM JOHNSON, OF CALIFORNIA

voter appears to be a hard one. There does not seem to be even one lone star of any magnitude among the candidates.

A NEW SUPREME COURT JUSTICE

DESPATCHES from Washington announce that Justice John H. Clarke, of the United States Supreme Court, has resigned, and that ex-Senator George Sutherland has been nominated by President Harding to fill the vacancy.

Justice Clarke was born in Ohio sixty-five years ago, and is a graduate of the Western Reserve University, of Cleveland. He was general counsel of the New York, Chicago, and St. Louis Railroad for thirteen years, but in spite of this so-called corporate connection has been regarded as so liberal in questions concerning property and labor that many conservative people have with shakings of the head looked upon him anxiously as an ultra-radical. It is true that in many recent important decisions of the Court he has stood with Justice Brandeis, who has long held so-called advanced views in industry and economics. Justice Clarke was appointed by President Wilson. He had served as a United States District Judge before he took his seat upon the Supreme Court bench. He is a man of literary taste and sympathy. He has been an ardent advocate of the League of Nations, and it is believed that he has left the bench in order to devote himself to a furtherance of the principles of the League.

The new Justice, Mr. Sutherland, was born in England sixty years ago, but received his academic education in this country and is a graduate of the Law School of the University of Michigan. He is a Republican; served as a member of the State Senate of Utah; and has been two terms, from 1905 to 1917, a member for Utah of the United States Senate, where he created for himself an enviable reputation as an authority on international law. He is a personal friend of President Harding's and has been President of the American Bar Association. He served as one of the advisers to the American delegation at the recent Armament Conference in Washington, where his views and advice were much relied upon. Mr. Sutherland is a man of broad and liberal views on legal, economic, and social questions, although he is generally regarded as more conservative than Justice Clarke. His appointment is a commendable one, and in making it President Harding has preserved the best standards and traditions of the Supreme Court.

A UNIVERSITY "MOVIE"

THERE are several features that make the Eastman Theater, soon to be opened in Rochester, New York, both

International

"MARTIAL MUSIC," MURAL DECORATION BY EZRA WINTER FOR THE NEW EASTMAN THEATER AT ROCHESTER

notable and novel. It is, we are told, the first time in the history of the screen drama that a motion-picture house has been incorporated with the regular work of a university. It is doubtly interesting to find that the connection between the Eastman Theater and Rochester University is through the music school of the University. With this in view,

the theater (named after Mr. George Eastman, its founder) will have what is thought to be the finest organ in the world, together with a smaller organ and nine organ practice rooms, and a collection of musical instruments for the use of students that cost \$35,000. In addition to the musical educational work of the theater it will provide musical

settings for its screen pictures in a manner consonant with high ideals of the musical art.

The plans for the programmes of the theater are for most of the performances not greatly different from those of the best moving-picture shows. On every Wednesday, however, a musical recital and concert will take the place of the usual performance, and both the music and the performers will be of the highest rank.

The new theater is beautifully decorated and adorned with mural paintings. One novel feature is to be what is called "an ideal condition with reference to illumination," so that during the performance of a screen drama the auditorium remains light enough to read a programme.

A recent newspaper writer on the subject declares that here at last will be found "a concrete realization of the pet dream of the movie interests, discussed for nearly a decade, since first an orchestra with soloists was introduced in an up-town theater incidental to picture presentation—the marriage of the art forms: music and the silent drama."

A COMMISSION OF INTERCOLLEGIATE ATHLETICS

TEN of the big universities of the Middle West are allied in athletics. In football, for example, they play one another for what is known as the Conference championship. The alliance is known as the Intercollegiate Conference. It is composed of the Universities of Chicago, Illinois, Michigan, Minnesota, Iowa, Indiana, and Northwestern, Purdue, and Ohio State Universities.

Recently the directors of physical education in these universities created a post of Commissioner of Athletics of the Intercollegiate Conference and appointed to that position Major John L. Griffith. The immediate occasion for the creation of this post was undoubtedly the exposure of certain evils in athletics which had developed in a number of colleges in this country, and among them at least one of the Conference universities. It will be the duty of Major Griffith to conduct an educational campaign on behalf of a sound amateur spirit and a better sportsmanship. That Major Griffith will undertake his task with no prejudice against a vigorous competition may be deduced from the fact that during the war he directed physical and bayonet training in the United States Army. Since the war he has been on the staff of the Department of Athletics at the University of Illinois.

When we learned of his appointment, we wrote to Major Griffith, asking for

information concerning his aims. In reply we have received a letter in which he says:

"In the first place, athletics, and, in fact, all of our physical education activities, have grown remarkably in the last few years and now challenge the attention and consideration of all. The political party now in power was elected on a platform one of the planks of which calls for Federal encouragement of those matters which pertain to the physical betterment of our youth. There are now several bills before Congress which aim toward correcting conditions which the draft figures revealed relative to our physical unpreparedness for war. Twenty-eight States have passed compulsory physical education laws. Furthermore, there is more interest now in amateur athletics in the schools and colleges, judged not only by the increased number of participants but also by the size of the crowds that witness the contests, than ever before.

"The American people prefer to give expression to their physical selves in terms of competitive athletics. In Germany mass setting-up drills as featured by the *Turners* are popular. We have heard a great deal about a German system of physical education or a Swedish system or a Japanese system, but none of these have ever gained popularity in the United States. The American system embodies the sports and games that have been developed in this country in accordance with our National temperament.

"Our competitive athletics, so long as they are kept clean, are indispensable. They furnish an ideal. Every normal boy aspires to be a Paddock, an Oliphant, or a Thorpe. They furnish wholesome entertainment of an invigorating sort to thousands of spectators. *Esprit de corps* in the educational institutions is largely developed around the athletic teams. Good sportsmanship and the spirit of fair play, which are both needed to-day as never before in our social and economic life, can be taught better in athletics than in any other manner, and our fighting games furnish a splendid substitute for military training.

"As Commissioner of Athletics of the Intercollegiate Conference, it will be my duty to conduct an educational campaign to bring about a better understanding of the purposes and values of athletics; to explain the rules which the directors have adopted to safeguard athletics; and to enlist the support of students, alumni, and the general public in the observance and enforcement of these rules. It is hoped that this may be accomplished through the co-opera-

tion of the press and periodicals and through meetings with students, educators, alumni, and others.

"Further, it will be my duty, in so far as possible, to see that students who are not eligible to compete under Conference rules are disbarred.

"The evils which threaten our intercollegiate athletics are gambling, professionalism, distrust, and enmities which sometimes arise over the contests and a willingness to violate the rules. The argument which is sometimes advanced, that our athletics are wrong because the men strive so hard to win, is misleading. Character is not developed by weak and insipid tackling nor by half-hearted trying on the part of the contestants. On the other hand, it is not necessary for an athlete to hate an opponent in order to play well against him, and the coach who sings hymns of hate to his men about other coaches and other teams is a menace to the game."

INTERNATIONAL GOLF

THE photographer who took the picture (which appears on the next page) of the Anglo-American Golf Match on the National Golf Course at Southampton, Long Island, it is apparent, is neither a golfer nor a sailor. If he were a golfer, he would have picked out a more picturesque portion of the fairway than he selected for his photograph; if a sailor, he would have chosen one of the beautiful water-holes of the National course showing the blue and shining Peconic Bay in its setting of golden sand and evergreen pines and cedars. The National Golf Course is believed by American golfers to be one of the most trying tests of golf in this country, as it is certainly one of the most beautiful courses in its surroundings. It is one of those courses where the slightest deviation from long and accurate play is likely to involve the unhappy golfer in almost insurmountable difficulty. It was the scene during the latter part of August of a contest for the Walker Cup between a team of eight selected British amateurs—some of them Scotch and some of them English—and eight selected American amateurs. The British team came over this summer for the purpose of entering this particular match and the American amateur championship, which was being played over the Brookline Country Club course at Boston as this issue of *The Outlook* went to press.

On the first day of the contest on the National links the Americans and Britishers played foursomes—not four-ball foursomes, but the ancient and genuine foursome commonly but erroneously called in this country "Scotch four-

Levick

THE GALLERY FOLLOWING JONES AND WETHERED TO THE SIXTEENTH HOLE, IN THE INTERNATIONAL GOLF MATCH

some," in which the partners on each side play alternate strokes at the same ball. In this contest the Americans won three out of four matches. On the second day the eight Americans played in single matches against the Britishers. Jesse Guilford, Robert Jones, Charles ("Chick") Evans, Francis Ouimet, and Robert Gardner were the winners for the United States, while Messrs. Hoo-man, MacKenzie, and Darwin of England beat their American antagonists. Thus the cup was won by eight to four matches.

Mr. Bernard Darwin, one of the contestants on the British team, is not only an excellent golfer, but an excellent writer on golf. No contest of physical prowess that we know of has a more voluminous, permanent, and picturesque literature than golf. It has not only a long list of what might be called textbooks, but it has furnished the subject-matter for innumerable essays and personal narratives and reminiscence. Perhaps this literature contains no single passage so eloquent or so classic as George Borrow's famous Apostrophe to the Bruisers of England, but it certainly has enlisted the services of some of the best out-of-door writers of modern times. Mr. Darwin belongs to this group of writers. He thinks that American golfers excel in putting:

There is no mistake about it that they are truly magnificent golfers. Up to the green they are fully as good as our men. I don't think they drive any better, but their pitching is surer and heavier. When it comes to the green there is only side in it. The lesson that Hagen taught us at Sandwich, where Mr. Walter Travis had taught us a similar lesson seventeen years before, was rubbed in yet again. Our men did not putt badly, judged

by British standards, but we do not begin to know what good putting is.

These Americans really can putt. They stand still and they hit the ball truly and with apparent ease.

If Benjamin Franklin were living to-day, he might add to the sayings of Poor Richard: Take care of the putts, and the matches will take care of themselves.

ADJUSTED COMPENSATION

THERE have been many editorials written about the Bonus Bill—some of them we suspect by editors who have never read it. The Outlook, as its readers know, is not in favor of the Bonus Bill as it stands, but even those who oppose it ought to be familiar with its provisions.

In the first place, it is not, as many seem to believe, a bill providing for a large lump payment to all men who served in the war. It is in essence the grant of a paid-up life insurance policy, the size of which is determined by the length of service performed. The only cash payment provided for is that to those veterans who, under the provisions of the bill, would be entitled to receive not more than \$50.

As passed by the Senate, the bill calls for the presentation of a service certificate to every honorably discharged veteran who applies for it. The value of this certificate is based upon the time of active service in excess of sixty days in the military or naval forces of the United States. This credit accrues at the rate of \$1 a day for home service and \$1.25 a day for overseas service. The certificate which the veteran is to receive equals the sum of his service

credit, increased by twenty-five per cent plus interest for twenty years at the rate of $4\frac{1}{2}$ per cent, compounded annually. This makes his service certificate approximately three times the value of his service credit. In any case, the service credit upon which the value of the service certificate is based cannot exceed \$500 for a man who has done no overseas service and \$625 for veterans who have performed any overseas service. Thus the largest paid-up policy which any man could receive would be approximately \$1,875. Veterans falling into certain classifications, which we shall not enter into here, are excepted from the benefits of this bill.

There are four options open to the eligible veteran: If his adjusted service credit is less than \$50, he can take payment in cash. If his adjusted credit is more than \$50, he must choose between receiving what is virtually a twenty-year paid-up life insurance policy or he must elect to receive vocational training aid or to receive farm or home aid. If he selects the certificate, he cannot assign it or give it as a security for a loan except as provided by the Adjusted Compensation Bill. Prior to January 21, 1926, he can borrow from a State or National bank not in excess of fifty per cent of his adjusted service certificate. The bill provides that upon his failure to meet his notes the Government will pay the bank the principal and interest of its loan. It would be possible for a veteran to regain his certificate by paying the Government the money which it gave the bank, together with the interest at $4\frac{1}{2}$ per cent, compounded annually. After January 21 loans similar to those made by the banks can be secured directly from the Government by appli-

cation through the Post Office Department.

After July 1, 1923, the veteran is entitled to receive in one payment or in installments an amount equal to 100 per cent of his adjusted service credit for the purpose of enabling him to make improvements on a city or suburban home or to purchase or make payments on such a home or farm or to pay off indebtedness existing on such a home or farm prior to the date of the application by the veteran. The amount which the veteran may receive for such a purpose amounts to 105 per cent of his adjusted service credit if the payment is made in 1924, 110 per cent in 1925, 120 per cent in 1926, 130 per cent in 1927, 140 per cent in 1928 and thereafter. The purpose for which this money is to be spent must be approved by the Secretary of the Interior.

As is widely known, disabled veterans are entitled to the benefits of the present Vocational Rehabilitation Act. The bill for adjusted compensation extends to uninjured veterans some of the benefits which have hitherto been reserved for disabled veterans. It permits all those who come under its provisions to receive 140 per cent of the amount of their adjusted service credit, to be expended at a rate of \$1.75 a day on a course of vocational training.

As the bill was passed by the Senate, it provides for the development of arid or semi-arid lands to be settled by veterans, and it authorizes the expenditure of \$350,000,000 for carrying out such developments. The bill also provides that the money for carrying out its provisions shall be paid out of and be a first charge upon the interest received by the United States on obligations of foreign governments, and that if this shall be insufficient the same shall be paid out of any money in the Treasury not otherwise appropriated.

We have not attempted to give more than an outline of the bill, nor does it seem possible to secure any exact estimate as to the amount of money which its provisions would require.

The chief objections to the measure as passed by the Senate seem to us as follows:

1. The enactment of this bill into a law will delay, and not hasten, the day when the disabled veterans of the war shall receive adequate care. These men should have the first call upon the attention of the United States.

2. By the inevitable inflation caused by carrying this bill into effect the business development of the country may be hampered to such an extent that the four million veterans of the World War will in the end lose more than they will gain.

3. The bill as passed by the Senate is

a fraud upon the men whom it purports to help, for it makes no real provision for meeting the obligation which it assumes. To provide for the payment by utilizing the interest on our foreign debt is a twofold deception. In the first place, it draws upon funds that are still to be collected, and, in the second place, it uses the funds in a manner not sound financially. If we receive the money from our foreign loans, that money belongs to a fund for the redemption of our Liberty Loans. To use the interest on our foreign debt for adjusted compensation and then borrow money for refunding our Liberty Loans would be taking money from one pocket and putting it in another and pretending that we had increased our available assets.

We hope that the President will veto the present Bonus Bill, as he has promised.

FOR EXAMPLE—

A GAIN we hear that "the most interesting magazine articles are never published"—a contention with which we entirely agree, as the most interesting magazine articles are never written. For example:

Inspired by the uprising against the Eighteenth Amendment, an Outlook contributor resolved the other day to prepare an article dealing, not only with prohibition, but with the Methodist Centenary, the tithing movement, the six months' evangelistic campaign for "one million souls by June first," the Inter-church World Movement of North America, the campaign for a "blue" Sunday, the movement to censor stage and screen—in short, the whole array of efforts since the armistice to accomplish incalculable good quickly and by force—the force, that is, of the "drive" or of law.

We remember that a famous editor, when asked, "What interests people?" replied, "Themselves." By that test, here was unquestionably the most interesting article conceived in years. Every American would see himself portrayed; for, either as promoter, as participant, as disgruntled remonstrant, as beneficiary, or as more or less victim, every American has been affected—personally, even intimately. And observe. The contributor regards these phenomena as symptoms of a world-wide neurosis prevalent after the war, and during it, and, to a considerable degree, before it. Instead of "Get-Good-Quick Schemes," his article might well have borne the headline, "The Matter with Us All."

Very beautiful oftentimes are the symptoms neurosis will produce—visions, ecstasies, even a high creativeness. The contributor recalled Taine's ex-

planation of Gothic architecture as the work of overwrought nerves. But he also recalled Taine's remark that "an army of masons" must labor constantly to keep the lacelike cathedral from tumbling down, so rashly has idealism outrun practicality. Does a similar well-intentioned unwisdom endanger the various efforts to make the world over speedily and by force? The contributor fears that it does.

Nothing could have been more beautiful than the impassioned zeal with which a by no means wealthy denomination subscribed \$115,000,000 for good works at home and abroad—nothing, that is, unless perhaps one sees a finer devotion in the spectacle of more than two hundred thousand tithers vowing to give the first tenth of their income to the church. But what has resulted? Will anybody pretend that performance equals promise? It falls short—as was inevitable from the outset.

Then, too, the contributor finds something wonderfully dramatic in the scene where forty bishops went down on their knees to pray for success in their campaign to win "one million souls by June first." The achievement, however, was by official count rather less than a third of that number. Again, what more beautiful than the enthusiasm with which thirty denominations united in the most astonishing "drive" ever heard of? On the other hand, what more distressful than its failure? Still again, a certain austere beauty—of motive, at least—marks the quaint and wholly unsuccessful attempt to re-establish the Puritan Sabbath in a community consisting largely of Jews, Catholics, and freethinkers. As for the movement to censor stage and screen, the end is not yet, though, like the movement to outlaw tobacco and like the plan of a delightful Bostonian to institute compulsory church attendance, it has aroused a peculiarly scornful indignation among worldlings.

Which brings us back to our contributor, as he has a lively interest in worldlings and fears that, beholding the failures of a too impatient and too militant idealism, they will come to flout all idealism. They are in a bad mood already. They object to being "rail-roaded" into a state of ethical perfection by a "Prussianism" that, given its way, would "cause America to bristle with *Verboten* signs."

But how, he asks, can he lecture the idealists upon their virtuous vices—the phrase is his, not ours—without seeming to discredit such lasting good as they have accomplished? Immense sums have been raised for manifold benevolence—yes, despite lapses. The Inter-church achieved much; who knows but

that it may have a better-planned and more enduring successor? 311,000 new church members represent that much gain, though "one million by June 1" was the goal. If a "blue" Sunday was an irrational dream, it at least did us the service of exposing itself as such. And if the censorship of stage and screen appears unwise, well, are we quite satisfied as to the wisdom of permitting them to follow their own devices?

So the article has not been written. Daring, disturbing, intensely personal, and calculated to arouse discussion the country over, it promised all the elements of supreme interest, and yet what worthy end would it have served? Our too impatient and too militant idealists have learned their lesson—or, at all events, the majority of them have—in anguish of soul. There is little danger of their again attempting a dozen times more than can in the nature of things be achieved. They are out of conceit both with haste and with force. And the minority, though as impatient and as militant as before, command no such following as before. Albeit slowly, the world-wide neurosis is passing. Old methods—particularly those aiming to reach motive, in the belief that motive, once reached, controls conduct—are once more held in the esteem they deserve. In other words, we are returning to a recognition of the well-established principle of sane progress: From within, out.

A HUMAN-NATURALIST

WE usually think of a naturalist as one who studies and writes about external nature—birds, animals, trees, and the rest. But all the great naturalists who have written literature rather than text-books have been what might be called human-naturalists; they have seen and loved external nature from the point of view of human nature. Decidedly this is so of W. H. Hudson, the English naturalist, who died lately after a literary career of nearly forty years, during which he produced a long list of stories, books of observation, and collected sketches and essays. All of these, even such a fanciful romance as "Green Mansions," with its marvelous heroine who talks the bird language, had their strongest interest in the author's own contemplative and appreciative love for nature and its effect on human character and ways of living.

Hudson's best-known and most elaborate books have to do with South America, but he was quite as much at home and quite as sincerely interested in the country lanes of England as in

the pampas of Uruguay and the Argentine. Thus quite lately his early book "Afoot in England," long out of print, was republished and was enjoyed as a charming record of rambles with more reflection, mood, and human interest than of close description. What one critic said of this little book well describes Hudson's writing at large: "Here is a mind and heart to know well, a personality deep and ardent, yet aloof in a kindly reticence, too." So with his "Shepherd's Life," in which the shepherds, their talk and traditions, even more than their sheep and dogs, form the real subject. So of another look of English sketches in which he humorously exalts the intelligence of the pig as greater than that of the dog or the elephant and pleads almost rhythmically for mercy to the lovely, harmless snakes. His last book, "A Traveller in Little Things," is a series of talks about English village life.

South America, however, was his native land; there he was born, and there he lived many years on the boundless and lonely pampas and among the wild and tame *guachos*. He loved it all, and the main secret of his hold on his readers is that he instinctively conveys the vividness of this liking to them. He did not write for effect, but to tell what really interested him. "The Purple Land" and "Far Away and Long Ago" are full of his knowledge of the horse-men of the plains and include even talks with old men who remembered the British expedition to Uruguay in 1807.

Mr. Galsworthy declared of one of Hudson's books that "it immortalizes as passionate a love of all beautiful things as ever was in the heart of man." Truly Hudson's love of nature and man was deep and sincere; but "passionate" does not seem just the word; his written expression of the feeling was calm, sane, and friendly rather than ecstatic. He was not a poet at heart, as was Richard Jefferies, nor a scientific specialist like Fabre, nor a philosopher like Thoreau. His powers of observation were acute and his skill in combining realistic narrative with imaginative descriptions of nature in her wild or charming aspects was unusual.

The public learned to appreciate Hudson's work slowly, but libraries soon found that there was a constantly and gradually increasing demand for his books. One by one they have been republished from time to time; the "Naturalist in Plata" (much more than a handbook) has appeared in six editions. Happily, he lived long enough to enjoy this appreciation; and no doubt it was a great pleasure to him to be able to resign last year, as no longer needed, the British civil pension of £150 which

was accorded to him, as to other authors of little means, whose literary work is of sterling value.

DEBATES AND BELIEFS

IN the last week of September the Oxford University Debating Team will go to Lewiston, Maine, for a return match with Bates College. An account of the visit paid by Bates to Oxford appears on the next page.

We venture to say that very few Outlook readers, or daily newspaper readers, for that matter, in the United States, know that Bates College, numbering only a few hundred students, wears the crown of American intercollegiate debating. Certainly Bates has achieved no such National reputation as Center College, Kentucky, but then Center College achieved her reputation in football, and football provides a surer path to the front page than debating.

These Anglo-American debates afford us an excellent opportunity of comparing our own methods with those of the English universities. In the Oxford Union the whole body of graduate or undergraduate members present are the judges of the contest, and the side gets the decision which convinces the Union of the soundness of its views. In America, as we know, there are usually three judges who award the palm of victory upon the intellectual merits of the arguments advanced. The British system has as its aim the development of parliamentary debaters; the American system has as its goal the production of trial lawyers. The argument against the American system was never more cogently presented than by Theodore Roosevelt in his Autobiography. Mr. Roosevelt wrote:

Personally I have not the slightest sympathy with debating contests in which each side is arbitrarily assigned a given proposition and told to maintain it without the least reference to whether those maintaining it believe in it or not. I know that under our system this is necessary for lawyers, but I emphatically disbelieve in it as regards general discussion of political, social, and industrial matters. What we need is to turn out of our colleges young men with ardent convictions on the side of the right; not young men who can make a good argument for either right or wrong as their interest bids them. The present method of carrying on debates on such subjects as "Our Colonial Policy," or "The Need of a Navy," or "The Proper Position of the Courts in Constitutional Questions," encourages precisely the wrong attitude among those who take part in them. There is no effort to instill sincerity and intensity of conviction. On the con-

trary, the net result is to make the contestants feel that their convictions have nothing to do with their arguments. I am sorry I did not study elocution in college; but I am exceedingly glad that I did not take part in the type of debate in which stress is laid, not upon getting a speaker to think rightly, but on getting him to talk glibly on the side to which he is assigned, without regard either to what his convictions are or to what they ought to be.

We wonder whether this difference between the English and the American procedure is not responsible for the gen-

eral indifference of the American public to intercollegiate debating. Of course no system would give to debating the popular appeal of football, but perhaps a change of method might be able to put a college discussion such as that between Bates and Oxford on the second page, if not the first, of our daily journals. Our debates as at present conducted are distinctly unreal. They do not move the hearers because the speakers themselves are not moved; there are no convictions involved. College debates, particularly in the larger universi-

ties, do not evoke the interest of the general student body nor do they call out the talents of the real college leaders. The trouble lies, not in the fact that debating is unimportant, but that, as we carry it on, it lacks actuality. The average college undergraduate is about as interested in dialectics as the average prize-fight fan is in sparring for points. We suspect that the average college undergraduate is nearer right than those who bemoan the general public lack of interest in intercollegiate debates.

AS SHE PASSES

BY HAZEL HALL

SHE has beauty, she has youth.
What is time, what is truth?

Her tread sings along the street.
What are old and groaning feet?

Life, a lover suave and gay,
Companions her upon her way.

He whispers of a tryst to-morrow.
What is betrayal, what is sorrow?

WHERE MEN DEBATE BELIEFS—NOT STATISTICS¹

BY GEORGE L. MOORE

ATLETIC competitions between the representatives of American and of British universities have become a more and more common occurrence since the war and make an interesting contribution to the cause of international sympathy and understanding. Now debating is added to the activities in which American students are mingling with their British cousins and coming thereby to know them better. It seems assured of being a permanent fixture. Bates College pioneered in 1921 by crossing to meet the pick of Oxford on the platform. This year the crack debating team of New York University argued the advisability of America canceling the Interallied war debts with the lads of Oxford, of Sheffield, and of Edinburgh. At all three places the vote overwhelmingly favored cancellation, a commentary not so much on the merits of the debating as on the state of mind of the British college students, decisions in British collegiate debate resulting not from the opinion of appointed judges, but from the general voting of the audience. The New York boys affirmed the

motion to cancel in the Sheffield and Edinburgh encounters, and denied it at Oxford. So pleased were the Oxonians at the Americans taking the side on which their convictions were thought not to belong that they passed public compliments on the Americans' sportsmanship. This September they will come to America to return the visit of Bates and of New York and to meet other college debating teams, which is one evidence that international college debating is a "recognized institution."

It offers a valuable means of measuring in comparison the products of English and American universities because it elicits powers of manhood whose development is more specifically the task of the school and college than building athletic prowess. Debate is not a major sport in America, of course. It is always humble in the presence of the football team, and is grateful for any crumbs remaining after the feasts of those heroes. Yet the meetings of the American students with the best debaters of Oxford in the historic Oxford Union, which has trained scores of great British statesmen and leaders in the art of public expression, and with the sons of

Edinburgh and of Sheffield, put our college product into more striking comparison with England's than any number of crew races, tennis matches, or track competitions. The New York University team were all impressed, for one thing, with what they consider certain points in which the British system of conducting a debate is superior to that used by most American colleges. There are no judges brought in from outside upon whose opinion the decision rests. Instead, the will of the auditors is expressed by balloting. The manner of procedure at Oxford is embellished by tradition and is solemnly carried through. At the other universities some of the tradition, perhaps, is lacking, but the system is identical. The chairman of the debate proposes the motion. At Oxford he is the president of the Union and is seated on a sort of throne. This year's president is an American, R. M. Carson, of Oriel, a Rhodes man and a fine representative, incidentally, of American scholarship. The presidency of the Union is considered the highest honor at Oxford. Mr. Carson is always pointed out to visitors as "the American who made us vote for prohibition." This

¹ An editorial on college debating appears on the previous page.

achievement was the result of a speech he made at the Union on American prohibition. The achievement assumes considerable magnitude when one realizes that the typical Oxford attitude toward prohibition is amazed disbelief that it can exist anywhere.

When Mr. Carson, as chairman, proposes the motion, the first speaker affirms it, followed by a speech of negation, two more speeches (one of affirmation and one of denial), and one speech from each side to sum up. So far the procedure is not unlike that used in America, but from now on it is radically different. In an American college music or some other form of entertainment is introduced at this point to lull the minds of the audience until the judges have made their decision. In England the fun is just beginning. When the chosen debaters of the evening complete their arguments, the question is open for discussion by the house. In all three of the contests of the American team this year this was the longest and most interesting part of the meeting. One speech from the floor was twenty minutes in length and surpassed the efforts of the debaters themselves for scope of understanding and trenchancy of expression. At Edinburgh adherents of the Labor, Socialist, Conservative, and Liberal point of view fought keenly for supremacy. When the chairman deems the forum closed, the vote is taken. There are two doors, one for the ayes and another for the noes, and all the members of the house choose their exits with care, depositing their votes in the two boxes—aye and no—provided for the purpose. At Oxford these receptacles are heavy carved oak, darkened by age; and Tradition—that ubiquitous fellow—has decreed that the aye box is a square foot greater in capacity than the no, for no other reason than tradition and that the boxes, of course, were made that size.

The general effect of this forum method of procedure and the popular

vote is to keep interest in debating quick and fresh. The audience is more responsive than an American debate audience, and it is larger. One isn't admitted except by ticket! Many an alumnus of an American college will remember being begged to attend a debate "to support the team."

The reason for an English university man going to a debate is that he is interested in the question at issue and more than likely plans to say something for his opinion. This difference in attitude and motive reveals an interesting contrast between what the student across the Atlantic thinks about and talks about and the mind of his American cousin. What surprised the American debaters this year more than anything else was the table talk and other conversation of the British collegian. He is a keen student of politics and social questions, and isn't ashamed to make them subjects of every-day discussion along with cricket and rowing. His conversation is witty, bright, clever, full of chaffing and joshing, but much more solidly based than American college talk. The Oxonian, the Edinburgh undergrad, and the Sheffield man showed themselves possessed of information and able to give it out easily and interestingly and to receive in kind. This ability is reflected in the debates, which are conducted in the conversational style. Formal argument in a solid, businesslike, "cold facts" manner, which is the substance of the American college forensic style, is rarely used. Debate in Britain is made to serve a desire to acquire a clear, cogent, and interesting manner of speech. Expressing his views as brilliantly as possible is the sole justification for debating, in the opinion of the British collegian, and so rooted is this point of view in the university consciousness that the American debaters were courteously advised not to regard the recent *rencontres* as academic contests, but merely as "a friendly interchange of views."

The amount of wit, humor, and whimsicality in the British speeches amazed their American antagonists, who had been trained to use humor carefully and in the form of a story with a point. Spontaneous wit was sprinkled through all of the other discourse, from both the debaters and the speakers from the floor. Occasionally it seemed irrelevant, as when one of the young Oxonians began his pleading somewhat as follows:

Dear Mr. Chairman (*pause*)

I am going to be confidential (*long pause*)

I have a brother (*whispered*)

He occasionally (*pause*) speaks to me (*pause*)

Recently he finished his studies here and decided to sip from the spring of knowledge in an American university.

He matriculated (*prolonged pause*)

Soon afterward he became ill.

And more in the same vein. There were also some facts in his discourse, but he had somehow acquired the gift of using them for penetrability rather than for weight. What such a speaker lacks in capacity to impress he gains in the ability to amuse and entertain, which is often a better method of cultivating receptivity in an audience than gravity and a businesslike array of facts.

All of the English college debaters cultivate the light, deft touch. Those who admire Chesterton and Shaw attempt the paradox and the aphorism, and do them rather well. They even garnish their table talk with this sort of thing.

Because their debating reflects the student psychology it may prove a salutary influence on American student thought and opinion to hear the Oxonians next year, although they will miss the setting of the Union, saturated with memories of Rossetti, William Morris, and others of England's great, and filled with hundreds of young men eager to hear and to be heard.

VERDUN AND COBLENZ

SPECIAL CORRESPONDENCE

BY FRANCIS ROGERS

TO the returning wanderer who has been absent for any space of time France must always appear to merit her title of "La Belle," but this summer, which everywhere in northern Europe has been cool and wet, her beauty is more obvious than ever. Her fertile fields, luxuriant trees, and overflowing streams give evidence this year of the kindness of nature, and even the grimness of her battlefields and stricken towns is mitigated by an abundant growth of weeds and wild flowers, as well as by the devotion and industry of reconstructive hands. Tales of a cruel

drought come from southern France, but this has not spread so far north as the tourists' customary summer routes. The value of the dollar, which everywhere on the Continent is, after the weather, the prime topic of conversation of all American travelers, has not decreased in the past twelve months. The French franc is still worth only about eight cents (pre-war value nineteen), the Belgian franc even less. Prices for those who think in dollars are still appreciably less than American prices. One can board and lodge in a convenient quarter of Paris for five dollars a day, and away

from the metropolis, if one avoids the haunts of pretense and fashion, for less. Commodious motors may be hired at the rate of about thirty cents a mile. For the American, then, life in France is, as it always has been, easy and, compared with conditions at home, inexpensive.

Four years of peace have not robbed Verdun of its aspect and general atmosphere of romance and heroic conflict. There remain still in the city many evidences of destruction, but these are gradually disappearing, and on every hand one sees activity in reconstruction.

As at Rheims and Soissons, the Cathedral at Verdun is the chief monument to the years of bombardment, and even now a corner of it no larger than a village church is all that has been restored to the devotions of the faithful. As one leaves the city and passes through the outlying villages on the way to the forts one cannot but be moved to admiration at the zeal and speed with which the ruin of all buildings, four years ago usually complete, is being replaced by permanent new construction. Many a little community which the war left houseless has resumed its normal life in solid and commodious farmhouses and buildings. There is work for every pair of able hands—one sees no idlers—and if one did not know that the expense of all this reconstruction is being borne by the French themselves and not by the Germans, who should bear it, the situation would be altogether cheering.

We visited Vaux and Douamont and the Trench of the Bayonets in a torrent of rain and bowed our heads in reverence before these shrines of French heroism and self-sacrifice, where so many, many times the defenders must have felt that nature, as well as the invaders, knew no mercy. On the way to Montfaucon one passes fields short years ago the scene of incessant struggle and slaughter, where miles of barbed-wire entanglements still overtop the new growth of weeds and bushes, and enters the territory where our own boys fought and fell so gallantly in the summer and fall of 1918. At Romagne 14,000 crosses mark the graves of those who died in the Argonne and whose people were content to let them lie in the land they had died to save. There could be no lovelier or more dignified final resting-place for them, and in the untold years to come the spot that is America in France will remain as a noble monument to our participation in the war.

As one leaves Verdun and journeys eastward into Lorraine along the route followed by the Germans westward in their attack on France, the signs of devastation are soon replaced by the evidences of long and undisturbed prosperity that characterized Germany before the war and still differentiate it from the austerity that belongs to the aspect of France even undevastated. Traveling northward through Treves, one sees on every hand fruitful farms and busy industrial towns. If there is a sweeter or more ingratiating landscape than that which is to be seen from the car windows as the train follows the course of the Moselle, I do not know where to look for it. All the hilly slopes east of the river are covered with vineyards under the highest cultivation, and every few miles is a pretty river town, the distributing center for the wine from the surrounding hills. An hour or two more, and one reaches, at the confluence of the Moselle and the Rhine, Coblenz.

A hundred years ago Napoleon made himself at home in Coblenz, but since then there has been nothing to disturb

its growth as a beautifully situated, prosperous commercial city. Its fine streets, handsome buildings, and well-planned parks all betray its comfortable history. In these particulars it does not differ substantially from fifty other German cities of moderate size. It is unique to-day among all the cities in Europe, because it is living under the Stars and Stripes, which float serenely from the highest tower of its famous old citadel, Ehrenbreitstein. From two buildings on the river-front beneath Ehrenbreitstein French flags are flying, but they are subordinate to one flag, which by its pre-eminence on the citadel signifies that the bridgehead of the Rhine at Coblenz is in the keeping of the American Army.

At the present time twelve hundred American soldiers, under the command of Major-General Allen, are in absolute control. Some six or seven thousand French soldiers are in and about Coblenz, but General Allen is also their commander-in-chief, and as long as our flag floats above Ehrenbreitstein the city will remain under American rule. The beginning of last June our army had packed all its belongings in readiness to depart. Then came orders from Washington to remain, and there our army still is. Early in 1919 Coblenz was the center for 300,000 Americans, but little by little this great host has shrunk, till now it is only the skeleton of its former self. It is small in numbers; in efficiency and training it is said to be the equal of the best. General Allen has spared no pains to keep its morale and discipline at the highest point. Its chief duty is to administer justly the territory intrusted to its care and to minimize in all possible ways the friction that in any occupied country is inevitable between the natives and the alien troops. Our army seems to be performing its task admirably and to be the least unwelcome of all the occupying armies. The unofficial contact of our soldiers with the native population is constant and agreeable, as is attested by the many marriages that have taken place between our men and German girls.

There is little homesickness among our men. Indeed, it would be surprising if there were, for I doubt if any army ever served under more comfortable conditions. The army, which is composed entirely of professional soldiers who enlisted, presumably, because of a taste for military life, is well housed and well fed; its military duties, while sufficiently exacting to keep it in fighting trim, are not severe. The men are paid in American dollars, the purchasing powers of which in Germany are now so great as to place within the means of our men innumerable luxuries. In addition, the ever-faithful and well equipped Y. M. C. A. and a unit of the Salvation Army minister generously to all cravings for healthy recreation—fields for all outdoor games, golf, tennis, swimming, libraries, billiards, canteens,

etc. No wonder that the American soldier in Coblenz is contented and that, having nothing to be disagreeable about and his pocket full of easy money, he makes no enemies. So much for the surface of things.

The closer one gets to the situation at Coblenz, the clearer becomes the value of our being there. One coming direct from Verdun to the Rhineland must realize why France feels that she has been unfairly treated both by her allies and by Germany and that if she were now to weaken in her attitude Germany would never make the reparations that are so justly due from her to France. Germany, sulky and disingenuous, will pay nothing that she is not forced to pay; that is certain. No matter how loud she cries poverty, the fact is indisputable that for every selfish enterprise she has money in plenty; for reparations only does she lack funds. England, with Germany's colonies and navy in her hands, but with grievous unemployment at home—the figures show a million and a half of idle men—sees as her most pressing need the restoration of her former trade with Germany. It is small wonder that between two countries having such different points of view there should be constant friction when their representatives come in contact with each other.

America is not in the League of Nations; her attitude towards European questions is almost as detached as was that of Woodrow Wilson in 1916. Congress is now striving to erect a tariff wall about our commerce that would render foreign trade more difficult than ever before. In such a situation let us be truly grateful that General Allen and his little army still represent us officially in the European tangle. The rift is widening between the two great European democracies that held the Germans back while we were making up our minds to participate in a struggle that really involved our own safety as a nation. We, with France and England, finally brought Germany to defeat. It is a sad time now, when the fruits of victory are still to be gathered, to withhold our hand from the harvest. It should be our earnest aim to try to reconcile the differences between our two allies to whom we are bound by a thousand ties of blood and tradition and to whom we owe the major part of what is best in our civilization. We did our share in 1918; it will be to our everlasting shame if we do not do it in 1922. Let us in our gratitude to England and France for the many precious things that we owe to them, in our sympathy with them in their many tribulations and sorrows, and in our understanding of their urgent needs, cease to think of America as a land unconcerned with the problems of Europe and determine, as we did in 1917, to play a worthy part in the world's great drama. General Allen and his little army are playing one in Coblenz; let us all, as a nation, play ours with equal zeal and vision.

COMPULSORY INVESTIGATION IN LABOR DISPUTES IN CANADA

SPECIAL CORRESPONDENCE FROM D. M. LE BOURDAIS

S NOW was beginning to fall upon the treeless prairies of the Canadian northwest and the settlers on their isolated homesteads were preparing for winter. But in one respect they could make no provision: they were without fuel, and none could be had. Wood of course there was none; and a strike in the coal mines of southern Alberta, in progress since the early summer, had long before resulted in complete depletion of the slim stock of coal reserves. And the outlook for an early return to work in the mines seemed to grow more hopeless as day followed day. Originally a dispute arising out of a difference of opinion regarding wages and working conditions, it had developed into a contest over the question of whether the coal operators should recognize the unions or not. The men would not deal with the company excepting through their union officers; the company would not treat with the men excepting as individuals. Apparently there was no possibility of settlement until one party or the other receded from its position. In the meantime the likelihood of many settlers freezing to death in their prairie shacks became more and more a matter of grim probability.

The mines were in Alberta, but the people of the neighboring province of Saskatchewan promised to be the chief sufferers. After the failure of various attempts at mediation by private individuals, the Government of Saskatchewan petitioned the federal authorities at Ottawa to intervene for the protection of the helpless homesteaders. Sir Wilfrid Laurier, who was Prime Minister at the time, despatched W. L. Mackenzie King, then Deputy Minister of Labor, who had already attained some distinction as a mediator in labor disputes, to the affected district to see what could be done. After considerable difficulty, arising chiefly out of the non-existence of any machinery by means of which the two parties to the dispute could be brought together, the strike was settled—temporarily, as such settlements usually are—and the men went back to work. The homesteaders again had coal for their stoves, but it had been a close call. That was in 1906.

This strike, and the knowledge that whatever settlement had been effected could be considered only as an armistice, and that similar conditions existed in a number of other industries intimately connected with the public welfare, caused the Government to recognize the necessity for the enactment of legislation which should at least postpone future strikes until every other practicable alternative had failed and which should also be the means of supplying

the public with the facts in relation to matters under dispute. Consequently, upon his return from the west, Mr. King was asked to draft a bill which should meet with these various requirements; and the result was what is known as the Industrial Disputes Investigation Act, which became law March 22, 1907.

The act has application to those industries which may somewhat broadly be defined as public utilities, and includes mining, both coal and metal; transportation, steam and electric, railways as well as steamships; telegraphs and telephones; gas, electric light, water, and power works. No change in wages or working conditions may be made either by employers or employees in any of these industries (excepting by mutual consent) without first giving thirty days' notice. If a dispute then arises, either party may apply to the Minister of Labor for a board of conciliation and investigation. This board consists of three members, two representing, respectively, the employer and the employees and a chairman agreed upon by these two. If they fail to agree, the Minister of Labor selects the third member. Fees and traveling expenses of the members of the board and witnesses as well as the cost of necessary clerical assistance and other expenses are paid by the Department of Labor. Authority is given the board to require the attendance of persons and the production of papers and documents, and generally to secure whatever information, in its opinion, is essential to a clear insight into the facts of the case under investigation. Each side is invited to present its view and outside testimony may be requested as well. Members of the board also make personal inspection of working conditions when considered desirable. After all the evidence has been adduced and considered, the board presents its report to the Minister of Labor, who communicates it to the parties involved in the dispute and also causes it to be published. Provision is likewise made for the presentation of a minority report in the event of a lack of unanimity; and this, too, is published. Neither party is bound to abide by the award. But generally, even though unacceptable to either or both parties, it becomes the basis for further negotiations between them; and then of course if agreement is still impossible, the final arbitrament of a strike becomes the only resort.

In the great majority of cases, however, the appointment of a board of conciliation and investigation either directly or indirectly results in a settlement. Frequently the board, acting in its capacity as mediator, succeeds in effecting

a settlement without the necessity for making an award. From its inception in 1907 to March 31, 1921, some 509 disputes were dealt with under the act, and of these only 33 failed of settlement.

Labor at first was, as a general rule, opposed to the act and considered it a restriction of the workers' right to lay down tools at will; but quite recently, in view of the tendency of employers to force reductions in wages, employees have come to look upon it with other eyes. And now there is evidence that, in some quarters, employers are beginning to consider it an abridgment of their rights. This latter was strikingly illustrated during the recent threatened railway strike.

The principal railways of Canada gave the usual thirty days' notice that on July 16, last, they would make certain wage reductions, and upon the expiration of that notice, without referring the matter to a board of conciliation and investigation as provided by the act, proceeded to put such reductions into effect. Union officials protested against this as a violation of the act, but the railways argued that the reductions were only tentative and that the difference, if in favor of the men, could be adjusted later—that is to say, if they should accept the award of the board in the event of its being against them (which, inferentially, they would not). They further contended that such action on their part did not constitute a violation of the act as interpreted by them; but the Federal Department of Justice, being called upon for an opinion, held that the railways were in the wrong. This opinion the latter seemed also inclined to dispute, contending that the Department of Justice was not competent to interpret the statutes. But at this juncture public opinion, headed by the Prime Minister—the framer of the act of 1907—stepped in; the railways, finding their position untenable, submitted to the popular verdict and agreed to restore wages to their original level pending the report of the boards of conciliation and investigation, which had been appointed in the meantime.

For a time the situation had been serious; a strike vote taken by the railway workers stood overwhelmingly in favor of a strike; and there is little doubt that had there been no Industrial Disputes Investigation Act railway transportation in Canada would have been disrupted by a period of bitter industrial warfare. It may come yet, but that possibility, too, has been minimized.

There may be doubts as to the merits or the justice of compulsory arbitration; but as to compulsory investigation and conciliation, at least, there can be none.

AMERICAN STUDENTS ABROAD

EDITORIAL CORRESPONDENCE

BY ELBERT FRANCIS BALDWIN

FORTY American students are over here this summer traveling together. It has been interesting to see a European city in their company.

They are in Europe at the instance of the European Student Relief (represented in America by the Student Friendship Fund), an outgrowth of the World's Student Christian Federation. The American Student Department of the Young Men's Christian Association is affiliated with the Federation, and therefore chose this body of young men among our American colleges and universities. The lads call themselves "Pilgrims of Friendship" and represent some forty of our educational institutions from Oregon to Florida.

They will be gone about ten weeks from New York to New York. They enjoy very substantial reductions of hotel and railway rates. They travel for a week at a time in their own sleeping-cars, thus eliminating hotel bedrooms. At the frontiers of the various countries they certainly had a very easy experience, compared with that of other travelers.

They journey at their own expense. So attractive were the opportunities offered for this particular journey that half of this student body actually borrowed the necessary funds for the trip, for their pecuniary position would not allow them to undertake it otherwise and their ambition to do so was quite as great as that of those students who had enough money for the journey. In order to pay back the sums borrowed some of the borrowers will have to teach during the coming scholastic year, instead of being in college as students, one of the conditions of the trip being that those who make it shall remain in close touch, either as fellow-students or as teachers, with the undergraduates in our colleges and universities. To the queries I put to learn whether any of the lads regretted having borrowed I received an invariable "No." Some added: "We are proud to have had the chance to borrow and of having taken advantage of it." One boy remarked: "I am going to do the same thing for next summer's trip." Others nodded affirmatively.

As indicating the kind of opportunities the students are having in Europe, let me tell about the two days they have just spent at Geneva.

The first thing they saw here was the International Bureau of Labor. They were received by that notable Frenchman Albert Thomas, the Director. He gave them a good talk—as he is perhaps the most brilliant orator of France, he could hardly do less. He told his auditors how happy he and his collaborators were to note the interest which any

visitor took in the work they were doing. "This Bureau," he added, "far from being a dangerous weapon, as a few critics would have us believe, has no other purpose than to introduce more and more justice in the relations between capital and labor." Then Dr. Meeker, who is one of the secretaries of the Bureau, described the work in detail.

The rest of the morning was spent at the headquarters of the League of Nations. There Dr. Hudson, of Harvard, explained the work of the League among the fifty-one member nations in the development of peace and justice. After his discourse there was a general discussion. The questions from the students showed, not only the great interest they had been taking in what had been told them, but also the excellence of their study of the subject at home.

Then came the luncheon hour, when, to our agreeable surprise, a no less welcome guest than Mont Blanc himself suddenly appeared from behind the clouds and showed himself to us in all his splendor. It was a privilege to lunch amid such surroundings.

At two o'clock we were at the Y. M. C. A. building, where the international work of its World Committee was commented on by Dr. Nitobe, professor at the University of Tokyo and member of the League of Nations secretariat, also by M. Slordet, one of the secretaries of the Committee, whose seat is at Geneva. But the most interesting feature for the American boys was the welcome in such a place by a Japanese Christian.

At three o'clock we were at the headquarters of the International Committee of the Red Cross. One of its Geneva members, Professor Bouvier, greeted us in impressive language, and was followed by one of the secretaries, M. Brunel, who described the work in detail.

At four o'clock we were at the famous Athénée, where M. Guillaume Fatio, President of the Society of Arts, vividly described the city and history of Geneva, illustrating his interesting lecture by lantern slides of much artistic merit. After tea at the Athénée, there were ringing addresses by Professors Rappard, of the University of Geneva, and Rockwell, of Union Seminary, New York. Some years ago M. Rappard was instructor at Harvard. He speaks English perfectly; hence that which specially interested the American students was, not so much the fact that Mr. Rappard was President of the Mandats Commission of the League of Nations and Professor of Economics at the University here, as that he addressed his audience rather in virtue of his title as a Harvard instruc-

tor. In the remarks of Professor Rockwell his American hearers will remember his insistence on the study of foreign languages, particularly French, and his praise of the University of Geneva Summer School, of which he is one of the thirty-odd American members. He thus spoke from the point of view both of teacher and student. This Summer School, I may add, affords a unique opportunity for the study of modern practical international politics; as Geneva is the seat of nearly thirty international societies, the school numbers among its lecturers some of their most distinguished workers.

Then we went to the Bastions, nearby, and saw the magnificent Reformation Monument, recently completed. More than any one else Charles Borgeaud, the eminent historian, had inspired its construction, and who could better instruct us concerning it than he? In the middle of an immense wall against the Bastions stand the gigantic and austere figures of Farel, Calvin, Théodore de Bèze, and John Knox, and on either side are the figures of their notable contemporaries—of the Great Elector of Prussia, of Cromwell, Coligny, Roger Williams, Henry IV, and Bocskay.

At the sunset hour we found ourselves in the library of the University, where M. Borgeaud welcomed us on behalf of that noteworthy and efficient institution of learning. None of us will forget the pictures—the noble head of the professor against a background of the old portraits of the celebrities of two, three, four centuries ago, and about us on every hand exposed in glass cases the University's collection of manuscripts and autographs which form, in my opinion, its most precious treasure.

To-day we saw the Collège de Calvin, established by John Calvin nearly four hundred years ago. The picturesque old building is now surrounded by modern constructions, and all form the great High School of Geneva. The person who showed us about had spent seven years here as a student. While the Swiss primary schools are free, this High School is not; the fee is about four dollars a semester, and there are two semesters in the year.

We also saw the "Alabama Room" in the City Hall. There in 1872 was signed the Treaty of Geneva—the first arbitration judgment. That would be interesting in any event, but it interests us specially because the case was between the United States and Great Britain. During our Civil War there were English boats, like the Alabama, which were sold, contrary to international law, to the Confederacy. We complained of this infraction of neutrality. Great Britain

and America finally decided to leave the question to five arbitrators, one of whom was chosen by the President of Switzerland. As a result of the arbitration Great Britain had to pay a large indemnity to our Government.

Then we all went to church in the beautiful chapel of the Machabées, which forms part of the Cathedral. The students were deeply impressed both by the service and by the noble sermon from Mr. Hamilton, of Edinburgh. Some of them told me afterwards that the hour spent in the chapel had been the best hour of the whole trip.

Of course we visited the Cathedral and admired the harmonious lines of its Gothic architecture. In order to explain the Cathedral to us M. Fatio did not hesitate to go up into the pulpit where Calvin used to preach! What is equally extraordinary, the Archbishop of Canterbury himself is shortly to preach from the same pulpit.

By this time the students were glad to partake of an excellent lunch offered to them by the National Protestant Church, after which we all went up the lake by steamer to M. Fatio's country place. The old manor-house, standing considerably back from the lake, was once inhabited by the original John Jacob Astor, of New York, but the present M. Fatio prefers to live in a small house which he built more directly on the lake shore. The students thus had the opportunity of seeing a splendid old property whose development was very characteristic of Switzerland. They also enjoyed a swim in the lake.

Then the steamer took us across to the park, La Grange, where the Mayor of Geneva received us officially. The view of the park, with its splendid trees and lovely old Louis XV mansion, in front of which was a long tea-table, was extremely picturesque, especially as the Mayor was accompanied by his mace-bearer, clothed, half of him in red and

half in orange, the colors of Geneva. The Mayor made a charming address to the students.

In speaking with the young men about their general impression of Europe I quickly discovered that the various countries, the various cities, and the general economic, social, political, and religious conditions had interested them keenly. But they had been interested even more in the distinguished men they had seen. For the students there were individual and distinct memories of the towns they had visited—of The Hague, Amsterdam, Cologne, Marburg, Göttingen, Berlin, Dresden, Warsaw, Prague, Budapest, Vienna, Munich. But standing out with very sharp distinctness were the impressions of the men whom they have met—Wirth, Simon, Leschenfeld, Seipel, Benes, Stepanik, Archduke Joseph, Count Apponyi, Admiral Horthy.

The lads have already seen Holland, Germany, Poland, Czechoslovakia, Austria, Hungary—that is to say, one neutral country, two new nations, and three members of the Teutonic alliance. They will see France and England—two countries of the Entente for which we of America fought. They are seeing Switzerland to-day—or rather, Geneva, where are concentrated many international endeavors.

But what do they know of Switzerland who only Geneva know? For next summer's voyage why not have a few days in the cradle of Swiss Democracy—her eternal mountains?

For the rest, next summer's voyage—so Dr. Gossard, the leader of the party, and Mr. Hoffmann, the Executive Secretary of the European Student Relief, told me—ought to be a little longer than this summer's voyage and comprise Italy and Belgium. If that is impossible, perhaps there can be two voyages undertaken at the same time, one for students who are particularly interested in east-

ern Europe, and one for those who prefer to spend their weeks in western Europe.

In talking with these students I noted their truly American spirit of "I want to know." But I noted as well their superior qualities of manner and deportment. They were not noisy or boastful or bumptious. They had a quiet serenity almost beyond their years. Their habits were really austere; not one of them used alcohol and few smoked. All gave the impression of having been well brought up. In speech they were simple, sincere, frank.

Some of them, however, were pretty provincial, as was indeed natural in those who had had little experience of the world. Consequently they were somewhat credulous. They constitute the kind of virgin soil in which good or bad seed quickly sprouts. The hospitality which they have received, and will receive everywhere, opens the way to propaganda of all sorts. It is not astonishing that they should be influenced by deception or be an easy prey for the disseminators of false reports.

But the desire of all the students to seek for truth is evident. Let us hope, then, that they will be able to rectify any misstatements which they may hear or read. They represent the coming generation: may the final impression of their sojourn in Europe have its proper influence whenever they debate questions of justice relating to the countries they have visited!

An American lady has just asked, "Do you suppose those boys appreciate all that has been done for them" in Geneva?" I had to reply, "No." But, just the same, I had to add: "For most of the lads, the weeks in Europe, spent as these two days in Geneva have been, ought to be worth a year in college. The boys appreciate that already. They told me so."

Geneva, August 13, 1922.

AFTER FIFTY—WHAT?

BY E. K. PARKINSON

THE motto of life in America in our twentieth century would seem to be: Speed—more speed—top speed. For speed is impressed and drilled into our youth. The boy is pushed ahead into school, on into and out of college, and finally into the hurly-burly of business, where more speed is required if he is to succeed. The goal of his ambition reached, top speed must be maintained or the man just behind him will jump into his saddle. Result—thousands of broken-down men, or men "gone stale" at forty-five, or fifty at the most.

It has been often said that American business men are gamblers at heart. The lodestar isn't the American Eagle served up on a gold piece, but rather the power and position which it brings and the thrill of the game.

When one stops to analyze life and

its values, what profit is there for a man to gain millions and boundless power, if in so doing he loses his sense of things worth while in life, to say nothing of his health?

Indeed, to run over the list of men one knows who are close to fifty or have passed it is somewhat of a shock. Jones has grown stout and flabby, Brown is as nervous as a race horse, Green has chronic indigestion, Smith has diabetes, and so on. One in ten is fit and trim as nature intended him to be at that age.

But still more deplorable is the limited capacity of these men for any intellectual enjoyment outside their chosen field. They can talk golf, baseball, racing, yachting, and automobiles, but beyond that they are dumb as an oyster.

When one realizes the vast field of

interests apart from business, one is tempted to suggest to successful business men that they retire and take up some worth-while hobby with all the zest they threw into business, perhaps something that will keep them outdoors. It might be yachting, possibly a trip around the world, or angling, or shooting, or developing a place in the country—in short, any one of fifty different things which would also allow leisure for reading, quiet thinking, a broadening of sympathies, as well as bringing one into a closer touch with nature.

The writer knows a chap who at the age of fifty-one found himself "going stale," and, after talking things over with his wife, decided to break loose and change his whole mode of existence. His two sons were of age, one of them being married. The younger elected to

join his father should he decide to live in the country.

After considerable search a comfortable remodeled farmhouse with all improvements was found on thirty acres of land, within one hundred miles of Manhattan and east of the Hudson River. The property had been previously owned by a retired merchant, who had spent considerable money in its development. There were some beautiful old trees of many varieties, a most attractive flower-garden with a stream running through it, a well-planned vegetable garden, as well as lawns and a tennis court. The outbuildings were well built and ample for all purposes. The location itself was charming, the country being high and rolling, with several small lakes and many streams in the neighborhood. It was about a mile from the railway station and just on the edge of a pretty little New England village.

The head of the family undertook the growing of fruit and the breeding of dogs; the wife assumed charge of a flower-garden, and, with the aid of a small portable greenhouse, provided flowers for the house during the winter, and soon became much interested in growing mushrooms for market.

The son at first found his pleasure in

sports which were to be had at a near-by country club. In the spring he "flivvered" over to the Catskills for the trout fishing, and in the autumn, when the air was keen and crisp, he could be found almost any fine day tramping the hills and dales with his gun and dog.

An unexpected visit to the Madison Square Garden Poultry Show a few years ago, however, converted this youngster into an enthusiastic poultry fancier and to-day he is the possessor of many blue ribbons, while the sales of thoroughbred stock pay him a handsome profit.

During the summer months these country enthusiasts fill their home weekends with friends, while the winter months are broken by frequent trips to town. It is a safe bet that this chap would never go back into business again, for he has found other and far more absorbing interests to occupy him, as well as an amazing renewal of his bodily vigor.

Of course for the restless man there is always the fun and thrill of adventure in travel to be had, by automobile, for example. What could provide more fun or interest than a modern camp trailer which has two comfortable beds with springs, an oil stove, ice-box, and an

electric light? Surely one may be absolutely independent and go where one wills with such an outfit; yet it is doubtful if one business man in twenty would be capable of looking out for himself and his wife for a week on the road. The joy of the open road is a sealed book to the average town man. One has but to make such a trip and meet the *voyageurs* to realize the truth of this, for these knights of the road are usually artisans, or proprietors of small shops, or teachers who have become independent and resourceful from necessity.

In a recent number of an outdoor magazine is an account of a man who traveled ten thousand miles in an open canoe, from Chicago to New York City by way of the Mississippi, the Gulf, and inland waterways. It proved a wonderful trip, filled to the full with adventure, but also required plenty of courage, self-reliance, and skill. Would one business man in a hundred at the age of fifty venture in a canoe for one-quarter of that distance? It would prove interesting to collect a few answers to that question. None the less this is an excellent time for the fifty-year-old to break away from stale habit, for business is not over-active, and thus the absentee might not even be missed. Try it!

A MOUNTAIN ARTIST

BY ZEPHINE HUMPHREY

IN the little valley of Dorset, Vermont, there is an informal exhibition this summer a group of paintings by an artist as yet unknown to the world at large. He is a son of the valley, untraveled (save in the sense in which Thoreau once said he had traveled widely in Concord) and utterly untrained in the traditions and theories of painting. His story is such an interesting one that the editors of *The Outlook* have asked me to relate it to their readers.

Some years ago a number of landscape painters came to the valley and took board in the family of a craftsman named John Lillie. They were an enthusiastic, industrious lot, and they soon filled the carriage-house of their host's big barn with sketches and canvases. Also they were genially friendly, as painters are apt to be, and established the happiest relations with their host himself.

They found him a thoughtful, intelligent man, with a strong, rather rugged face and meditative blue eyes. As carpenter, mason, and plumber he had been in demand ever since he could remember, and the quality of his work was renowned through the neighborhood. Especially was he valued by the "summer people" who were coming into the valley and who wanted their houses built or remodeled skillfully. He had an instinctive eye and touch for the finely harmonious.

His love for his native mountains

commended him particularly to the painters who sojourned with him. He seemed to know all about the hills, just where to go for their noblest views, just

Art is the genuine democrat. It appears as cheerfully in the palace as on the green hillsides of Vermont. In next week's issue H. G. Leach tells of the work of a Swedish Prince who wields a brush as skillfully as his ancestors have wielded scepters. The story of Prince Eugen will be illustrated with examples of his remarkable work.

what atmospheric conditions would make them look most beautiful; and he was never too busy to stop and stand gazing off at them. The interest was unusual. Most Vermonters take the loveliness of their environment pretty much for granted.

Until the summer of which I am speaking he had never seen an oil painting, and he was immensely interested in the productions that piled up in his carriage-house. Feeling himself not unwelcome, he spent a good deal of time with his boarders, watching them at their work and pondering. Finally, one day, when they were all off at a safe distance on the mountainside and he was securely alone, he got out an assortment of house paints for which he happened to be an agent, made a selection of house painter's brushes, augmented by a shaving-brush, found a smooth, thin strip of board, and went to work. When he had finished, he hung his picture, a narrow, oblong panel, beside the others on the wall of the carriage-house.

The next morning there was great excitement among the landscape painters. "Who in thunder painted that?" the chief of them demanded. "Not I." "No, nor I." "Of course not!" exploded the chief. "You couldn't. That begins where you leave off." It was not very long before their host was found, and, being challenged with questions, made his surprising confession, and then—well, one can better imagine than describe the sensation he caused. For,

JOHN LILLIE—A PORTRAIT BY EDWIN B. CHILD

indeed, his entirely unprecedented picture betrayed great and mature ability.

During the rest of that summer he was the constantly courted companion of the landscape painters. They gave him proper brushes and colors, supplied him

with canvases, and took him with them on their sketching trips—or, rather, he took them with him to the choice spots he knew among the hills. They were very cautious about offering him counsel, and he was more than cautious about

receiving it. "Hands off!" was the instinctive slogan in face of the miracle that had been worked among them. Suddenly, without any effort, he painted landscapes as if he had spent his life doing nothing else. In the autumn the painters gave an exhibition in a studio in the village, and John Lillie had more canvases hung than any one.

During the following winter he made his first—and, up to the present writing, his only—trip to New York. He was invited by his painter friends, and by them was taken to the current exhibitions and the Metropolitan Museum. His judgment was unerring. He knew how to go straight to the best picture on a wall and how to point out its peculiar excellence. He was quite unswayed by the opinions of others, although he listened respectfully to them. He knew what he knew, why he knew it, and how to abide by it. When he came back to the winter valley (and he was very glad to get back), he had a store of impressions, some of which he cherished and many of which he let slip.

After that for a long time nothing particular happened. The landscape painters did not return to the valley and the local excitement over John Lillie's pictures died down. It had never been an altogether sympathetic excitement, anyway, so far as his fellow-townsmen were concerned. Picture-making seemed a childish waste of time to most of them, especially when a man was skilled in a useful craft and had a family to support. Summer homes increased, and John Lillie had all he could do planning and building and remodeling. Gradually his brief burst of landscape painting

A painting by John Lillie

"HE HUNG HIS PICTURE, A NARROW OBLONG PANEL, BESIDE THE OTHERS ON THE WALL OF THE CARRIAGE-HOUSE"

THE BATTLEMENT—A PAINTING BY JOHN LILLIE

A GREEN MOUNTAIN—A PAINTING BY JOHN LILLIE

came to seem to his neighbors a unique, amazing episode.

Not to him, however. No, although he loved his craft and reveled in the beauty of the fine old houses which he was asked to reclaim, he never forgot the greater joy of the creative impulse he had known. When such an impulse once grips a man it never lets him go. Little by little, during the long winters and when at times work was slack in the summer, John Lillie accumulated a store of canvases which he kept in his hen-house and concerning which he mostly held his peace. Now and then, when the thrill of catching some particularly lovely effect was unendurable, he tried to share it with a neighbor; but the neighbor did not always understand—as why, indeed, should he? So he said less and less and went his hidden way. If it had not been for the coming of yet another landscape painter to the valley last autumn, the hen-house might have kept its secrets.

But when the landscape painter did come! He was a temperamental soul, and, as the vivid phrase runs, he went right up in the air. "Why, this is a genius you have in your midst!" he scolded the valley folk. "What do you mean by asking him to come and mend your kitchen sinks? Kitchen sinks! John Lillie! I tell you, we're none of us fit to wash his brushes for him."

Of course it was extravagant, but it was immensely effective in waking the valley up, and soon John Lillie's name was on every lip and all the lingering summer people who cared anything about pictures were making pilgrimages to the Lillie hen-house. John Lillie received them cordially, not in the least bewildered by the sudden limelight which had been turned on him, not too much elated, but very truly pleased and gratified. The artist paints his pictures for himself and something outside him which we may as well call God; but the sympathetic approval of his fellow-man is needed to make the trinity complete. On the outer wall of the hen-house, against the soft gray background of unpainted boards, he slipped canvas after canvas into a studio frame which had been given to him. In the clear autumn light the paintings showed to great advantage.

They were strange pictures. On general principles, one would have expected an untrained painter to see and reproduce things photographically. But Lillie's Dorset was not at all the Dorset of his neighbors and of most of the summer people. It was a big, elemental world, simple, rather bare, sometimes austere, sometimes instinct with a poignant loveliness, always high and remote and full of romance. In the significant words of

earthed them, his pictures had "the unreality of all great things." One of the canvases held nothing but the golden crest of a big, bare autumn hill against a gray sky. Not a bush, not even a rock broke the noble curve, and only a faint rift in one corner broke the monotony of the sky. Yet it was a picture which one could ponder and search indefinitely. Another showed a white winter world, blurred and indistinct, with a thin line of wind-blown trees staggering across it. All the pictures had mystery and imagination. They were amazing productions on the part of a countryman whose only training had lain along the precise and accurate lines of carpentry.

Well, what to do about them and him? That was the question. If a genius had been discovered, he must be treated worthily. The visiting landscape painter went back to New York and talked so convincingly to one of the Fifth Avenue picture dealers that the latter sent for a number of Lillie's canvases and kept five of them to show his patrons. The rest were taken by a young lawyer and his wife who lived in the East Seventies, and who set aside one of their big rooms to serve as a gallery during the season. Three of these pictures were sold. And now a new crop of them is on exhibition in their home valley.

What will come of it all? That is a

further important question, and one that cannot be answered. The ways and the ends of destinies like John Lillie's are beyond human fathoming. But, whatever may or may not happen, this is

sure: that the inhabitants of Dorset have been stirred and roused by a gust of that wayward spirit that bloweth where it listeth; whence it comes and whither it goes no man can tell. Like

John Keats, like Walt Whitman, John Lillie has been singled out for a mysterious, unprepared visitation, and all who know him are the more thoughtful and reverent for the experience.

THE INSTITUTE OF POLITICS

SPECIAL CORRESPONDENCE FROM WILLIAMSTOWN

BY ANDREW TEN EYCK

A PROMINENT New York lawyer, much preoccupied in the duties of his profession, was my guest over a week-end. He knew nothing of the Institute of Politics except what he had read in the newspapers, and his impressions, it is fair to say, were those of the casual reader of the newspapers. He lived through the intimate life of this institution one day. He is not ordinarily a silent man, but he was so here. I feared the inappropriateness of my hospitality, but in the last few minutes before he left I was permitted to listen to his impressions. "I have enjoyed every minute of this week-end. It has been like a sudden trip abroad. The views I have heard have been so diverse, so sanely practical, and yet so idealistic. I didn't think that any body of folks like this could be assembled anywhere. It is a compliment to America that such an institution has been brought into existence."

My New York lawyer represents, I should say, the average intelligent American, much too absorbed, as this gentleman himself stated, in the question of making a living to give close study to international affairs. The Institute of Politics, seen through the eyes of such men, has been worth while. It has been pre-eminently a place of open discussion. It has fostered no programme and passed no resolutions.

When I met Lionel Curtis in New York about a month ago, he said to me that he was attracted to Williamstown because it was a place, as he understood it, where people didn't agree with each other. The trouble with the world, Mr. Curtis believed, was that we have been holding conferences, like those at Lake Mohonk, with people who agree with us, and we keep on agreeing, and all that is accomplished eventually is a sort of mutual admiration. Mr. Curtis appears now to have been a prophet.

It has not been easy for Dr. Garfield to adhere to his idea of maintaining the freedom from commitment. The test has come often. His controlling idea, and circumstances, have saved the day. There has been no Round Table conference where the views have been unanimous.

In general, the British lecturers, Lionel Curtis and Philip Kerr, created the keenest interest. Mr. Kerr talked about the prevention of war in the spirit of both a realist and an idealist, and put

forth a plan for world organization along the lines of the Government of the United States and what he termed the British Commonwealth, whose sanction would be backed by force. Although he was always careful to preface his speeches with the explanation that he spoke only for himself, it was never quite possible for his audience to forget that he was formerly the *alter ego* of a man who has remained in power while the other war Premiers and Presidents have been superseded and repudiated by the people. Therefore whatever Mr. Kerr had to say about the causes of the war, the Peace Conference, or a new world order took on an unconscious tinge of the reflected glory of his chief, and was interesting because of that impression as well as because of the inherent sense of the matter itself.

All through the Institute no issue cropped up more than the one which Philip Kerr stated in the following words: "It is an extraordinarily difficult problem how America is to play her part as a world power in helping to guide world policies while avoiding entanglements with the purely internal problems of Europe."

The Round Tables on the rehabilitation of Europe and Interallied debts were miniature lecture halls largely because of the clash between the New York bankers and such men as Oscar T. Crosby, former Assistant Secretary of the Treasury. This issue came forward again and again, and I do not think opinion has been much clarified by the discussions. One had ordinarily expected that there would be tense arguments about the policy of the American Government as to the League of Nations in the Round Tables, but, so far as could be gathered, such discussions have figured little in the Institute of Politics. In one Round Table the League was discussed, but it was concerned exclusively with those matters over which the League has some supervision and is functioning, namely, the mandated territories, the Saar Basin, and the Free City of Dantsic. The discussion of international relations, so far as the United States Government was concerned, dealt solely with the system of diplomatic intercourse and individual representations to the different Governments.

I think the Institute of Politics, if it can be said any clear opinion was developed on the subject, clearly foresees

that the future world problems lie in the Pacific. Lionel Curtis said: "The relations of the people of Europe and America to those of Asia and Africa are the ultimate problem of politics. The real question is how to bring those relations within the realm of law properly so called." Then, in stating the principle, Mr. Curtis said: "The problem you have to face in the Philippines and we have to face in India is how much scope you can give the people to hurt themselves without destroying the fabric of government altogether."

It was singular to note that the British delegation and a great many Englishmen and Canadians who came here to visit the Institute constantly used the word "Commonwealth" instead of "Empire" in speaking of the British Empire.

There is unquestionably a group of young Englishmen of the General Smuts school who are anxious to see such a transformation in the relationship of the various Dominions to the mother country. It was even suggested that this group would like to invite America in some future day to join, perhaps not the British, but an English-speaking commonwealth of nations on the principle of a common language and a system of common law which would prevail universally in such an organization.

The chief value of the Round Table discussions was not so much in the specific thing said or discussed as it was in showing how an idea takes root in a gathering like this. People are rapidly revising their opinions, for instance, about war. Philip Kerr's explanation of the Kaiser's part in causing the war was satisfactory. Mr. Cravath's dictum that we could not afford to let Germany pay the full bill and that it should be reduced two-thirds is not far from the idea many hold who have studied the problem. The French view as put forward by M. Raymond Recouly, French journalist, and doubtless in the confidence of the French Foreign Office, who lectured at the Institute, seemed to show moderation. The thing which concerns us most is not that Germany in equity and right should pay the reparations which have been assessed, or even higher ones, but that the economic collapse which is imminent in Germany carries danger, especially to France, and in the long run would affect Great Britain and the United States.

Dr. Josef Redlich, former Minister of

**REPRESENTATIVES
OF FIVE FOREIGN
NATIONS AT THIS
YEAR'S "CONGRESS
OF THINKERS"**

Lecturers from abroad for the Second Annual Session of the Institute of Politics, held throughout August at Williams College, Williamstown, Massachusetts. The group is gathered on the steps of Chapin Hall, where all the public addresses are given

Left to right: Lionel Curtis, Secretary of the Irish Peace Conference; Raymond Recouly, foreign editor of "Figaro" and "Le Temps;" the Hon. Philip H. Kerr, for four years confidential adviser of David Lloyd George; Dr. Harry A. Garfield, Chairman of the Institute and President of Williams College; the Hon. Manoel de Oliveira Lima, former Brazilian Ambassador to Great Britain; Dr. Rikitaro Fujisawa, Japanese political writer and professor in the University of Tokyo; Dr. Josef Redlich, Austrian jurist and former Minister of Finance

Finance in Austria, was a good reflector for the most part of the Austro-German view-point. His addresses were mostly historical, but in the Round Table discussions and in private talks one could gather what is on his mind.

In the last lecture Dr. Redlich urged America to return to the counsels of Europe. There should be a reinforced League of Nations, he said, with Germany and America in it, a revision of the peace treaties in respect to reparations, a great Zollverein of the Central and near Eastern states formed, and a great European conference called to impose disarmament in all European states.

Dr. Redlich believes that the United States will not long escape the effects of the European collapse. "Tell your people," he said, "to enjoy the summer while they can. No one wants to make history in the summer. The big things come in the crisp October weather, when statesmen come back from the mountains. This American boom cannot last long, and I am afraid you will soon feel the breakdown in Europe."

On our domestic problems the Austrian jurist preserved reticence, but he observed on one occasion that, in his opinion, the Democrats are not anxious to win this fall's election, for they, he thinks, would shoulder the critical responsibilities which are impossible of solution.

In general, the Institute of Politics possessed few of the distinguished characteristics that marked its first session. The public lecturers, with one or two exceptions, did not approach those of a year ago; on the other hand, the Round Tables in nearly every case functioned more successfully than a year ago. The interest of the different Round Table

leaders in the work of their associates took concrete expression by the organization of what is called the Super Round Table during the last two weeks. There every evening each leader in his turn would present a summary of what he had accomplished. Usually it did not end there, for nearly every formulation of so-called world policies would be challenged by his associates. As a concrete illustration of just how this Super Round Table functioned, I can do no better than to quote some of the propositions presented by President David P. Barrows, of the University of California—first, because they are an example of how some of the results of the Institute are achieved; and, second, because they concern the problems of the future.

The Government of the United States, following the evacuation of the Czechoslovak legions and the withdrawal of its own troops, is justified in insisting upon the evacuation by Japanese troops of all Russian territory.

The declared policy of the United States of considering Russian national rights and interests, jeopardized by the internal condition of Russia, as a trust to be guarded by all the nations in former alliance or association with whom Russia waged war against common enemies is a policy of moral strength and dignity and deserves the support of all friendly nations.

The continued occupation by Japanese troops of the Primorsk, the establishment of a civil Japanese régime in northern Sakhalin, and the appropriation of Russian mineral properties within these regions will continue to disturb the confidence of both Russians and Americans in the fair intentions of the Japanese Government.

The promise of future friendly and helpful relations between the Chinese,

Russian, Japanese, and American peoples lies in the full and prompt realization of the assurances given by Japan's representatives at the Washington Conference and in the consummation of the policy of withdrawal announced by the present Japanese Ministry.

I have been surprised to find people thinking of another titanic world struggle. In fact, I have talked with few who did not think it inevitable. Some have accentuated the present existing commercial rivalries of nations as being the slumbering flames. The naval and military group see those and have no confidence in avoiding them, and are arguing for us to keep our powder dry. Others would call an international conference to limit the danger of world-wide rival discriminations and recriminations among nations. Others still would pursue the lone game with a strong nationalistic arm. It has not been uncommon to hear an idealistic lecture one hour, and a Round Table conference at another hour virtually discrediting all the idealism that had been heard the hour before. One thing of large significance has been that the idealist left Williamstown encouraged with the vision he had been given, and the realist left with a fuller equipment of the facts and figures to carry on his battle for the increased prestige of his country as a world power. Still further, the practical idealist, who has my sympathy, goes away with both the vision and the facts to settle the issues in order to realize his vision.

Culbertson, Barrows, and Rogers were to me the real contributors to the Institute of Politics. I make this estimate because of the content of their contributions and because the happy solution of the issues they raised are the *sine qua non* of peaceful relationship of nations in the world, and these gentlemen see the need of a world conference to save us from the inevitable drift. Nationalistic tariff walls are bones of contention. The Far East is the arena of the future world struggle; Dr. Rikitaro Fujisawa himself stated the challenge. Our only hope is to appeal to the liberal forces of Japan, and to do so we must get news here and avoid the present difficulties of having a Jap orator throw a book on the wire when he doesn't like the news we are sending into the Far East. To avoid this, therefore, we must own our own cables, as does Great Britain, and develop a comprehensive system of world cable communications, which, as Mr. Rogers has shown, we have so far lamentably failed to do.

It is an exceedingly difficult task which Dr. Garfield has to perform in keeping the Institute of Politics away from the dangers which threaten its usefulness. He must unquestionably deny its platform to the propagandist. He must keep it uncommitted from dogmatic principles and from worshipping any angel. In my opinion, he has so far succeeded.

Williamstown, Massachusetts, August 23, 1922.

LORD NORTHCLIFFE

BY J. ST. LOE STRACHEY

THOUGH I greatly appreciated the honor done me by so distinguished a publication as *The Outlook*, when asking me to write a study of Lord Northcliffe, there were many reasons which inclined me to excuse myself from undertaking the task. I had known Lord Northcliffe for a quarter of a century, and at one time in my life—that is, when both he and I were comparatively young men—we were on friendly, if not exactly on intimate, terms. We always differed a great deal in our outlook on public affairs, and indeed on things in general, and so found it difficult to lay our minds side by side as friends should. At the same time, I admired his push, energy, and great business qualities, and he, I think, liked as well as respected the "Spectator." It happened also that we were near neighbors in the country, and this propinquity made us see perhaps more of each other than we should if juxtaposition had not been an element in our acquaintance.

In later life we came to differ strongly on many questions. This, coupled with the fact that Lord Northcliffe gradually ceased to live much in Surrey, made us meet very little in the course of the last eight or nine years. Still our old acquaintanceship and the thought of the brilliant and eager young man whom I first got to know by a common interest in motor transport, and also the tragedy of his death—it was a cruel irony of fate which made his attempt to rest and restore his bodily and mental vigor the determinating cause of his illness—revived in me many kindly feelings towards the dead man. I should be inhuman if they had not. At the same time, my judgment told me in imperative terms that if I wrote upon Lord Northcliffe I must write the whole truth as I saw it and not partial and fragmentary glimpses. This again, my judgment told me, must lead to a critical attitude and to my saying things which one hesitates to say almost at the side of an open grave. I do not mean by this that I felt any necessity to say harsh things about Lord Northcliffe, but I knew that I could not indulge in the conventional eulogies, nor treat Lord Northcliffe from the point of view of a great man and a great journalist, as he has been treated so largely in the British and American press.

But, though these considerations inclined me strongly to say no more about Lord Northcliffe than I found it necessary to say in the "Spectator," reflection showed me that, after all, I ought to lay what I believe to be the facts before the American public. The reasons which brought about my final decision can easily be stated. The American public understand better than any other nation

Paul Thompson

LORD NORTHCLIFFE

what is gained by, and what is involved in, the art of publicity. Therefore it is very important that they should not imagine that every one in England looks upon Lord Northcliffe as a competent and representative exponent of that deeply important art.

It would be a cause of serious misunderstanding on a vital matter if the wiser minds in America should come to think that we regarded Lord Northcliffe as the ideal newspaper proprietor, editor, and publicist. Yet if no voice were raised here in protest and no sincere attempt made to show what Lord Northcliffe really stood for, and what was the attitude of better-informed British public opinion in regard to him, they could hardly do anything else but take him at his face value, or, at any rate, at the value apparently set on him by the British press. To judge by the eulogies published in London, one would imagine that Lord Northcliffe was a kind of Delaine and John Walter rolled into one, and that he fulfilled the highest ideals of journalism as understood in this country. I am sure I am right in saying

that the great majority of thinking men would hold such a misconception to be little short of a disaster.

My aim is to show in its true colors his attitude towards the problems of journalism. I know of course that in doing so I shall expose myself to many disagreeable charges. To begin with, people may think me jealous as well as ungenerous. But I would rather incur those charges, and even the still more odious charge of sheltering personal hostility under the cloak of duty, than allow without protest Lord Northcliffe to be described as "the greatest figure in contemporary English journalism, and its ideal representative."

Lord Northcliffe was not a great editor. He was not a great publicist. He was not even a supreme organizer and collector of news, nor a great purveyor of publicity. He was something totally different. In my opinion, the highest thing that can be said of him is that he was a great man of business, a great money-maker accidentally engaged in the work of journalism. I use the word money-maker not in any hostile or in-

vidious sense. I firmly believe that the money-makers supply a very useful element in human society. I can supply a fact in support of my assertion. Lord Northcliffe, some twenty years ago, said to me in one of those moments of self-revelation which were common with him as a young man and were in many ways extremely engaging: "I don't pretend to be a statesman, or even a politician, or to know much about public affairs. What I do know, is how to produce a paper and how to sell it." There, I think, he exactly diagnosed his own mental powers and limitations. He was a great merchant, or, if you will, a great broker in the wares of journalism; but he did not go further.

As long as he made it his main business to exploit and develop the machinery, physical, moral, and intellectual, of the press his success was almost unbounded. At the outset of his career almost everything he touched in the journalistic world not only turned into gold, but was from his point of view a well-deserved success. In the perfectly legitimate arts of the producer and salesman he was unrivaled. No matter was too small for his consideration, no enterprise or speculation too big. Though not an expert in any of the many branches of his undertakings, he managed to be what was quite as useful—that is, a successful chooser of men to help and serve him. But, though he relied upon the advice of experts, he showed his ability in knowing when to accept that advice wholeheartedly and when to reject it and trust to his own speculative instincts. If he determined to buy or found a newspaper, he followed prudent external advice unless it conflicted with his main and essential decisions.

It was the same story when he was considering whether he should commit himself to new machinery, and to new methods of using that machinery, or whether he should be content to go on in the old ways. Again, in the matter of salesmanship—that is, in the matter of pushing his wares—though his ideas were not his own and were not even original, he managed to use them so ingeniously and so boldly that they took on a kind of originality in his practice of them. Take a very simple example. When he was developing the "Daily Mail," I remember his telling me one of his plans for raising the circulation. He had returns of the daily sales of his paper in every city in the Kingdom. If he found that the proportion of sales per head of population in a particular town lagged behind the general average, he immediately set all his machinery in motion to ascertain the cause of this town's failure to absorb his paper. He kept asking the question, "Why does only x per cent of the population here take the 'Daily Mail' when three times x take it in a neighboring town?" He persisted in such interrogations till he had got the answer and applied his

remedy. At the same time, complementary investigations were going on in the towns or districts which showed the highest percentages of readers. Was there any peculiar or extraordinary reason why they should read the "Daily Mail" in greater numbers than their neighbors? If not, then valuable lessons might be obtained by studying the action of his local agents, and applying these principles of action elsewhere. He was armed with facts for screwing up his circulation elsewhere. "What man had done in Blackchester man could do in Whiteville"—that was the "slogan" applied to those engaged in pushing his paper in new districts or in old districts which lagged behind.

But this, though clever and enterprising, was only a good example of the simple art of the vigilant salesman in all kinds of trades. There was nothing actually original about it, though there was a great deal of genuine enterprise and skill in the application of the artifice. No great vision and no special understanding of human nature or of the English people were involved.

As in the case of most successful money-makers—for once more we must never forget that it was in this region that Lord Northcliffe could claim unqualified success—the methods employed seemed to have very little to do with brain power or the higher intellectual gifts. Successful money-makers are rarely thinkers even in their own special trades, and this was, I think, specially true of Lord Northcliffe. As I felt obliged to point out in my obituary notice of him in the "Spectator" of August 19, Lord Northcliffe was not a daring innovator or speculator in the newspaper world, but rather a skilled and prudent user of other men's experiments. He once said to me with great impressiveness, and as if he were saying something which he regarded as one of the lodestars of his life, "Never be a pioneer!" He went on to explain that the pioneers in the various walks of life and business were never the men who succeeded. They went forward and, if they took the delights of exploration, they certainly did not get any other reward. The wise man watched the pioneer at work. If the pioneer fell and failed, and so showed that the ground was impracticable, the forest too thick, or the current too strong, he did not follow him. If, on the other hand, the pioneer succeeded, the wise man could proceed in confidence. The good business man was, that is, he who best availed himself of other men's experiments, but did not experiment himself.

I think an analysis of Lord Northcliffe's methods would prove that he almost invariably followed this plan. He never plunged. He never put his foot into what was alleged to be a ford without the feeling that he could draw it out if, after all, the water should prove dangerously deep. He did not found the "Daily Mail" till he had seen

the experiment of the "Evening News," which was his first venture in daily journalism, succeed. He bought the "Evening News" very cheaply as a going concern, and watched it very carefully. Up till that time he had only been an owner, though a most successful owner, of popular weekly newspapers. When, however, he saw that with wisdom and prudence a halfpenny evening newspaper could be made, not only a good newspaper, but financially a very successful paper, he argued that what could be done with an evening paper could be done as well with a morning paper, or indeed a great deal better. Morning papers, in England at any rate, find it easier to get advertisements than evening newspapers. But when, fired by his experiences in the "Evening News," he determined on creating the "Daily Mail," he took every possible care to make his venture successful. He traded, as it were, both with the living and the dead in journalism to find new features and paying features. Especially did he study American models. These afforded him plenty of useful pioneers. He also studied the old ways of journalism in England and adopted features which for some reason or other had been allowed to drop out.

When I say "studied," I do not mean that he himself studied very carefully; but that he got other people to study for him, and then used his judgment. But all this, though excellent business, did not prove him a great journalist, a great editor, or even a great newspaper organizer. It only showed him a great man of business.

I doubt whether, in the true sense, Lord Northcliffe ever reflected or ever thought. His mind, as is so often to be noted in the case of the successful money-makers, was exceedingly superficial, as were, indeed, his mental interests private and public. He was, however, keen and alert and genuinely interested in new things. But he liked them as a clever child likes toys—something to be first welcomed as a mystery, but soon only tolerated till a newer or more amusing treasure could be found. He never thought things out, nor, indeed, realized the need of doing so. Above all, he never understood anything in the true sense of the word.

Though he talked much about publicity and, in a sense, practiced it on an enormous scale, and made a large fortune out of it, I feel certain that he never obtained a full and true view of the significance of the thing he was dealing in. Like so many men of his kind, he could throw up a series of balls and keep them spinning in the air, but he could not explain even to himself how his act of legerdemain was accomplished. To put it in another way, he had the faculty possessed by many dealers in the arts. There are plenty of picture dealers and dealers in antiques of all kinds who are totally without any artistic sense or knowledge, and appar-

ently without any sensibility in regard to the beautiful. For all they know, Guercino lived in Spain and Goya in Bologna. They confuse centuries, epochs, and schools with the most marvelous profusion. Yet these same men instinctively know a good picture and can often tell far better than men of true learning, scholarship, and understanding in the philosophy of the aesthetic whether a picture is a genuine work or a forgery, and also by whose hand it was painted.

A sincere artist will often tell you that, though he has profoundly studied the work of, say, Leonardo all his life and has a sure intelligence in regard to the master's mind, if it comes to valuing a picture or being quite sure of its authenticity, he would very much rather trust to the judgment of Mr. Blackstein or Mr. Whitestein than his own. So Lord Northcliffe, though he did not understand publicity in the true sense, was often instinctively an exceedingly good judge of what would prove successful publicity and paying publicity. Just as a man may do "big business" in rubber without understanding the way in which rubber is produced, or what is its future, or what even are its uses, so Lord Northcliffe traded in publicity without knowing much about it or, at any rate, without understanding it in the higher sense.

A proof of this want of true understanding is to be found in that part of his life which was so conspicuous a failure. During the latter part of the war, and still more after the peace, Lord Northcliffe persuaded himself that the power of the press was greater than it really was. He dreamed of becoming the leader and director of the country, not indirectly and as a great influencer of public opinion, but actually as Prime Minister! That was, I am assured, his visionary aim. His lever was to be the newspapers he controlled. He found himself utterly mistaken when, having quarreled with Mr. Lloyd George as the obstacle to his ambition, he determined to remove him from power. Apparently, Lord Northcliffe was so little experienced or, at any rate, had so little understanding of his strength, that he thought he could write Mr. Lloyd George down—i. e., destroy him by leading articles. If he had been able to reflect, he would have learned that, though Mr. Lloyd George might destroy himself, he could not be destroyed by newspaper opposition. He had, in fact, utterly misconceived the nature of the power of the press.

No one thinks more highly of the profession of journalism, no one is prouder of the position of the press, than I, but it must never be forgotten that the one and almost only power of the press is publicity. Pope in his "Essay on the Characters of Women," speaking of women's place in the world, declares that power is all their end, but "beauty all their means." So with us newspaper

men. Power may be all our end, but publicity is our only means.

But, granted this, what are the consequences? One of the most important is that, though we may "boom" a statesman in whom we believe or whom, for some other and possibly less worthy motive, we want to keep before the public, we cannot unmake him by the arts which we used to make him. As Dr. Johnson put it, "No man is ever written down except by himself." A very few moments of thought will show that this is due to the fact just noticed, the fact that publicity is the newspaper's only means to power. If you are always writing a man down, you are in effect always advertising him, always giving him publicity. But in giving him publicity you bring him before the public eye, and then the public, in that intensely independent way which is theirs, judge him from their own standpoint. But, while judging for themselves, they are very apt to note and so to discount the animus with which a man is attacked. Eulogy is a lubricant which, though it may occasionally weary, does not raise the contradictiousness of mankind. On the other hand, persistent antagonism is sure to bring into operation the law of reversed effort. If one sees a person persistently abused in the press, one is very apt to take the other side.

But there is a higher motive than this of contradiction. When a man is brought before the public merely to be commended, the thing is soon over and forgotten. If, however, he is arraigned before the court of public opinion, the jurors realize that they must go more thoroughly into the matter. They must hear both sides and judge the facts. But it may well be that in this process of adjudication they take a different view to that of the journalistic prosecutor. This is indeed a happy circumstance.—It makes the journalist careful in his attacks, and so acts as an antiseptic. But this limitation of the power of the press Lord Northcliffe never understood, and perhaps never even tried to understand. He took the view of the flatterers of the press—i. e., that a newspaper can do almost what it likes with public opinion. He was convinced that by a careful manipulation and presentation of the news the public, without being directly deceived, could be made to take the view which the newspaper wanted it to take. This danger of manipulation is no doubt real, but it is not nearly so great a danger as it appears to be. Fortunately, there are many safeguards and correctives. If not, the peoples who depend upon their newspapers so greatly as do those of the English-speaking world would be of all men most miserable. As a class newspaper men have an instinctive feeling that they must tell the news, and tell it honestly. I am not going to pretend that this is from a double dose of original virtue vouchsafed to my profession. What I have termed an instinct, no doubt, to a great

extent arises from the knowledge, conscious or sub-conscious, that publicity is our greatest business, and that those who ignore this fact and sell adulterated wares (that is what manipulation of the press comes to) will in the end do bad and not good business.

Here I reach a very interesting point in connection with journalism. I firmly believe that the newspaper that is run as a business concern—run, that is, to pay, i. e., run to sell its readers what they want to buy—is likely to be a better paper and also to serve the community better than the newspaper which has ulterior ends. The ideal newspaper proprietor, in my opinion, is the honest tradesman, the man who says, in effect, of himself and his work, "My business is to sell the public a good, sound newspaper, a paper which contains nothing that has been adulterated, nothing that is a sham, nothing that is poisonous. I am the servant of the public, but I claim the right to act the part which every honorable and high-minded servant acts. I will obey my master up to a certain point, and no further. If he asks me to do a foolish thing, I may do so, because, after all, the choice is his. If, however, he asks me to do a low, mean, or disreputable, let alone a criminal thing, I must refuse and tell him plainly what I think of his order."

What the ordinary citizen desires to get from his paper is the facts, and the whole of the facts. Now, he may have the highest belief in Mr. So-and-So's good intentions, but he does not want to have his news colored by them, however good they may be. Still less does he want to have his news distorted by the personal likes or dislikes of a proprietor. Therefore he greatly distrusts the newspapers owned by men who are in the newspaper business, not as tradesmen, but for ulterior objects—party objects, personal objects, or pecuniary objects other than those derived from the direct sale of a newspaper. American newspapers, I may say parenthetically, have come to their great position and will, I believe, continue to hold that position by the fact that they are so largely owned by people who are openly and obviously engaged in the trade of selling newspapers, and who know that in the end they can do sound business only by selling "a straight and sound line of goods." Another good example was the London "Times" in the past. The Walters were essentially honest tradesmen. They had a great public relying upon them for a particular class of intellectual product, and they supplied that product. They did not look beyond their trade. For example, when Lord Palmerston lectured Delane on the want of consideration, public spirit, and so forth, which he had shown in publishing a piece of news which was inconvenient to the Government, Delane cut him short with the brief but crushing sentence, "You seem to forget, Lord Palmerston, that my business is publicity."

That was an answer worthy of the "Times" at its best. Delane was speaking greatly of a great trade. I am quite content not to put it higher than that. I do not claim to be engaged in an art or a profession.

In a similar way, Lord Northcliffe, while he was successful—that is, up till middle life—was a true trader in news, even if not one who could claim to be very well inspired or very thoughtful or very reflective. The moment, however, that he began to use the great lever he had forged for other purposes than those for which it was meant he got into difficulties and began to lose his influence. Curiously enough, in some confused way Lord Northcliffe seemed to have realized this himself. Only a few months ago, in a wild pamphlet which he wrote about millionaire newspaper proprietors, he made a vehement attack on men who owned newspapers, not because they wanted to carry on a successful trade, but because they had ulterior motives. With a good deal of his invective on this point I found myself in agreement. Un-

fortunately, however, Lord Northcliffe was like the lady of whom Congreve wrote in his famous poem:

She is the thing that she despises.

He was all the time doing the very thing that he was denouncing—i. e., the man who used his papers, not for trade, but for other purposes.

Before I end this sketch of Lord Northcliffe and the journalistic lessons of his career I want to say once more that, though I have had to speak plainly about him, I am strongly touched by the tragic irony of his end. I should have been only too glad if I could have honestly said, "At any rate, he succeeded in doing what he tried to do." Respect for the truth will only let me say that he succeeded in this up till the middle of his life, and then that the abundance of his success led him to failure. How this came about is easily seen by any one who regards the facts of his life. When still a very young man, and without experience—he was not one of the people who possessed an intuitive knowledge of life and men—he reached a position in

which he was toadied, flattered, and cajoled by the majority of those with whom he came in contact.

Considering the temptations to which he was exposed, and considering also the facts of his career, one might very well say that the wonder was, not that he suffered a kind of intellectual shipwreck, but that he did not do a great deal more harm than he in fact did. That, in my opinion, is the just view, and, being so, I feel bound to record it.

I have a word to add by way of postscript. My readers may think it strange that I have said nothing about Lord Northcliffe and the part he played in the war. I have not dealt with his war record because I believe that his influence on the war was absurdly exaggerated. If, then, I had touched the matter, I could not have avoided being strongly polemical. Also, I must have spoken more harshly than I want to speak. Finally, I wanted to put what I think is a true account of the man before the American public, not to plunge into an infructuous controversy.

SHEER ENVY

BY MARIA MORAVSKY

I NEVER camped in all my life. I hated exercise. I was afraid to sleep with my windows open. So now when I see a husky, salmon-colored American camper, proud of his fresh sun-blisters, I look at him resentfully.

Tents with wooden floors! Real gas stoves! Portable phonographs! And—the crowning glory of it all—folding bathtubs! And he calls this camping! Why, if a Russian housewife laid her eyes on all the American camper's kitchen outfit, she would unhesitatingly forsake her city house for the "wild" life in the open.

"To rough it"—you call your camping! You luxury-swamped sybarites! And you have the nerve to call the poor Russian city-mole an effeminate person!

In Russia we seldom camp of our free will. And it is not because we are more effeminate than you. If we do not open our windows at night, even if it overlooks the sheltered street in the city, it is because we cannot afford to waste so much heat. To sleep with the windows wide open in winter—why, it would call for steam heating, or at least for all-wool underwear! No average Russian was ever as rich as that!

And to move to the country with all the array of canned food, stoves, cameras, Victrolas, and—above all—with a bathtub! The luxury of ancient Rome had nothing on you, modern American campers!

When I saw for the first time the famous tent city of San Diego, on Coronado Beach, I thought almost with tears: "If one-tenth of our peasants could afford a tent dwelling with a

screened porch, a swinging hammock, a gas-stove, and a rubber bathtub, we would consider ourselves a nation of millionaires!"

Sheer envy is and will be the predominant feeling of a foreigner gazing at all these camp luxuries until you be-

gin sharing them with the great barren camp called the after-war Europe. We need your trading in portable bungalows, little stoves, hand showers, cheap articles of hygiene, and scores of civilization's substitutes for immediate use, because the war-ridden countries cannot be rebuilt at even a year's notice. To make the beggar-like conditions of life less painful many a European country should be put on a camping basis. Temporary homes, with at least a ghost of comfort—this is what we need immediately. What you mean by reconstruction is a thing far too solid for us.

You want to rebuild us at once and thoroughly; to put us firmly on our feet; to give us modern electric fixtures, fine railways (provided you obtain profitable concessions for building them), up-to-date plumbing (provided we can pay millions of rubles, marks, or kronen to your engineers). Wonderful task, and well worth spending your and our energy and money! But, as the ancient Slav proverb goes: "A golden plate is of no use to the hungry."

Do not give us a golden plate alone. Don't start a wonderful system of plumbing without giving us in the meantime cheap water filters—to save us from cholera and her sister epidemics. A tent erected immediately is better than the most comfortable house next season.

We have to live somehow in the meantime. We have to camp, not for pleasure, but for the sake of saving our lives, to "rough it" in the severest sense of the word. And who, if not Americans, campers *par excellence*, will teach the world how to camp?

THE DREAD TYPHOON

Do you remember the island of Yap? It figured not long ago in the press despatches as a center of international discord. But Yap is not young as a disturbing factor in the world; it is the nest from which the dread typhoon arises to carry death and destruction to eastern Asia and the ships of the Pacific.

LIEUTENANT CLIFFORD A. TINKER recounts the family history of the typhoon in a forthcoming issue of *The Outlook*.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER II—LAW AND LETTERS

MY brother Nathan at this time carried through a bit of youthful business enterprise which added greatly to his joy and mine. Having collected some old hemp rope, which was very scarce at the time, he received enough money for it to enable him to buy a handsome bay pony. This became our joint and most treasured possession. Nathan in later years became noted as a horse fancier, a driver of trotters, the owner of a fine stable. It is an old axiom that the man who really knows horses knows men also. Nathan knew both. But few things ever gave Nathan and myself as much pleasure as the possession of that pony. So it was a hard blow for us when he became a Yankee prisoner of war.

On April 16, 1865, General James H. Wilson, commanding 15,000 Federal soldiers, marched against Columbus. Lee had surrendered nine days earlier, but this was unknown to General Wilson and to our citizen soldiers, composed chiefly of superannuated men and school-boys. There was a feeble defense, and Wilson's army took possession. Soon afterwards the rabble from the factories commenced looting. Led by drunken Federal soldiers, they burned the cotton warehouses. Lost were the savings of many, including most of my father's. All horses were seized, our little pony among the rest. I never saw him again, though I still retain a vivid mental picture of him. Frequently since, when I have met that fine old veteran, General Wilson, who is still among the living, hale and hearty, I have jestingly reproached him for taking my most treasured possession.

"Go South" had been good enough advice in 1852, but "Stay South" under what was known as Reconstruction—stay there under conditions serious enough to break the strongest and discourage the most enterprising—this was not suitable to my father's enterprise. Again he forced a situation analogous to that after the '48 Revolution—much more serious, though. He was older.

The North offered an outlet for enterprise. There, too, my father could more readily dispose of the remainder of his cotton. His idea was to pay off pre-war debts contracted in New York and Philadelphia and make a fresh start. Isidor was able to help him considerably. A youngster of nineteen, but already a sagacious man of experience, a stay of two years in London had netted him several thousand dollars. Sent there as secretary of a commission to buy supplies for the State of Georgia, he had turned to brokerage when the effective blockade of Southern ports stopped shipments. He had made his profit selling

Confederate bonds. Returning, he used part of the proceeds to purchase a house for his mother and added the balance to his father's money, with which they established a wholesale china and glass-ware business in New York City.

When the Confederate Government canceled the commercial obligations of Southern merchants to Northern creditors and ordered this indebtedness paid to the Government instead, the debtors regarded themselves morally free from paying their creditors. My father, though, was true to his original obligations, saying:

"I propose to pay my debts in full and leave to my children a good name even if I should leave them nothing else."

The dry-goods house of George Bliss & Co. was his principal New York creditor, and the sum between four and five thousand dollars. When my father called about the debt, Mr. Bliss was amazed, asked many questions, and even then found it difficult to grasp how this man of fifty-seven, with four children, stood ready to plunge into a new venture and handicap himself at the start by paying off an old debt.

"I don't think you are fair to your family and yourself," said Mr. Bliss, "to deprive yourself of the slender means you tell me you possess by paying out your available resources. I will compromise with you for less than the full amount, in view of the hardships of war and your family obligations."

PREPARING FOR COLLEGE

Isidor arranged for my schooling. A picture of Columbia College in my geography text-book set me to thinking how wonderful it would be to study there. Being only fourteen and a half when we came to New York, and not having the entrance requirements, I was instead enrolled in the Columbia Grammar School. It was my first experience with a high-grade school. The teaching was much more thorough. It seemed to me I had to learn everything anew. Considering the modest income of the family, the tuition fee and the cost for books were large, but my father, economical in all other respects, was liberal beyond his means where education was concerned. My brother, moreover, was desirous that I should have the advantage of the college training which circumstances, notably the war, had withheld from him.

I appreciated to the full the privilege I was permitted to enjoy, and applied myself whole-heartedly to study. The school regulations required that the parents should fill out a blank each week stating, among other things, the number of hours we studied at home. Three or

four hours were the average for most students, but, as my average was fully double that, I felt rather ashamed to give the exact number, so I stated less.

The school was at Fourth Avenue and Twenty-seventh Street and our home was in West Forty-ninth Street. I always walked both ways, saving car-fares and at the same time conserving my health.

Despite my hard work, I made a poor showing, though on one occasion I shone with accidental glory. It was the custom when a question was asked to pass it from pupil to pupil, and to set the one who gave the correct answer at the head of the class. It so happened once that I gave a fortunate answer and moved forward to occupy the seat of scholastic eminence. I sat there enjoying a near view of the teacher's countenance, wondering how long I would thus remain distinguished, and looking back occasionally to note how the last row looked. At this moment a visitor entered who was none other than the inventor of the telegraph, S. F. B. Morse, whose grandson was in my class. Knowing the custom and observing me in the seat of honor, he remarked upon my having a large head in comparison with my body, something like himself, and added that I must be a bright boy. There was humiliation rather than elation in being thus praised when I, as well as the rest, knew I did not deserve it.

The principal, Dr. Bacon, encouraged us individually when the time for college-entrance examinations approached in the spring of 1867. For me he had consolation in addition to encouragement, for he feared that because of my lack of early training I might not pass. There were still two weeks before the examination. I crammed night and day. I knew that I could not expect my father to keep me in school another year when after two years of preparation I had shown myself deficient. That thought was my spur, though I am quite sure that both Isidor and my father, knowing I had done my best, would have insisted upon my taking another year for preparation.

I was not prepared, therefore, for so surprising a result as to be the only one in my class to pass all examinations without a single condition. "Lucky dog!" said the others who flunked; and I could not but admit it was luck rather than brilliancy. The professor who examined my classmates in ancient geography was the author of the text-book upon which the examination was held. A meticulous pundit, he regarded that book as supreme and absolute. A good answer, if not exactly according to that book, was as good as no answer at all.

MRS. OSCAR S. STRAUS

From a portrait of the wife of the Ambassador, painted by Gremer

Luckily, another and more generous-minded professor had taken his place by the time it was my turn to be examined.

DISTINGUISHED CLASSMATES

The college course began October 7, 1867. Our class matriculated fifty-two and graduated thirty-one. Among those who graduated were Stuyvesant Fish, of the well-known New York family, whose son, Hamilton Fish, Secretary of State in the Grant Administration, as

well as his grandfather, Nicholas Fish, were also graduates from Columbia.

Brander Matthews, who then carried the prefix of James, was also a graduate. He gave evidence then by his writings in the college papers of his future distinguished career as a literary and dramatic critic. Others were Robert Fulton Cutting, an ideal citizen, member of a famous old New York family, and for many years President of the Citizens' Union; and Henry Van Rensselaer, afterwards a Jesuit father, who is no

longer among the living. In 1916, on the occasion of the commemoration of the 250th anniversary of the founding of the College, three members of this class, including myself, received the honorary degree of LL.D. At this writing, fifty years since graduation, only ten among our number are remaining.

Athletic sports had very little college vogue at that time, especially at Columbia, confined as it was within a city block. With no such outlet for healthy spirits, the tendency for some students

President U. S. Grant, to whom the autobiographer appealed, as a youth, in his ambition for a military career

was to become boisterous and lacking in proper decorum in the lecture-room, particularly when the subject was not to their liking.

A compulsory and most unpopular subject in the senior class was Evidence of Christianity, and, as that gentle, good-natured professor Rev. Dr. McVickar was entirely lacking in the power to maintain discipline, Evidence of Christianity was a battle-ground. It gave rise to many boisterous demonstrations. The study was compulsory and denominational, and a number of the students who were not Episcopallians resented it. In common with most of the class, I strongly favored that the subject should be elective instead of compulsory. Yet the College found a legal, if unreasonable, justification for the study, based upon the fact that Columbia was originally an Episcopallian foundation. Dr. McVickar complained to the College Board. President Barnard gave serious attention to the matter, but nothing was done to improve the situation.

CLASS-ROOM DIPLOMACY

The disturbance in the lecture-room one day grew unbearably boisterous, and the professor was in considerable distress. I arose and told him I knew how he could have an orderly class. He was in such a plight that any suggestion would have been favorable to him. I asked him to let me take his chair for a moment, which he did. The class was silent, curious to know what I was about to do.

I made an appeal, reminding them briefly that we were now seniors, and that some of us, especially those who intended to study for the ministry, were interested in the subject but were un-

able to follow it because of the disturbance. As I paused I heard several jeers of "Professor Straus." Then I called upon those who were opposed to the study of Evidence of Christianity—and I knew there were a number—to rise. They arose.

"You may leave the room," I said. Eight or ten remained. Turning to Dr. McVickar, I said: "Here is a class you can teach."

Subsequently a petition was drawn up and signed by a majority of the seniors requesting that the class be excused from examinations in Evidence of Christianity. The request was denied.

Among the few collegiate prizes was one known as the Alumni Prize for the most deserving students in the graduating class. The College Board nominated William H. Sage, J. F. Vermilye, and myself as the candidates, and the class elected Vermilye, to whom the prize was awarded.

AN INTERVIEW WITH GRANT

I had a short-lived notion at this time of entering the army. Reading in the newspapers that President Grant had a few cadetships open for West Point, I obtained from President Barnard, of Columbia, a letter of introduction to Grant, in which I was commended highly.

I called on the President, who was in the city. He received me kindly, and said the few appointments allowed him by the law must be offered first to sons of officers who had been killed in the war. If sufficient were not available for all the appointments, he would be glad to give me a chance. I told him I thought he was perfectly right. That ended my great military career.

Not from special aptitude, but because I preferred it to business, I chose the law for my profession. My entire outlook was idealistic rather than practical. As with other young men, it cost me considerable mental struggle to harmonize the two divergent views into a workaday plan. As my father and brothers had begun to prosper in business, and as I had no one but myself to look ahead for, I felt free to follow my own bent. Besides, being the youngest, I had the benefit of their brotherly interest and economic protection if there were need for it. This served to encourage my utmost efforts not only on my own account, but to justify their interest and help.

I graduated sixth in my class and was designated to deliver the class poem at Commencement. The choice, I remember, lay between Brander Matthews and myself, and for some reason which I have not been able to ascertain to this day, I was chosen. "Truth and Error," which I had had gravely entitled the poem, was well received by the large audience of proud parents and sympathetic friends who gathered at the Academy of Music.

In the autumn of 1871 I entered Co-

Joseph H. Choate, distinguished lawyer, with whom Mr. Straus rode horseback every morning for several years

lumbia Law School, after enjoying the first vacation I had taken since I came to New York. Other summers I had spent assisting in some branch of my father's business, not because I relished work unduly, but because I regarded it less as labor than as diversion.

My first vacation, in the Wyoming Valley, near Wilkes-Barre, was a success in spite of the farmer with whom I boarded. Perhaps I did not have a right to expect much for the five dollars a week which I paid him, but, whatever I expected, I remember that I received less. But there were fish in the brooks, and I do not recall that I starved.

MEMOIRS OF LAW SCHOOL

The Law School, which was at that time situated in Lafayette Place, was under the direction of Theodore W. Dwight, who deserved his great reputation as the most distinguished teacher of law in the country.

Our professor in political science, whose lectures we attended once a week, was the distinguished Francis Lieber, a Prussian veteran who had fought in the Battle of Waterloo. At the close of the Napoleonic wars he returned to his studies in Berlin, and thereafter was several times arrested for his outspoken liberal views. After frequent persecution, and even imprisonment, he fled to England, and in 1827 came to this country. He was the author of many books, legal and political, among them being "Civil Liberty," which was adopted as a text-book in several of our universities. He prepared in 1863 "Instructions for the Government of Armies of the United States in the Field," which Lincoln promulgated as a general order of the War Department. It was a masterly piece of work, embodying advanced hu-

From Frank Leslie's Illustrated Newspaper, July 10, 1875

Before an audience that packed the immense Gilmore's Garden, which then occupied the present site of Madison Square Garden in New York, Mr. Straus delivered his "poetic swan song" in 1875 at a fair for the benefit of Mount Sinai Hospital. This is a view of Gilmore's Summer Concert Garden in its heyday

manitarian principles. It formed the basis for several later European codes.

Usually egotism and real merit do not co-ordinate, but negate one another; Lieber was an exception. He combined both in a marked degree, sometimes in a manner that afforded amusement to his students. He referred continuously to "My Civil Liberty" as a book of extraordinary erudition, new in its field, the last word on the subject. He was a short, solidly built man, with a distinct German accent, and so full of his subject that he was apt to lose himself in the vast field of his philosophical and historical knowledge. As his course was optional, those who came to listen came to learn, and we received a larger view of the function of law in civil society than we derived from all our studies of municipal law.

The course at the Law School covered two years, and successful examination at the end of it entitled a student to admission to the bar without a further State examination. I was graduated in June, 1873, and immediately entered the law office of Ward, Jones & Whitehead, a prominent New York law firm, whose senior member, John E. Ward, had presided over the Democratic National Convention which nominated Buchanan in 1856. Later he served for two or three years as Minister to China. He was a friend of my brother Isidor, and took me into his office largely out of friendship for him.

I remained with his firm about six months, forming a partnership later in 1873 with James A. Hudson, who was associated with the Ward firm and was about ten years my senior. The new firm was Hudson & Straus, with offices on the fourth floor of 59 Wall Street.

On the same floor was the office of Charles O'Connor, then the acknowledged head of the American bar. He was practically retired, but still kept a small office and a clerk. Frequently, feeling fatigued during the one or two weekly visits to his office, he would rest himself on a lounge in the room set aside in our office for a library.

It was an unusual privilege for a young lawyer like myself to enjoy such pleasant personal relations with this great leader of his profession. We received our first important case through him, and collected so much more of an old debt than our client had expected that he sent us a check for ten thousand dollars, saying that if we did not regard it as sufficient he would make the check larger. With five thousand dollars in reserve, I felt rich and independent. My wants were simple, and our general practice was encouraging.

FOUNDING OF YOUNG MEN'S HEBREW ASSOCIATION

At about this time I first became active in public-spirited undertakings. The Young Men's Christian Association a few years before had opened its Twenty-third Street Branch in New York, and the movement, on the whole, was getting much publicity and proving very successful in its work among young men. But it was an institution for Christians, and it occurred to several of us—as I remember it, there were two of my fellow-members of the bar, Meyer S. Isaacs and Isaac S. Isaacs, Dr. Simeon N. Leo, Solomon B. Solomon, and myself—that it would be a useful undertaking if we organized a Young Men's Hebrew Association for the cultural and intellectual advancement of Jewish young men.

We launched our project early in 1874. We rented a house in the vicinity of Nineteenth or Twentieth Street and began in a very modest way. Our first entertainment was of a purely literary nature, and I recollect on that occasion addressing the members of the infant enterprise on the subject of literary clubs, ancient and modern, from the time of Socrates and Plato to the days of the coffee-houses of Addison, Steele, and Goldsmith. The Y. M. H. A. subsequently had its years of struggle for existence, but to-day its place in our cities as an influence for the development of culture and patriotism is assured, as well as that of its sister organization of later birth, the Young Women's Hebrew Association.

CONCERNING PSYCHOLOGICAL SPREES

In 1876 or thereabouts we removed our office to the New York Life Building, at 346 Broadway, corner of Franklin Street, because our practice was largely commercial, and this location was more convenient for our clients. Adjoining our office on the same floor was the office of Chamberlain, Carter & Eaton, then one of the leading commercial law firms, of which subsequently Charles E. Hughes became a member. In 1878 Simon Sterne, then one of the younger leaders of the bar, entered the firm, which became Sterne, Hudson & Straus; afterwards, when our managing clerk entered the firm, Sterne, Straus & Thompson. Hudson withdrew to devote himself to patent law.

Thompson, who replaced him, was the author of books upon psychology which were commended by Herbert Spencer and other leading European and American authorities. He was more interested in psychology than in law; and Sterne, who could be very sarcastic, once said: "Do you know that Thompson is dissipating?"

I expressed surprise.

"Of course he is," he went on. "When he leaves here, he works till all hours of the night writing psychology, and returns next morning to his legal work with an exhausted brain. I'd rather he went on a spree, instead, for one gets over that quite definitely."

The firm had a varied practice, ranging from collection cases to important questions regarding street railways and other public utilities. Sterne was rapidly achieving a reputation as a leading authority upon railways and railway legislation. In 1879 he was retained as legislative counsel by an Assembly committee to investigate political corruption influenced by railway corporations. The chairman of the committee was A. Barton Hepburn, then an Assemblyman from St. Lawrence County. The committee sat intermittently for nine months. The report, including certain recommendations for legislation partly drafted by Sterne, was the first impressive and well-directed attempt to deal with the public regulation of transportation companies, and resulted in the

passage of the State Railroad Commission Bill in the 1880 session. It also exerted an influence seven years later when the Federal legislators created the Federal Inter-State Commerce Commission.

While Sterne was engaged in this public work his two junior partners, besides giving him assistance, conducted the practice of the firm. Such railway clients as we had withdrew their business as a protest against the public activities of our senior partner.

ON THE BRIDLE-PATH WITH JOSEPH H. CHOATE

I enjoyed at this time an intimacy with Joseph H. Choate, of the firm of Evarts, Southmayd & Choate. Daily for several years we spent the early mornings saddle-riding in the park. He was always full of fun and wit during these exhilarating morning hours. There was hardly a subject we did not discuss while in the saddle. His days were crowded, for amid the exacting duties of his profession he was much sought after to make public addresses on important occasions. On horseback he would frequently outline the substance of his future addresses.

"I am in fashion just now as a speaker," he said once, "but, just like wall-paper, the fashion will change."

However, the fashion to secure Mr. Choate as the principal speaker on public occasions continued until his death in 1917.

My major work for the firm was in the most exacting and nerve-racking branch, the trying of cases. I had not yet learned to conserve my energies. The result was that the wearing exacting of court work reduced my weight to 105 pounds. Consulting a physician, I was strongly advised to choose less exacting work, and especially to stop the trying of cases. As that branch of the law appealed to me most, it was a great disappointment to have to abandon it. Rather than continue in the profession with such an inhibition, I yielded to the advice of my father and brother, and early in 1881, after taking several months' vacation, I quit the law and became a member of L. Straus & Sons, already large manufacturers and importers of china and glassware.

It so happened that on account of their growing business they needed my services, and my transition period was made as acceptable and agreeable as possible. I continued for a long time, however, to long for the profession to which I was so much attached. As a compensation I devoted my evenings and spare time to historical reading and study.

JOAQUIN MILLER READS POEM AT WEDDING DINNER

Having embarked on a business career, I reversed a decision that I made while practicing law. As a lawyer I had taken very seriously and literally the

saying that "the law is a jealous mistress." I was her devoted slave, quite willingly so, and I determined never to marry. I was economically independent as a single man, and could devote my time to the law for its own sake. This I preferred to do, as the idealist that I was, rather than pursue the law for economic reasons first, and for its own sake as much as possible secondarily, which I felt would have to be the case if I married. But as a business man things were different, and I decided now to marry.

On January 23, 1882, I became engaged to Sarah, only daughter of Louis and Hannah Seller Lavanburg, and we were married on the 19th of April following, at the home of her parents, on West Forty-sixth Street, near Fifth Avenue. At the wedding dinner, to which had come hosts of our friends and acquaintances, Joaquin Miller, Poet of the Sierras, as he was called, read a poem which he composed for the event. The manuscript, I think, is still in my possession.

An address I delivered before the Young Men's Hebrew Association in 1875 denoted my line of intellectual endeavor for the next few years. My subject was "The Origin of the Republican Form of Government in the United States." Delivered before a large audience at Chickering Hall, it was given generous notices in the press, resulting some months later in my giving another address on the same subject before the Long Island Historical Society of Brooklyn. I traced the rise of democracy, as distinguished from monarchy, from the Hebrew commonwealth of the early New England Puritans, especially in their politico-

religious "sermons," which were delivered annually before the legislatures of the several New England colonies. This line of presentation was referred to in the notices of the address, and it attracted many of the Brooklyn ministers of various denominations.

In one part of this address, after referring to the sermons, I also quoted a similar argument advanced by Thomas Paine in his "Common Sense." Then I quoted Washington, Monroe, Dr. Rush, and others in praise of Paine's services to the patriotic cause. Several ministers in the audience left the hall, saying that they did not come to hear eulogies of Paine. I refrained from expressing any opinion of my own, but simply quoted the high estimate of the Fathers of the Republic.

LITERARY AVOCATIONS

This subject I later developed into a book with the same title, which subsequently was translated and published in France by Emile de Laveleye, the eminent Belgian publicist. It was a pleasing event in my life, since the book was well received and even spoken of among American historical writers as a distinct contribution to our history.

My next book, "Roger Williams, the Pioneer of Religious Liberty," grew out of studies made in preparing the first book. Historical writing is characterized as the aristocracy of literature, because it requires long and patient investigations and yields meager returns. Fortunately, by reason of my vocation, I could indulge in my avocation, especially after business hours. The late Russell Sage is said to have advised a young man who consulted him not to fritter away his time on books, but to concentrate upon one book, and that book the ledger. My own advice would be that of Robert Burns, who sang:

And gather gear by every wile,
That's justified by honor,—
Not for to hide it in a hedge,
Nor for a train-attendant.
But for the glorious privilege
Of being independent.

My Life of Roger Williams had a generous circulation, several reprints, and was highly commended by the reviewers. I published various works later, for which I was given honorary degrees at various colleges.

One more time I figured in public as a writer of poetry before I finally put the craving aside and adjusted myself to things for which I was better adapted. In 1875 a large fair was held at Gilmore's Garden, which then occupied the site upon which is now Madison Square Garden. The purpose of the fair was to raise funds for the erection of a new building for the Mount Sinai Hospital. Samuel J. Tilden, then Governor of New York and prospective Democratic nominee for the Presidency, made the opening address and I delivered a poem. Thus my poetic swan song was sung before an audience which packed the immense garden.

Chapter III of

"Under Four Presidents"

will appear next week. It describes the interesting circumstances and events that led to the appointment of a Jewish Ambassador from a Christian democracy to a Mohammedan absolutism.

The famous Henry Ward Beecher letter to President Cleveland, urging the appointment of Mr. Straus, is printed in full, some of it in facsimile. The voyage to Turkey, including memorable visits in London and Paris, is described. Constantinople and its strange people are closely portrayed.

Mr. Straus began his autobiography in last week's issue of The Outlook with an account of his forefathers in Bavaria, one of whom figured in Napoleon's councils, and of the family's journey to Georgia. There are intimate impressions of slavery, of deacons dueling with knives, circuit riders charmed by the Biblical erudition of Oscar Straus's father, and the future diplomat's first lessons in oratory.

THE BOOK TABLE

BOSWELL YOUNG AND OLD

BY ARNOLD MULDER

YOU walk in on a movie in the middle of the story, see it through to the end, only to find that it is the last performance of the day and that the first half of the plot must forever remain a question-mark. If the story has gripped you, your mind automatically tries to supply what has gone before. How did the disagreement between the lovers arise? What was the mysterious crime that the hero is accused of having committed? How did the villain get a hold on the girl's father? Rather fascinating study, but baffling in proportion to the subtlety of the story.

Professor Tinker's "Young Boswell"¹ supplies such a first part of a half-told tale of infinite charm and subtlety for which the world has been waiting for a hundred and thirty years. Boswell himself in his *magnum opus* had given many glimpses into his own life that were almost exasperating because they left our interest in him as a personality unsatisfied. He stepped into Johnson's life in the middle and, good artist that he was, expended his energies on developing a complete portrait of the "bear," using himself merely as a tool. But it was not possible for him to stay out of the picture, and again and again he tells about himself only in so far as the story has a bearing on Johnson, leaving our curiosity about what went before and after, so far as the narrator is concerned, unsatisfied. His love affairs, for instance. In the "Life" he marries and begets children, and there is a good deal about domestic arrangements, but it is all incidental, sketchy—as of course it should be. Professor Tinker's book fills in the picture, and a delightful picture it is. And then the strained relations between Boswell and his father: in the "Life" the story leaves us halting between two opinions; in "Young Boswell" we are given a view of the beginnings and ends of things and we are content. Boswell's life on the Continent is represented by a few sketchy letters in the biography; in "Young Boswell" such incidents as the fascinating attempt to bring Rousseau and Voltaire together form a thrilling story.

These are only hints of what the Boswell lover may look for in Professor Tinker's book. The pages are sprinkled with incidents that are beginnings of threads which the world has had in its hands a hundred and thirty years. The theater has more than once made a *tour de force* by developing a story backwards, and that is also about the net effect of the publication of "Young Boswell." And the fact that it is a work of ripe scholarship, that the author has spared no pains to tap the rich sources

at his command—the collection of Mr. Adam, the Temple manuscript, etc.—makes the story all the more thrilling and the portrait of Boswell all the more alluring.

Professor Tinker is not "Boswell's Boswell," as the advertisements claim—no one could be "Boswell's Boswell" after a hundred and thirty years, constant note-taking on the spot as ideas came

Engraved from a painting by Sir Joshua Reynolds

JAMES BOSWELL

hot from the brain forming too great a part of Boswell's equipment; but he has done what during all this time has been crying to be done—executed an authentic portrait of the man who himself had painted perhaps the completest portrait in history.

And how very much this needed doing! Macaulay was not the only one who thought that Boswell's genius resided in his thick hide. A sort of myth has grown up around James Boswell which makes his name practically synonymous with "sycophant." Not only does "Young Boswell" give the lie once for all to this notion, but it does a still greater service by driving readers back to the "Life of Johnson." Like most great books, the "Life" has been kept before the public for more than a century by the enthusiastic praise of a very few persons. The rest of us who are at all conscious of things literary have been content to admire at second-hand.

My own case is probably typical, hence this record of a personal reaction. For twenty years I had been wanting to read the "Life of Johnson." Times without number I had taken the fat volume in my hands, but always its half million words scared me away, as did a kind of vague feeling that the book was probably rather hard going. Like, I hope,

thousands of others, I needed "Young Boswell" to push me in. And I soon found that, like a great many others who have been using Boswell as a household word, I did not have any real conception of what he is or what the "Life" is.

There is, for instance, that most common fallacy of all, that Boswell licked Johnson's boots. Not until I was well started on the great adventure did the fact take hold of me that Boswell was a man in his own right, an intellect of commanding force, a personality who would almost inevitably have made an impress upon his time, even if Samuel Johnson had never been born. The publication of "Young Boswell" of course reinforces this statement. Boswell had an admiration for Johnson that approached veneration, but in many very material respects he differed sharply with him, and he did not hesitate to tell the czar of English literature so to his face, later taking care to register his own convictions in opposition to Johnson's in his notes. And a close analysis of these instances of differences between them very often shows, in the light of subsequent history, that Boswell was right and the great Johnson wrong. As, for instance, in the case of Johnson's uncompromisingly Tory attitude on the revolt of the American colonies. Boswell stood with Burke on the subject, while Johnson, yielding to the violent and unreasonable prejudices that characterized him all his life, was almost prepared to wish that the forebears of our present Sons and Daughters of the Revolution had one neck, so that George III might place his foot upon it and hack it off.

Boswell indeed defends Johnson against many and various charges made against him by the swarm of hasty biographers who published reminiscences soon after Johnson's death, and some of those defenses rather smell of special pleading. He seems to have looked upon Johnson as more or less his own private property, whom he alone should have a right to criticize—like a wife who finds fault with her husband but will not tolerate any one else saying anything against him. In all of which Boswell is extremely human and gives a display of unconscious self-revelation that makes one love him as well as respect him. And he venerates Johnson to so high a degree that the suspicion sometimes crosses the mind that the enemies of Johnson, whom, in his own phraseology, he "animadverted against," were probably more than half right in their dislike of the "bear," who was never more delighted than when he could contradict some one and could rub some one's fur the wrong way. Boswell let slip no opportunity to call Johnson "that great and good man," which phrase occurs in the "Life" scores of times, and he painstakingly dug up examples of Johnson's kindness and

¹ Young Boswell. By Chauncey Brewster Tinker. The Atlantic Monthly Press, Boston.

charity: he loved and was kind to his pet cat; he supported and gave a home for many years to blind Mrs. Williams; he took to his lodging a woman of the streets (almost like the hero in a present-day best-selling romantic novel), fed her, and then preached a little sermon to her to lead a better life. All of which incidents, and many more, are carefully recorded as illustrations of the fact that this "great and good man," whom enemies persisted in calling harsh and cold, had a warm heart filled with pity for all unfortunate creatures. And again and again Boswell hints at secret charities of Johnson's. Similar hints of course appear in the biographies of practically all prominent men, so that they are almost taken for granted, whether based on fact or not. Curiously, Boswell's insistence that Johnson was at bottom a tender-hearted person creates the suspicion that he was not. On this point Boswell seems to protest too much. And again curiously, we do not care to have the "bear" made out a tender-hearted man; tenderness is somehow out of drawing in Boswell's picture. The "Life" is the story of an imperial mind in a ridiculous, mountainous body; a mind, moreover, made delightfully human by its almost childish prejudices, its laughable contradictions, its admixture of reason and credulity, its strong hold on reality accompanied by half acceptance of spooks, its strong sense of personal independence living side by side with a belief in the divine right of kings and faith in what he calls "subordination to authority." Along with all this Johnson may have been tender-hearted, and this quality may be illustrated by his attitude toward his pet cat—so much more rounded is Boswell's character than we are in the habit of expecting from even the best-drawn character in the best-written novel that tenderness might easily fit into the picture—but somehow we are not much interested in this side of his character. It does not make much difference either one way or the other.

But Boswell was not merely a panegyrist, which character has been fixed upon him by many generations of textbook writers, so that most of us have been in the habit of smiling at him and have learned to think of the verb "boswellizing" as almost a synonym for "boosting." Again and again Boswell faithfully records Johnson's faults. In this respect the "Life" is a most amazing example of the scientific method in biography, used in an age when there were few precedents for this method. Even realists in fiction to-day who remorselessly drag into the light the secret sins of their heroes might learn something from this Scotch barrister, James Boswell, who had the courage to tell the truth about the friend he loved.

Consider the contrast between Johnson's "Prayers and Meditations," published after his death, and Boswell's picture of his subject's physical life. The great scholar was a glutton, and Boswell takes pains on several occasions

From an old print

BOSWELL'S INTRODUCTION TO THE LITERARY CLUB

Boswell is at the left, hat in hand; Dr. Johnson faces him, with hand on chair

to tell us so. And his manner of doing it brings out the essential force of Johnson and constitutes a character touch that could not have been omitted without harming the picture. Boswell's genius told him that this touch was necessary, and as a true artist he supplied it even though it hurt him. He tells us that Johnson ate so ravenously that the veins stood out on his forehead and the perspiration streamed down his great brow. Johnson was moderate in nothing—violent in his eating and drinking (and even in his fasting!) as well as in his spurts of prodigious intellectual labor. He was not a graceful kid glove, but a huge, rough, clumsy gauntlet. He told Mrs. Thrale that Milton could carve a colossus from a rock, as he did in "Paradise Lost," but that he could not cut a face on a cherry pit (referring to Milton's supposed failure with the sonnet). And Boswell's "Life" shows us Johnson himself as a colossus hewn from a mountain, not a polite manikin half ashamed to admit that he has a body.

The great Johnson was jealous of his friend and one-time pupil, David Garrick, and Boswell makes no attempt to gloss over or excuse this small trait in his "great and good" friend. And how he would have marred his picture if he had! What could be more human and more natural than Johnson's jealousy? Garrick and he come from the same country town to London at the same time, Garrick more or less under Johnson's protection. Garrick becomes an actor, a profession that Johnson despises. Johnson becomes the first literary figure in England, but he does not earn money enough to make a decent appearance until the time when his pension is granted, while Garrick, younger and with a mind far less profound and with talents which, in Johnson's opinion, are of far lower order, becomes a very rich man in a few years and wins the applause of all London with his acting. Johnson was human, and Boswell's

genius consists largely in this, that he resisted the temptation to dehumanize him.

But Boswell as a realist never appears to better advantage than at that difficult point in the biography where he describes Johnson on his deathbed supplicating God to pardon his sins and calling himself the chief of sinners. Johnson himself, long before, had called this phrase as used by St. Paul a figure of speech, and what would have been simpler for Boswell than to call it that now and let it go at that? But Boswell had a literary conscience, and he was an honest man. He had made a contract, consciously or unconsciously, with himself to portray Johnson as he was, and now the difficult time had come to refer to a phase of Johnson's life that less courageous biographers would have passed over in silence. Johnson was plagued with "violent blood," he tells us honestly—leaving Johnson meanwhile to linger in his death agony—and he sometimes fell before the assaults of passion. And the instances when he had not lived up to the ideals that he was constantly setting for himself in his "Prayers and Meditations" must have preyed upon his mind in that last hour, his biographer thinks. Boswell devotes several pages to Johnson's departures from virtue, but he does it with a reticence and with an art that are the marks of the genius. It is realism at its best. It is needed to complete the picture of Johnson, and Boswell is courageous enough to supply it. In the same way he has the courage to tell us of Johnson's great fear of death, which is referred to perhaps a score of times. Who but a man of unusual stamina would have given so much emphasis to a fact that was so very likely to detract from the heroic proportions of his subject?

And while on the subject of Boswell as realist, there are few of the most advanced disciples of "naturalism" to-day who know better how to crowd their pages with significant details for the

purpose of making their figures step out of the book as living beings. Take this little detail, among a large mass of others used to bring the actual Johnson before our mind's eye:

Such was the irritability of his blood, that not only did he pare his nails to the quick; but scraped the joints of his fingers with a penknife, till they seemed quite red and raw.

What an eye the man had for details that make us believe in the authenticity of his character, and what a realistic novelist he might have been! It is significant that he was a great admirer of Fielding's "Tom Jones," the first great English realistic novel, in direct opposition to Johnson's violently expressed opinion that "Tom Jones" was rubbish and that "Clarissa Harlowe" was the great novel of that generation.

But, in spite of his failure to appreciate "Tom Jones," Johnson was something of a realist himself, which has an odd sound to us who seem to think that it is our own generation that has discovered realism. "If nothing but the bright side of characters should be shewn," he tells Boswell, "we would sit down in despondency, and think it utterly impossible to imitate them in anything." Hence he is all for telling the whole truth about a man. Boswell had Johnson's own authority for not omitting from his record his hero's discreditable affairs with women and the other departures from virtue that may reasonably be looked for in a person of such vigor and vitality.

And the whole effect is of course what might be expected when one honest, vigorous intellect sets out to describe another. Johnson stands forth as a real man, commanding, imperial, inflexibly honest; an intellectual colossus; loving praise, but too proud to practice the arts of courting it; independent and free and high-spirited; publicly telling the great Lord Chesterfield to go to the hot place, or words to that general effect; dominating the intellectual life of his generation; the companion of lords and ladies and scholars and wits and more than holding his own among them by virtue of his intellectual superiority; accepting a pension from his King, but having it distinctly understood that it was not to interfere with the freedom of expression of his political views—and all this honestly portrayed without leaving out the human touches of weaknesses and prejudices and sins that help to stamp the figure as authentic and that breathe into it the spirit of life. All in all, it is an amazing performance; and during these many years I was under the impression that Boswell was a mere shadow of Johnson, a literary sycophant! And there are probably thousands of well-read men and women who are still under that impression. No characterless manikin could have achieved the "Life of Johnson;" it would have been too amazing a paradox for belief.

And, above all, the "Life of Johnson" is interesting. It is not a sea of words against the current of which one must swim with all one's might with teeth

set to get through it. After a few pages this sea enfolds the swimmer with a loving embrace. It was created by an artist, and that makes all the difference. One forgets that the book contains half a million words because often the words glow and unconsciously bring that brightness to the eye and that flush of pleasure to the cheek that mark the distinction between a task and a pleasure in reading.

And Boswell is so amazingly modern that the impact of his personality on the present-day reader comes with astonishing force. It has been pointed out by reviewers of "Young Boswell" that he was essentially the present-day reporter—a kind of super-reporter who knows all the tricks of that ultra-modern profession. But it has not been pointed out that he could probably give pointers even to the most up-to-the-minute present-day politician as well. As a single instance, there is the trick of getting a

statesman's views before the public by having somebody write him a letter and getting his answer for publication. Tumulty, clever politician, used that trick many times during the late Administration, by his own admission in his recent book. But Tumulty did not invent it. A century and a half ago the idea occurred to Boswell, and we find him coolly proposing to Johnson to use it. And it is gratifying to learn that Johnson was not above such little innocent tricks and that he was hugely pleased when it succeeded. Oh, James Boswell, barrister, had plenty of arrows in his quiver, and he had a kind of greatness that was indeed different from Johnson's, but that in many ways had as rich a flavor. Is it not about time that the teachers and writers who have built up this myth about Boswell's supine subserviency to his hero should actually read the "Life of Johnson" and learn to tell the truth about its author?

THE NEW BOOKS

FICTION

HE KNEW LINCOLN, AND OTHER BILLY BROWN STORIES. By Ida M. Tarbell. The Macmillan Company, New York. \$1.50.

This book brings together three stories of Lincoln that are by way of becoming famous in our expanding Lincoln literature—"He Knew Lincoln," "Father Abraham," and "In Lincoln's Chair." To these has been added "Back in '58," a story in similar vein heretofore unpublished in book form. If these stories throw light on no new facet of Lincoln's character, they formulate with admirable simplicity the tradition of homely wit and high purpose which provides the most familiar approach to our greatest National figure.

POETRY

KINFOLKS: KENTUCKY MOUNTAIN RHYMES. By Ann Cobb. Houghton, Mifflin Company, Boston. \$1.50.

"Kinfolks" was published last spring, but we have been withholding our comment until we could secure a picture of its reluctant author to present to our readers. Many of them, we feel sure, must have read with sympathy and appreciation the various poems of the

MISS ANN COBB, AUTHOR OF "KINFOLKS,"
PLAYING UPON A KENTUCKY MOUNTAIN
DULCIMER

Kentucky mountains from Miss Cobb's pen which have appeared in *The Outlook*. These *Outlook* poems, together with others of equal merit, are included in the present volume. We know of no writer of dialect poems who has a deeper understanding of the hearts and minds of the people portrayed than Miss Cobb. Her volume is a very real and human contribution to American poetry.

MUSIC, PAINTINGS, AND OTHER ARTS

ART OF THE MOVING PICTURE (THE). By Vachel Lindsay. The Macmillan Company, New York. \$3.

This is a revised and enlarged edition of a book first published seven years ago. It is interesting for its vigorous and imaginative attempt to formulate a new theory of aesthetics on the conception of "architecture, sculpture, and painting in motion." Mr. Lindsay, better known assuredly as one of our most individual contemporary poets, was for a time a painter and a student of painting. This book reveals his serious preoccupation with art and his intense conviction that its function is to serve a moral purpose. In criticism, as in verse, he has all the emotional frenzy and histrionic power of the revivalist. Mr. Will H. Hays might find in this book a groundwork for an evolution of the "movies."

PRACTICAL COLOR PHOTOGRAPHY. By E. J. Wall. The Plimpton Press, Norwood, Massachusetts.

Photographers of a scientific turn of mind will find in this book abundant data for the various processes by which color photographs may be made.

MISCELLANEOUS

MY DISCOVERY OF ENGLAND. By Stephen Leacock. Dodd, Mead & Co., New York. \$1.50.

Mr. Leacock's humor has never been more enjoyable than in this book. He contrives to touch up the foibles and follies of Englishmen and Americans alike, and without giving offense in either direction. Dig Capital reading!

Barrett Specification Roofs

Bonded for 20 and 10 Years

Barrett Specification 20-Year Bonded Roof on Connell Estate, Scranton, Pa. Roofer: Globe Slag Roofing Company, Scranton, Pa.

Scranton Builds for Permanence—

FEW cities of her size enjoy the industrial importance of Scranton, Pennsylvania. For Scranton is the metropolis of the world's greatest anthracite coal fields—the business center of a district that for years to come will be the chief source of the Nation's supply of this indispensable commodity. So, when Scranton builds, she builds for permanence.

It is but natural, therefore, that the principal buildings are covered with Barrett Specification Roofs. For no other roofs are so durable—no other roofs are guaranteed against upkeep expense by a 20-year Surety Bond.

The architects of Scranton endorse Barrett Specification Roofs unanimously. They know that, cost and durability both considered, these roofs are the most economical. They know that, from the first layers of Specification Pitch and Specification Felt to the final thick wearing surface of gravel and slag, every ounce of material used is indispensable to the unequalled service and fire protection these roofs provide.

The guarantee on a Barrett Specification Roof is in the form of a bond, issued by The U. S. Fidelity & Guaranty Co. of Baltimore, without cost to the owner. This bond is positive protection against all repair expense during the bonded period. It is issued when the roof is 5,000 square feet or larger and located in a town of 25,000 or more, or in a smaller place where our inspection service is available.

There are two types of Barrett Specification Bonded Roofs—Type "AA" Roof, bonded for 20 years; and Type "A" Roof, bonded for 10 years.

Copies of The Barrett Specification sent free on request.

FINANCIAL DEPARTMENT

The Financial Department is prepared to furnish information regarding standard investment securities, but cannot undertake to *advise* the purchase of any specific security. It will give to inquirers facts of record or information resulting from expert investigation, and a nominal charge of one dollar per inquiry will be made for this special service. All letters of inquiry should be addressed to THE OUTLOOK FINANCIAL DEPARTMENT, 381 Fourth Avenue, New York.

BONDS VERSUS STOCKS

AS a general proposition common stocks yield the highest return of all investments; next come preferred stocks; bond yields are the lowest of any. This is another way of saying that bonds are the safest investments, that preferred stocks rank second in this respect, and common stocks last, for of course safety is usually in inverse ratio to the size of the yield. The fact that some common stocks are safer investments than some preferred stocks, or even bonds, and that some preferred stocks are safer than some bonds does not change the

general rule, and in our present discussion of bonds and stocks we are using only high-grade examples of each.

When a man is seeking investment for his money, the question he asks himself is, "What shall I buy?" In the security market three possibilities are open to him: common stocks, preferred stocks, and bonds. He must make a choice, and, with the thought in mind that a brief discussion of these three kinds of securities may prove helpful to those of our readers who have funds to invest, we shall attempt to set forth the main

Use this booklet—and the service behind it

WHEN you send for our monthly booklet of Investment Recommendations, you should feel assured that *personal service* is also available to you in the selection of sound investments.

The booklet lists and describes, every month, a large number of attractive bonds which we recommend for investment. If, in addition to the information which it gives, you desire more detailed explanation of our offerings, or if you wish other investment assistance, our representatives at any of our offices are prepared to serve you, either in person or by correspondence.

We shall be pleased to send you a copy of the current issue of Investment Recommendations, upon request to our nearest office.

characteristics of bonds and these two classes of stocks.

In favor of bonds is the fact that they are secured by definitely described property pledged for the payment of interest and principal. A bondholder is a creditor, a man who has loaned money, and in exchange has received from the borrower a promise backed by a pledge of property to guarantee that upon a certain date the face value of his loan will be repaid, and that in the meantime he will receive interest at a certain specified rate. He has no stake in the company's earnings other than that they be sufficient to pay him the interest due. If unexampled prosperity should fall to the company's lot, he does not share in it. He receives the same rate of interest he did when earnings were less. On the other hand, he need not worry greatly about periods of adversity. He receives the same rate of interest at such times too. And if interest is not paid, he can, in company with the holders of the same issue of bonds, take over the property pledged for their payment, have it sold, and share in the proceeds to an amount equal to the face value of his bond and the unpaid interest. In other words, a bond is a conservative investment in that it is not seriously affected by business fluctuations and variations in the size of the company's earnings. A bond is bought for the income it yields, and not for the sake of possible gain. A bond presents fewer elements of risk than stocks, and, this being the case, is the sort of an investment for the person of small means, who cannot afford to take chances with the little he has. High-grade bonds, further, are always acceptable as collateral in case the owner wishes to borrow on them, for they are not only good security, but are readily convertible into cash, as there is an excellent market for the best classes of bonds. During the past year or two the bond market, in fact, has been more active than the market for stocks, the demand for high-grade, non-speculative investments being unexampled.

There is always a brisk demand for the best preferred stocks too. Many preferred stocks are decidedly in the class of investment securities, and one advantage they have over bonds is that as a general rule their yield is higher. Another item in their favor is the fact that dividends are free of the normal income tax, and this circumstance further increases the net yield of stocks as compared with bonds. Stock dividends, however, as contrasted with bond interest are entirely dependent upon earnings. The first money a company earns over and above expenses must be used for the payment of interest on its obligations, and bonds are decidedly an obligation. Shares of stock, however, are more in the nature of participating certificates, entitling the holder to dividends, if earned, but not otherwise.

Preferred stocks are usually "preferred as to dividends and assets." That is to say, they are entitled to dividends before any distribution can be made on

FINANCIAL DEPARTMENT

(Continued)

solution of the company the preferred stockholders would get their share of the assets—after the fixed obligations have been discharged—before anything could be given to the holders of the common stock.

Dividends on preferred stocks are usually limited to a certain amount per share, just as bond interest is fixed and determined. Sometimes it is provided that after a certain percentage is paid on the preferred and a like amount on the common both classes shall share equally in any further distribution. This, however, is rather the exception than the rule.

In many instances, the amount of dividends a preferred issue can receive being limited, the common stock dividends are considerably higher, for dividends on common stocks are not limited at all, and if earnings are high enough the common may pay two or three times as much as the preferred. In the case of one of our large railway systems, for instance, the preferred stock pays \$4 a share a year and the common \$10. It should be borne in mind, however, that common stocks are almost entirely dependent for their value upon earnings, and, as business conditions change, earnings are bound to fluctuate and the size of the dividends vary. It being the case that earnings are liable to fluctuate and that the security for stocks are dividends, stocks are speculative, their value varying with the size of earnings. Uncertainty is what makes an investment speculative, and no one can with certainty predict or foresee the size of earnings. Companies with established businesses are almost certain to earn something on their capitalization. Bond interest being a charge on these earnings ahead of dividends, interest is more of a certainty than dividends. Preferred dividends having a claim on earnings prior to common dividends, preferred stocks are surer of paying their dividends than are common stocks, so that common stocks rank last and the element of uncertainty is greatest in their case.

Suppose a corporation has outstanding \$10,000,000 of 5 per cent bonds, \$3,000,000 of 7 per cent preferred stock, and \$7,000,000 of common. If net earnings amount to \$2,000,000 a year, it will be applied as follows: \$500,000 for interest on the bond issue and \$210,000 for the preferred stock dividend, leaving \$1,290,000 of earnings on the common, or at the rate of over \$18 a share. However, it is probable that a considerable portion of the \$18 will be held in the treasury. In this case the common stock would seem to be a more attractive investment than either the bonds or the preferred stock. But suppose a bad year comes along and earnings fall to \$1,000,000. What happens then? Well \$500,000 is used for interest on the bonds, \$210,000 for the preferred dividends, and the balance, amounting to the equivalent of a little over 4 per cent, will probably be kept in the treasury and no disburse-

FINANCIAL DEPARTMENT

(Continued)

ment made on the common. The common in this case will not be considered as attractive an investment as formerly, and its price will drop tremendously. Suppose a still worse year ensues and earnings are only \$600,000. Interest on the bonds will be paid, but nothing on the preferred or common stocks. If earnings were only \$400,000, interest would probably still be paid on the bonds, the deficit made up by dipping into the treasury, but the two classes of stocks would of course again be ignored.

It is possibilities such as these that make bonds the best investments, that cause preferred stocks to rank second and common stocks last. And every investor in making up his mind about what to buy should remember that it is wise to consider the possibility of adversity as well as prosperity.

CONTRIBUTORS' GALLERY

ARNOLD MULDER is a daily newspaper editor; editor of the bi-monthly magazine "Michigan Out-of-Doors;" and the author of four novels, the last of which, "The Sand Doctor," was published in 1921 by Houghton Mifflin Company.

"As to biographical data," writes George L. Moore, "mine are the short and simple annals of the poor. I have been a student most of my life except for four years spent at Wesleyan University, and to earn my bread I have worked for newspapers. My permanent home is in Wellesley, Massachusetts, but for some months I have been in Europe. I claim considerable distinction, being, I am sure, the only American over here not investigating conditions."

JOHAN ST. LOE STRACHEY, compatriot and fellow-journalist of Lord Northcliffe, is editor and proprietor of the London "Spectator." He was educated at Balliol College, Oxford University, and has been a journalist in London since 1884.

ZEPHINE HUMPHREY, in private life Mrs. Wallace Weir Fahnestock, is a writer of considerable charm and appeal. She is the author of several volumes, including "Recollections of My Mother," "The Edge of the Woods," "The Homestead," and "The Sword of the Spirit." Her home is in Dorset, Vermont.

To list Mr. Andrew Ten Eyck's various activities would more than fill the Contributors' Gallery from end to end. Student, lawyer, soldier, writer—these are general terms

which cover but partially the fields of effort in which he has been engaged.

Stop it—With 3-in-One

Squeaking means friction. Friction means premature wearing out—expense.

Lubricate your auto springs with 3-in-One Oil—the easy way. Done in an instant. Keeps your hands clean. Don't jack up your car. Don't loosen the clips. Don't use a spring spreader. Do nothing but just this: Squirt 3-in-One along the edges of the leaves and on the ends of the springs. Its penetrating power is wonderful. It works

its way between the leaves—lubricates them perfectly—stops the squeak.

3-in-One prevents rust forming between the leaves—the cause of nearly all spring breakage. Apply 3-in-One once a week, then the leaves will always slide freely and the springs ride easier. New springs lose their stiffness if 3-in-One is used.

End Magneto Troubles

by oiling your magneto (any make) with 3-in-One, the oil that never clogs a bearing or burns at any rate of speed. It lubricates the delicate bearings perfectly and works out every vestige of gum and dirt. Result—a fast, hot spark at just the right firing instant. Magneto manufacturers recommend 3-in-One.

Ford Commutators

need 3-in-One. Makes cranking far easier. No dust or dirt can collect in the commutator when 3-in-One is used. The oil keeps it bright and clean. Every Ford owner should try this.

Keep Your Car Bright

by using 3-in-One on the varnished body surfaces. It beautifies the car and hardens the high finish. Prevents rust on the metal parts. Puts a fine polish on nickel parts. Brightens up the windshield. Preserves the upholstery and leather cushions.

The Handy Oil Can

full of 3-in-One, is the convenient package for motorists. Get a can for your car to-day.

FREE Liberal sample of 3-in-One and Special Automobile Circular.

How Disobedience Gave Way to a Tug at the Heart-Strings

HAS your child ever looked defiantly up into your eyes and said, "I won't!"? When Bobby said it to me I could hardly believe my ears. He had always been so willing and obedient. A sudden fear clutched my heart. I knew that this was not something to be passed by lightly. For I felt that, if uncorrected, it was just a forerunner of many of the things I had noticed with dismay in other children—disrespect, willfulness, selfishness, ill-temper and jealousy.

I was afraid that this single act would build itself into a habit. My fears began to be realized as day after day I found no true solution to the problem. And then I learned a secret that opened to me the innermost portals of my child's heart—and disobedience vanished almost magically. Just a little tug at the heart-strings and this problem and all that came later were solved.

I Learn this Secret

A great friend of mine was the mother of an adorable little girl, Judith. This happy mother told me the secret of the Parents' Association, an organization of 30,000 parents. "For the first time," she said, "there is now a scientific method in child training, founded on the principle that confidence is the basis of control. This new system really shows you how in your own home to correct the *causes* of disobedience, willfulness, untruthfulness, and other dangerous habits which, if

not properly remedied, lead to serious consequences. It removes the *causes*—not by punishment or scolding but by confidence and cooperation along lines which are amazingly easy for any parent instantly to apply."

"This new system has been put into the form of an Illustrated Course for the busy parent. Judith and I owe a tremendous lot to the Parents' Association and it is producing remarkable and immediate results for thousands of parents in all parts of the world. It is also endorsed by leading educators. It covers all ages from cradle to eighteen years."

Coupon Brings Free Book

Needless to say I wrote at once for the free book of the Parents' Association, "New Methods in Child Training," which describes the new system of the Parents' Association and its work. If you are a parent you too will want to read this startling book. The little coupon below will bring it to you at once. So why not mail it without any obligation on your part, today!

I Learn this Secret

Parents' Association, Dept. 19, Pleasant Hill, Ohio. Please send me your book, "New Methods in Child Training." Free. This does not obligate me in any way.

BY THE WAY

A VISITOR to the recent Book Fair in Florence, Italy, says in the "American Printer" that among the surprises of the fair was a large exhibit from Soviet Russia, containing many newspapers. "One would think," he says, "that when the Soviet presses are not busy printing currency they print newspapers." Poland's exhibit of books and posters was distinctive and artistic, in the opinion of this observer, while "Germany in her shrewd and clever manner had arranged a very large exhibit." America was represented, but only in a small way, "her meager representation being due in part to the late day at which many American houses were notified of the fair."

The tribulations of a non-Italian-speaking visitor to the Florence Book Fair are humorously hit off by the writer above quoted, in describing his attempt to get to the Pitti Palace. He wrote "Palazzo Pitti" on a piece of paper and showed it to the cab driver. The man seemed to understand, and started. "After a while he seemed to become possessed of a bright idea, for he turned and rattled off a lot of words among which I recognized 'Michelangelo.' I repeated the word to show that I understood that much. Soon we began to go up a grade, and becoming uneasy I again showed him my pad with the words 'Palazzo Pitti' on it. He stopped

BY THE WAY (Continued)

the horse and talked a lot; I got out my guide-book, and finally I found that we were on our way to the monument of Michelangelo on the heights above Florence. We finished the trip, the scenery was decidedly interesting, but I did not get to the 'Palley Petey.'

Under the head "The Necessary Hyphen" a contributor to "The Writer" says that many newspapers make their headlines unintelligible by omitting the hyphen. "THE PANGERMAN PLOT UNMASKED," he says, looked like a man's name so far as its second word was concerned until it was realized that it meant Pan-German. Another instance quoted is, "BRIDE TO BE KILLED BY MOTOR CYCLE." Here "bride-to-be" was meant.

Another omission that confuses the reader is the lack of a space between two words. A sign in a leather shop in New York reads: LEATHER FOR ALL'USER. FINDINGS, ETC. The passer-by at first may conclude that a g has been left out and that "galluses" is meant; then he may consider that he is not up with the dictionary and fancy that "allus" is some new device. Finally it dawns on him that ALL USES is meant.

Speaking of newspaper headlines, an amusing mistake occurred in the New York "Times" of August 19. Senator Jones, of Washington, was reported as saying of President Harding's address, "The Government can take no other attitude." A subhead above the paragraph read: "CAN'T FAKE NO OTHER ATTITUDE." A later edition corrected the aspersion on the Government to this innocuous rendering: "Can Take No Other Attitude."

British notions of propriety on the bathing beaches are more rigid than ours, as may be seen from the following extract from an English paper:

The authorities at Brighton seem determined to play the rôle of Mrs. Grundy, for they summoned three lady visitors for not entering the sea from machines. The ladies wore long cloaks over their bathing costumes, and there was not the faintest suspicion of impropriety. The Bench rightly turned the matter into a farce, and ordered the girls to pay ninepence each as costs. A very discreditable prosecution!

A man who had the misfortune to have bow legs was advised by a friend, according to the London "Morning Post," to repeat the Coué self-hypnotizing formula every night thirty times: "Every day and in every way my legs are getting straighter and straighter." Unfortunately, he miscalculated the number and repeated the magic words sixty times every night. As a result he is now knock-kneed!

The Professor (as quoted by the Boston "Globe")—"I noticed you were talking during my lecture this morning."

Student—"I beg your pardon, sir. I do not recall it. I must have been talking in my sleep."

Which of these two men has learned the secret of 15 minutes a day?

The secret is contained in the free book offered below. Until you have read it you have no idea how much 15 minutes a day can mean in growth and success. Send for your copy now.

HERE are two men, equally good looking, equally well dressed. You see such men in every social gathering. One of them can talk of nothing beyond the mere day's news. The other brings to every subject a wealth of side light and illustration that makes him listened to eagerly.

He talks like a man who has traveled widely, though his only travels are a business man's trips. He knows something of history and biography, of the work of great scientists, and the writings of philosophers, poets, and dramatists.

Yet he is busy, as all men are, in the affairs of every day. How has he found time to acquire so rich a mental background? When there is such a multitude of books to read, how can any man be well-read?

The answer to this man's success—and to the success of thousands of men and women like him—is contained in a free book that you may have for the asking. In it is told the story of Dr. Eliot's great discovery, which, as one man expressed it, "does for reading what the invention of the telegraph did for communication." From his lifetime of reading, study, and teaching, forty years of it as President of Harvard University, Dr. Eliot tells just what few books he chose for the most famous library in the world; why he chose them and how he has arranged them with notes and reading

courses so that any man can get from them the essentials of a liberal education in even fifteen minutes a day.

The booklet gives the plan, scope, and purpose of

Dr. Eliot's Five-Foot Shelf of Books

The Fascinating Path to a Liberal Education

Every well-informed man and woman should at least know something about this famous library.

The free book tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," how he has so arranged it that even "fifteen minutes a day" are enough, how, in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me besides the way to a vast new world of pleasure."

Every reader of this page is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

Send for
this **FREE** booklet that gives
Dr. Eliot's own plan
of reading

The Mother of All Living

By ROBERT KEABLE

Author of "Simon Called Peter"

The Boston Transcript: "Mr. Keable has power we knew before, but it has grown with use. He is a bigger man than when he wrote 'Simon Called Peter' and he has staged a vaster scene. . . . This is a book with a meaning and it possesses potent appeal."—Dorothea L. Mason. \$2.00

The Red Knight

By FRANCIS BRETT YOUNG

Public Ledger, Philadelphia: "Every one of Brett Young's books leaves a lasting impression in one's mind. One does not easily forget either his theme or his characters. . . . This book is a romance. . . . superbly written and completely absorbing. . . . Once more Mr. Young has done a fine piece of work."—A. Hamilton Gibbs. \$2.00

The Driver

By GARET GARRETT

An absorbing story of the development and influence of "big business" by one of the few men competent to paint such a picture. From the march of Coxey's army to the rise of "high finance" the author presents a picturesque record and a fascinating novel of American business and financial life. Ready in October

Black Pawl

By BEN AMES WILLIAMS

The South Seas and a tramp trading-schooner form the stage on which this drama of love and jealousy, hate and violence, is starkly played to the end. A frank, bold, straightforward story of red-blooded life by the author of "Evered." Just ready

The Unlit Lamp

By ELIZABETH SANXAY HOLDING

The attractive and intelligent daughter of a man of brains marries an average, moderately successful young New York business man. The resulting reactions of character, convention, and temperament make an extraordinarily acute picture of married life and its modern problems. \$2.00

Fielding Sargent

By ELSA BARKER

A convincing case of psychoanalysis in which the reader "listens in" on the psycho-analyzing of a fine, capable man who was being driven to desperation by an illusory fear of his dead wife's return. The absorbing subject of the use of the Unconscious is treated sincerely and ingeniously in this strong, significant novel. \$2.00

Abdication: A Novel of India

By EDMUND CANDLER

The New Statesman: "The picture is vividly done, and it includes a brilliant description of Ghandi and his command of the multitude. Mr. Candler writes from direct observation and with acute understanding." \$2.50

Still Life

By J. MIDDLETON MURRY

The first novel of an author who has an international reputation as a critic and a bookman. In "Still Life" Mr. Middleton Murry reveals himself as a creator and scientist in "atmosphere" and in delicate analysis of human character and motive. \$2.50

The Things We Are

By the same author

To get inside the mind of a shy, reticent man and to define with accuracy his mental states, is successfully undertaken in this distinguished work. "The atmosphere is highly original," says The Nation and Athenaeum, "and the subtlety of the analysis is backed at every point by skillful concrete touches."

These novels can be had at all bookstores, or from the publishers

SHALL THEY BE CUT OR KILLED?

THE following question has been a perplexing one for some time.

I endeavor to teach English to high school pupils. The work is divided into two parts: 1, study of grammar and rhetoric; 2, reading of good literature, such as is usually assigned to children of this age. Of course it is only to be expected that a majority of them will drift into positions where their efforts at English composition will rarely be called for.

On the other hand, I hope that the taste for good reading will stay by them and in future years they will go to libraries and call for some of the standard fiction, travel, biography, and poetry instead of wandering in, seeing a pretty book cover and some illustrations of people in up-to-date dress, and calling for books that are nothing but the typical light fiction which is read in an hour and melts from the mind like the snow in the April sunshine.

To cultivate this taste, or at least to let the pupils know that something does exist beside this light stuff, I have a reading list of books by the so-called "Standard Authors," also some of the better class of modern fiction, biography, travel, etc.

Like the proverbial horse which won't drink are a great many of these children, and quite as helpless as the horse's master am I. For instance, I read portions of "David Copperfield" to the class—Aunt Betsy and the Donkeys, David at the Peggottys, and other scenes which delighted me in my early teens. They listen attentively and enjoy the passages, but when they pursue the suggestion that they read the whole book outside they find that it has so many pages and such fine print that they are discouraged. One boy preferred to lose 10 points from his mark for the month's work rather than to read "any of those dry old things" and wanted to know why I didn't let them read books with some "pep." (Pep with its concomitant "jazz" is hardly found in Dickens!)

All pupils are not like this. Out of 50 there might be found a saving remnant of 5 who read and really like good books, 10 more who read them and are indifferent or hostile, and 35 who infinitely prefer to read nothing at all or a little popular fiction.

I have had to compromise. I ask one biography, one book of travel, and one standard novel, however painful the dose may be, among the eight books required during a school year of ten months. That leaves a leeway of five books which may be taken from a list carefully compiled in council with an experienced librarian. This has such names as "Rebecca of Sunnybrook Farm," "David Harum," Bret Harte, Sherlock Holmes, any historical novel that has a sufficient setting of adventure and romance to be a good story, from "Boy Captive in Deerfield" to "The Crisis."

Even with this latitude, in came a little freshman boy of Polish descent

with a note-book containing the names of his own personal book list. All were apparently of the class of cheap fiction of five to twenty years ago, except "Two Years Before the Mast," which I grasped at as the shadow of a great rock in a weary land. Many a time and oft ("far, far too oft") a child brings in some pretty little book grabbed hastily from the public library and wants credit for it. "No," say I; "read that for fun, if you will, but for school credit you must read something worth while."

It seems a pity that a boy who loves adventure stories should not have Oliver Twist's doings with Fagin, Jean Valjean's miraculous escapes, and the host of delightful people of fiction in an attractive form.

The chief objection in the mind of the average child is the fine print and the huge number of pages. The remedy is that some publisher take the better-liked works of the standard writers, cut them down a third at least, leaving the plot and necessary description of characters, but omitting the moralizing and philosophizing, and issue them in good-sized print.

I believe that there would be a growing demand for them. Of course it is in the nature of a compromise, and "Half a loaf is better than no bread," but this step would help to increase greatly both the reading and the sale of the better books.

I know that some people will object to this cutting down. Very well. So do I. If people will read the originals, that is a far better thing to do. But this plan of cut editions in good print and attractive bindings is to win the ninety-seven per cent who are not now reading them. Young people, both American and foreign-born, are drifting away from the old books and the old standards. How can we get them to give up an evening at the movies once in a while because they would rather stay at home and read?

This plea seems not half so strongly put as it should be, but if some far-seeing editor would follow this suggestion he would win the approbation of teachers of English, of librarians, and of the young people themselves, who could make new and delightful companions among the people of fiction. Why should not David Copperfield or D'Artagnan seem as real as Richard the Lion-Hearted?

Of course, all this will take time, but it seems as if a good hustling editor and publisher could start these books coming from the press within a few months.

An additional argument to strengthen the plea is that the very few novels that have been shortened and put into use in high schools are among the best-liked books in the course; for instance, "A Tale of Two Cities," or "Quentin Durward," or "Lorna Doone."

Here you have the problem and the solution. Won't some editor please start in at once? **LUCY ESTELLE TRIPP.**

Easthampton, Massachusetts.

[One, and perhaps the best, solution to this teacher's problem was given in the Outlook for August 18. Mr. Hubert

Training for Authorship

Dr. E. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 11 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 15 cents, annual subscription \$1.00. Besides our teaching service, we offer a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

Coryell, in his article entitled "What Books Do Boys Recommend to Each Other?" told how he made his boys not only swallow the classics but swallow them whole.—THE EDITORS.]

CONTRIBUTORS' GALLERY

H. G. LEACH gained his first intimate knowledge of Scandinavia while traveling in that country on a fellowship from Harvard, following four years spent at Princeton and his graduate work toward his A.M. and Ph.D. degrees at Harvard University. He was for many years Secretary of the American-Scandinavian Foundation, and during that time he secured economic support for the exchange of forty students annually between the United States and Scandinavian countries. He has been made Knight of the North Star in Sweden and Knight of the Dannebrog in Denmark. Mr. Leach is the author of several books on Scandinavian subjects.

To Frederick M. Davenport has been given the ability to see clearly and judge accurately. His character study of Governor Nathan L. Miller of New York, published in this issue of *The Outlook*, is something which no citizen interested in our Government should fail to read. Mr. Davenport was educated at Wesleyan University in Connecticut, and at Columbia. He is now Professor of Law and Politics at Hamilton and is holding office as New York State Senator for the third term.

CAROLINE ELIZABETH MACGILL is a name which may perhaps be unfamiliar to our readers. Miss MacGill makes her first appearance in *The Outlook* in this issue, although she has contributed to the "North American Review," "Scribner's Magazine," and the "Independent," and has written monographs for various historical and economic series. After gaining her A.B. degree at Cornell in 1904 she did graduate study at the President White School of History and Political Science and at the University of Wisconsin, and later became instructor in economics at Rockford College and the University of Wisconsin. For eight years she served as a research worker, editor, and collaborator on the staff of the Carnegie Institution of Washington. Since 1915 she has been engaged in literary and social work.

SEVERAL weeks ago Mr. Roger C. Hoyt, Eastern Advertising Manager of *The Outlook*, gave a talk on the function of advertising over the radiophone at the Westinghouse broadcasting station at Newark. Despite the proverbial hostility which is supposed to exist between editors and their business office, we have urged him to put his remarks on paper for the benefit of those who did not hear him speak. Mr. Hoyt joined the advertising staff of *The Outlook* in 1906 after graduating from Williams College.

The Outlook

SEPTEMBER 20, 1922

MRS. HARDING

THE OUTLOOK joins in the heartfelt expressions of hope and sympathy which are pouring into the White House from all parts of the country elicited by the gallant struggle of the Presidential family against the ravages of disease and the threats of death.

At this writing the condition of Mrs. Harding, while still serious, is more encouraging. That this great anxiety should be thrust upon the President at a time when he is confronted with some of the most serious political perplexities and problems that any President has ever faced is pathetic, and the pathos is increased by the fact that he has been sustained and strengthened during his public career by a very fine family life.

The family is still the ideal unit of American life, and the country is proud, sometimes consciously, sometimes subconsciously, of the fact that the White House is full of associations of dignity and happiness in the relations of husbands and wives—George and Martha Washington, John and Abigail Adams, Grover and Frances Cleveland, William and Ida McKinley, Theodore and Edith Roosevelt. Warren and Florence Harding have continued this fine tradition in a way that has commanded the respect and admiration of their countrymen and countrywomen.

ORGANIZING THE IRISH FREE STATE

A STEP forward was taken in setting up the Government of the Irish Free State at the meeting of the Dail Eireann which convened in Dublin on September 8. This is the first representative body brought together in Southern Ireland since the London Treaty was indorsed by a great majority of the voters. The minority members elected—that is, those who insist upon fighting to the bitter end for a completely independent Irish Republic—refused to take their seats in this assembly with the exception of one anti-treaty member, Lawrence Ginnell, who appeared for the sole purpose of making a disturbance, but refused to qualify as a member and was ruled out of the body.

The shadow of the deaths of Michael Collins and Arthur Griffith cast a regretful but not a hopeless tone over the assembly. The new head of the Provisional Free State Government is William T. Cosgrave, who has been in charge of

the civil side of affairs since Collins was killed. The only opposition to the election of Mr. Cosgrave and of the men named as his associates in the new Provisional Cabinet was the vote cast against him by a few labor members. The other most notable figure in the new Cabinet is Richard Mulcahy, who is to be Minister of Defense. Thus he is a successor to Michael Collins, while Cosgrave may be regarded as a successor to Grif-

International
WILLIAM T. COSGRAVE AT THE FUNERAL
OF HIS LATE CHIEF, MICHAEL COLLINS

fin in that he is really the head of civil affairs, while Collins, whom he nominally succeeds, was really the head of military affairs.

In accepting his election Mr. Cosgrave declared that it was his intention to push forward the London Treaty which has been sanctioned by the Dail and the electorate, to help in enacting a constitution for Southern Ireland, and also "to assert the authority and supremacy of Parliament, to support and assist the national army in asserting the people's rights, to ask Parliament, if necessary, for such powers as are deemed essential for restoring order and suppressing

crime, to expedite as far as lies in the power of the Government a return to normal conditions, and, having established the country on a Free State constitutional basis, to speed the work of reconstruction and reparation."

There is still a good deal to be done to put the Free State into complete operation. The most important thing is an agreement with the British Government on a form of constitution which will carry out the substantial provisions of the London Treaty. The armed opposition still existing in Southern Ireland seems to be decreasing and to be largely the work of comparatively small bands of irregulars.

THE TRIUMPH OF THE TURKS

THE victory of Kemal Pasha over the Greeks is one of the most complete and sweeping military successes of modern times. The Greek army was more than defeated, it was crushed and dispersed. The Turks under Kemal followed up their successes rapidly. Smyrna, the military and naval base of the Greek forces, was evacuated by the Greeks in disorder and the Kemalist troops entered the city on September 9. Scores of thousands of refugees, mainly Greeks and Armenians, had fled to Smyrna for refuge, fearing slaughter by the Turks. Just how far Kemal Pasha has been able to keep his troops under discipline is not positively known, but he at least issued the proper formal orders to refrain from slaughter of the Greeks.

The reaction of this depressing defeat of Greece by her ancient enemy was instantly felt in Athens. The Ministry under which this disgrace was possible resigned. A new Ministry was formed under the leadership of Triantafyllakos. The new Minister announced that his policy would be to defend the Greek interest at the peace conference, but the constitution of the new Cabinet indicates that the Government still represents the old régime and the policy of King Constantine. Naturally, the alarmed and excited Greeks are turning to Venizelos as a possible leader, and it is not at all impossible that the popular demand and perhaps a plebiscite of the voters will recall the statesman to undo the work of those who drove him from Greece. Venizelos is now in Paris, and is quoted as saying:

I have seen America and have been amazed to observe how a free people

with free institutions can work out their own salvation. It is my ambition to make Greece an America in Europe. For a few months I had the United States of Greece in my hands, only to have them wrested away by European politics. Perhaps our next attempt will be crowned with better success.

The basic comment on this new and threatening situation in the Near East is that the Allies missed their opportunity, just as they did in Russia, to agree upon a definite, sane and safe policy and to enforce it with united power and vigor. Now Turkey, as represented by the Nationalist or Angora Government headed by Kemal Pasha, is urging radical claims for a settlement that would again make Turkey a menace in the Balkans and in Europe and would restore the old rule of the Turks over Constantinople. Kemal has already issued a statement as to his demands. It includes Adrianople, all of Eastern Thrace up to the Bulgarian border, supremacy in Constantinople, and a control in the interest of all countries over the Dardanelles, in which apparently the Turks should have the chief part. Recent despatches declare that there is now a movement of Kemal's army in the direction of the Straits and that the military question there is serious.

Kemal's victory was celebrated in Constantinople by noisy demonstrations. There was rioting which threatened to be dangerous, when the Allied authorities put a stop to it.

Thus the Turkish rule, marked for centuries by slaughter, pillage, and hatred of all Christians, is again a disturbing and threatening factor in European as well as in Asian affairs. The Entente Powers had hoped to confine that rule to parts of Asia Minor, but, because of lack of unity of purpose and because of jealousy between the Powers, the situation has been allowed to become dangerous and extremely difficult of adjustment.

A LEAGUE AT SEA

THE discussion between Lord Robert Cecil and the Earl of Balfour at the third annual meeting of the Assembly of the League of Nations now going on at Geneva illustrates the natural limitations of action in the League. Lord Robert, as quoted in the reports, thought the League was doing splendid work, but its large machinery was used for too small matters. He wanted the League, now that the time to forget war had come, to enter on a higher plane. And he especially thought it a reproach that the League had done nothing to restore peace in the Near East. Balfour replied: "The League has neither ships, men, nor money, so how could it deal

with a non-member of the League like the Kemal Government? There is a certain class of critics of the League, including Lord Robert Cecil, who regard the League as a substitute for the Governments, replacing the Foreign Offices and the War Department and occupying itself with all sorts of political questions, besides every branch of welfare work."

So far the Assembly has discussed in a general way and with no definite results large international questions like German reparations, disarmament (the League reports a reduction in Poland of a million men, in France of 200,000, and substantial reductions in Italy, Sweden, and Japan), the disposition of Austria (a destitute orphan among nations and sorely in need of a protector), but it seems more likely to do some positive good in its proposals on what may be called world welfare projects. About these projects a staff correspondent of The Outlook wrote from Geneva just before the League Assembly met:

"The League's campaign against the white-slave traffic has been far more successful than that against large armaments. In 1904 and 1910 certain international agreements with regard to this subject were concluded, but, unfortunately, did not secure a general adhesion; only thirteen nations signed them. Due to the League's praiseworthy energy, not only was a new and improved agreement drawn up, but thirty-three signatories have already been secured.

"A special tragedy is that of the fate of the several hundred thousand women (mostly Armenian Christians) whom the Turks have seized and imprisoned in their harems. In view of such a horrible destiny, the League has brought about co-operation among the interested Powers; it has even tried to bring moral pressure on 'the unspeakable Turk,' and has established homes for those who have been rescued.

"As the campaign against opium and other habit-forming drugs largely originated in America, under the leadership of the late Dr. Hamilton Wright, it is natural that we should take particular interest in the League's efforts to co-ordinate international activity in this respect. Mrs. Wright, herself an expert, has been appropriately appointed to the League's Advisory Board. The League invites all states, whether member-states or not, to ratify the Hague Convention (which was framed by Dr. Wright), and would enforce a law throughout the world that no opium shall be exported or imported without a written certificate from the country of importation that it is needed for legitimate purposes. Meanwhile the amount of opium necessary to

be grown for such purposes is being ascertained by reports from the various countries as to their annual requirements. The information thus obtained will provide the League with a basis for further measures for the better execution of the provisions of the Hague Convention. The League is also extending inquiries, through its Opium Commission, as to all harmful drugs.

"There are at least three reasons why Western Europe now contains Russian refugees. The first reason is because of the movements of armies in 1914, 1915, and 1916 to and fro across the Russian frontiers. The second reason is because of Bolshevik outrages. The third reason is because of famine and starvation. At least a million and a half of refugees need aid. What shall be done with them? There is not enough work to go round and the refugees are generally at a long distance from the few countries, like Bulgaria, for instance, where employment is to be had and where the cost of living is low. With regard to these unfortunate men, women, and children, the League of Nations has already accomplished a good work among its own member-states. England and France have agreed to support small groups of students and children; Jugoslavia has made arrangements to give employment to over half of the many refugees within its borders; Bulgaria has offered to receive twenty-six hundred new refugees and Czechoslovakia to receive no less than five thousand agricultural laborers, besides a thousand students and a number of children. Finally, our own American Relief Administration has approached the League, proposing co-operation with regard to some fifteen thousand Russian refugees who are in a peculiarly pitiable condition in Constantinople. It contributed \$100,000 conditionally upon the League's raising half as much again to transfer the refugees to other countries. The League did raise a third of this sum, but, as the prospect of getting more was not bright, American donors generously offered to make good the balance."

LAFAYETTE DAY

IN accordance with the custom established early in the European war by the Lafayette Day National Committee, September 6 was celebrated in New York and other cities as the anniversary of both the birth of Lafayette and the Battle of the Marne. In New York exercises were held in the forenoon at Union Square near the statue of General Lafayette. Dr. John H. Finley, formerly Commissioner of Education for the State of New York, and now one of the editors of the New York "Times" and author of a notable book on French culture

GENERAL PERSHING LAYING A WREATH AT THE FOOT OF THE LAFAYETTE STATUE
IN UNION SQUARE, NEW YORK CITY, SEPTEMBER 6

entitled "The French in the Heart of America," presided at this meeting, at the close of which General Pershing—whose name will go down in history as the author of the phrase, "*Lafayette, nous voilà!*" (Lafayette, we are here!)—laid a wreath upon the statue of the great Franco-American Revolutionary patriot. There were anniversary services held in old St. Paul's Church on lower Broadway, and in the churchyard there was an interesting ceremony in which water from the Marne and earth from Ay, France, were placed upon the grave of the distinguished engineer, Lieutenant-Colonel Stephen Roche-Fontaine, who served on the staff of Washington.

In the afternoon members of the National Committee escorted General Pershing and Count Charles de Chambrun, a great-grandson of Lafayette, to West Point, where a ceremony was held near the statue of Lafayette on the beautiful parade ground of the Military Academy. Colonel Franklin Q. Brown, of the National Committee, presided, and the attendance of the Superintendent of the Academy, with members of his staff, and a large body of the corps of cadets,

made of the occasion a beautiful military spectacle. The chief address was delivered by Maurice Léon, of the New York Bar, who originated the idea of the celebration of September 6 as the joint anniversary of the Battle of the Marne and the birth of Lafayette. Mr. Léon eloquently reviewed the attachment and sacrifices of Lafayette for the young American Republic, and the aid which more than a hundred years later the American people and American soldiers and sailors gave to the Republic of France in her struggle for liberty. The French and American Republics have many bonds of sympathy that they should foster in mutual understanding and in pursuing a common aim in the progress of democratic civilization. This was vividly suggested by an anecdote of General Pétain which Mr. Léon related:

In July, 1918, near the Marne, General Pétain, commander-in-chief of the French Armies, stepped out of his headquarters as the advance guard of the American forces were going forward to meet the German rush toward Château Thierry. He stood silently and for a long time watched them pass by, an unending column of splendid manhood. Then he came in. His officers listened for

a comment. It is reported that all he said was, "For us this is a transfusion of blood."

An inopportune thunder-storm drove the large audience which had gathered on the parade ground into the beautiful assembly room of Cullom Hall, where the Count de Chambrun, who is French Chargé d'Affaires in Washington during Ambassador Jusserand's absence, made a stirring address in finished English. General Pershing read messages from Marshal Joffre and Marshal Foch, and used those messages as the text for as delightful an occasional speech as could have been asked for by the most exacting critic. He said that he had not intended to take part in the "battle of oratory" of the day, but he showed himself as much of a master of oratorical technic as he is of military tactics. His presence and his speaking constituted one of the most graceful tributes to Lafayette that the day produced.

VARDAMAN LOSES HIS HOLD ON MISSISSIPPI

It is a pleasure to record the fact that Ex-Senator Vardaman has been defeated for the Democratic nomination for United States Senator from Mississippi. Vardaman and his kind have long been a drag upon the political life of their State. The contradictions of American politics have never been more clearly illustrated than by the fact that men like Vardaman, Russell, and Bilbo could be selected by the same electorate that chose the keen-minded John Sharp Williams as its Senatorial representative.

For a first-hand report of the feeling in Mississippi The Outlook telegraphed to Mr. Frederick W. Jones, of Hollandale, Mississippi, who recently contributed to this journal articles upon the flood menace and the insurance scandals in his native State. In reply to our query Mr. Jones telegraphed us as follows:

Vardaman's defeat means new political life for Mississippi, also a return of honor and the assurance of prosperity. Russell and Bilbo, the present Governor and his immediate predecessor, both of whom have brought scandal upon the office, went down with the ex-Senator. With them goes a hitherto dominant faction that has held power through demagoguery and corporation baiting.

The women of Mississippi in their first opportunity to use the ballot saved the day. In the first primary Vardaman led Stephens by 8,000 votes, but Miss Kearney, the third candidate, polled 18,000 and made a second primary necessary. In the interval between the two primaries she advocated the election of Stephens. Governor Russell's statement in Memphis after the first primary that he was writing many letters urging the election of Vardaman also cost the ex-Senator heavily. The Bilbo-Russell type of Governor with its

insane-hospital scandal and Birkhead seduction suit has but scant support among the women.

The election sets free forces of decency and fair play scarcely to be measured.

Corporations such as the great fire insurance companies driven out of the State by the revenue agent are assured of a larger measure of justice. Russell and Vardaman supported the agent in his raid. The primary has saved the State and the Nation from a peculiarly wicked act of fraud and deceit.

Vardaman, whose voice has thrilled thousands of his supporters in other campaigns, did not raise it once in this. His managers said his teeth had been extracted and he could not make himself understood from the platform. His campaigning has been done by proxy.

The future is bright. Next year some of the most conscientious political leaders the State has developed in a generation will be candidates for Governor, including Sennett Connor, the young Speaker of the House. A wondrous change from Vardaman, Russell, and Bilbo days.

Mississippi is to be congratulated.

WITH THE VOTERS AND CANDIDATES

THERE have been other interesting elections besides those in Mississippi. Wisconsin Republicans have again proved their loyalty to La Follette by giving him another nomination to his present office. Senator La Follette's hold upon his State is not easy to analyze. His record at Washington has been erratic. In judgment he has frequently been seriously at fault, although it certainly must be said that his vote has been governed by his convictions rather than by self-interest. Some of his success is due to the fact that though he was once classified as an insurgent, with a rod in pickle for any political machine, he has built up a personal organization in his own State which works on ball bearings.

In Maryland Senator France has, like La Follette, secured a renomination to his present office in the Republican primaries. He defeated Mr. John W. Garrett, who was Secretary of the Washington Arms Conference.

The Democrats can apparently take little comfort from the elections in Maine. Maine, as all Americans know, holds its State elections in September. The vote in this State has always been regarded as an indication of the general political trend of the country, the varying majorities of Maine serving as a political barometer. This year Senator Hale and the Republican State ticket have been re-elected to office by a majority which appears at this writing to indicate no significant loss of Republican prestige.

Harris & Ewing

H. D. STEPHENS, OF MISSISSIPPI

THE INDUSTRIAL SITUATION: THE COAL STRIKE

AFTER an inexcusably leisurely delay of a week or more following the general agreement of union leaders and operators to resume hard-coal mining, the contracts have been formally signed and actual work began in the mines on September 11; 155,000 workers reported and the number is increasing every day. The mines were closed 163 days, there has been no summer production, and it is obviously impossible to catch up with the shortage actually existing. Danger of an actual coal famine is averted; but the householder will have to get his hard coal in small quantities, and he is urged to save it by careful stoking and handling and to employ substitutes such as coke, hard-surfaced and screened soft coal, and wood so far as possible. Congress will probably soon send to the President the two bills (now in conference between the Houses) that in different form have passed both Houses, one setting up a fact-finding commission for the coal industry, the other providing against profiteering and for priorities and fair distribution of coal. Both recognize that a National emergency exists in the production, transportation, and distribution of coal and other fuel, but neither looks forward to future emergencies by providing a permanent National Coal Commission.

THE INDUSTRIAL SITUATION: THE RAILWAY STRIKE AND THE INJUNCTION

AN effort still continues to put an end to the strike of the railway shopmen through a settlement between a group of Western roads and their men, with the hope that Eastern roads would

fall in later. This to some extent parallels the way in which the strike condition in the soft-coal industry was weakened. In both cases the result sought was that unions should abandon their demand for settlement on a National basis and that operators and workers who wanted to come together should be allowed to do so. The railway executives claim that, what with loyal employees and new men, they have a fairly competent force at work now and that before long the strike is bound to collapse of its own weight. On the other hand, Mr. Gompers declares that the shopmen's fight is now stronger than ever. The embargo on Western freight other than food announced by four Eastern railways is based on a desire to give coal priority, but labor men say that it indicates a shortage of locomotives.

In this situation it is doubtful whether the sweeping injunction asked by Attorney-General Daugherty is not a hindering rather than a helpful influence. At all events, it has been occupying the public attention and stirring up lawyers, economists, and industrial leaders on both sides almost to the exclusion of other controversies.

When the temporary Federal injunction came up in Chicago before Judge Wilkerson, who originally issued it, in an effort to make it permanent, an off-hand effort to have it canceled, made by the defendant's attorneys, was properly dismissed, and as we write argument is going on as to the facts on which the injunction is based, its Constitutionality, and its legality under the Clayton Act. We print below press despatches summarizing the allegations of acts said to be committed by members of the shopmen's unions or by their adherents and supporters, as presented in affidavits to support the Attorney-General's claim that a state of terrorism and sabotage exists amounting to a conspiracy to interfere with inter-State commerce and the transmission of the mails:

Twenty-five murders, some of men, women, and children who were not opposing the strikers but were travelers on trains.

Twelve trains abandoned in the deserts of California and hundreds of passengers, some very old, some babies in arms and some ill, forced to live in terrific heat for periods of from one to four days.

Approximately 950 mail trains forced to discontinue. A loss of \$75,000,000 suffered by California fruit-growers, unable to have their products transported.

Dynamiting, bombing, and setting fire to railroad property, including many bridges.

The removal of non-union coal cars from trains in Kentucky; tampering with the mechanism of 4,000 or 5,000

cars so they could not be moved and setting fire to others.

The drawing of spikes from rails in innumerable cases, endangering lives of workers and passengers.

It is understood that the Attorney-General has expressed willingness to make changes in the original restraining order as to phrases which are construed by labor leaders as interfering with proper liberty of speech and of legal personal action. This charge has been voiced by Mr. Gompers in vehement language, accompanied by the declaration that "It is a well-known and well-established fact that organized labor has discouraged the resort of the railway strikers or even their friends or sympathizers to violent or unlawful methods. They have been counseled to confine their activities within the province of their Constitutional right."

A NEW GOLF KING

THE Nation has a new amateur golf champion—a player who has never held that honor before. It was to Jesse Sweetser, a Yale undergraduate, that the wreath of victory fell.

Sweetser, in the course of the National tournament at Brookline, Massachusetts, defeated in turn William Hunter, a former British champion; Robert Jones, of championship caliber; Jesse Guilford, holder of the last year's American championship; and Charles Evans, who has twice won this honor. It was Evans who shared with Sweetser the final match of the tournament and who lost the chance of regaining his former title by a defeat of three down and two to play. Sweetser's deadly approaching was perhaps the deciding factor in his well-earned victory, though it would be hard to find any flaws in the rest of his game.

THE LABOR SITUATION

THE railroad strike still wends its weary way in spite of Attorney-General Daugherty's sweeping injunctions—or rather, perhaps, because of them. In *The Outlook* of September 6, Mr. Rollin Lynde Hartt quoted Mr. William Carman Roberts, an expert in the knowledge of public opinion as expressed through the daily press, as saying:

Never in my whole experience have I known strikes to be so generally condemned. As a rule, newspapers are inclined to side with the "under dog." This time, with the exception of the labor press, they have been almost unanimous in denouncing the strikers, as the strikes appeared

selfishly inopportune, coming just when a return of prosperity was in sight. The railway strike especially invited censure.

Strikes feed upon public sympathy; nothing so weakens a strike as the lack of it. Entirely apart from Mr. Daugherty's failure to understand or recognize legal and ethical precedents in his sweeping application, it may be said that he was guilty of a serious tactical mistake. The first result of his effort was to arouse public sympathy, which the strikers had been steadily alienating, in behalf of the unions. That this is not an unfair charge is indicated by the sudden modification made by Mr. Daugherty in the form of his application for an injunction when the Administration at Washington began to get the reaction of public opinion.

Stripped of all its legal technicalities and verbiage, the principle upon which an injunction may justly be based is a very simple one. The only true function of an injunction is to prevent the performance of an act which may result in an irreparable injury if it is committed. For example: A telephone or a telegraph company is running its lines along a village street, and to accomplish what it desires threatens to cut down an elm tree a hundred years old. The only recourse for the village, or for the property owner on whose land the elm tree stands, is an immediate injunction; for if the tree is cut down, no amount of damages awarded by the court can reproduce the tree. A hundred years is required for such a reproduction. But if the company erects an unsightly pole on private property, no injunction is needed. The owner can appeal to the court, and if the court decides that the pole is an injury, it can be removed and the *status quo ante* re-established.

If it comes to the knowledge of the authorities that a train crew are planning to abandon a train in the midst of a Western desert, an injunction is the proper remedy, because when the train is once abandoned, no court can supply an adequate remedy. To enjoin men, however, from meeting or speaking in behalf of strikes or strikers is unnecessary, because incendiary language which is contrary to the statute law can be punished by ordinary judicial procedure. Government by injunction is fraught with danger to free institutions. Injunctions should be resorted to and granted by the courts only when it is apparent that this is the only method that can avert a fundamental social or individual wrong.

But Mr. Daugherty is not by any means the only man to blame. The American people must share the respon-

sibility with him. For the people through their representatives in Congress have by the Clayton Act exempted labor organizations and farmers' organizations from the operation of the statute law, and then, when labor organizations acting under that exemption try to do things which injure or incense the public, that public, or a portion of it, clamors for injunctions. Is not this really an illogical and foolish way to handle the problem?

How simple it would be if the principle of the Sherman Anti-Trust Law, which makes combination or conspiracy in restraint of trade illegal, were extended to all organizations, whether of capital, or of labor, or of agriculture. This would not, in spite of Mr. Gompers's alarms, prevent the individual workman or groups of workmen or great bodies of workmen from quitting their jobs or from collective bargaining. It would, however, give the public the protection of the courts, which would decide in the case of a great strike, like the coal strike or the railroad strike, what evidence there was of a conspiracy or of specific acts to restrain trade. If in addition the trade unions were incorporated with properly constituted treasuries making reports to the Government like the treasuries of every other corporation, they could be assessed damages for their illegal combinations in restraint of trade when the court so decided. This seems to us to be a prime and essential step to take before we can have any kind of logical and effective dealing with industrial conflicts in this country.

PUSSY-FOOTING

WE wish some modern Savonarola could preach a series of denunciatory sermons exposing the vice of pussy-footing. It is certainly one of the most pernicious and characteristic vices of present-day public men and governments.

What is pussy-footing?

The *Lusitania* was sunk by what the Federal Courts of the United States afterwards declared to be a murderous act of piracy, and some American statesmen were cautious in expressing any opinion in regard to it or in taking part in any public protest against it because their protest might affect the German vote.

That is pussy-footing.

Railroad strikers dynamite passenger cars; tamper with electric systems; endeavor to derail trains by removing bolts from the track; and abandon women and children to suffer from hunger and thirst in the desert; and states-

men advocate the return of the strikers with their seniority rights unimpaired because of the labor vote.

That is pussy-footing.

Both Houses of Congress have passed a Bonus Bill, but both Houses are aware that public opinion is against the plan and they are relying on the President to veto the final measure; they fear to act according to their convictions because of the soldier vote.

That is pussy-footing.

The Senate has adopted a Tariff Act which is acknowledged to be the worst hedgepodge that the history of American industrialism has yet produced; but Republican Senators, instead of voting against it, have quietly shelved it in conference, hoping that it will die an unnoticed death and thus relieve them of antagonizing the manufacturing vote.

That is pussy-footing.

Fortunately for American self-respect, this kind of pussy-footing is not wholly confined to this country. One of the worst examples of it has just come to our attention, and the English must bear the brunt of the accusation.

The Turks have been committing indescribable atrocities in the Near East. This is nothing new. The Turks have been doing this kind of thing for some centuries. The Rev. Ralph S. Harlow, Professor of History and Sociology in the American College at Smyrna, has just arrived in this country. He has been in correspondence with *The Outlook* for many months, and has given us information which has aroused our indignation with regard to Turkish savagery. Within a few days he has been in the office of *The Outlook*, and photographs which he had of acts of atrocious murder and assault by the Turks on the Armenians and other non-Turkish people were so sickening that it was almost impossible to look at them. The Turkish situation became so intolerable that a few months ago the British Government invited the American Government to take part in an official investigation and report of these atrocities. France and Italy were to join in the undertaking. After some hesitation the American Government accepted the invitation, and this acceptance was hailed with joy in these columns as an indication that our Government was prepared to do its share when it could in restoring a civilized equilibrium in Europe. That official investigation, if it had taken place, might not have resulted in any organized attempt to stop the Turkish torturers by force; indeed, our Government expressly reserved the right not to commit itself to any further action than that of investigation and report; but the investigation alone

would have had a great and far-reaching moral influence.

Our joy has now been turned into indignation by learning that just as the American Government was about to appoint its official representatives on the investigating commission, it received an official communication from the British Government saying that the original plan contemplated was impracticable, and suggesting that the whole matter be referred to the International Red Cross. What has happened undoubtedly is that such pressure has been brought to bear on the British and French Governments by Mohammedans in India and Egypt and Tunis and Algiers that Great Britain and France are pussy-footing.

No investigation by the International Red Cross can begin to have the effect on public opinion or upon the Turkish Government that the official Governmental investigation by Great Britain, France, Italy, and the United States would have had. The whole plan has now ended in a complete and pitiable fiasco. We do not belittle the terrible problem which Great Britain has to face. A general uprising of the Mohammedan populations of India and Egypt as a method of expressing their sympathy with the Mohammedan torturers of Turkey would be a serious and perhaps a terrible menace to the British Empire. Nevertheless, pussy-footing never made, nor will it ever save, an empire.

DOG-DAYS

THE heat and vexation of the dog-days have plagued the world since the time of Pliny. This year they have culminated in a rather unusual outburst of international irritability. Mr. Kipling, for example, in an interview in the New York "World" reported by Mrs. Clare Sheridan, the English sculptress, says that Americans came too late into the war; that about all we did was to make eight per cent out of our war loans; and that we prevented the Allies from continuing the war and framing the terms of peace in Berlin. "They have got the gold," he says, speaking of us Americans, "but we have saved our souls."

Of course this has raised a storm of protest. It has been useful, however, in that it has brought to light an important historical fact. Mr. Weeks, Secretary of War, commenting on Mr. Kipling's assertion, says officially that General Pershing wished to continue to advance into Berlin, but that the hostilities were suspended and the Armistice signed when it was because of the insistence of Marshal Foch and the British General Haig.

We advise our readers not to take Mr. Kipling's strictures too seriously. He is

not a statesman, but a poet, and a rather irascible and temperamental one at that. Moreover, his reporter, Mrs. Sheridan, has an artistic and lively imagination, and is more interested in sensations than in statesmanship. The indiscretion of the interview is evidently not wholly Mr. Kipling's. In spite of his manifest and rather waspish desire to get under our skin, we shall go on reading "Puck of Pook's Hill" and "M'Andrew's Hymn" with equanimity and pleasure.

Another Briton has also succumbed to the heat of the dog-days. George Greenwood, of the "Daily Telegraph," in writing of the recent victory of American golfers over their British competitors, says:

Personally I see nothing wrong with British golf. The plain truth is we do not make a business of it, and I sincerely hope we never shall. . . . If the Americans in their pursuit of golf care to live on milk and fish, to eschew tobacco, and go to bed at ten o'clock, let them. I would rather see Tolley, Ray, and Vardon blowing clouds of tobacco smoke around the links than with their mouths full of chewing gum.

Dear! dear! If golf as a sport and a pastime is to be judged by the comparative moral advantages of chewing gum and tobacco, it will cease to be a pastime and degenerate into a mere educational system. The whole world seems to be becoming pedagogical and psychological. We do wish that Brother Greenwood would suppress his didactic tendencies long enough to let us get a little fun out of international competitions.

Another phenomenon of the dog-days is found in the tempest in a teapot which has been aroused by an article in a supplementary volume of the "Encyclopædia Britannica" on Mr. Newton Baker, Secretary of War in the Wilson Administration. Letters and interviews have appeared in the daily press denouncing the article because it calls Mr. Baker a politician. We think it was very wrong of the "Encyclopædia Britannica" to do this. The "Century Dictionary" defines a politician as "one who is versed in the science of government and the art of governing; one who is skilled in politics." Mr. Baker is an able lawyer; a fine citizen; a delightful neighbor; a man of high ideals and aspirations; but one who was not successful as a politician under the foregoing definition. He did more than any other man, except President Wilson, to ruin the political fortunes of his party. His motives and ideals may have been, and doubtless were, of the highest, but the fact remains that he was not a political success. The editor of the "Encyclopædia Britannica" in retort

upon his critics might recall the story of the Western editor who said of a man in his small town, "Bill Jones is so dirty and shiftless that he is not fit to live with pigs." On being asked at the point of a revolver to retract, he said in the

next issue of his newspaper: "We said last week that 'Bill Jones is not fit to live with pigs.' We apologize. He is fit to live with pigs." If the editor of the "Britannica" had said, not that Mr. Baker was a politician, but that he was

an unsuccessful politician, he would come nearer the truth.

All of which leads us to suggest that in the dog-days everybody should try to keep cool and wait with patience for the regenerating frosts of November.

WHAT DOES A STRIKE TOWN THINK?

SPECIAL CORRESPONDENCE BY W. WORTHINGTON

"HE ought to be murdered!"

This is what his neighbor's wife thought, and said, as she watched him, conscious that the eyes of the town were upon him, as he returned to work before the settlement of the strike.

"The women are worse than the men to talk, more radical." So said the wife of a farmer who had moved to town.

I wanted to know how the people of Hillyard think and feel after two months with the railway shopmen on strike and with no immediate prospect of settlement in sight. So I spent a day talking it over with a minister, a banker, the Ford man, a farmer, a striker, a merchant, and anybody else that I could scare up a conversation with. Hillyard is a railway town—intermountain division point on the Great Northern and location of extensive car shops—just outside Spokane.

The man "who ought to be murdered" had gone to work under force of necessity, conviction, or persuasion, perhaps all three, and doubtless deeply troubled about questions of loyalty to himself, the union, and the company. But he found himself in deeper trouble than before; for when he appeared in the shops for work the strike-breakers looked upon him as England looked upon Benedict Arnold. He was a traitor to his union and his class.

"What in hell are you doing here?" he was asked. "We are strike-breakers. You don't belong with us." And they made it so intolerable for him that he was glad to quit and informed his friends of the union—friends no longer—that "he saw things differently now." He had forfeited the respect of his striking neighbors and was held in contempt by the strike-breakers. Whatever the rights and wrongs of it, a man takes his social standing, if not his life, in his hands when he tries to break into that situation.

This is only one of the little hells created by the labor war now in progress on the Western roads. Newspaper reports indicate that the same situation, or worse, obtains in other division towns.

An old man, long an employee of the company and with a pension coming soon, kept his job in the conviction that he had earned the right. His sons struck, and now they "don't speak." Men and women who are ordinarily

frank and outspoken in their opinions have "shut up." They will not discuss the situation. They "don't want to get into trouble with their neighbors." "Scabs" or strike-breakers live in the "shacks" or cottages provided by the company, mingle very little with the townspeople, and go strictly about their business when they do. They are paid in cash, so that they do not need to ask the banks or stores to cash checks. No one has been molested in a physical way, but there are many methods by which pickets, strikers, and even women and children can make life a social misery for any one who is a "traitor to his kind." Scab signs are posted in numerous places, in stores and windows of homes:

Don't Be a Scab

A scab is the most contemptible thing on earth (and more)

Be a Man

Pickets are seen singly and in pairs at all the entrances to the yards as well as at all street corners. Every man who looks like a worker is tackled without ceremony to learn his business or destination, and is made decidedly uncomfortable in his mind if he intends to work for the company. One young farmer, unshaven and looking a little rough, dismounted from the street car, was approached and asked his intentions. "None of your d— business," he shot back. "I don't ask you where you are going and what you're going to do."

One merchant said: "If it were not for the pickets, the strike would not last a week. Most of the men were not in favor of it, to begin with. There was no dissatisfaction here. They were called out by the unions. But the pickets make it so uncomfortable for a man that he can't stand the gaff."

A peculiar psychology exists. Among the strikers there is a tacit respect for the man who is frankly out for his own interests, as they see it. Thus old men who are nearing their pension age are permitted, or even asked, to retain their jobs. Superintendents and bosses down to but not including the "straw bosses" are supposed to be identified with the company; they are not permitted to join the unions and they are for the most part respected. At least they are not held in contempt as traitors to labor. The line is drawn at the "straw" or sub

boss who is a member of the union and who, if he keeps his job, is called a scab.

The unions practically control the situation, and public opinion, where it is opposed to the strike, is silent or finds only an underground expression. Business men who hold this position will, when approached, make an out-and-out declaration of sympathy for the strikers, and then, having paid tribute to "safety first," will, if conversation is extended, gradually reveal their true attitude, which is about as follows:

The strike was unjustified and not desired by the substantial men in the unions, but forced by the "higher ups." Jewell is accused of having "hidden out" for a few days after the strike was declared. Admissions of wrongs on both sides are admitted. It is war, and we will have to pay the bill. The strike is a poor method of settling a dispute and does not really determine the rights and wrongs of the question, any more than war does. Seniority, which is now the only bone of contention, cannot in fairness be granted. The President blundered when he suggested that the companies yield this point.

Farmers and those whose business is with farmers are the only ones who bluntly and frankly come out in opposition to the strike. The farmers' interest has been jeopardized. They are facing serious loss and inconvenience right now, with the possibility of greater or total loss in some instances as the result of the transportation tie-up. Milk sours on the sidings on account of delays and the bottom has fallen out of the perishable-fruit market. Hence the farmers are outspoken in condemnation of the unions, the companies, and the Government in its failure to deal with the situation strongly. Hopes of a farmer-labor bloc have been shoved some distance into the future. A farm laborer expressed sympathy for the strikers, and then said: "But there are some things about the unions that ain't right. If a man goes to work in the shops, they call him a scab. But these strikers go out and take my farm jobs away from me. I call them scabs just as much as the strike-breakers." A house painter, when the strike came on, found himself underbid and his business taken from him.

Strikers think that public opinion is gradually shifting to them. I am afraid it is the public opinion of their own cir-

cle and of the business that is dependent upon them, a part of which, at least, is not wholly outspoken. The public that stands "apart" watching the fight is quite impartial, criticising both sides and generally disgusted with two men whose interests are ultimately identical fighting each other and shifting the cost upon the spectator.

One of the striking shopmen, while defending his own position with evident sincerity but taking for the moment the position of the "suffering public," said with conviction: "The situation is intolerable and fearfully expensive. It should never have been allowed to occur, and there should be some Government agency with power to prevent its ever occurring again."

The original causes of the strike were:

Proposed wage cuts. Not strenuously opposed by the men.

Proposal to pay overtime only after ten hours. This threatened the eight-hour day, and was opposed.

Proposal to let out certain work by piece or on contract to non-union shops. This threatened the existence of the unions; to force down quality and increase accidents; to make work more irregular in the shops. Also opposed.

These contentions were granted by the roads when the Government interposed. Seniority was injected into the dispute by the refusal of the men to go to work after a certain date. By seniority is

meant the preference of older employees over the newer ones, together with certain pension accumulations. The right of an older employee to "bump" a later arrival seems to be regarded as worth more than the pension. Some did not know what their pension rights were.

Seniority is now the only thing that stands in the way of settlement, and strikers say that they will never go back to work without these rights. "Such a situation," they say, "would be intolerable." They say also that they have "millions" back of them, and that they do not need to go to work for a long time. The "Big Five"—engineers, firemen, conductors, brakemen, and maintenance of ways unions—are contributing liberally for the support of the strikers.

The leading minister, a Congregationalist, is frankly and openly in sympathy with the strikers. He thinks that the responsibility for so managing things that industrial peace is possible clearly lies with the management of the roads. The great question at issue, he thinks, is not the daily wage, the eight-hour day, or the existence of the union, but the question of interrupted or seasonal employment. The daily wage is sufficient if work were constant. The irregularity of employment keeps the town constantly on its "uppers." Failure of the church and other social agencies for good is due in large measure to uncertainty of income. The contract-letting

proposal of the roads promised to increase this uncertainty and irregularity. The unions of course emphasize the danger to their organizations, but the minister is probably right. The union leaders are afraid for their jobs. There is a feeling that with a proper settlement of the troubles the unions would go out of existence.

The impatience of the public with the present war is in part due to the conviction that no one gains anything by it and that it is in no way an approach to a solution. There is in the Northwest one signal example of peace in an industry which before the war was "all shot to pieces" with radicalism, I. W. W.-ism, and sabotage. The lumber industry is at peace in the Northwest to-day largely on account of the influence of the Loyal Legion of Loggers and Lumbermen, under the management of Norman F. Coleman, former college professor, Christian gentleman, and industrial statesman. They have brought into the business the principle of representation, and the entrance of the men into the problems of management and the entrance of management into the problems of the men has made peace possible through understanding. It makes profit sharing possible without calling it that and is a device to do away with the evils of absentee landlordism, so inevitable where capital is furnished by stockholders who live everywhere, as is the case with the railways.

THE REMEDY

SPECIAL LONDON CORRESPONDENCE

IN addition to the large loans America is making to Europe our statesmen are giving advice also. Lately Governor Cox, Mr. Frank Vanderlip, and Colonel House have been more or less interviewed. They are full of warning to Europe and suggested American financial intervention.

I am not sure that they are telling all they know. Here are the plain, unvarnished facts:

We haven't any free gold for Europe; what we have is pledged as security for the Federal Reserve paper money and as security for the depositors in the member banks. I have before me a letter from the Vice-Chairman of the Federal Reserve Board, dated August 14, saying that the last statement of the combined liabilities of the Federal Reserve system and the bank deposits of the member banks showed that the "reserves" (that is, gold and silver) were less than fourteen per cent of such liabilities, and that the present reserves "are not higher than they should be."

Ours is not the only gold reserve in the world. Switzerland, Holland, Scandinavia, France, and England have much gold. They hold it aloof, as they should,

instead of wasting it on a vain attempt to counteract the torrent of inflation now deluging Europe.

America believes in legitimate democracy, but she has reason to question the credentials of so-called democracies which make no attempt to keep their word. It is because Europe doubts the promise of Germany, Poland, Austria, and others to pay that their paper money is hardly worth its weight as rags. The first step in a wayward course is always the vital and tragic one; the others follow along in the same direction in spite of the protests of a weakened will to do otherwise.

It is absolutely impossible for the weak Socialistic Governments of Germany and Austria to stop issuing paper money.

The remedy, after all the dodging and side-stepping of theorists and practical politicians, is:

1. A new and strong government that will keep expenditures within income.
2. The creation of a reserve (on a gold basis) by such taxes and capital levy as may be necessary.
3. New paper currency to be issued against this reserve and redeemed when demanded.

4. The present worthless paper money to be called in and exchanged for the new currency on a fixed basis of 1,000 or 10,000 to one, as the case may be.

We must start with a strong government. Czechoslovakia has pointed the way.

You may ask, "What has Germany got to make a reserve out of?" Why, export credits and the present gold reserve of the Reichsbank, amounting to around \$250,000,000. That is much more than the entire gold value of the 200,000,000,000 paper marks or more in existence.

There are plenty of assets in all these countries which can be used for reserves, but there is no use trying to use them until the amount of paper money is limited.

A change from the present control to a strong control may mean revolution; it may mean reversion to monarchies. I am not concerned about the name. I only point out the one and only remedy.

If some of the present so-called democracies go down, it will be small loss to the world. This old earth will continue to revolve, and a new and better government by the people and for the people may appear.

W. C. GREGG.

London, England, August 29, 1922.

THREE GERMAN BIRDS

F & A Photos

This is the "Vanipyr" in which Herr Hentzen flew for more than three hours in a test at Gersfeld, Germany. The records made by these German soaring planes have been discussed in recent Outlook articles and editorials.

International

This glider, flown by Herr Klemperer, not long since won the first prize in a German competition by staying aloft for twenty-one minutes. In this flight it rose above its starting point and alighted only thirty feet below it.

Herr Martens' "Greif" flew for two hours and six minutes from the same hilltop which Herr Hentzen used for his record-breaking flight. The character of the country where the German tests were held is well shown. These soaring birds require for their flight the upward currents which occur in such a hilly country as this.

PAUL

BY LYMAN ABBOTT

WHO is the founder of Christianity—Jesus Christ or Paul?

Lay readers may be surprised to learn that some theological scholars are quite seriously discussing this question, and that books have been written upon it. One or two scholars, more eager for novelty than for truth, have even claimed that Jesus Christ never existed. Others, more rational, think that Jesus Christ gave the religion but Paul gave the theology, and that the two are not consistent. Those who hold to this view in any of its forms must reckon with Professor Machen's book.¹ He is apparently as familiar with the Greek language as with the English and with life in the first century as with life in the twentieth. In his volume, a series of lectures delivered in the Union Theological Seminary of Princeton to theological students, he is an expert speaking to those who hope to become experts. Much of his volume would be interesting only to students of the Greek Testament. Its criticism of the New Testament is minute, almost microscopic, the work of a careful, able, and conscientious scholar.

But he seems to me more successful in his examination of details than in his mastery of great principles. Thus he puts emphasis on unreal antitheses. "Jesus for Paul," he says, "was primarily not a Revealer but a Saviour." Might he not be a Saviour because he was a Revealer? Again: "Jesus, according to Paul, therefore, was not a teacher but a Redeemer." And yet it is Paul who declares that Jesus came *teaching* us that we should live soberly, righteously, godly, looking for the appearing of God. Professor Machen lays great stress upon the contrast between the supernatural and the rationalistic interpretation of the Gospel and upon the recognition both by Paul and by the Gospel of its supernatural character. But he scarcely recognizes the possibility of an opinion which is gaining currency in the churches, and perhaps still more outside the churches, of the mystical character of Christianity. If its mystical character be recognized, it is seen to be both a supernatural and a rational religion; for mysticism involves a personal experience of and companionship with a supernatural Person, and as a human experience it is capable of rational investigation and interpretation.

There are two conceptions of religion: one obedience to law, the other spontaneous life. Every teacher realizes the difference between the pupil who is not interested in music but conscientiously practices her hour a day and the pupil

who loves music and enthusiastically practices in her eager desire to acquire the capacity to play. Every pupil recognizes the difference between a teacher who sets her pupils tasks and sees that they are accomplished and the teacher who inspires in her pupils a love for learning and a desire to acquire it. Obedience to law was the religion of Pharisaism in the first century and of Puritanism in the eighteenth. The religion of spontaneous life is well expressed in a saying attributed to Augustine, "Please to do right, then do as you please."

Paul was brought up in the religion of the Pharisees "as touching the righteousness which is in the law, found blameless." But he was not satisfied. The conscientious legalist never is satisfied. Though he has kept all the commandments from his youth up, his soul still cries out within him, "What lack I yet?" What he lacks is spontaneity of life. And life is always a gift; it is never self-created.

When Paul discovered this difference between law and spontaneous life and accepted the gift of life, he became possessed with an irresistible passion to give it to others. He became an evangelist. He has been studied by philosophers as though he were a philosopher.

He was not a philosopher; that is, he was not interested to give the world a new system of theological thought. He was the herald of a new life; and he had an overmastering desire to give to others the life which Jesus Christ had given to him. He traveled from province to province proclaiming the glad tidings. He was an orator, and wherever he could get an audience there he found a pulpit—a Jewish synagogue, a Greek schoolroom, a Roman forum, the public street, a prison yard, anywhere, everywhere. As soon as he had kindled a flame of devotion in the hearts of a few disciples he left them to give their message to their fellow-men and traveled on to lay new foundations in a new field. He was a pioneer as well as a missionary, and it was his ambition to preach where no one had preceded him. His epistles are not theological treatises written by a philosopher interested in framing a philosophy of religion. They are the letters of an evangelist, warm with the enthusiasm of an ardent soul, written to give counsel, warning, and encouragement to little fraternities which had been gathered by his labors and looked to him as their spiritual father.

Inspired by his faith, which was much more than a doctrine, Paul was not content to remain in Jerusalem and make of Christianity a Jewish sect. The Christian life was God's gift to the

whole world, and he went out into the world, in spite of bitter opposition, within as well as without the churches, to give this gift to the Gentiles, as to the Jews. Circumcision was a Jewish ceremony as old as the Jewish nation; but when he found that it interfered with his mission to the Gentiles he simply discarded it, as General Booth subsequently discarded the sacraments when he found that they interfered with his mission to the outcast in London. When Paul was criticised for so doing, he simply replied: "Circumcision is nothing, and uncircumcision is nothing, but the keeping of the commandments of God." He was not an Anarchist, or what the theologians call an Antinomian; he recognized the value of law as a standard of character, as a restraint on lawlessness, and as one of the fruits of the new life. But it was not medicinal. Brought up in the strictest sect of the Pharisees and familiar with its phraseology from his youth up, he used the language of Pharisaism to overthrow Pharisaism, the language of legalism to destroy the spirit of legalism, and he sought to substitute therefor the freedom of a life of faith and hope and love freely given and to be joyfully accepted.

The Greeks were more interested in speculative philosophy than they were in spiritual life. Paul seems to have feared lest he should be mistaken for the founder of a new school of philosophy, and he protested. "The Greeks," he said, "seek after wisdom, but we preach a Messiah crucified, to the Greeks foolishness." It is pathetic that the Church which he did so much to create has done what he feared—developed a system which they call by his name, "Pauline Theology."

He proclaimed a Messiah who was a Saviour because he was a Revealer. The Messiah he preached revealed the true nature of God—a God who came to seek and to save that which was lost, a missionary God, a life-giving God, a God whose righteousness rightens all who accept his gift of life. There is no evidence that Paul ever saw Jesus. There is no evidence that he had ever seen before his conversion any of those fragmentary narratives of which, subsequent to his conversion, the present Gospels were composed. His faith in the Messiah was a mystical faith. In one of his letters he gives an account of his conversion. "It pleased God," he says, "to reveal his Son in me, that I might preach him among the heathen." His faith was not derived from, though it was confirmed by, what he later learned of the earthly life and tragic death of Jesus.

Christianity, according to Paul, says

¹ The Origin of Paul's Religion. By J. G. Machen, D.D., Assistant Professor of New Testament Literature and Exegesis at Princeton University. The Macmillan Company, New York.

Professor Machen, "is both a life and a doctrine—but logically the doctrine comes first." But Paul was not interested in the logical development of a system of thought, he was possessed by an irresistible desire to possess himself and to impart to others the Christ life. Nothing seemed to him too great a sacrifice to accomplish this, his life purpose. He had the temperament of John Wesley, not that of John Calvin. Whatever may be true in philosophy, in life experience precedes definition. The child loves his mother before he knows

what love means or what mother means. In the history of religion, life has always preceded theology. The Christian faith was seen in the first century, but the Nicene Creed did not appear until the fourth century. The *life* is the light of men. When Professor Machen says that life is the expression of the doctrine and not *vice versa*, he contradicts both psychology and history. It is not more certain that stars preceded astronomy, flowers preceded botany, and language preceded grammar than that religious experience preceded theological

thought. The thing to be defined came before the definition.

There is much in "Pauline Theology" inconsistent with the simple life and teaching of Jesus as recorded in the Gospels; but nothing inconsistent in the epistles of Paul if they are read as the letters of a missionary and an evangelist. On the contrary, of all the disciples of Jesus Christ, the two who have most clearly understood his secret and interpreted the source of his power are Paul and John—and they are both mystics.

PRINCE EUGEN OF SWEDEN

BY H. G. LEACH

PRINCE EUGEN of Sweden would have proved himself a prince among men as well as a prince among painters, there is little doubt, even had he been born, like Zorn, the son of a Dalecarlian peasant woman, or, like Carl Larsson, the son of a day laborer. His paintings would have sold for princely sums on Fifth Avenue and hung in metropolitan galleries. Had his royal origin not placed a ban upon commercializing his genius, the school-houses and public buildings of Stockholm that glow with his inspired frescoes would have nothing to show the visitor but whitewashed walls or tawdry ornamentation. Instead, a painter-prince, seated on his scaffold like any other workman, has labored, month after month, with loving hand and without compensation to share his own dreams of color with the children of Sweden.

It will be recalled that the present reigning dynasty in Sweden, the Bernadottes, with their passion for arts and letters, is of comparatively recent origin and of French descent. The great-grandfather of Prince Eugen and his brother, the present King, was Jean Baptiste Bernadotte, one of the eighteen marshals of France under Napoleon, who was elected Crown Prince of Sweden on August 21, 1810. His wife was Désirée Cléry, daughter of a Marseilles banker and sister of Joseph Bonaparte's wife. Bernadotte was a veteran of every Napoleonic campaign and had been French Minister of War. The arbitrary election by the Swedish Government of a French general to succeed the infirm and childless Charles XIII, although one of the most singular freaks in history and the sort of political patchwork that usually proves to be a short-lived experiment, resulted in turning a new corner in the prosperity of Sweden. For Bernadotte, both as Crown Prince and as King Charles XIV, transferred the powers of leadership and organization he had exhibited under Napoleon to the unqualified service of his adopted country, and his energy and public spirit have descended in large measure to the four

members of his family who have succeeded him to the throne of the Northern Kingdom.

Prince Eugen of Sweden, the King's brother, is generally recognized to be one of the world's great painters of landscapes and of the luminous northern summer nights. His personality corresponds best with the schoolboy's conception of one of the noblest of the Knights of King Arthur's Round Table, a Sir Galahad or a Gawain. My own first meeting with him will always be a refreshing memory. It was the summer after the war, when all men's minds were turned to peace and reconstruction and the thought that somehow the world was to be made over and that it was to be a better world. It was felt that America would contribute to the new day, and there was a tendency in the Scandinavian North, as in the other parts of Europe, to idealize America and Americans and a curiosity to know more about our ways and our habits of thought.

When we reached the inn in the country near Stockholm where we were to meet for an informal supper, the Prince drove up. We were presented to his Royal Highness as he stepped out of his car. It was an evening late in May, a month before high midsummer, and yet so early in that Northern latitude the afterglow of the sunset lingered on long into the night. As Prince Eugen, tall, quiet, and gracious, stood there in the deepening rosy light with the dark spruces in the background, he seemed more part of a picture than a reality.

It was a happy party of artists and their friends who gathered around a very festive Swedish board in the historic old inn. War restrictions on food had largely been suspended, and the Swedes, who had grown thin during the previous terrible year, were now trying to get back into their usual stalwart form. As for the liquid accessories to the feast, the Swedes follow strictly the old motto of the Greeks, "Nothing in excess." For they live happily under the sanest prohibition regulation in the world, the so-called "Stockholm System"

of Dr. Bratt, whereby spirits are doled out according to the just needs of the population. Dr. Bratt did not interfere with the glasses set before us that night, as they had been carefully selected to meet the approval of that arch-connoisseur of the good things of life, Anders Zorn, who was enjoying to the full the last summer of his life. There was in particular one guest who occupied as much attention as any one at the table. This was Zorn's Pekingese dog, "Liten," which we would translate "Tiny," his boon companion in his last years. Tiny sat on Zorn's shoulder a good part of the time, where Zorn fed him and carried on with him a conversation of questions and comments, to which the little creature responded with bright eyes and intelligent head-shakings. Whenever Zorn talked to the other guests, Tiny began to bark to call attention to the neglect. Prince Eugen, the real presence of the evening, partook lightly both of the refreshments and the conversation, always attentive and yet often, it seemed, in a pleasant reverie.

In the course of the evening I found myself seated between the two artists and engaged in a social-economic discussion. That same Prince Eugen, who as an artist had turned from presenting brooding landscapes destitute of man to painting the factories and the busy shipping scenes which he saw from the windows of his home, was as a man interested in his fellow-men and longed to help solve the insoluble riddles of labor and capital. In terms of praise he gave his conception of our American workingmen. They seemed to him more fortunate than their fellow-laborers in other lands, with their baths and cleanliness, their better education and apparent consideration for others. Zorn, who had visited America several times and had opportunity to study conditions here, smiled at the Prince's idealistic conception of our Utopia and in kindly humor tried to disillusion him of some of his dreams.

Another happy memory of that summer is an evening in Prince Eugen's home, the palace of Valdemarsudde

A LATE PAINTING BY PRINCE EUGEN OF SWEDEN SHOWING THE VIEW FROM THE GARDEN OF HIS HOME

This residence was built by the Prince on a terraced promontory commanding a view of the harbor of Stockholm. Across the water is the southern quarter with its factories. Every ship that goes down to the sea or to the thousand villa colonies of the Skärgård or archipelago of Stockholm passes by Valdemarsudde. In the still glowing summer night we wandered over the terrace, looking out on the sparkling waters reflecting the lights of the ships, or stopped to inspect a statuette or a fountain or to pluck a flower in what seemed to all of us an enchanted garden. Leaving the garden, the Prince took us to his private gallery, connected by a corridor with the main building, where he has assembled a collection of the work of his friends and contemporaries. Returning to his drawing-room, we saw the gem of his collection, a painting by the mad artist Josephson, once rejected by the state, but now regarded as one of the art treasures of Sweden. This painting, the "Water Satyr," represents a male creature playing a violin beside a waterfall.

That evening ended, as all Swedish supper parties, with tea served indoors in the drawing-room. By the window sat Zorn with a box of cigars beside him, enjoying to the full the contours and color of the Northern summer night. Prince Eugen remained standing, and when he looked out of the window his eyes seemed to be searching in the bright Northern night for hidden, spiritual contacts and themes for his paintings.

Some twenty-five years ago a Swedish art collector, Mr. Thorsten Laurin, a friend of the Prince, conceived the

happy thought of making a systematic effort to bring real art into the schools. He and his associates maintained that every schoolroom should contain at least a first-class reproduction of some masterpiece of art to which the pupil could daily accustom his eyes. Not only this, but they were so ambitious as to hope that living artists would paint for the schools or sell their work for a reasonable price to serve the popular cause. The society which they founded is called *Konsten i skolan* (Art in the School). No one has taken a greater interest in the work of this society to propagate art in the schools than Prince Eugen. With princely generosity, he has ordered paintings for this purpose from his fellow-artists. Not only has he played the part of Mæcenas, but he has often stood for months at a time decorating with his own brush schoolhouses in process of construction. In 1904 he executed for the auditorium of the Northern Latin School in Stockholm a decorative panel of a Swedish summer landscape. More famous is his large fresco of the city of Stockholm bathed in sunlight in the auditorium of the new Östermalm Latin School, in Stockholm, a schoolhouse built in a remarkable return to mediæval monastic designs by Ragnar Östberg, the architect who designed the new Town Hall.

This theme of the open sunlit landscape was expanded two years later in Eugen's triumph in the monumental-decorative style, the altar-piece for the church at Kiruna, north of the Arctic Circle in Lapland. This church is something quite unique in ecclesiastical architecture. There is nothing like it under

the sun, for it is an attempt to symbolize the artistic aspirations of the Lapps, who themselves have no other buildings than their wigwams of reindeer skin. Prince Eugen's task was to create an altar-piece, and he approached it in a spirit of reverent inspiration. Conceiving that the Lapps and the people of the Arctic in their dreams preferred to picture sunny southern lands, he has chosen a landscape from a more sunny part of Sweden. No temple or human figure disturbs the scene. A clump of trees occupies the center of the picture, with a blue light around their crowns. The whole peaceful landscape is blessed by the rays of the sun. On entering the church at Kiruna one needs no sermon nor choir to stimulate to worship. Prince Eugen's altar-piece, pervading the place, impels one to bend his knees and lift up his heart. While there is no text, the work seems to be suffused with the spirit of the Twenty-third Psalm: "He leadeth me beside the still waters. He restoreth my soul." Few modern paintings, whether secular or religious, have been more truly the result of inspiration than this painting, utterly devoid though it is of any conventional religious symbolism.

Prince Eugen is still in the prime of his powers as an artist. During the last years he has devoted practically all of his working hours to decorating the new Town Hall of Stockholm. Month after month Prince Eugen has gone daily from his palace to this building while under construction, finding his way in and out among the workmen, to paint on its walls a series of motives from the shores of Stockholm. These are now finished. In the winter of 1920, Prince Eugen made a pilgrimage to Greece and Italy. Always a student as well as an artist, Prince Eugen came under the spell of the decorations in Tuscan palaces, from the end of the fourteenth century, and when he returned to Stockholm he took his studio again to the Town Hall, to a smaller room, where he began a new series of paintings under Italian influence. To get them done in time he had to give up all his plans for the summer. These decorations are ornamental and make use of only three colors—red, gray, and black. Among the motives used are Swedish shrubs and the arms of heroes of Swedish history.

During these last years the people of Stockholm have been able to point with pride to the walls and towers of their new Town Hall reflected in Lake Mälär, and to tell the stranger that within, where the masons and plasterers had finished, their painter-prince was at work with the rest, leaving a synthetic memorial of his glorious art and his love of their city. In the future tourists of every country visiting Stockholm will go to the Town Hall in much the same spirit with which they enter the palaces of Italy, to see the inspired labor of the patriotic painter-prince who "for the joy of the working" has consecrated his genius to his country.

WHEN THOSE WHO HAVE LOVED US AND DIED

BY ALINE KILMER

WHEN those who have loved us and died look down and see us truly,
Stripped of the glamour that clothed us, our shuddering souls laid bare,
Do they turn their eyes away from us, sad with the bitter knowledge
That only the merciful veils of sense had made them find us fair?

Do they see how feeble our bravest fight, how soon we strike our standards?
How many the shameful wounds we bear, how few our noble scars?
Or in our night when God seems gone and heaven far off and forgotten,
Do they see the marsh-lights we follow wildly, thinking we follow stars?

Can they see that the earth we walk is only a shifting quicksand?
That our very virtues are snares where we writhe in impotent fear?
Do they know how we pray through the midst of our sins asking for pity and pardon,
Offering childish inadequate gifts to the Lord who weeps to hear?

How can they bear it at all, if they love us ever so little?
How can they bear to watch the way we struggle and fall and rise?
So they may keep their love for us and still find joy in heaven,
Surely God must have mercy on them and lend them his pitiful eyes.

THE BOY MAKES THE MAN

AN APPRECIATION OF GOVERNOR NATHAN L. MILLER, OF NEW YORK

BY FREDERICK M. DAVENPORT

MEMBER OF THE SENATE OF THE STATE OF NEW YORK
PROFESSOR IN LAW AND POLITICAL SCIENCE AT HAMILTON COLLEGE

NATHAN L. MILLER, the present Governor of the State of New York, has become a National figure. It is a fitting time to appraise him from the root up. Whence came he? What are the dominant characteristics of his personality? What are the guiding principles of his career? What sort of a public record of accomplishment has he? How comes it that he is in high favor with the political machine and yet a leader of sound public policy? What is there about him that should appeal to the Mississippi Valley and to the Pacific Coast as well as to the State of New York? Has he the permanent quality of National statesmanship?

The story of his beginnings is the simple American story of a plain home in the farming country of Cortland County in the commonwealth of New York, the story of a hard-working mother with a vision for her son, the story of a boyhood and young manhood of struggle out of narrow and difficult circumstances into an environment where his conspicuous talents might have full play.

His parents were rent-paying farmers with inconsiderable property of any kind. His greatest inheritance was the inheritance of every real man—a real mother of noble character who sacrificed for him and kept him in school as best she could until he graduated from the

Cortland Normal and became a teacher.

I met recently a classmate of the Governor's in the Cortland Normal of the year 1887, who gave me her impression of the boy of that period. "He seemed but a mere lad," she said, "although he was about eighteen years old. He was small of stature, no taller than the smallest girl in the class. He was diffident and very modest about his attainments, with that indefinable quality which came in later years sometimes to be interpreted as cold austerity. But it was never that. He was never cold and haughty. There were always a graciousness of manner, a cordiality and faithfulness in friendship, a firmness in decision, and a genuineness of character which impressed us with his straightforward honesty. He was particularly brilliant in mathematics and Latin, because of his keen, shrewd mind. 'Little Nate,' as he was jokingly called, was not only our schoolmate, but our friend, our brother, our comrade in all the activities of those never-to-be-forgotten days."

For several years the boy Nathan taught school near his home in order that he might attach himself to a law office in Cortland and become prepared for the legal profession. He never had the training of the great law schools of the country, but his mind natively was deep and shrewd and wise and there are

few graduates of Harvard Law or Columbia who to-day can match him in legal learning or acumen.

He scraped along on his own resources, a poor boy in the best sense of the term. Soon he was elected school commissioner of his district, and shortly afterward was admitted to the bar. His talents were legal and political from the beginning. He at once displayed great ability at the bar. His neighbors are witnesses that there never was anything mercenary about his practice. He had no thrifty regard for money. Up to the time of his going upon the bench of the State of New York poor people were mainly his clients. The fact that they could or could not pay had not the slightest influence upon the way he handled their cases. He gave the best that was in him always. He became by all odds the chief trial lawyer of his county at thirty-five, when he was called to the bench. He was a jury lawyer, forceful and eloquent. His experience on the bench has taken a great deal of that particular quality away from him, but his rational sway over the jury mind is a part of the tradition of his county in his early period.

Beginning in his twenties, he showed great adaptability to politics. His first political address was in the little country village of McLean, where he was

Photograph by C. H. Overton, Cortland, N. Y.
NATHAN MILLER IN 1887, AT THE AGE
OF 18

teaching at the time of the organization of a Harrison and Reid campaign club in the fall of 1892. The village folks thought he did exceedingly well; so well that when, in the following winter season, a home talent dramatic entertainment was given in McLean, the young school-teacher was invited to participate. The community also remembers about this that his talents in drama were as inadequate as his campaign speech had been triumphant. Miller never was an actor. He never could be. Whatever he thinks or whatever he does has naturally the clear merit of being real, genuine, and straightforward.

In 1897 the Republican party in his home county was very badly beaten by a fusion ticket, and the time was ripe for a change in leadership. It came the next year, when Miller, at the age of thirty, became the undisputed political head of his county. In 1902 he was appointed Comptroller of the State of New York to fill an unexpired term, and at the succeeding election retained his seat by the vote of the people of the State. In less than a year, however, he was appointed by Governor Odell to succeed Justice Burr Mattice, who had died.

It was this ten-year period from 1892 to 1902 which gave him his practical grip upon the machinery and organization of politics in the State of New York. He sat with the Platt leaders in the frequent meetings in the city of New York. He learned exactly how the wheels go round and why they go. Naturally loyal though he was to the

party organization, he perceived already that some of the Platt practices were exceedingly harmful to the party and the country. He grew up in the old school of politics and his later judicial training made him cautious and conservative. Nevertheless nothing has ever counted so much with Nathan Miller as integrity and reasonableness in any public man or in any party policy. And his old acquaintances in politics laud his sound judgment as an organization man and his unerring instinct as to what was the right thing to do.

Miller's early profound political experience has been of enormous advantage to him as Governor. He understands the psychology of the average party man and political leader in the State of New York as no Governor has in the present generation. He has been able to work with the politicians in and out of the Legislature with less friction than has been the case with any Governor I have ever heard of. They feel him to be in a very real sense one of their kind, and when he asks them out of his clear vision and determination and intelligence to do things which they never dreamed of they just do them without cavil or reproach.

It is this early cautious organization training in the old school and the long separation from active issues while he was on the bench and a naturally quiet and unheated mind which give in Governor Miller the accurate impression of a conservative personality. Many individuals of a progressive temperament have consequently been misled into the belief that the Governor was a friend of reaction. There is nothing in that. Whether they say much about it or not, dyed-in-the-wool business and political reactionaries in the State of New York are as disappointed in Miller as the most hectic liberal. When the Governor took firm hold of the deplorable transit situation in the city of New York, the more reactionary representatives of the property interest in metropolitan transportation were in high glee. They are more sober now. The Miller policy in New York traction affairs lends itself as little to reactionary injustice as it does to Hearstian or Hylanian demagoguery. And certain politicians are not reconciled at all to the Governor's waste-saving reforms. The light of reason and sound sense illumines brightly the economic and political area of the commonwealth under the Miller leadership. There is not much room for the bogies of reaction or radicalism within range of the Miller vision.

It is true that the Governor has grown in sensitiveness to wise measures of human advance since he has been at the head of the government in Albany. Early in his administration progressive persons thought that they detected a defect in sympathy on the human side of government. Whatever there was to that is an aftermath of a necessarily secluded life upon the bench in the

(C) Paul Thompson
GOVERNOR MILLER OF NEW YORK
(A recent photograph)

period between 1903 and 1915, when the country was ablaze with liberalism under Roosevelt and his compeers. Transport a judge from the bench once again to the human arena of politics and government, and you must give him as much time as a kitten to get his eyes open. We all remember how it was with Hughes in 1916. But if a judge has it in him, as Hughes has and Miller has, he soon sees things as they are forming in the mold of the popular will, and guides his policies rationally in accordance therewith.

I call Governor Miller a conservative liberal. He is willing to go as far in reasonable advance as the government and the people are able to pay for and manage measures of advance. The trouble with the radical liberal in most periods, but especially in the present economic crisis, is that he would have us in hot water and bankruptcy at the same time. Miller would make us think as we go and pay as we go and always have a little balance of caution in the policy and money in the treasury. His administration at Albany has been characterized by intelligence, economy, and responsibility. In a time of chaos Miller would lay anew in industry and politics the economic foundations of an ordered liberty. The Port of New York, the transit system of the metropolis, the barge canal, the unused water powers of the State, the penal and charitable institutions, the government bureaus, the political machines, have all felt the molding and developing touch of the

master hand. And liberal measures of progress have not been forgotten. The juvenile court idea, which Judge Lindsay has made immortal, is established by the Miller administration for the commonwealth of New York. Hereafter dependent, delinquent, and neglected children will be taken care of without giving them a criminal record, and those of them who prove worthy and competent will have their chance in the human society of which they are a part.

Another important piece of evidence of liberal interest in human welfare on the part of the Miller administration is to be found in the establishment and generous endowment of a division of maternity, infancy, and child hygiene in the State Department of Health. This piece of humanitarian policy is designed to accomplish under State auspices, State rules, and State funds much more than is contemplated by the widely heralded Sheppard-Towner Maternity Act of the National Congress. New York accepts no funds from the National Government, repudiates the Sheppard-Towner Act as an encroachment in a subtle fashion upon the activities of the States, but undertakes on its own initiative to protect to its utmost mothers and little children not knowing how or not able to care for themselves.

Miller was a member of the highest courts of the State of New York between 1903 and 1915. He was on the trial bench for a little more than a year, when he was designated by the then Governor Odell to the appellate division of the Second Department in Brooklyn. He remained there until he was selected by Governor Hughes in 1909 for the First Department of New York, because Hughes wished to make the First Department a very strong appellate division. Here he stayed until 1912, when Governor Sulzer designated him to sit on the Court of Appeals. He therefore had in the Comptrollership and the various courts a wide administrative and judicial experience. Abruptly in 1915 he resigned from the Court of Appeals before he was forty-seven years of age.

The sources of his power are clear. He has by nature a very keen legal, analytical, logical mind, with a fine edge from experience. He has the capacity to devote himself assiduously to his daily task. In spite of a somewhat frail body from boyhood, he can assimilate any quantity of hard work. His mind is able to concentrate closely upon an argument and take eagle flight through briefs and records to find out what the issue is. While he was a local political leader in his young manhood, he was noted for his remarkable judgment. He was a strategist of no mean order. And these qualities have grown with his growth and strengthened with his strength. And withal he is very quiet and modest and even-tempered, with nothing vindictive in his nature; a very courteous man, patient, unruffled, and unafraid.

There is about him no sentimentality and almost no visible emotion. But that there is a deep vein of true sentiment in him, let the following attest. One of his first acts after he had begun to accumulate a surplus in the law was to purchase a fine farm of seventy-five acres near the village of Cortland, upon which he placed his father and mother in their declining years. They had lived on the farm a very short time when his mother, of whom he was very fond, suddenly died. A little time afterward he came from New York to spend the Sunday in the village of Cortland, and asked one of his closest friends to walk with him to the cemetery where the body of his mother was buried. It was a site which he himself had selected, so he told his friend, on high ground overlooking the little farm of seventy-five acres, which, he said, had been the center of almost the whole of the unworried content and happiness which his mother had ever known.

The taunt of the demagogue seeks to brand Miller as a corporation lawyer on the ground that he has frequently been since he left the bench the attorney for corporate business. Corporation lawyer as an opprobrious epithet came with the wave of emotional liberalism out of the West, where the main form of corporate business is the railway and where the term corporation lawyer means a railway counsel who lobbies in Washington and is the hired man of railway power, with at least the assumption running against him as a free and independent American citizen. In the East, on the other hand, any man who aspires to the front rank of legal eminence is sure to be the counsel in much corporate business, because in the East the main forms of business are corporate in character.

And many lawyers of the first rank and of the first quality of citizenship, who keep the door of their offices wide open to all who may wish to enter as clients, naturally have much corporate business as their experience and reputation enlarge. But the real men among them are not affected in their obligations or opinions as American citizens. Lesser ones among them may, and unquestionably often do, imbibe corporate bias which they sometimes carry with them into citizenship and government. But the real ones do not. One afternoon at two o'clock, when the Great Northern Securities case was before the Supreme Court of the United States, a representative of Morgan and Hill appeared at the office of Elihu Root and retained him as counsel. At four o'clock on the same afternoon Edward H. Harriman, who was arrayed against Morgan and Hill in the substance of this famous case, also appeared in the office of Elihu Root, seeking to retain him as counsel. If Harriman had arrived at ten minutes before two instead of at four o'clock, Mr. Root would have been Harriman's counsel, and not Morgan's, before the Supreme Court of the United States. But when Elihu Root was in the Senate of the United States or was High Commissioner of the American Nation at The Hague or in the great international conference at Washington, his country was his client, and all the powers of an intellect unsurpassed in this generation were employed for his country.

When Nathan L. Miller left the bench, he became the counsel for a great corporation. But he retained the right to have private clients and argue cases, and his most important business until he became Governor was the defending of causes of great moment before the First Department Appellate Division and the Court of Appeals. The point is that he has a mind of far too great keenness and integrity to be influenced by corporate bias. Throughout his term as Governor his State has been his client.

He is a National example. There is no State in the Union where precisely the things which most need to be done in the present governmental crisis have been so well done as in the State of New York under the Miller Governorship. And he has maintained a practically perfect party solidarity in the Legislature. He has recognized the unquestionable fact that the American system of government cannot work without responsible leadership, and he has had the human tact and the practical sagacity as well as the high intelligence to furnish the leadership.

Miller can think. And he can act. And he has the courage to do the thing which for the moment may be unpopular, but which is right and is rapidly discovered to be right by public opinion. In the possession of these qualities he is a National asset. The country at large has too few like him in the high places of power.

"Ireland Revisited"

FREDERICK W. CLAMPETT, a graduate of Trinity College, Dublin, and a keen student of the problems of his native land, presents an extraordinarily clear picture of conditions in Ireland in an article which will appear in next week's Outlook.

What Bernard Shaw said to him concerning De Valera is as compact and trenchant a comment upon the folly of the Irish Republican leaders as anything we have seen. It represents Shaw at his best.

THE INARTICULATE YOUNG

BY CAROLINE E. MACGILL

NOT that I pretend to be one of them, though small Elizabeth did say a while ago that "Aunt Caro would never grow up, would she?" And I assured her solemnly that I never would. For, as every devotee of Barrie knows, youth is a matter of the spirit. I am sure that, like my young contemporaries of the moment, I was much older at eighteen than I ever will be again, should I live to be eighty. It is fortunately going somewhat out of fashion now to think that youth has no problems. Why, there is no period like it for a sense that all the weight of the world is on one's shoulders. Indeed it is, too, for the ignorance of youth is a far heavier burden than the wisdom of age. By thirty we have learned to "pass the buck," and by forty we have built up an effectual system of defenses, so that we avoid the impact of burdens which we cannot lift efficiently. Sometimes, indeed, we build our counter-offensive so well that it repels all attacks, but of that species I shall not speak. Youth, however, is comparatively naked. Its armor is weak, and it is open to the penetration of every burden which blows where it listeth. No, I do not think I should like to turn the clock back, myself. If years have brought me a touch of rheumatism now and then, they have also brought me the blessed assurance that I need only assume the special burden which is made with a hollow fitted to my individual shoulder measurements.

My young friend Lucy and I have been reading "Dancers in the Dark" and other productions of the "young intellectuals." She is perplexed by them, being herself "young," sweet-and-twenty, as we once said, and a collegian. She says that she knows some girls that maybe are like that girl in "Dancers" and some fellows that could pose as world-weary youth if there were any one to pose before. But her chief worryment is the kind old ladies and dear old gentlemen who think that all girls and boys of the college type indulge in cheek-to-cheek dancing and petting parties. I could tell her of a greater danger than that, but I refrain. She has enough on her mind now.

I suggest that she and her sort do some writing on their own account, but, as she justly says, she is too busy doing her daily work. Now Lucy could, I think, qualify as an "Intellectual," whether she ever makes Phi Beta Kappa or not. Even in my own day we did not think that a sure augury of intellectualism, and experience has not increased faith. I remember a most "shocking" damsel, one whose gyrations were quite of a piece with the ultra-moderns, who "won" Phi Beta Kappa, married a col-president, and settled down into the conventional of small-town host-ess. The mediocrity which enveloped

her was complete. The "young intellectual" of our class, with leanings which were whispered to be ultra-radical and dangerous, now writes sonnets of impeccable purity of style and ultra-orthodoxy. For we had quite a collection, even twenty years ago.

When I was Lucy's age, I knew a woman about whom many spicy stories lingered from the days of my mother's youth. She retained a great deal of vivacity of manner and witty conversation, which made her amusing company for the world of her daughter's contemporaries. And her daughter was the most properly brought up, carefully chaperoned, prosaic maiden you could imagine. I think that is about the usual way, my dear Lucy. These pseudo-horrifying young people are the alternate swing of the pendulum, offspring of my whilom friend and harking back to their grandmothers in a good many cases, even if the dear old ladies do deny the day ever existed when they were young clips themselves. There were girls who did things we did not approve when I was in college. I make no doubt that there are many more of their kind now in the sedate halls of Alma Mater; but there are more girls there too. The proportion may be larger, but that it is very much larger I doubt.

The trouble is, Lucy, that the *shouting minority* always gets the most attention. Sometimes the shouters are on the right path, and sometimes not; but so goes the world, so goes progress, if you will. We must not suppress the shouting, because it will break out somewhere else if we do, like tying down the safety-valve; and, besides, we cannot raise much if we do not plow up the ground. To-day they are using dynamite, and say it does the business much more efficiently.

These young people are silly, vulgar, if you will, and bound to no good end, apparently; but, take my word for it, they'll get switched off into the freight yard and lost in ten years. They have no pertinacity, even for evil. This is the time when their blood runs fast, and they must get the superfluous energy out of them. The country is over-prosperous and bread easily won, so there is no saving grindstone of toil to "take it out of them." But out of them it will come, Lucy, some day. "The Ten Commandments will not budge, and stealing still remains but stealing." Of all the self-ordained reformers and radicals of my day, there is not one who has achieved any influence in the world's affairs unless he or she has undergone a conversion to the wisdom which is alone serviceable. I used to worry over them too a little, though not a great deal, having enough to do to attend to my own more pressing problems. I think that the fact that my interests lay in the classics and

history helped me to keep my head and saved my tears, for I read in Horace about willful maidens who were acquainted with all viciousness clear to their rosy finger-tips, and many admonitions to the Roman youth to remember the *integer vita* of the preceding generations. Horace is fine reading to-day. True, Rome fell because her civilization broke down under the assaults of luxury and vice. Perhaps ours will do the same? It may be, Lucy, it may very well be.

The more you read history, the more profoundly and deeply, the more you will be impressed with the certitude of ancient truths. As a condition of our ability to choose right we must be able to do otherwise. I know all the arguments of your young friends concerning economic or philosophical determinism, but life has shown me too many facts to take their theories very seriously. That's one of the burdens that youth bears, but learns in time to shift. Of course some one may say, if I bring up Lincoln as a man economically and hereditarily doomed to failure, that Lincoln was a transcendent genius, not a norm by which other men may be judged. On the other hand, the job offered to him was one needing a transcendent genius. There are countless lesser jobs, all mighty necessary in the economy of things, and all open to men of lesser genius, who can do them in as high a degree of comparative perfection as Lincoln did his. And, Lucy, I've seen man after man and woman after woman rise out of the most impossible circumstances and do that very thing. That's one of the advantages of years. You can explain the working of the machine by facts from your own experience. You saw just a little of it in our economics class this year, didn't you? Peggy was a dear girl, a most attractive girl in her way, and her violent modernism nearly swept a lot of you off your feet. It sounded rather good—to sweep away all the old injustices, all the old inequalities, all the old slaveries—until you began to test out her theories. Then you found how much had to go along with them. Marriage, for instance. There should be no unhappy women, bound to cruel husbands whom they did not love. Until you realized that along with the overthrow of the bonds of matrimony must go the home, the loving care of father and mother for the children, the ideals of duty, of stability, of faith and honor to a pledge. I watched you day by day under the assaults of Peggy's glib tongue and her woeful ignorance of the facts of history. She somehow thought she was Minerva, sprung full armed from the head of Jove, until we began to test her, to bring her up against actualities. You remember the day she used the example of the Pilgrims to bolster up her arguments for

Communism, and when we told her it was a failure, said that was because the men who tried it were a "bunch of theorists and intellectuals, and didn't know how to work." Shades of our hard-working and high-minded Pilgrim ancestors! When we showed her that the contrary was in fact true, that the failure of the Plymouth experiment was due to the same thing that has caused the downfall of the Russians, was the same old truth that work as a means of grace stands foremost, that to labor is to pray as truly in the twentieth century as in the eighth, you experienced a remarkable revulsion of feeling towards Peggy. I think Peggy did you

a lot of good. You saw just how foolish and hollow her ignorant theories were, and in time you saw just her own measure of selfishness and instability. The world will teach Peggy—in fact, you taught her maybe more than she taught you—but meanwhile she taught you a tremendous deal.

Lucy, dear, our civilization may fall, just as that of the Jews fell after the days of Solomon, or as did that of ancient Rome. When a mother disciplines a naughty child, she is not thereby ruining the child's life; on the contrary, she is preserving it, she is teaching it needed lessons of self-control, of power to choose the right.

So, my dear Lucy, don't worry over these "young intellectuals." They'll get over it in time, and a new crop take their place. Just remember that there are really a very great number of people in the world who think just as you do and are striving for just the same honorable and clean and forthright aims. Very many more of you, in fact, than of the weaker kind, that Peggy represents. Only you are inarticulate, she is glib. She has to be, poor thing! All the right, all the security, is on your side, Lucy. Her volubility is really an effort to justify herself to her own conscience. It is too bad she should waste so much effort on such a useless task.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER III—FIRST TURKISH MISSION

I WAS naturally disposed to be an independent in politics, especially in city and State politics, where sometimes the conflict of character and personality called for more consideration than in those larger National campaigns of opposing issues. I was a believer in election reform, and in later years became president of an organization for vitalizing the party primaries.

The William R. Grace-Tammany fight in New York in 1882 was the first political campaign in which I took an active part. Grace was an excellent Mayor, gave the city a good business administration—so good and so independent that Tammany refused to renominate him. But the independent voters gave him a banner and backing; Republicans, too, joined the ranks; and Grace was re-elected.

In this campaign I served as secretary of the Independent Executive Committee, with Frederic R. Coudert as chairman. Two years later, being then in business, I aided in organizing the Cleveland and Hendricks Merchants' and Business Men's Association, which paraded 40,000 strong from the lower end of Broadway to Thirty-fourth Street.

A few days before the election the Republican managers called a ministers' meeting in New York. About six hundred clergymen, representing all denominations, assembled at Republican headquarters to meet the candidate. Dr. Samuel D. Burchard, a brilliant orator, was selected to address them. In concluding his speech, which on the whole was dignified and temperate, he stigmatized the Democrats as the party of "Rum, Romanism, and Rebellion."

Mr. Blaine, great politician that he was, failed to repudiate the sentiment on the spot. Extraordinary efforts had been made, and with some measure of success, to secure the Roman Catholic vote.

I was present at Democratic headquarters when the reporter who had

been sent to this meeting returned. Senator Gorman asked the reporter to read from his shorthand notes. When he came to the expression, "Rum, Romanism, and Rebellion," it immediately arrested the chairman's attention. He had the reporter write it out. The Democratic managers saw its importance, and had the whole country placarded with posters headed "R. R. R.," with many additions and variations. The election proved very close, the victory depending upon the vote of New York. The official count gave the Presidency to the Democrats by only 1,047 votes. Without doubt, the number changed by Dr. Burchard's remarks decided the election.

Because of the closeness of the New York vote the Republicans did not at once concede Mr. Cleveland's election. There was a feeling of nervous apprehension. Jay Gould, who controlled the telegraphic lines, was accused of holding back the returns. The Tilden-Hayes contest was recalled, and the recollection did not serve to allay the fears of the Democrats.

It was imperative that the uncertainty be dispelled and that confidence be expressed in the announced result. So the Merchants' and Business Men's Association held a victory mass-meeting at the Academy of Music, then the largest auditorium in the city. This celebration had an assuring effect throughout the country. August Belmont was chairman, and I, as secretary, presented the resolutions. Among the speakers were Henry Ward Beecher, Daniel Dougherty of Philadelphia, Algernon S. Sullivan, and others. Beecher's eloquence was interspersed with humor. Replying to waggish remarks that Cleveland would not fit in the Presidential chair because of his avoirdupois, Beecher said:

"If the chair is too small, then make it larger."

The campaign over, I devoted myself

again to business. When a member of the National Committee with whom I co-operated while organizing the merchants' movement asked whether there was any political office I aspired to, I replied that my only wish was that Cleveland should live up to the political principles which brought him the support of so many independent voters.

MARYLAND SENATOR PROPOSES DIPLOMATIC CAREER

A talk I had almost two years later, however, resulted in a shifting of my plans for the future. In September, 1886, I was in Chicago on important business. At the Palmer House, where I was stopping, I met Senator Gorman, of Maryland, who had just returned with several other Senators from a Far Western trip.

One evening, while we were sitting together and talking of matters political, the Senator mentioned that during the trip he and his son had read my book, "The Origin of the Republican Form of Government in the United States." He remarked that it aided him towards a clearer view of the sources and early growth of our form of government. This remark was followed up with a surprising suggestion. S. S. Cox, the Minister to Turkey, had resigned, or was about to resign, the Senator said, and he would like to recommend me to the President for appointment to that post. It would provide suitable circumstances, he added, for further studies of government.

The entire conversation served to make me think along new lines. Occupying my consciousness, it diverted my course in a way of which I had not dreamed. I was married, had two small children, and with these responsibilities was deeply absorbed in making my way in business. I had no thought of a political career, nor of service in the diplomatic corps. I had never

Oscar S. Straus, from a photograph taken in Constantinople in 1888, soon after his arrival in Turkey on his first diplomatic mission

given much attention to our foreign relations.

When I returned to New York, I conferred with my father and brothers. They encouraged me wholeheartedly, saying they would look after my interests and not permit them to suffer. Without this generous offer on their part the position would have been impossible, for to maintain it adequately would require an expenditure of several times my salary.

The salary of Minister to Turkey had been reduced to \$7,500, though subsequently restored to \$10,000; and in order to live properly we had to rent a winter house in the capital and a summer house outside, or live in hotels, as Mr. Cox and his predecessor, General Lew Wallace, did. General Wallace was restricted to his salary, and felt compelled to decline the invitations of his colleagues because he was not in position to reciprocate. His "Ben Hur," by the way, he had written before his sojourn in the East, and not afterward, as is often supposed.

Shortly after this time the relations

between Senator Gorman and President Cleveland became strained. This had the effect of shelving all his recommendations for appointments. The Senator apprised me of the situation, and advised me to use such influence as I might be able to command.

Originally the post had not been of my seeking, but now that my expectations had led me to make all sorts of new plans I wanted to see it through. Help was freely offered, and from sources so gratifying that a mere expression of interest would have been flattering.

I also conferred with Carl Schurz, with whom I stood on intimate terms, and with John Foord, another friend. In the early 80's we used to have a lunch club that met about once in two weeks at a little French restaurant, Louis Sieghortner's, at 32 Lafayette Place, now Lafayette Street, in a house that had been a former residence of one of the Astors. We used to discuss various political and reform matters—the "Mugwump" movement, the Cleveland campaigns, or what not. There were ten or twelve of us, and Carl Schurz was one:

Charles R. Miller, a leading editorial writer of the "Times," who died on July 18, was another; and John Foord, whose death by accident occurred in Washington only a few days ago as I write, was another. Foord was then editor-in-chief of the "Times." He took up my appointment with both President Cleveland and Secretary of State Bayard. Schurz encouraged me and said he would speak to Oswald Ottendorfer about having me appointed. Ottendorfer, proprietor of the "New-Yorker Staatszeitung," was a client of our law firm and knew me well. Subsequently I saw him, and he wrote to Cleveland strongly recommending the appointment.

Cleveland was favorably impressed, but hesitated. America's chief concern in Turkey, he said, was the protection of the American missionary interests. He would not like to appoint any one to this mission who might be objected to by the two missionary societies, the American Board of Commissioners for Foreign Missions and the Presbyterian Board of Missions.

A. S. Barnes, the publisher, was an important member of the American Board. Barnes knew me well. He had been in frequent consultation with our law firm when we represented Brooklyn in its action to compel the Atlantic Avenue Railroad to sink its tracks. Barnes brought the matter before his Board, resulting in its Prudential Committee sending a letter to Cleveland expressing full approval of my appointment. They merely suggested that I be asked not to hold any receptions on the Sabbath, as one of my predecessors had done. This intimation was not necessary, as I would naturally have refrained from offending the religious sensibilities of my nationals at that post.

HENRY WARD BEECHER'S LETTER TO PRESIDENT CLEVELAND

The greatest American preacher of his time, Henry Ward Beecher, heard through one of his trustees of Plymouth Church that I was being considered for the Turkish post, and that there was some hesitation about appointing me because of my religion. He wrote a notable letter to the President on February 12, 1887. I am happy to be the possessor of the original, which was given me by Governor Porter, then the First Assistant Secretary of State, and I quote from it:

Some of our best citizens are solicitous for the appointment of Oscar Straus as Minister to Turkey. Of his fitness there is a general consent that he is personally, and in attainments, eminently excellent.

But I am interested in another quality—the fact that he is a *Hebrew*. The bitter prejudice against Jews, which obtains in many parts of Europe, ought not to receive any countenance in America. It is because he is a Jew that I would urge his appointment as a fit recognition of this remarkable people, who are becoming large contributors to Ameri-

can prosperity and whose intelligence, morality, and large liberality in all public measures for the welfare of society deserve and should receive from the hands of our Government some such recognition.

Is it not, also, a duty to set forth, in this quiet but effectual method, the genius of American government?—which has under its fostering care people of all civilized nations, and which treats them without regard to civil, religious, or race peculiarities as common citizens? We send Danes to Denmark, Germans to Germany. We reject no man because he is a Frenchman. Why should we not make a crowning testimony to the genius of our people by sending a Hebrew to Turkey? The ignorance and superstitions of medieval Europe may account for the prejudice of that dark age. But how a Christian in our day can turn from a Jew, I cannot imagine. Christianity itself sucked at the bosom of Judaism. Our roots are in the Old Testament. We are Jews ourselves gone to blossom and fruit. Christianity is Judaism in Evolution—and it would seem strange for the seed to turn against the stock on which it was grown.

While recuperating at Atlantic City from a cold I received news of my appointment. A few days later I was taken on a department tour through the intricacies of relations with the Ottoman Empire under the guidance of the Third Assistant Secretary, John Bassett Moore, now the noted authority on international law, and Alvah A. Adee, that distinguished veteran of the State Department, who has broken in diplomats to

Henry Ward Beecher, "the greatest American preacher of his time, heard that I was being considered for the Turkish post, and that there was some hesitation about appointing me because of my religion. He wrote a notable letter to the President"

The ignorance & superstitions of medieval Europe may account for the prejudice of that dark age. But how a Christian in our day can turn from a Jew. I cannot see again Christianity itself sucked at the bosom of Judaism. Our roots are in the Old Testament. We are Jews ourselves. Gone to blossom & fruit, Christianity is Judaism in Evolution—and it would seem strange for the seed to turn against the stock on which it was grown.

Prover Cleveland

Dear Mr. President

Some of our best
Citizens are solicitors
for the appointment of
Oscar Straus, as Minister
to Turkey. — Of his fitness
there is a general consent
that he is personally, and
in attainments, eminently
excellent. —

But I am interested in
another quality. — The fact
that he is a Hebrew.

their duties for more than forty years. With Adee at his desk the Department could always carry on.

AT THE WHITE HOUSE

The day I arrived in Washington I called upon the President. Replying to a question, I told him I would leave for my post April 9.

"That is businesslike," he said. "I like that."

He seemed to be very much pleased with the reception of my appointment by the press throughout the country.

My selection as the head of an important mission appeared to the press all the more significant because of the Kelley trouble two years before. A. M. Kelley, of Richmond, a Cleveland nominee for Minister to Italy, was declared *persona non grata* by the Italian Government because he once publicly denounced King Victor Emmanuel for his treatment of the Pope. Cleveland then appointed him Minister to Austria-Hungary, but that nation, then a member of the Triple Alliance, preferred to present objections rather than displease her Italian ally. Austria-Hungary used as a basis for her objections the fact that Kelley's wife was a Jewess. The President and Secretary Bayard were incensed. Both rebuked this religious bigotry publicly, the President in his annual Message to Congress and the Secretary of State in the

following answer to the Austro-Hungarian Minister at Washington:

It is not within the power of the President, nor of the Congress, nor of any judicial tribunal in the United States, to take or even hear testimony, or in any mode to inquire into or decide upon the religious belief of any official; and the proposition to allow this to be done by any foreign government is necessarily and *a fortiori* inadmissible.

Two days later, by appointment of Colonel Lamont, the President's secretary, Mrs. Straus and I, accompanied by brother Isidor and E. G. Dunnell, New York "Times" correspondent, called on Mrs. Cleveland in the Green Room of the White House. I vividly recall this visit. Mrs. Cleveland came into the room with a sprightly and unceremonious walk, very friendly, with charm of manner and a sufficient familiarity to put us entirely at our ease. She was a very handsome woman, with remarkable sweetness of expression, and her appearance symbolized beauty and simplicity.

What most impressed me about the Clevelands, after these two visits, was the simple, unassuming manner that was so in keeping with the spirit of our laws and the democracy of our institutions. Verily, I thought, in the words of Cleveland himself, "a public office is a public trust," and while administering such office we are but for a time the servants of the people.

LONDON AND PARIS GRACIOUS TO AMERICAN ENVOY

Before leaving Washington we again called on the President, as agreed. In his entire conversation and attitude he expressed satisfaction with my appointment. He said he understood the missionaries were doing good work, and he felt sure from what he had learned of me that they would receive impartial and just treatment at my hands. He commented on the fact that the press of the country had been so unanimously in favor of my appointment.

"I wished they would go for you a little; I have something to give them," he said. From Mr. Dunnell I learned later the meaning of this remark. He had received a letter from the Prudential Committee of the American Board of Commissioners for Foreign Missions, highly approving of his appointing me as Minister to Turkey and indorsing me of their own accord in unqualified terms. This letter he was holding to give to the press should any unfavorable comment be made because a member of the Hebrew race was being sent to a post where the Christian mission interests were so large.

Mr. Cleveland's parting remark to me was: "I know you will do well; I have no trepidation—none at all."

On Saturday, April 9, at 6 A.M. we—my wife, Aline, the younger of our little daughters, and myself—sailed out of the harbor on the S.S. Aurania. My one prayer in bidding farewell to my home

was that I might find no vacant seat round my table upon my return, and that I might discharge my high trust with credit to my beloved country and with honor to my friends and myself. For this no sacrifice would be too great.

London and Paris were hospitable and gracious to an American envoy on his way to the Orient. In London I got the Turkish view of affairs while dining with the veteran Turkish diplomat, Rusten Pasha, who represented the Sultan at the Congress of Berlin. I met many literary people, editors, authorities on constitutional government, with whom I was eager to exchange opinions.

We spent one pleasant evening with Dr. and Mrs. John Chapman, of the "Westminster Review." My article on "The Development of Religious Liberty in America" was appearing in a current number of the "Review." The Chapmans were good friends of George Eliot and Professor Lewes. In fact, the novelist and the professor first met at the Chapman home. Dr. Chapman also told me that he was the one who first employed George Eliot in literary work. He became editor of the "Review" in 1851 and engaged her as associate editor.

The impetuous personality of General Boulanger, the fire-eating Teutonophobe Minister of War, dominated the thought of Paris. The idol of the revanchists and the populace in general, Boulanger was at this time about fifty years of age, but looked younger. Of pleasing appearance, with brown hair and closely trimmed beard, he seemed more Anglo-American than French.

We were at luncheon at the beautiful residence of Count Dillon, outside of Paris. The General entertained us with an account of his experiences as the delegate of France to our Yorktown Centennial Exhibition.

"With your American officers I travel as far as the Pacific Ocean. They show me their fortifications. They ask me what I think."

Turning to Mrs. Straus, he continued, with a twinkling eye: "You know your American fortifications. What can I say? It is not for a guest and a friendly fellow-soldier to tell how antiquated and insignificant these fortifications are. No! So I say: 'Splendid! Never have I seen such protection; and why? Because no country has two such big ditches in front of their fortifications—the Atlantic and the Pacific.'"

When the champagne was being drunk, each made some observation. Turning to the General, I said: "May you administer the War Department so well that posterity may honor you as the great preserver of peace!"

To this he responded that for fifteen years France had pocketed insults, and the time had arrived when she must be ready for the offensive. At a subsequent meeting he asked whether I would be willing to assume charge of French interests in Turkey if war came. I said that, while I was personally willing, this

was something for my Government to decide.

The subsequent meteoric career of Boulanger is history. For two years his personality dominated French politics and became an open menace to the Republic. Then came his fall. He fled from Paris when a warrant was signed for his arrest, and was afterwards condemned for treason. In 1891 he committed suicide on the grave of his mistress in a cemetery at Brussels.

While in Paris we dined with Mr. and Mrs. William Seligman. Among the many distinguished guests was the noted Hungarian artist, Munkacsy, who painted "Milton Dictating Paradise Lost to his Daughters" and "Christ before Pilate." Mrs. Straus's face seemed to interest him very much. The dinner over, he sat beside her all evening. He admired her plain style of hair-dress, remarking it was most becoming and natural. He intimated that he wanted to paint her face in a picture, and expressed great regret when he learned that we intended to leave Paris in a few days. A heavy man, with bushy hair and beard, and with unusually small and inexpressive eyes, he looked a laborer; in fact, he was a carpenter before he became a painter.

He talked little. His wife, showy and loud, presented a strong contrast. After dinner, we were entertained by a young musical prodigy who has since become famous in his profession throughout the world, Joseph Hoffman.

CONSTANTINOPLE, CITY OF PICTURESQUE DIRT

We left for Vienna on May 10. At that time there was no railway connection with Constantinople. The Oriental Express went by way of Bucharest to Varna, on the Black Sea. From there we went by steamship to Constantinople. The view as we passed through the Bosphorus and approached Constantinople had the effect upon me of a dream. I suddenly realized how much of my Homer I had forgotten—the Homer on whom I had spent years of hard study. However, most of us meet so many new subjects that have a more direct relation to our surroundings that it is next to impossible to get that "elegant leisure" necessary for a continued interest in the classics.

My predecessor, S. S. Cox, having been given the sobriquet of "Sunset Cox" in the States, had christened the Legation steam launch Sunset. When we reached the quay at Constantinople, we were met by the Sunset, with the officials of the Legation and Consulate aboard. There being no residence at the Legation, we took an apartment at the Royal Hotel. Later, with summer approaching, we engaged the entire second floor at the hotel in Therapia, some twelve miles from Constantinople on the Bosphorus, near the entrance of the Black Sea. Several other Ministers lived at the same hotel.

Our first impression from the windows

The harbor of Constantinople

of the Royal Hotel in Constantinople was of picturesque dirt. As Mrs. Straus said at the time, dirt not only on the hard earth roads and the people, but even on the dogs. In time, however, one is less impressed by the dirt than by the picturesqueness—the venders calling out their wares of fish, fruit, meat, vegetables, all carried on the edges of baskets covered with leaves; the water-carriers with their urns carried on yokes; and the veiled women.

Sir Henry Drummond Wolff was in Constantinople as a special envoy to negotiate regarding the withdrawal of the British troops from Egypt. Acquaintance with him soon ripened into friendship. He was in that awkward situation which sometimes develops when special envoys are sent on missions into territory already represented by an accredited diplomat. There was an evident estrangement between Wolff and Sir William White, the British Ambassador. Both were exceptionally able men.

Wolff, being detained longer on his mission than he had anticipated, was also compelled to seek rooms at Therapia. He was unable to find suitable accommodations, so we shared part of our suite with him. This arrangement proved to be very pleasant and diplomatically advantageous. I got the benefit of Wolff's tried experience in Oriental diplomacy.

Frequently we all dined together in the large *salon* of our apartment. Our party usually included the Dutch Minister, Baron van Tets, and his wife, both very charming. Baron van Tets subsequently became Minister to Berlin, later Minister of Foreign Affairs.

Immediately after my arrival at my post I communicated with the Minister for Foreign Affairs, Said Pasha, to present my credentials and arrange for

an audience with the Sultan. It was one of the insidious peculiarities of the Sultan to delay audiences by making successive appointments and postponements. This—or so the Sultan must have thought—might impress the new representatives of foreign governments with the importance of his Majesty.

At this time also Ramazan, the month of fasting, was observed, and only the most pressing official functions took place during that time.

AN AMBASSADOR'S £300 WIFE

We looked forward with more than usual interest to the evening of our dinner at the Persian Embassy. The Persian Ambassador's wife had been a Circassian slave whom he bought for three hundred pounds, with a horse thrown into the bargain. However, everything and everybody was quite

European, and there was nothing extraordinary about the occasion, after all. The Ambassador's wife was of course typically Circassian; chalky white skin, soft black eyes, small features, an unattractive figure unattractively dressed, with whom conversation was almost nil because she knew only Turkish.

The streets of Pera, the European part of Constantinople, are exceedingly narrow and very hilly, for the city is built on several hills, like ancient Rome; in addition they are poorly paved and dirty. This makes driving dangerous; and, as in mediæval times, sedan chairs are quite generally in use as a means of conveyance for the ladies of the diplomatic corps and the wives of the higher Turkish officials, especially at night to dinners and other official functions. Two sinewy porters carry these chairs, one in front and the other behind, and they shuffle along with considerable rapidity. Usually the lady is carried while the gentleman, preceded by his kavass in the case of a diplomat, walks alongside, except in inclement weather, when he follows also in a chair.

I am reminded of the wife of the German Ambassador at the time, a large, heavy woman, whom the porters quite justly charged double. She, however, was entirely oblivious of her extra avoirdupois and always complained of the injustice of these porters. The Austrian and Russian Embassies were particularly difficult of approach by conveyance other than the sedan.

We certainly were living in a new sphere of life, in a strange land among strange people with customs and habits that brought to mind the age of the patriarchs. There was much to see where some thirty nationalities lived and did business as if in their own homes—much to wonder at, much to deplore, much to praise and admire.

IN THE SULTAN'S PALACE

ABDUL HAMID's reception of an American diplomat is faithfully described in next week's installment of "Under Four Presidents." Even the egg-shaped coffee cups resting in jewel-studded holders are depicted. The Sultan is further described at his prayers in the mosque. Mr. Straus reports a series of interesting diplomatic tangles, including his defense of the sale of the Bible in Turkey, and his reopening of the American missionary schools. He concludes the chapter with a vivid account of a journey to Cairo and a close-up of the Khedive.

THE BOOK TABLE

SUMMER NOVELS WORTH WHILE

THE midsummer novels have been unusually notable for that season as to intrinsic value or authorship, or both. There are not many single weeks even in the full flood of the fall season that bring into the Book Table stories by such well-esteemed writers as Mrs. Wharton in this country and Mr. Hutchinson and Mr. Maxwell in England, to say nothing of half a dozen others which certainly are not "hot weather novels" in the sense of being as light and unenduring as summer butterflies.

Mrs. Wharton's "The Glimpses of the Moon" is cosmopolitan in setting and scenery, so that she now shows us New York's social "upper class" (horrid phrase) out of their habitat. It is inevitably compared with "The Age of Innocence," and by some critics with her first success, "The House of Mirth." Probably these three books have attracted more readers than any of her other novels, not because they are finer in execution or in study of social philosophy, but because they are more definite in setting and plan. In the new book, as invariably with Mrs. Wharton's work, the writing is restrained; it has no appeal to emotionalism or mere love of excitement. She creates her characters, each clearly marked with individual moral and mental traits; then she places them in certain conditions to which they must inevitably react in accordance with character. In this story, for instance, a charming and cultivated young couple, with a wide circle of society friends but without much money, deliberately marry with the idea of "carrying on" for at least one year by complaisantly accepting favors of substantial value; in a superior kind of way they live on their friends. But they find that this entails submergence of self-respect, and indirect payment involves disintegration of moral independence. They differ as to how far their complaisance can be carried; and on that rock their marriage nearly wrecks, to be saved by final recognition of the fact that happiness does not really depend on luxurious living and society ostentation, but on something quite different. The romance bestowed by wealth loses its glamour and the romance of life and love as they rest on independence prevails. "Oh, the blessed moral strength that wealth confers!" proves an illusory sentiment. Mrs. Wharton is too good an artist to argue the case; she lets the people and the circumstances bring the answer. The situation is held close in hand and the reader's interest is never allowed to drop. "The Glimpses of the Moon" cer-

tainly sustains its author's recognized position among the leaders in American fiction.

W. B. Maxwell's "Spinster of This Parish" is the story of a woman's love for a man, a love that could be restrained by no obstacles, broken by no hardships, destroyed by no conventions of society. If the lives of these two people had been actual, theirs would have been one of the few surpassing love stories of history. Legally she is his mistress. The man so honored is an explorer, a seeker of fame and danger, an erratic, boyish, self-confident figure. His wife is hopelessly insane, divorce impossible under English law. But the young, quiet, reserved girl Emmeline breaks with her parents, accompanies her beloved explorer to South America, nearly dies and suffers terrible dangers in crossing the Andes with him, for many years comforts and aids him in his efforts to reach the South Pole, cherishes belief that he is alive when every one else believes he has perished, and finally, in advanced middle age, when the insane wife dies, the "spinster of this parish" is wedded to her man. All this is saved from being ignoble by the spinster's dignity, devotion, and steadfastness.

The way in which the spinster's story is introduced to the reader is singular and arresting. When she is asked for counsel by a young girl whose marriage is opposed by her parents, the spinster advises conciliation rather than rashness and says that she "has her reasons." Then the author remarks, "Her reasons were these"—and practically the whole narrative follows. It is strong in its appeal to one's sympathy, but not given to sentimentalism. In absorbing story interest it is, in my opinion, far away ahead of most recent novels.

"This Freedom" is the title of the eagerly expected new novel by the author of "If Winter Comes." It is hardly fair to hope from any author who has just had practically every one reading one of his books that he should forthwith duplicate or exceed that success. It is enough to hope that he will turn out sound, interesting work on a level with his other literary performances. This and more can truly be said of "This Freedom." It will be widely read and justly praised, although there is in it no one single character who appeals so persistently to one's sympathy and liking as did Mark Sabre in "If Winter Comes." This new book is more of a problem novel. Its style is oddly ejaculatory; the pages abound in short, sometimes repetitive sentences that

strike at the same point again and again. The girl Rosalie, who somewhat precociously sees that men have things all their way and that they are important even if generally "beasts," chooses to rival men in their own field, becomes an expert financier and a banker, then, with her husband's agreement, tries to be both a home-maker and a business woman, and falls lamentably in getting her children started right in life. Their tragedies convince her that "this freedom" of hers is a failure, and the book ends with a new start in making a real home influence for her grandchild. Criticism and comparison aside, this novel is sure to provoke discussion and will be read by every one who wants to keep abreast of the most important fiction work of the year.

For the lover of the robust and adventurous plot story with added literary ability I find among the midsummer books three especially entertaining and worth while. Mr. Bacher's "In the Days of Poor Richard" not only gives us a delightful picture of Benjamin Franklin the man, but also stirring incidents of Indian fighting and historic glimpses of England and America in Revolutionary times. Mr. Warwick Deeping in "The House of Adventure" shows that a vigorous and striking novel of the Great War and the days just after can be made into spirited fiction, despite some people's prejudice against war novels. One particularly enjoys the introduction of Clemenceau at the end as informal judge of village villains. The tale is alive with incident and crises of danger and love. Mr. Sabatini's "Captain Blood" is a semi-historical story beginning with the Monmouth rebellion and then taking the hero to the West Indies as a labor-slave. His intrepidity and resource make him a captain of buccaneers, and later, like the famous pirate Morgan, he becomes commander of a British warship. The book is not quite as good as "Scaramouche," for that was singularly original in subject and treatment, but "Captain Blood" nevertheless has a good chance of being also a best seller.

In a quieter vein and both marked with sincere workmanship and sound spiritual psychology are Elsie Singmaster's "Bennett Malin" and Edith Dart's "Sareel." The first is an unsparing analysis of a would-be author of prodigious conceit whose self-magnification brings injury to all about him; the second, a surprisingly delicately wrought picture of the love and personality of a

workhouse girl (Sareel is short for Sarah Hill)—a "helpless inarticulate victim pursued by vindictive destiny,"

yet brought into a safe haven at last by her stanchness and basic firmness of character. R. D. TOWNSEND.

THE NEW BOOKS

HISTORY AND POLITICAL ECONOMY KING'S COMPLETE HISTORY OF THE WORLD WAR. By W. C. King. The History Associates, Springfield, Massachusetts.

Novel features accompany this popular history of the Great War. The pages are broken up by boxheads and black-face sub-heads, topical but not alphabetical indices precede the chapters, and detached "visualized charts" are inclosed in envelopes. These features will scarcely appeal to readers of conservative taste. The story of the war includes its aftermath, the work coming down to "the eighth year of the war," as the author calls the year 1921. The book brings out strongly the evil aspects of German militarism. The style is crisp and incisive, and many of the Great War's dramatic events are presented in vivid word pictures.

ESSAYS AND CRITICISM

JOHN MASEFIELD: A CRITICAL STUDY. By W. H. Hamilton. The Macmillan Company, New York. \$3.50.

An aid to the immortality of Mr. Masefield that by turns embarrasses the admirer of his art with its unrestrained hyperbole and gratifies him with an occasional flash of acute insight. In interpretation and discriminating criticism much of the book is almost wholly deficient; it is saturated with enthusiasm that one could wish more finely tempered by intelligence.

POETRY

NEGRO FOLK RHYMES. By Thomas W. Talley, of Fisk University. The Macmillan Company, New York. \$2.25.

Professor Talley's idea in the compilation of this stout volume was a praiseworthy one, for, while a deal of attention has been paid to Negro spirituals, but little examination of the more purely secular music has been made. He falls in a laxity of investigation which permits the inclusion of distorted Mother Goose rhymes and even some of Stephen Foster's melodies as examples of folk rhyme peculiar to the Negro alone. It is to be expected that a certain amount of material, stanzas, lines, and phrases from other literature will be found embedded in Negro folk verse, but certainly an entire bit of alien work, however distorted, is not to be regarded as an authentic part of that rich heritage. So excellent, however, is much of the work which the compiler has painstakingly set down that he may well be forgiven his lack of exactitude. Much of the material is of a broad comical order, but there are times when the reader will observe the primitive singer fumbling toward a poetical utterance.

IN APRIL ONCE. By William Alexander Percy. The Yale University Press. \$1.50.

The idea that a lawyer is too matter of fact to write poetry has been exploded by Edgar Lee Masters and Arthur Davila Locke. To be added to the ranks of

poetical lawyers is the name of William Alexander Percy. In his book (it is a second volume of verse by him) he betrays a legal mind by sticking closely to safe precedents. Although his poems are in old measures and his themes are time-honored subjects, he does manage to imbue them with an individuality, although it must be admitted that it is not emphatic. He adds to the "Do you remember" school of poetry (always a weakness of *young* men) the following piece, which may be quoted as representative of the book:

TO BUTTERFLY

Do you remember how the twilight stood
And leaned above the river just to see
If still the crocus buds were in her hood
And if her robes were gold or shadowy?
Do you remember how the twilight stood
When we were lovers and the world
our wood?

And then, one night, when we could find no word
But silence trembled like a heart—like mine!—
And suddenly that moon-enraptured bird
Awoke and all the darkness turned to wine?
How long ago that was! And how absurd
For us to own a wood that owned a bird!

They tell me there are magic gardens still,
And birds that sleep to wake and dream to sing,
And streams that pause for crocus skies to fill;
But they that told were lovers and 'twas spring.
Yet why the moon to-night's a daffodil
When it is March—Do you remember still?

Old-fashioned? Yes, but there will be many to like it.

RELIGION AND PHILOSOPHY

SONG OF SONGS (THE). Translated by Morris Jastrow, Jr., Ph.D., LL.D. The J. B. Lippincott Company, Philadelphia. \$3.

There are two interpretations of the "Song of Solomon," the one adopted here by Dr. Jastrow and in his English Reader's Bible by Dr. Moulton, which regards it as a collection of ancient love songs; the other, adopted by Ewald and by Renan, which regards it as a love drama. Dr. Jastrow's argument against the latter view would be conclusive if by a love drama we understood a modern play acted on the stage of a theater with change of scenery and a great company representing the royal Court. But it loses its effect if we regard it as a song drama recited or sung by an Oriental story-teller. On the other hand, if

it is only a group of love lyrics of a decidedly sensuous character, we cannot but wonder how it ever found its way into an anthology of religious literature, whereas it distinctly belongs there if it is a drama in which love and ambition are rival suitors of a woman's heart and in which love triumphs with the declaration by the peasant lover:

Many waters cannot quench love,
Neither can the floods drown it:
If a man would give all the substance
of his house for love,
He would be utterly contemned.

As "love lyrics of ancient Palestine" we can well let the Song of Solomon be forgotten, but as a love drama it will never lose its literary beauty or its moral power.

DU PONT

Into your home He has brought a wealth of Comforts!

WHEN you reach the close of this paragraph, stop reading for a minute examine the room you are sitting in, its furnishings and fittings then with that picture in your mind, try to imagine the same room in your great-grandfather's day (stop here and look and think!)

. quite a difference, wasn't there, in the two rooms? In yours are comforts and conveniences that your great-grandfather never even wished for . . . they were unthought of in his day.

Commonplaces they are in your eyes, but in your great-grandfather's eyes miracles! Yet this wonderful change in life has come only in this past century the century that has seen the Chemical Engineer take his rightful place in the world's industries. For it is he who, more than any other, has wrought this difference in the surroundings of life and brought into your home a wealth of comforts.

* * *

THE contributions of the Chemical Engineers of the du Pont Company to the comforts and conveniences of today's life, are a source of no little pride to us.

The du Pont Company has from its very beginning been building upon the foundation of chemistry and has always been one of the country's large employers of chemists. When the invention of dynamite and the appearance of other high explosives began to call for

increasingly higher types of chemists, for men who knew manufacturing as well as chemistry, it was but natural that the du Pont Company's leadership brought together one of the finest chemical staffs in America. And also it was natural for this chemical staff, in its researches seeking to improve du Pont explosives, to come upon other uses for the materials they worked with, and so in time came a series of du Pont products seemingly unrelated to explosives.

Thus came improved Pyralin for toiletware and many other articles—better Fabrikoid for the upholstery of fine furniture, for luggage, binding books and scores of other uses. These are examples of the way in which du Pont Chemical Engineers have adapted different products for your use from similar basic materials.

Thus came a complete line of paints, varnishes, enamels, lacquers for the decoration and preservation of the country's homes, cars, furniture, etc. Thus arose, too, the manufacture of dyes, which are based upon the same materials that explosives are based upon, and thus also came many chemicals that America's industries must have.

* * *

ON all of these products, so varied in usefulness, you find the du Pont Oval as a guarantee of excellence and as a sign that they come to you through the aid of du Pont Chemical Engineers.

This is one of a series of advertisements published that the public may have a clearer understanding of E. I. du Pont de Nemours & Co. and its products.

The Jewish Tribune

will be of distinctly artistic value, and dedicated to the great event of the year, the Palestinian Mandate, which practically assures the rehabilitation of the Holy Land.

In keeping with the importance of the event, the issue will be handsomely printed and will be a souvenir number to be treasured in every home as something worth while. Anyone desiring a copy should write to The Jewish Tribune, 1328 Broadway, New York City, enclosing stamps for 25c., and the copy will be promptly forwarded. The issue will appear on the twenty-second of September.

A PLAIN TALK ON ADVERTISING

BY ROGER C. HOYT

WHEREVER one turns to-day, he is confronted by advertisements.

They fill up two-thirds of your favorite magazine or newspaper. They stare at you from enormous billboards and are painted on the sides of buildings. They glitter in huge electric signs which turn night into day. If you ride in a street car, your attention is caught by a many-colored card telling you to "Chew Wrigley's Gum" or how to "Keep that School-girl Complexion." Advertisements stare you out of countenance or sneak up on you surreptitiously. But you can't dodge them. You naturally ask, "What is this all about?" "Are such huge expenditures for advertising justified?" "Are these advertisements truthful or misleading?"

There is still too much mystery in advertising. Some people regard it as a mysterious something which will bring miraculous sales overnight. Others, of a more suspicious nature, look upon advertising as a modern gold brick and the advertising man as the natural successor to the patent-medicine faker who sold hair oil, warranted to grow hair on a billiard ball in twenty-four hours, from a soap-box in the village street.

Again, many people regard advertising as an unwarranted expense which increases the cost of the article advertised. How often the question is asked, "Who pays for the advertising?" And, judging from the many attempted answers, even the advertising men themselves have rather vague ideas on this point.

Perhaps a very brief statement of how properly applied advertising really works will therefore be of interest.

I think this whole subject can be greatly simplified if we consider legitimate advertising as just plain "news."

Some years ago a wonderful machine was devised which with a good deal of scratching and rumbling succeeded in reproducing a feeble imitation of the human voice. This was a remarkable invention, and due comment was made in the newspapers. A few people even had courage enough to buy this curious box which, when properly coaxed, emitted a weird assortment of sounds, to the delight of their invited audience and dismay of the next-door neighbors. Then an enterprising business man in Camden, New Jersey, started making improvements in this talking-machine and at the same time started telling people about the new invention. It is true that he paid the magazines and newspapers to print this news and called his announcements advertisements. But what he was really doing was to spread the news of this new form of entertainment broadcast over the land and thus bring to the people a deeper and more intelligent appreciation of good music. Is not the news that Caruso's golden voice can still be heard in one's own home of more genuine value and impor-

ance than the latest divorce scandal or murder case?

Let me carry this thought of "news" a little further. Consider life in a typical American home to-day as compared with that of a generation back. What has brought about the great change in the standard of living? I do not hesitate to attribute it largely to advertising, which is only another name for the dissemination of news regarding articles which make for a fuller and more enjoyable existence.

Very likely the maid is awakened in the morning by a Big Ben alarm clock. She hastens to prepare breakfast, consisting of Sunkist oranges, Yuban coffee, Quaker oats, toast made from Ward's bread, and some crisp strips of Beechnut bacon to serve on a Valsparred table. In the meantime the master of the house is bathing in a Standard sanitary tub with Ivory soap; shaving with Colgate's cream and a Gillette safety razor; donning his B.V.D.'s, Cluett shirt and collar, Holeproof hose, Hart, Schaffner & Marx suit, and Regal shoes. After breakfast he grabs his Stetson hat, jumps into his Buick car, equipped with Goodyear tires, and rides over Barrett Tarviated roads. At the office he sits at a Globe Wernicke Desk and dictates letters through a Dictaphone, which are transcribed on an Underwood typewriter and filed away in a Library Bureau filing cabinet. On his way home he stops at the florist's to "Say It With Flowers," and in the evening enjoys his Robert Burns cigar while listening to the latest fox-trot on the Victrola. And advertising furnished the original impulse for this entire day's programme.

Advertising, because of its news value, has thus been a dominant factor in raising the standard of living and bringing greater comfort and a more healthful and happier life to millions of Americans.

But advertising must also justify itself from an economic standpoint. If it is a tax on the community in the form of higher prices for advertised products, as is frequently claimed, can it be justified? The old question arises, "Who pays for the advertising?"

In my opinion, this question is just about as foolish as to ask, "Who pays for the railways?" or "Who pays for the telegraph and telephone?" These are generally accepted and recognized means of distribution. The railways convey and distribute goods; the telegraph and telephone distribute necessary news and information. Both are indispensable means of communication.

It is true that the country has recently been complaining of high freight rates. But suppose there were no railways. How much would it cost then to transport a barrel of flour from Minneapolis to New York; or a ton of coal from Scranton to Boston?

Suppose there were no telegraphic communication. How much would our

A PLAIN TALK ON ADVERTISING (Continued)

trade-marks, and good will among its assets at a valuation of \$54,000,000.

And so I think I may safely say that advertising renders a distinct and valuable service to the people of this country. Its news value has enabled progressive manufacturers to tell their story in the quickest and most economical manner. It has raised standards of living, developed a keener appreciation of the beautiful, promoted better health and sanitation, and greatly increased our National wealth.

Manufacturers of bath-tubs and soaps have advertised cleanliness into the consciousness of the American people. Tooth-paste manufacturers are preaching care of the teeth and proper dentistry; food manufacturers are teaching a more careful regulation of one's diet; the largest manufacturer of eye-glass lenses is now spending several hundred thousand dollars to educate people to take proper care of their eyes; a maker of beds talks about the hygienic value of restful sleep.

Makers of pianos and graphophones are selling good music to the public. The stars of grand opera may now be heard in homes from Maine to California; publishers are advertising good literature.

Florists are urging us to "Say It With Flowers." Manufacturers of greeting cards suggest the more widespread distributing of seasonal greetings.

Building material associations are telling us to build our own homes with pine, or redwood, or brick, or stone, as the case may be. We are then advised to roof with fire-proof shingles to avoid fire loss. The paint manufacturers press their slogan—"Save the Surface and You Save All."

Our wives are saved much drudgery by widely advertised appliances such as electric irons, stoves, washing-machines, vacuum cleaners, and kitchen cabinets. Electric fans keep us cool in the summer and heaters keep us warm in the winter. Our whole course of life from the hygienic nursing bottle to the copper-lined casket is made smoother and richer by advertising news which tells us how to secure all those things which may make life really worth while.

And so when you pick up your favorite periodical to-night, don't tear out the advertising pages and cuss the publisher for wasting such a large amount of good white paper. But stop and consider these same advertisements as "news" announcements of the best things which human ingenuity has devised for your comfort, edification, and enrichment. If you will look at the advertisements from this point of view, you will be the gainer in health, wealth, and happiness.

WANTED—CARTOONS

THE OUTLOOK wants to receive cartoons from its readers, clipped from their favorite newspapers. Each cartoon should have the sender's name and address together with the name and date of the newspaper from which it is taken pinned or pasted to its back. We pay one dollar (\$1) for each cartoon which we find available for reproduction. Some readers in the past have lost the dollar bills to which they were entitled because they have failed to give the information which we require.

BY THE WAY

"Tut-Bits," the English repository of selected humor, seldom gives credit to the sources of its selections, and many of them strike the reader as the kind of thing he has seen before but can't exactly place. Perhaps this example is a new one—or is it really from Joe Miller?

Mary had a little lamb,
You've heard this tale before;
But have you heard she passed her plate
And had a little more?

The following, also from an English periodical, the "Weekly Telegraph," strikes a fresh note:

A little girl stood weeping by a pillar-box. Noticing her plight, an old gentleman asked her what was the matter. "I—I wanted to post a letter," she replied, between her sobs, "and not having a stamp, I put two-pence in the slot, but—no stamp has come out!"

Immediately the old gentleman burst into tears. "What are you crying for?" the little girl asked.

"To think," he said, chokingly, "that a nice little girl like you should try to get money out of me with such an old chestnut as that."

Portuguese men are not specially noted for their strength, the champion wrestlers and pugilists being of other nationalities, but Portuguese women, according to a writer in the "Wide World," are enormously strong. "These women," he says, "think nothing of carrying a box weighing well over a hundredweight on the top of their heads. A woman porter carried my steamer trunk, weighing a hundred and twenty pounds, in this way to my hotel, for at least half a mile, up steep hills the whole way! Every conceivable kind of load is carried in this way. Peasant women will carry a closed umbrella neatly balanced on their heads. I once saw a woman coming into market with a sleeping infant in a small round basket on her head, one hand holding the basket and the other an umbrella to shield off the strong rays of the sun."

The "Cornell Widow" thus out-Herrick's Herrick:

Whenas in knickers Julia goes,
Till then, methinks, one scarcely knows
The purpose served by common clothes.

For when I drop my eyes and see
Parentheses from foot to knee,
Oh, how her rashness shocketh me!

A Spaniard writes to the New York "Times" deprecating any attempt to formulate a universal tongue. French, he says, is such a language. "It is absolutely the only language which foreigners can pronounce well, standing midway between the frightful concentration of the English words and the terrific stretching of the Italian and the Spanish words, which offer to foreigners an in-

"The Wild Leopard Has Broken Loose!"

A GREAT wave awash over the ship! A leopard cage turned over, its rotten bottom smashed in—and the leopard loose in a forest of oil barrels on deck!

Frank Buck, collector of wild animals for zoos and circuses, tumbled out of bed at five in the morning by an excited officer. It was up to him to get the animal.

A panic among the passengers! Buck and the ship's officers on edge in the battle to get the animal again—*alive!*

What would you have done?

Buck tells what he did with this beauty of the jungle, and he tells a host of other remarkable tales of adventure in the checkered career of a wild animal collector. In the October

ASIA

The American MAGAZINE on the Orient

More than 50 Illustrations
Special Photograph Insert

Snapshots from Mr. Buck's October installment of beast-and-bird collecting stories:

"As I did the orang rushed towards me. I took another step backward, standing in the position of a boxer. He raised his head a trifle. I hauled off with a good swing. It caught him right on the point of the jaw..."

"At every port (Sumatra) three or four trappers come down to the boat with a crate of monkeys, a couple of tiger cubs, a gibbon, or a baby rhinoceros."

"The snake—twelve and a half feet long—was very wild and every time I approached the box, beat its head against the wires. . . . It has been estimated that 20,000 Indians a year are killed by cobras. . . . Almost all other wild animals will try to get away as soon as they scent man, but the cobra rises up off the ground and glides straight for his opponent. . . . Between me and freedom was the snake . . . not more than three feet from me. . . . If I had had a broom or a heavy stick, but . . ."

This distinctive magazine—ASIA—is searching out the history, the beauty, the meaning, the absorbing past and the turbulent present of Asia—all of which is of consuming interest, for much of America's future lies wrapped up in the destiny of the Orient.

No magazine ever before presented such a picture of the East. Each month an infinite variety of engrossing articles and stories, and an art insert of real value, bring a new continent to your library table.

Other Features in the October ASIA

The Price of Blood

By Chester C. McCown

"You must sleep, but we must take revenge on the enemy," Ahmed chanted at the open grave of his mother, who had been killed in a woman's quarrel through which two Arab families of cousins were plunged into a blood feud. Here is seen honor being strangely appeased today according to the law as it existed even in the time of Abraham.

Overcrowded India

By Harold Cox,
Editor of the Edinburgh Review

India has less than two-thirds the area of the United States, but the population is three times as large. The struggle for mere existence is so intense that the lower castes live in a horror of poverty, sickness, starvation and ostracism. Will Indian mothers continue to beget children in the numbers they have?

Amphibious Wanderings in the Near East

By Gertrude Emerson

From Port Said to Constantinople, signagging in and out along the coast of Asia Minor, on the *Falilana*—"a rotten old tub" which, however, proved the means of leading Miss Emerson to strange scenes and enthralling adventures. A delightful, sensitive and sincere article holding a dozen romances in one.

Ashore at Pago Pago

By Edward A. Salisbury

Of all the islands in the South Seas under direct rule of the white man, American Samoa is the only place visited by Edward A. Salisbury where he found the natives really happy, and where the race instead of dying out is increasing and improving. Why? Read what this traveler saw there.

Rosaries of the Great Religions

By Dr. Cornelius H. Patton

Do you realize that no less than three-quarters of the human race use rosaries in their religious devotions today? The Christian Church uses them; Mohammedans, Buddhists, and many other Eastern sects count their prayers by beads. The story of these aids to meditation and the deep psychological reasons for the survival of the rosary are found in this convincing and beautiful article.

BY THE WAY

(Continued)

vincible obstacle. The best linguists on earth, the Russians and Hollanders, speak French perfectly, German fairly well, and English in a most distressing manner. Even in this hemisphere south of the Rio Grande English is practically unknown, whereas ninety per cent of the educated classes speak French as fluently as they do their native Spanish or Portuguese."

John Morley, when editor of the "Pall Mall Gazette," had for an assistant another distinguished journalist, W. T. Stead. Morley, according to a recently published book, had the scholar's predilection for experts, while Stead questioned their availability in journalism. "Suppose you had to have an article on sun-spots," said Morley, "would you get an astronomer to write it who knows everything about the subject, or a journalist who knows nothing?" "The journalist, most assuredly," Stead replied; "if you get an astronomer to write the article he will write it for astronomers, and use terms which your readers will not understand. The net effect will be that your reader will not learn what you want him to." "But," queried Morley, "is that not setting ignorance to instruct ignorance?" "By no means. It is setting a man who is intelligent to tap the brains of a specialist, and then to serve up his knowledge so that it can be understood by the ordinary reader." Apparently the debate ended here.

An advertisement in a New York newspaper is contributed by a reader who thinks it is as remarkable as any in the "agony" column of the London "Times:"

Wanted.—Well-known poet will exchange manuscript of unpublished volume of verse for use of sparsely furnished cottage for Summer. Address Poet, —.

"A man went into a store and bought a pair of shoes for \$10, and gave the storekeeper a \$50 bill in payment. The shoe man went to the butcher to change the bill, returned and gave his customer \$40 in change. Later the butcher found that the \$50 bill was a counterfeit and the shoe dealer refunded him \$50 in good money. What was the shoe man's loss?"

So writes a subscriber, little knowing, apparently, that he has stated a problem that has taxed the powers of the ablest minds for generations. From a chap-book of the Middle Ages we extract this answer:

"Thys wycked swindleer made his eschape with the shoes and £8 (\$40) in goode monnaie. The merchaunt keppe £2 (\$10). Later hee had to coughe up ye £2 (\$10) with £8 (\$40) of his owne cashe to ye butchyr. So hee loses £8 (\$40) and ye shoes. N. B. If ye shoes coste hym £1 (\$5) to make, hys loss is onlye £9 (\$45)."

WHAT THE PUBLIC WANTS— BELOW THE EQUATOR

BY MARIA MORAVSKY

POR Charlie Chaplin would be sorely distressed if he saw how coldly his films are received on the other side of the globe.

America's Sweetheart also would not be satisfied with her far-away audience. These queer Peruvians, Chileans, and half a dozen of other recently movie-infected nationalities of South America, all of them are blind to the charms of your Mary.

It is not so much the fault of the players as the film-makers. What is considered "sure fire" in the States does not work there, below the Great Belt. Happy endings leave the audience dissatisfied. The inevitable embrace in the last reel is not seldom met with an open sneer.

Strange creature is the South American. No less than half a dozen murders (on the screen) can satisfy him. Suicides are even more in vogue. And if you want to please his heart thoroughly, kill the hero and make the heroine fade away, mourning him! He is just like a Russian, in this respect.

One of the pictures most popular in South America was "Hijas Perdidas" (Perished Daughters), a melodramatic German production, with a broken-hearted parent in the last scene. He discovers his son lured into a bad house kept by his own daughter! This is meant as a punishment for the sins of his early youth.

There is a nice dying scene, besides, and several love's illusions smashed. Also a couple of ruined girls. Lot of unpunished villains. Tragic ending. The public was delighted.

I am not going to analyze thoroughly the whys of such attitude. It was formed partly because of the Latin craving for stark realism; its tragic stories serve as a consolation for these people whose living conditions are often beggar-like. There is a kind of perverse cheerfulness in the thought that others have to suffer also.

North American optimism is seldom met with among those somber half-Spaniards. Indian blood, freely mixed with the Latin for centuries, probably has something to do with their fatalistic outlook on life. Whatever are the reasons, one is clear: the public below the equator wants tragedies. And the bloodier the better.

This is written partly for the benefit of the film manufacturers; they may some day come to reason and abandon shipping to the far South the "sunny" American dramas. But, aside from this charitable purpose, I strive to remind American readers, actors, and photoplay-writers that the taste of the masses is not standardized the world over. So, in order to gain either world-wide market or world-wide fame, they should season their Extra Sweet Syrup Productions with the bitter spice of pessimism which the public likes immensely—below the equator.

Frederic Taber Cooper, in The New York Herald, says of "This Freedom":

"This volume is destined to be the season's chief bone of contention, the most hotly challenged and debated, quarreled over, wrangled over, praised and exalted for its farsighted wisdom and splendid courage; denounced and flayed for its blindness, its bigotry, its deliberate falsification of life."

THIS FREEDOM

By

A. S. M. HUTCHINSON

Author of

IF WINTER COMES

Already it has been praised by John Clair Minot in *The Boston Herald*, W. Orton Tewson in *The Philadelphia Public Ledger*, as well as by Mr. Cooper in *The New York Herald*—flayed by Heywood Brown in *The New York World*, and by Burton Rascoe in *The New York Tribune*—both praised and flayed by Katharine Fullerton Gerould in *The New York Times*, and by Edwin Francis Edgett in *The Boston Transcript*.

Mr. Cooper is right. The early reviews prove his statement. "This Freedom" will be more widely, more heatedly discussed than "If Winter Comes"—which means that you MUST read it.

CONTRIBUTORS' GALLERY

FEW American writers, explorers, lecturers, and special correspondents are better known than George Kennan. As the special correspondent of *The Outlook* in the Russo-Japanese War; in Cuba, in the Spanish War times; in Martinique after the great volcanic eruption; and in other countries, Mr. Kennan has done some of the most notable special correspondence work in the history of this journal. He had for a great many years the pleasure of a peculiarly intimate friendship with Alexander Graham Bell. In this article he is perhaps the first to write about Dr. Bell with hardly a mention of the telephone. The article will be found, we are sure, to be the more interesting in that it is personal and reminiscent rather than scientific in its character.

HERBERT GORMAN is contributing assistant to the New York "Times" Magazine and Book Review Section. He has been spending the summer at the MacDowell Colony at Peterborough, New Hampshire, principally occupied in finishing his novel, correcting proof on a book of verse which is appearing in the fall, and putting together the Peterborough Anthology.

O. M. KILE, formerly associated with the American Farm Bureau Federation, and an authoritative writer on farm problems, has been in close touch with the members of the Congressional Commission which conducted investigations into the costs of distribution and the effect on the farmer of the pending Tariff Bill, and has given the subject considerable independent study. Mr. Kile is the author of "The Farm Bureau Movement," and writes regularly for the leading agricultural publications.

LIEUTENANT-COMMANDER K. C. MCINTOSH of the United States Navy makes readable a scientific subject. His article was announced in our issue of September 13 as written by Lieutenant Tinker. We wish to correct that statement and apologize for the substitution of names in our advance notice. Lieutenant-Commander McIntosh has been stationed at the Naval Air Station at Pensacola and is a frequent contributor to "Sea Power," "The Naval Institute Proceedings," and numerous aeronautical magazines.

DR. FREDERICK W. CLAMPETT is Chaplain of Saint Luke's Chapel in Paris. During the war he was Chaplain of the 144th Field Artillery in France and before that Rector Emeritus of Trinity Church of San Francisco.

EDWARD EYRE HUNT is secretary of the Conference on Unemployment which was called by President Harding in 1921. He graduated from Harvard in 1910 and assisted in the English Department for two years. For two years he was on the editorial staff of the "American Magazine," and in 1914 went to Europe as war correspondent. He entered the American Red Cross in France, July, 1917, and was decorated for his war services by France, Italy, and Belgium.

*Now to brighten up
after dusty summer!*

*Whenever soap comes
into contact with the
skin—use Ivory.*

Winter ahead!

Down with curtains, off with
slip-covers and bed-spreads, up
with rugs!

And—

"Good morning, Mr. Robin-
son. Please send me a half
dozen cakes of Ivory Soap,
laundry size, right away."

Curtains! Cretonne, silk, lace
—all their bright colors and
delicate traceries grimed by
open-window fluttering—almost
shout with relief when they feel
the dust and soot depart in
Ivory's gentle, safe suds. No
fear of fading or tearing for them!

And Ivory Soap jelly for
scouring rugs—

Dissolve half a large cake of
Ivory, shaved in 3 pints of hot

water, and let cool. Scour rugs
with a brush, dipped in the jelly,
and wipe off suds with a damp
cloth—all the colors will be
restored. Safe for the finest
Orientals! For complete direc-
tions see booklet referred to at
left.

*Think of being able to use
economically for such household
cleaning a soap as fine as Ivory—
so fine that millions of people pre-
serve the softness of face and hands
with it every day.*

Have you ever listed the seven
desirable qualities you think a
fine soap should have? They
would probably be:

The Outlook

SEPTEMBER 27, 1922

THE DESTRUCTION OF SMYRNA

THE unresisted entrance of Kemal's Nationalist army into Smyrna was followed, as has so often been the case in Turkish victories, by rapine, slaughter, and fire. Smyrna, a city of some 300,000 inhabitants, is little but a heap of ashes and ruins; only a part of the Turkish residence quarter remains untouched; for three days the fires burned practically unchecked. No one knows how many Greeks and Armenians perished. A terror-stricken mob of people sought refuge on the waterfront and overcrowded the foreign ships in the harbor. The American war vessels there, we are glad to report, rendered efficient and humane assistance within their limited power. Foreign schools and institutions, some of them American, went down in the general combustion, but so far as is known American teachers and workers (except perhaps a few naturalized American citizens) escaped alive and are actively engaged in relief work.

There is danger that, in the centering of interest in the grave international issues raised by Greece's overwhelming defeat, attention may be diverted from the humanitarian side of the problem. Whatever else is done, the Powers should take steps to prevent the recurrence of massacre and devastation in the Near East. In this America has a right and duty to be heard, both because of the extent of our benevolent and commercial interests and because American lives are involved. We shall unquestionably join also in the needed relief work.

We should also let our National protest be heard as to the crimes committed against civilization and humanity under the guise of warfare. From time immemorial Turkish victories have meant massacre, cruelty, and slavery, and Kemal's triumph is no exception to the historical record. It is reported that the Assembly of the League of Nations, after listening to an earnest plea from Dr. Nansen, indicated that it could only by resolution express "an ardent desire" that something be done. In some way the world must put a stop to barbaric slaughter in the Near East, and our responsibility and duty did not lapse because we do not take a part in the political and territorial questions involved. The Kemalist Parliament is reported as asking that the League of Nations and a neutral commission investigate the atrocity charges.

(C) Underwood

THE CITY AND HARBOR OF SMYRNA BEFORE THE CONFLAGRATION

WHAT WILL TURKEY GAIN?

THE story is told by Mr. Cunliffe Owen in the New York "Times" that three hundred years ago, after a disastrous war, the Sultan of Turkey ordered to be recited in every mosque this prayer, "May the Angel of Discord, who has always been our ally, come again to our aid, and confound our enemies." Once again indecision and lack of a united purpose among the Powers have put the Turkish armies into a threatening position, and will almost certainly gain for Turkey important concessions. We hear very little now of the demand, so strong just after the Great War, that Turkey must be put out of Europe and kept out. Greece has been allowed, and by Great Britain encouraged, to occupy territory in Asia Minor; she has been driven out and disgracefully beaten; no one doubts that Turkey will hold on to Anatolia. There is a strong probability that she will receive concessions in Thrace, and she is clamorously demanding Adrianople and supremacy in Constantinople itself.

If one thing is patent, it is that the old Entente Powers must cease their shifty indecision and secret promotion of individual ambitions and unite in a common policy. Russia openly favors Kemal and threatens to aid him; with the Russo-German treaty signed at Genoa in mind, there are future possibilities of a German, Russian, and Turkish combination in Near East affairs that may not be disregarded. "A rein-

vigorated Entente is needed to face a reinvigorated Turkey," says one writer.

On one point the Entente Powers should join: that the Dardanelles and the passage to the Black Sea must be kept open, free, and neutralized. Alarmed by Kemal's threats made in the first flush of victory, Great Britain at once instituted a vigorous military policy, landing troops and guns at Chanak (on the Asian side of the Straits), sending large reinforcements to her already large naval force in the Straits, urging the Balkan countries to aid in the defense, and even inviting Australia and Canada to send military contingents. The attitude of some classes in Great Britain was less warlike, and for two reasons: one was the evident dislike of a large part of the British press and people to anything like a new war; the second was the expressed belief of France and Italy that a peaceable agreement might be reached around a council table.

General Townshend, of Kut-el-Amara fame, is reported as saying that England must "get out" of the Near East; he is one of those who fear the effect of a strong policy on Mohammedans in India and Egypt. On September 19 it was officially stated in London, after a Cabinet meeting, that Great Britain will defend the Dardanelles alone if the other Powers refuse to join, while Kemal has had the audacity to ask that his army occupy Thrace during peace negotiations.

The real danger point is the part of

Courtesy of the New York "Times"

THE STRAITS, THE NEUTRALIZED ZONE, AND SMYRNA

Angora, the seat of Kemal's Nationalist Government, is about 150 miles east of Eskişehir

the neutral zone that lies in Asia—clearly shown on the map printed on this page. Kemal's troops have in some instances overstepped the neutral line; if his army enters the zone in force on the plea that it should be part of Turkey's Asian possession, a difficult and dangerous situation may arise. The indication as we write is that the whole Near East question will be taken up quickly by a conference of the nations involved.

THE PEACE OF EUROPE

Is there danger of another general European war? This question has been anxiously asked since the present crisis arose. It seems unthinkable and is certainly highly improbable, but there are peculiar dangers in the situation; and the way to avoid serious complications is to recognize them and deal with them.

A special correspondent of The Outlook now in Europe, Mr. W. C. Gregg, cables us as follows:

"England has done so much to thwart France in her expectations from the Versailles Treaty that she is fearful of the loyalty of France in the Turkish trouble. Almost frantic appeals appear in British newspapers for Allied unity. England and France make a poor double team. This fact more than anything else threatens the peace of Europe. Safety lies in the understanding which France has with Poland and the Little

Entente. If this is a real military combination under French leadership, the peace of Europe will probably not be disturbed by an attempted German comeback. Any reasons for further European wars are offset by political confusion, lack of preparedness, and by the French army, which at this moment is the principal safeguard of civilization."

POLITICAL HOPES: BLASTED AND BLOSSOMED

THE Democratic hope that Senator Lodge might fail of renomination in Massachusetts had little tangible basis. The result of the primary by which he was nominated by a three-to-one vote bore out the predictions of all observers familiar with conditions in Massachusetts. For Governor, Massachusetts chose to renominate the present holder of that office, Channing H. Cox. Governor Cox's opponent was Attorney-General J. Weston Allen, who did such good work in securing the disbarment of District Attorneys Tufts and Pelletier for using the machinery of government for private extortion.

If the Democrats are disappointed in the renomination of Senator Lodge, they ought to be pleased over the defeat of Cole Blease for the Governorship of South Carolina. It is probably a tragic confession of editorial ignorance to admit that we know very little of the record of his victorious opponent, Mr. Thomas G. McLeod. To know that Cole

Bleaze has been defeated is, however, adequate ground for congratulating the State of South Carolina.

The present Governor of Georgia, Thomas W. Hardwick, has been beaten for renomination by Clifford L. Walker. Five years ago Governor Hardwick was Senator from Georgia and was beaten for re-election mainly because President Wilson threw his influence against him. In the present contest he apparently owes his defeat to his former ally, Thomas E. Watson, of vitriolic pen and the United States Senate. Governor Hardwick also incurred the hostility of the Ku Klux Klan by his praiseworthy attempt to make that organization of misguided nativists unmask.

AN ARMY, NOT AN ASSOCIATION

THE Salvation Army is unique among benevolent associations in that it is under the absolute rule of one man. As in every other army, the General commands; the officers and soldiers obey. That great genius, William Booth, built the organization on the army type because he saw the possibilities of discipline, obedience, the uniform, and the band—militancy, in short. In many ways the plan has worked marvelously well. The Salvation Army has fought a good fight; one does not have to agree with its theological tenets (few, perhaps, know or care precisely what they are) nor to find its methods always dignified; what matters is that it has been of vast helpfulness in seeking out those who are sick, poor, and hopeless—whether in body, mind, or soul—and bringing to them Christian brotherhood and aspiration.

Under the direction of Commander Evangeline Booth the Salvation Army in America has made remarkable advances in numbers, in efficiency, and in popular esteem. It is, we believe, the largest existing branch of the Army. Its war work was beyond praise. Literally it befriended the American soldier; and no American soldier who saw its work in France will ever fail to remember its friendly spirit. While its capital and property holdings are said to have increased by \$22,000,000 under Commander Booth's direction, an astoundingly large percentage of the income received goes directly to the needy and to actual work; the officers, from Commander Booth down, receive, above actual expenses, what would be called pitifully small pay were it not that every one knows that they literally give themselves, and that their devotion is unbounded.

In view of what the Army has accomplished, it would be rash to say that hereditary supremacy has not been wise

TO SHOW HOW COSTLY SUMMER WAS

(Merchant of Venice, Act II, Scene 9)

THE WASTE OF WAR

Thomas in the Detroit News

"I DON'T WANT CRUTCHES—I WANT A PERMANENT CURE!"

for this special form of activity. But it is natural for American laymen to wonder whether an infusion of democracy in government might not be desirable here.

When, the other day, Commander Evangeline Booth, head of the Salvation Army in America, received from her brother in London, Commander-in-Chief Bramwell Booth, polite and appreciative marching orders, she accepted them without a word of complaint; she is a good soldier; she knows how to obey. In due time she will return to England to accept any command or work assigned her. It is reputed that General Booth proposes himself to supervise from London the American organization through the co-operation here of three Commissioners, in New York, Chicago, and San Francisco. All this is quite correct legally and quite within the rules and methods of the organization. But again the American layman may express the hope that the head of the Army and his staff will give due emphasis to the fact that the great body of the Army on this side of the water is American and that practically all the money contributed is American and that care will be taken to assure the public that American ideals and wishes will be considered in the management of the Army. It was largely the feeling that this was not the case which led to the split in the organization about twenty-five years ago.

CHINA AND AMERICAN SECTARIANISM

At the recent National Christian Conference in Shanghai it was reported that 120 different religious communions from the Occidental world are now working in the Oriental republic. Native Christians are tired of explaining to the people why Southern Methodists are found in Northern China. Translating such words as Baptist, Episcopal, and Presbyterian leads to results that rejoice the facetious but which do not contribute to edification. People who are critical of mission boards may understand a little better why denominationalism continues in China by a study of recent history among the Disciples of Christ. The reports issued at their convention at Winona Lake, Indiana, the first week in September, and the discussion of these reports, throw a great light upon the problem. From the face of the documents it seems that Disciples missionaries, who were immersionists at home, have not been very zealous in pushing the denominational dogma beyond the sea. Chinese Presbyterians and other pedobaptists moving into a district where only Disciples churches were found were received as Christian brethren and put to work. They became church officers and were even employed

(C) Underwood

DONALD B. MACMILLAN

as mission workers. So little account did the missionaries take of denominational distinction that they in some instances reported these unimmersed people as members. A conservative minister of America visited the mission fields last year with an interpreter, and these facts were brought to the attention of the American constituency in an unmistakable way, compelling the mission board to admit most of the allegations, and to try to explain them.

The Disciples of Christ at Winona Lake have answered the demand of the Shanghai Conference of native Christians with denial of their request for Christian union. The missionaries are warned that if they take pedobaptists into the native churches as full members they will be recalled, though as a compromise measure the board has replied to an inquiry from the Rev. E. K. Higdon in the Philippines that he may believe in "open membership" if he will agree not to practice it without the consent of his board. That the board is disposed to be as generous as its constituency will permit is seen in the indorsement of the practice of enrolling "guest members" from other communions. If the missionaries do their duty, they must make these "guest members" know that such members are deficient in the matter of baptism from the Disciples standpoint.

Very few Disciples missionaries who have been on the field in the face of naked paganism care much for the theological disputes at home. They see that the only hope of the infant Christian movement in China is co-operation and the erasure of all denominational labels. Chinese leaders have served notice that they will have none of our Occidental denominationalism when they are able

to support the Christian movement without foreign money. Christianity halts in China not because of narrow-minded native leadership in that land, nor because of bigoted missionaries, perhaps not very much on account of ignorant board members at home. It is the sectarian preacher in America who threatens to boycott the missionary task when it gets too liberal who is responsible. Only as broad-minded laymen in the churches are able to modify this noisy sectarianism will China win the chance to become Christian.

NEW POLAR GEOGRAPHY

THE return of the Arctic explorer Donald MacMillan from his year's voyage in the Arctic seas is an interesting event in the world of science and exploration. As in his former expeditions, Dr. MacMillan has brought back valuable contributions to our knowledge of that portion of the ice-bound seas which has never been thoroughly explored. The value of such observations is not of a sensational character but it is no less serious and important.

The region just explored by Dr. MacMillan is on the upper and western coast of Baffin Bay. It now appears that the geography of this region has always been incorrectly charted on the maps. The MacMillan expedition succeeded in penetrating further into these unknown regions than anyone but the Eskimo has ever gone. It will be remembered that five years ago this explorer returned after four years spent in the Arctic the result of which was to disprove the existence of the supposed Crocker Land. It appeared that what was supposed by Admiral Peary to be a newly found stretch of land was in fact the effect of a mirage. Now Dr. MacMillan reports that the entire map of the coastline of Baffin Bay will have to be revised. It has been charted on maps in accordance with the reports of an explorer commonly known as "Northwestern Fox." His dash in this vicinity was made three hundred years ago, and no one since that time has penetrated so far along that coast. Now MacMillan has followed Fox's road and gone considerably beyond it, and, as was almost to be expected, he finds that Fox's charts abound in error.

It is interesting to report that under the modern and scientific methods of exploration carried out by this expedition and recommended by Peary and Stefansson it was conducted with perfect safety and comparative comfort.

There are great possibilities of discoveries that may be of practical value in the far north. Even if this were not so, there is something in the nature of mankind which will never be satisfied

until the whole surface of the earth is thoroughly explored and mapped.

THE TENNIS CROWN STAYS PUT

The tennis crown of America still rests on the head of William T. Tilden, 2d, of Philadelphia. In the recent national tournament at Germantown, Pennsylvania, Tilden fought out the finals with William M. Johnston, of California. The present trophy had been twice won by each of the finalists, and this year's victory gives Tilden permanent possession.

The experiment was made in this year's tournament of "seeding the draw," instead of leaving the arrangement of the players entirely to fortune. The most noteworthy contestants were planted through the list in order to preserve as far as possible the best contests for the last. The scheme, which brought Tilden and Johnston into the final bracket, worked admirably. Johnston took two sets from his opponent, and then Tilden was forced to win three sets straight in order to gain the victory. The come-back of Tilden under such circumstances afforded a thrill which the spectators will not soon forget.

INTERNATIONAL YACHT RACES

The contest for America's Cup developed into a travesty on one of the greatest of sports. The beautiful and fragile toys developed by that historic event we trust will never be brought forth again. It will be a disappointment if the next challenge from England is not made and accepted under rules which will produce vessels rather than the playthings of millionaires.

Since the last contest for America's Cup there have been two Anglo-American team races of a type which deserve hearty encouragement. Last year four American yachtsmen took their six-meter racers to England and suffered a defeat in British waters. This year four British boats were brought to Long Island Sound for a return match. The American challengers were the victors.

These international races are run on a point basis. The winner of the race is given one point for finishing and one additional point for each beaten contestant. Thus, if eight boats are entered and finish the race, the winner scores eight points for her team, and the second seven, and so on down the line. The present series of six races was won by the Americans by a score of 111 to 104. Even with boats of the six-meter class the sport is not one for those with slender purses. It would be an interesting experiment to attempt to build up an international one-design class. In such a case team matches of even an international character could be held frequently at a minimum of expense, for

Photo Edwin Levick, N. Y.

GREBE (AMERICAN) LEADING REG (BRITISH) IN THE FINAL DAY OF THE INTERNATIONAL RACES IN LONG ISLAND SOUND OFF OYSTER BAY

it would only be necessary for helmsmen and crews to cross the Atlantic to challenge or defend the trophy at stake. By holding enough races so that each helmsman and his crew could sail all of the boats in turn, an absolute equality of conditions could be created.

The one-design idea has been the making of our small-boat sailing, for it has afforded the best possible training for our young yachtsmen.

It is recognized, of course, that the present method implies both a contest in yacht design as well as yacht handling. To limit an international contest to vessels of one type would eliminate what has been regarded as an important feature of such races; but the gain might more than offset the loss.

LABOR BANKS

It is hard to understand the curious inconsistency of labor leaders except on the ground that we are all human and are therefore all more or less inconsistent.

While during the past summer the leaders of labor organizations have with one hand been knocking down industry, with the other they have been building it up. There are now nine or ten labor banks in operation in this country—that

is to say, banks organized and in the control of trade unions. There is one at Cleveland, Ohio, conducted by the Brotherhood of Locomotive Engineers; another at Hammond, Indiana, conducted by the same Brotherhood; a savings bank at Washington, D. C., belonging to the Machinists' Union; a trade union savings bank at Seattle, Washington; the Finnish Mutual Savings Bank, under labor management, at Superior, Wisconsin; and the Amalgamated Clothing Workers' Bank at Chicago, Illinois. The Order of Railroad Telegraphers has applied for a bank charter in St. Louis, Missouri; a labor bank is planned at Birmingham, Alabama; a labor trust company is reported to be in process of organization in Philadelphia; Pittsburgh is about to have a labor bank; two are planned at Cincinnati, one by the Machinists' Union and one by the Railway Clerks' Union; and labor banks are being organized in San Bernardino, California; Detroit, Michigan; St. Paul and Minneapolis, Minnesota; Kansas City, Missouri; Tucson, Arizona; Spokane, Washington; Dallas, Texas; and Three Forks, Montana.

Of all these banks the pioneer and

most successful is the Cleveland Bank, of which Mr. Warren Stone, head of the Locomotive Engineers' Brotherhood, is President. The Locomotive Brotherhood Bank at Cleveland, and all the other labor banks, differ not at all under the law from banks generally, but they are introducing some rather novel and interesting methods. The Cleveland Bank, for example, has disturbed some of its competitors in that prosperous city by paying a larger rate of interest for city and county funds than the other banks had agreed to. The result is said, by a well-informed correspondent of *The Outlook*, to be that the Locomotive Brotherhood bank, although it has a capital of one million dollars and a surplus of one hundred thousand dollars, and is a member of the Federal Reserve System, is not a member of the Cleveland Clearing-House. The Cleveland Bank, 51 per cent of the stock belonging to the Locomotive Brotherhood as an association and 49 per cent being owned by individual members of the Brotherhood, proposes to pay a dividend to stockholders of not over ten per cent when earned, and to distribute its surplus earnings over that amount to depositors in an increased interest rate. This is somewhat of a novelty in banking, and is raising some discussion in Cleveland. We imagine, however, that the depositors are not objecting.

Every believer in thrift and prosperity must welcome the creation and successful administration of these labor banks. *The Outlook* certainly welcomes them. But they confirm its opinion that trade unions ought to be put under the operation of the Sherman Anti-Trust Law, exactly like unions of capital. One law for all is what has made the American Federal Reserve banking system a success and what has enabled these labor banks to spring into being. The trade unions which have wisely organized these labor banks should be held as responsible to the law when they combine to restrain trade, as they should be protected by the law when they combine to promote thrift.

PROHIBITION

IN its issue for September 9 the "Literary Digest" summarizes the results of its poll on prohibition. It reports a total vote cast of 922,383 individual ballots. Of these, 38.6 per cent voted for enforcement of the present law; 40.8 per cent for a modification permitting the sale of beer and light wines; and 20.6 per cent for a repeal of the Amendment. The poll was an enterprising and interesting one, but is not quite so significant as it appears on the face

of the returns; for we do not believe that those who voted for a modification of the law, so as to permit the consumption of beer and light wines, realize what their vote actually meant.

The Constitution now forbids the manufacture, sale, or importation of intoxicating beverages. The Volstead Act defines as an intoxicating beverage any beverage containing more than one-half of one per cent of alcohol. If the Volstead Act is so modified as to permit the consumption of beer and light wines, which would require at the very least a ten per cent alcoholic content, the country will inevitably have a return of the saloon problem. Beer and light wines must be sold if they are to be consumed. Even if they were not sold for consumption on the premises and the sale were limited to "bottle trade" at groceries or other similar places there would rise triumphant in all its glory the old back-room-grocery barroom—one of the worst phases of the American saloon. If the 40.8 per cent of the "Digest's" voters who want "light wines and beer" had been fairly presented with the indisputable fact that the legal sale of beer and light wines means the revival of the saloon problem, we do not believe it is extravagant to assume that at least half of them would have voted against the saloon.

If our assumption is correct that one-half of those in the "Digest's" poll who voted for modification would have voted against the return of the saloon, the real significance of the poll is that at least sixty per cent of the balloting was in favor of prohibition—prohibition, at least, of the liquor saloon as it used to exist in this country, and as it still exists as a terrible social sore in Great Britain.

In spite of the reports in the daily press of bootlegging, deaths from wood alcohol, and the violation of the law in the clubs and restaurants of the large cities, scientific and impartial statistics prove, we think, that the social and economic results of the operation of the law so far are beneficial. The "Manufacturers' Record," of Baltimore, has issued an exceedingly interesting report of a country-wide inquiry it has made of the effects of prohibition on American industry. An overwhelming majority of the leaders of industry favor it. Postal Savings Bank deposits as well as deposits in regular savings banks, especially in industrial centers, have grown. Crimes and convictions due to drunkenness have decreased. Hospitals report a marked falling off in cases of alcoholism and secondary diseases due to alcoholism. These social and economic gains are not matters of guesswork but of carefully compiled statistics. The "Scientific

Temperance Journal," of Boston, published in June a complete, elaborate, and impartial survey of the situation in Massachusetts, and quotes Dr. Charles W. Elliot, of Harvard, a man of scientific type of mind who weighs his words, as saying to the Massachusetts Legislature: "Evidence has accumulated on every hand that prohibition has promoted public health, public happiness, and industrial efficiency. This evidence comes from manufacturers, physicians, nurses of all sorts, school, factory, hospital, and district, and from social workers of many races and religions laboring daily in a great variety of fields. This testimony also demonstrates beyond a doubt that prohibition is actually sapping the terrible force of disease, poverty, crime, and vice. These results are obtained in spite of the imperfect enforcement in some communities of the Eighteenth Amendment to the Federal Constitution."

Nation-wide prohibition is a magnificent and unique experiment. Time only, and a fair trial, can demonstrate whether it can be made a permanent success. But it at least deserves a fair trial, and so it seems to us that every man who wishes his family and his country well will by his vote for members of Congress this autumn sustain strict enforcement in order that the men and women of the oncoming generation may have a chance to determine from experience what the permanent policy of the country shall be regarding alcohol as a beverage. We have little doubt that, with fair play and a chance to study actual results over a reasonable period of time, the verdict of the coming generation will be against alcohol, as the verdict of our generation has been against morphine and cocaine.

THE OLD SOAK

ONE of the most fertile imaginations in America is possessed by Mr. Don Marquis, now columnist for the New York "Tribune." The delightful succession of characters which have emerged from Mr. Marquis's brain and served as the vehicles for his philosophies and his antipathies constitutes a most agreeable chapter in the writings of the present day. None of his figures perhaps has yet attained the universal popularity of Mr. Dooley, but many of the creatures of his brain seem almost as much alive as the hero of Archey Road.

News that "The Old Soak," vehicle for Mr. Marquis's antipathy to prohibition and his recognition of both the vices and the imaginary quality of the so-called virtues of alcohol, was to appear on the stage made many theater-goers look for-

Photograph by Abbe

HARRY BERESFORD AS THE OLD SOAK AT THE PLYMOUTH THEATER,
NEW YORK CITY

ward to the opening night with their risibilities on the *qui vive*. From the reception which was awarded the play it is quite obvious that most of the theater-goers were not disappointed in their expectations. The probabilities are that Mr. Marquis's comedy will have a more prosperous career than that of the Old Soak himself.

The play was in some measure a disappointment. The fertility of Mr. Marquis's imagination seemed to have exhausted itself in the creation of the chief character and in some of the dialogue. Both in plot and situation the play is almost wholly lacking in originality. The wealthy and sanctimonious banker, the wayward son, the actress who was better than she seemed—we have met their like many times before. They afford typical examples of the kind of literary characters at which Mr. Marquis himself delights in poking fun. The setting for "The Old Soak" is, in fact, so obviously ready-made that we suspect that Mr. Marquis utilized it with his tongue in his cheek. The obviousness of the setting probably will not detract from the popularity of the play for that large portion of the theater-going public which likes to have the

occasions for a tear or a laugh pointed out well in advance. If they run across stock signals to "Smile here," or "Weep now," it makes it all the easier for them to enjoy the progress of the drama under consideration. They will find plenty of sign-posts in Mr. Marquis's dramatization of "The Old Soak."

THE SUPERIOR RIGHT

SECRETARY HERBERT HOOVER has the reputation of being a doer rather than a talker. Yet on occasion he can put a truth of import in as clear and forcible a fashion as any speech-maker of them all. Such an instance was his affirmation of "the superior right of the public" in a recent talk before the Salesmen's Association of the American Chemical Association. He was speaking directly about the coal strikes, since composed by what many think is but a temporary truce—a truce based on realization that the industry can for the present at least furnish high wages and high profits and with precious little reference to the rights of the public for service and fair prices. In plain, round terms Secretary Hoover denounced the outrage to the public's

superior right in basic and universal industries at times when "the whole Nation once every two years or less can be pushed to the precipice of want and commercial collapse; when we are brought to consideration of price-fixing against extortion in time of peace; when hundreds of thousands of workers, not only in the industry, but outside of it, are thrown into skimping and starving, and when the Nation is made to suffer the shame of Herrin and rampant crime that has followed in the train of strikes."

Later he defined what he meant by this superior right as "the right of the public to a continuous supply of its vital necessities and services upon terms fair to the employer and employee. When these various rights [collective bargaining, the National basis of unions and employers, and so on] infringe upon the public right, then the dominant right is public right."

All of this applies to other basic industries as well as to coal. That even in the strikes just settled the public interest has not yet been guarded is indicated by the remark of Senator Cummins on the day when the Senate passed the Coal Anti-Profiteering Bill, after the strike was settled, that "Profiteering is more general now than it has been at any time since the strike. If there ever was an emergency, it is now." How such an industrial war as we have been going through works widespread injury to classes that have nothing whatever to do with inciting or settling railway and coal strikes, is shown from Mr. Hoover's view, expressed on another occasion, that the greatest loss is caused to the farmer who has to accept low prices because the railways cannot transport his crops. So, too, Governor Miller of New York has denounced the obduracy of striking railway shopmen against fair offers of settlement, saying that in effect they declare: "We must maintain our stranglehold until, not our adversary, but the public, is brought to its knees." He asserted that it was such a thing as this that he would make a serious penal offense.

It is for the people at large to declare and enforce this superior right through their elected representatives in Congress and executive office, but also through exercising their industrial intelligence to understand business and economic processes. Some of the considerations involved are discussed in this issue in an article by Mr. Edward Eyre Hunt, which includes some expression of Mr. Hoover's views as to business cycles.

In wars between capital and labor the public is not an indifferent neutral; its resources are exhausted and its rights are outraged.

A GERMANIZED ENGLISH POLICY

BY ELBERT FRANCIS BALDWIN

THE other night, the "Norddeutsche Allgemeine Zeitung"—still a powerful paper—aptly quoted Bismarck's phrase regarding Russia and Austria: "Between these two states the relations can become better or worse; they cannot remain as they are."

I—GERMANY

Ever since the signing of the Treaty of Versailles, over three years ago, Germany has unceasingly endeavored to escape the terms it imposed upon her. For instance:

(1) Her real armament is greater than that to which she has a right.

(2) The trial of her war culprits, imposed by the Treaty of Versailles, has been insufficient and in some cases ridiculous.

(3) She has not delivered coal and wood as agreed.

(4) She has lowered her exports and augmented her imports, especially in articles of luxury, instead of limiting those importations to articles of necessity.

(5) In order to show an apparent bankruptcy, the Germans have sent much of their capital to other countries, a leakage estimated at from \$1,000,000,000 to \$2,000,000,000.

(6) With the same end in view, the German Government has greatly augmented the personnel and therefore the total of salaries in its postal and railway services.

(7) Finally, also with the same end in view, the Government has pursued a policy of lowering the exchange value of its monetary standard by enormous emissions of paper money. It has put forth such a large number of paper billions that its printers must now work their presses continually night and day in a fruitless attempt to provide themselves with an adequate medium of exchange. At present the attempt to keep up takes an incredible number of paper marks.

Hence the German Government has certainly not done all it could to increase its receipts, to lessen its expenses, and to prevent its capital from evading the just demands upon it.

Apparently the Government has adopted three rules of conduct:

First, it does not intend to pay for reparations a single mark more than is actually forced upon it.

Second, it seems to think it quite within its right to create deliberate bankruptcy in order to obtain easier terms from its creditors.

Third, it thinks that all its recent policy will give a prodigious boom to its industry.

Now, however, with the recent great fall in the value of the mark, the German banks can no longer finance German industries in their necessary purchases of raw materials. If there is no upward turn in the situation, there will

be an army of the unemployed. Then many stores and shops will close for want of custom. A comparatively small quantity of foodstuffs, if any, will be ordered from abroad. We may hear also of insufficient crops in Germany. There may even be some starvation.

Can the present Government withstand such a crisis? Suppose it cannot and is overthrown? What kind of a government would succeed it? A monarchist and reactionary Government? Or a communist-bolshevist affair? Either would menace not only the execution of the Versailles Treaty but also the actual peace of Europe infinitely more than does the present Government—which should be upheld wherever possible.

Certainly no nation of the Entente wants Germany to escape the punishment she merits for her culpability in starting the World War. But no country wants to reduce Germany to economic or political impotence. If any country wanted to bring about Germany's ruin, it would only have to allow those great German industrialists who have been exploiting the people to go on lowering the value of the mark; or to permit the conspirators, whether monarchists or bolshevists, to continue their daily and nightly work of trying to destroy the present republican régime. No, the Entente is not acting that way. Nor is France in particular.

II—FRANCE

It is unfortunately too easy for us in America to forget that France fought for us for three years before we entered the war, that France did deeds of heroism at the Marne and at Verdun really for us too as well as for herself.

If we have not seen with our own eyes the devastation in France wrought by the Boches, it is difficult to comprehend that they have destroyed no less than ten French departments; that they have killed thousands and thousands of Frenchmen in battle; that they have outraged and mutilated women and children; that they have demolished buildings—churches, schools, factories, homes; that they have ruined mines, forests, orchards, vineyards. For years the Germans had been preparing for a war with France and in France so that they might devastate it to such a point as to make its rehabilitation impossible.

France has indeed suffered much more than has any of her allies. Not one of them has had so much territory devastated as she has; not one of them has lost so many men or so much material.

The difference between France and the other allies, especially England, is being continually accentuated by the talk concerning German payments. The proportion which France will receive is 52 per cent and that of England 22 per cent, a

seemingly just proportion because, among the reparations, the Versailles Treaty included pensions. And that in spite of American opposition. It was easy to see that if pensions had not been included in the total of reparations, France would have received in the neighborhood of 75 per cent and England only about 5 per cent.

Since the war closed France has done all possible to rehabilitate herself. To repair her devastated departments she has spent millions of dollars. The total sum, though large, can repair but a small part. But the sum represents all that France can find or borrow. For the rest she asks for the execution of the Treaty of Versailles.

When the French look at their country, they see no results of reparations; they see no security.

No country has so much need of security as has France, because no country is so much threatened. In the ultimate analysis, security is not only necessary for France herself, it is the only base on which the reconstruction of Europe can rest.

Where is such security to be found? At present only in the French army. Yet, in England and America, France is blamed for wishing to maintain her present army. Instead of blaming her, she may well be excused. It is not her fault; the fault in the first place is with the English and American Governments, who have not kept their pledges with France to protect her against Germany, pledges made when the Treaty of Versailles was signed.

In view of her alarming economic situation, Germany requests a remission of debts, a so-called moratorium, until 1925. Her creditors want to do all they can to aid Germany in her distress consonant with their own self-respect. In this regard the policy of one of the Allies—France—has been characteristically French; the policy of another of the Allies—England—has become, unfortunately, Germanized.

France will not consent to accord a moratorium without the assurance, by guaranties given, that the German payments for reparations will begin again. Any other means would be, in French opinion, a denial of justice, first, toward the creditors, and, next, towards Germany herself. For a moratorium, pure and simple, would only encourage the German industrialists and profiteers in their speculations, the German Government in its obstinacy, and the German people in their illusions. For the whole world, indeed, the result would be a catastrophe if one followed this abysmal course. The only conditions on which France will consent to accord a moratorium are conditional on Germany's giving guaranties. France has wanted to include among these German mines and forests. Other guaranties to

be demanded might be, for example, the control of import and export licenses, the establishment of a customs boundary on the Rhine, a supplementary percentage on the value of Germany's exports, a certain percentage on the receipts of dye works, and, finally, a monthly deposit of a certain quantity of gold in a foreign bank.

In all this France is convinced that she will never get anything from a Germany which is not equally convinced that, in the last analysis, France is prepared to act coercively. It is because of this conviction that Premier Poincaré acted as he did during a recent week in Alsace in expelling certain Germans. This policy, nevertheless, though based on justice, can easily go too far. M. Poincaré saw it and modified it immediately. It would be regrettable for French as well as for German interests if too rigorous measures were taken.

III—ENGLAND

What a difference between France and England! In England we see a country better prepared than ever to repel aggression, a country with no devastated provinces, a country whose commerce is ever more powerful and whose finances are so satisfactory that a beginning may be made in paying the debt to the United States. The ends which England proposed at the beginning of the war she has obtained.

England remains always "a nation of shopkeepers." She does not wish to lose any customer; certainly she does not wish to lose one of her best customers, Germany.

Hence what we sometimes call "the Keynes school" has made its way in that country. Instead of imposing very

severe financial reforms on Germany (including even the nomination of an Allied counselor at Berlin, who would have the right of veto on German expenditures, a sort of impartial liquidator of no matter what Entente nationality, even American), now we see that England wants to give Germany a moratorium without any guarantees whatever! There you have a Germanized policy.

Its topmost height was reached day before yesterday when the British delegate in the Committee of Reparations publicly made his confession of faith before the Commission had handed down its decision. He said that England wanted to give Germany time enough to pull herself together and to meet her engagements—so does all the world. But, he added, the only means to this end is to give her a very long moratorium and not to put any obstacle, such as rigorous guarantees, in the way of getting back her credit. Any other policy, he proclaimed, would have the result of dissipating hope of obtaining actual or eventual reparations; any other policy would ruin Germany—and not only that, it would entail an inevitable and immediate repercussion in other countries, that is to say, it would bring about a world catastrophe.

So spoke the British delegate. Suddenly and publicly he announced his personal opinion concerning the secret debates which his colleagues were still having. Such an act is like that of a judge who gives out an opinion before the court in which he is sitting has adjudged the case.

Naturally this act has encouraged the German people in their illusions, their misunderstandings, their obstinacy. Naturally, also, the act, with the implied

strength of the British Government behind it, will push the German Government more than ever to extremes. It is not surprising, therefore, that to-day we find in the telegraphed editorials from the German papers the echoes of the opinions of the people and the Government—a joyous chorus of praise for the Germanized English policy.

IV—BELGIUM

As she was at Genoa, brave little Belgium is also now particularly worthy of attention, admiration, and respect.

By virtue of her right of priority, established by the Treaty of Versailles, Belgium should receive any present German reparations. In the desire to bring about an arrangement fairly satisfactory to all the Entente Powers, the Belgian Government has made a proposal which last night the Commission on Reparations accepted. It is that, instead of the cash payments due to the end of the present year, the Allies are to accept payment of these amounts in six months' German Treasury bills, payable in gold, and *guaranteed* in such manner as may be agreed upon by the German and Belgian Governments. If there is default in agreement, the bills are to be *guaranteed* by a sufficient deposit of gold in some foreign bank acceptable to Belgium.

And yet, with guarantees twice repeated in the agreement, so worthy a paper as the London "Telegraph" actually proclaims it, as per report just here, "a defeat for France." On the other hand, to-day's "Journal de Genève" more justly concludes that "*la politique française a enregistré . . . un succès indiscutable.*"

Geneva, September 1, 1922.

BUSINESS MEN AND BUSINESS CYCLES

BY EDWARD EYRE HUNT

SECRETARY OF THE PRESIDENT'S CONFERENCE ON UNEMPLOYMENT

IT is not solely an American riddle—this so-called business cycle which brings the United States alternately fat and lean periods, these booms and slumps that are the plague of business to-day. No industrial country is free from its influence—America least of all.

Now, what is the remedy?

Lopping off the peaks of booms and filling up the valleys of slumps to make business more nearly level, by applying to the future a knowledge of the past.

Business moves in a ceaseless ebb and flow, sometimes high and sometimes low, but never the same. The only normal thing about it is its continuous change. Business at an eternal sameness of level would be wholly abnormal. In fact, the idea of a normal business level has wrecked many a concern—dry rot and self-satisfaction are deadlier than fall of prices and lack of orders.

In forty years we have had five seri-

ous depressions: 1883-6; 1903-4; 1907-8; 1914-15, and 1921. In other words, within the lifetime of the average man there have been five industrial catastrophes in which the unemployed have been reckoned by the millions and the idle capital by the billions. We are just emerging from the latest of these business horrors, when all the resources of the Government and of private persons in better position have been called upon to care for those who, through no fault of their own, have been thrown out of work because there has been simply nothing for them to do.

The time is coming when the forehanded business man is going to be able to take in sail before the storm strikes him, because his business barometer will warn him in advance.

Let us analyze a cycle, beginning, because we have to begin somewhere, with the revival of activity.

Revival at first is confined to narrow limits, but it spreads in an ever-widening circle because the more active businesses must perforce buy raw materials and supplies from other industries, which in turn buy from others, and so on and on.

As they buy they employ more labor, they borrow more money, they expand their plants. These make higher profits, increase family incomes, and widen demand. Retailers begin to buy from wholesalers, who in turn order from manufacturers, and they from producers of raw materials. All this while the sun is shining and everybody begins talking prosperity, so that orders are plentiful and prices boom, while buyers rush into the market to secure stocks before prices go even higher. Wholesale prices mount and retail prices follow. Wages rise; discount rates increase; interest rates move upward; stocks and bonds are car-

ried along with the rising tide of prosperity.

As the profits increase, heavier orders are placed and large contracts for new construction are made. Again, these still further swell the physical volume of business and help to drive prices farther upward. The boom is on. And this prosperity contains within itself the seeds of future depression. As old contracts expire, new ones are made at higher costs—materials, interest, rents, salaries, all go up. Out-of-date equipment and uneconomically located plants are called into use. Everybody bids for labor and wages mount, with overtime and bonuses common. Labor and management decline in efficiency, because undesirables are employed, and when jobs are easy to get men do not put forth their best efforts.

Finally comes the time when the supply of funds at the old rate of interest lags behind the volume of business. New bonds can be floated only at higher rates. Capital gradually grows scarcer. This reduces the prospective margin of profit, and here and there a new venture is postponed. So certain businesses which depend on industrial expansion for their own prosperity begin to feel a tightening of the lines. Buyers are starting to defer the execution of new plans. The demand for consumer goods is rapidly reaching its climax. With the restriction of those businesses which have to do with industrial expansion comes a lessening in the orders to enterprises that furnish them with materials.

High interest rates force the unloading of stocks previously held off the market to be sold at higher prices. Profits begin to waver; wary creditors conjure up imagined losses because of the shrinkage in the market value of the enterprises to which they have lent money. They begin to refuse renewals of old loans; they press for a settlement of outstanding accounts.

And so liquidation starts in and rapidly extends, because as one enterprise is called on to pay its maturing debts it makes similar demands of its own creditors.

A new phase develops—industry is forgetting about profits and trying to forestall bankruptcy. Instead of trying to make sales, executives devote their energies to saving money. Expansion gives way to contraction, securities begin to fall and commodities follow the downward trend. Credit adjustment has created a crisis. In the old days, right here would we have had a money panic, but the Federal Reserve Bank Law has given us a safety-valve and the impending depression is industrial rather than financial.

It comes on fast; just as prosperity began cumulatively, so depression starts in the same way. The discharge of wage-earners lessens consumer demand. Savings go and family incomes fall. Investor demand diminishes, because people with money will not go into new rises while business is depressed.

This causes further contraction, and every reduction of employment creates another reduction of consumer demand, which further depresses business demand and discourages investment. As prices fall, competition is keener for the remaining business. Every reduction in price is the progenitor of another reduction. Wholesale prices tumble first. Raw material falls faster than manufactured goods. Lessening profits spread discouragement and check enterprise; but right here when things are blackest are the germs of revival.

Costs of doing business are being reduced. Labor and management become more efficient as jobs grow scarcer. Economy is the watchword. Loosely organized concerns are reorganized to save them from disaster. Rents and salaries are pruned, old debts are written off, and inventories are revalued. Production sinks to lower levels and the demand for accumulated stocks slowly makes itself apparent. Articles used as long as possible wear out and must be replaced, and the first step towards revival is the fact that the demand for goods finally ceases to shrink.

With all these readjustments the crisis is gradually overcome and recedes into the past, and hoarded-capital held at low rates of interest seeks outlet at more attractive yields. A few bold ones put their money into new enterprises; business prospects brighten with the payment of old debts and the disappearance of accumulated stocks. Prices slowly stagger upwards; the banks have money to lend and want to lend it, and so revival starts in ever-widening circles and the business world is back where it began.

To attempt to blot out such an economic process would be futile. It simply cannot be done. Every period of "prosperity" has in itself the very forces which will eventually make for its undoing. Credit is at the bottom of the matter, and business cannot exist without credit.

But the business cycle, in part at least, can be controlled.

But how?

Last October the President's Conference on Unemployment, after adopting a series of recommendations for temporary measures of relief, suggested that an analytical study be prepared of the causes of the business cycle and an attempt be made to collect facts and statistics as to the best methods for offsetting bad results of the periods of expansion and depression which have been characteristic of our industries. Secretary Hoover, Chairman of the Conference, appointed a committee on the business cycle, namely: Owen D. Young, Chairman; Clarence Mott Woolley; Joseph H. Defrees; Matthew Woll; Miss Mary Van Kleeck; and Edward Eyre Hunt, Secretary.

The work of making the survey of the business cycle has been undertaken by the National Bureau of Economic Research, Inc., 175 Ninth Avenue, New

York City, of which Dr. Wesley C. Mitchell, the American authority on the business cycle, is Director.

The Committee is to report in November. It will make certain definite recommendations. Some of them will deal with the part which the Government is to play and some of them with industry's share in the new business life of the Nation. Statistics of course will have much to do with the solution of this problem of the business cycle, to which forehanded men are looking as a possible way out of their many troubles.

Taking this for granted, what are some of the proposals for controlling the business cycle? Various authorities have suggested certain possibilities. Government and railway purchases may be used as a balance-wheel to steady the business mechanism. Rolling stock might be ordered over the whole period of a business cycle, reducing the volume of orders in good years and increasing it in bad ones. The Government might hold back its great projects in years of intense activity and not bid against private enterprises for labor and materials, postponing its best efforts to seasons of dullness, and thus providing work for the workless and markets for those who have stocks of material to sell. It has been suggested also that roads be built in bad times and that colleges, schools, and Federal building projects be pushed when labor is idle and prices are low. In the aggregate this will be a very material help.

Mr. Hoover has outlined further remedies. He advocates the systematic forecast of business conditions. Present statistics are inadequate, because they do not cover the field and they do not bring to one business what is going on in another one. Such a knowledge is now possessed by the few, but if our plans work out it will be the property of the many.

This is not mere theorizing. Many industries have solved the problem for themselves already. It is the boast of some of them that they were able to forecast the acute depression of 1920 by fully six months, so that they were able to go through the crisis without discharging a man or clipping a dollar from their dividends. They did not buy in the boom, but they devoted all their energies to selling in the slump. They cut down production, they reduced prices, they paid their debts, they discounted their bills, they liquidated their inventories, and wrote off bad accounts ahead of hard times.

What the Committee hopes is to help many business men by informative statistics and their own business barometers to gird themselves against future depression. Thousands of American business men, by wise thought and careful planning, can largely control the cycles of depression by forecasting the course of their own particular business.

This is the first time that the problem has been resolutely attacked. It is a

real effort to deal fundamentally with a failure in our industrial and economic organization which is as old as industrialism. Mr. Hoover says:

There is a solution somewhere, and its working out will be the greatest

blessing yet given to our economic system.

This is a long-time job. It is an old and world-wide industrial problem which we can solve only by American ingenu-

ity and sticktoitiveness. This dismal economic phenomenon has been endured too long by civilization without an organized attempt to combat it.

The time to begin an effective, vigorous, aggressive attempt is to-day—now.

IS THE FARMER "GOLD-BRICKED" AGAIN ON THE TARIFF?

BY O. M. KILE

EVERY time the farmer touches the tariff he gets burned.

It was so in the 60's, when the farmers entered into a deal with the Eastern manufacturers to outvote the South and put through a programme of protective tariff and free Western lands.

It was so all through the years when the farmer's voice was strong in condemning the tariff, yet his vote was too weak to upset it.

It bids fair to prove true again to-day, when the farmer admittedly has the votes and the power in Congress to get just about anything he wants.

"If the present Tariff Bill goes through, it will impose a charge on the American people of between five and six billion dollars in excess of the actual amount necessary to offset the difference in wages here and abroad," says Gray Silver, head of the organized farmers' legislative activities at Washington.

The farmer seems to have been out-traded. He has come to the point where he needs some tariff protection against a few products, such as wool from Australia, frozen eggs from China, lemons from Italy, and hides from South America. Except for these products and a few others, tariff protection is practically useless to the farmer. Of what good, for instance, is a tariff on corn or most grades of wheat, when the American farmer must export these products and sell in competition with the producers of all the world? On our really important crops—the crops that bring in the money—tariff protection means little to the average farmer.

Yet Congress has liberally provided him with a nice, fat, new tariff on nearly all agricultural products. The farmer can't say that the tariff-makers in Congress never did anything for him. They have. They have been most generous with their tariffs—on farm products that do the farmer no good. And then, having done this, what could be fairer than to give everybody else high tariffs on their products too? Certainly the farmer should not object to that theory, the tariff-makers argue. So, as Mr. Silver points out, the farmer is placed in the position of paying billions more for the things he has to buy and receiving tariff benefit on a few comparatively insignificant products.

The farmer believes in protecting in-

fant industries and in protecting against ruinous competition, but what raises his ire, and what should raise the ire of all consumers, is to see tariffs used merely for the purpose of raising prices in this country. For instance, a tariff of twelve dollars is asked on ammonium sulphate, a fertilizing material, at the very time the producers are selling large quantities abroad. Glove manufacturers are asking several hundred per cent duties on grades of gloves not even made or likely to be made abroad.

But how, you ask, has it been possible for the tariff-makers to put this across if the farmers hold the balance of power in Congress?

Well, in the first place, they haven't finished the job of putting it across yet. Not quite, but they very likely will.

The difficulty comes from the fact that the agricultural bloc is a bi-partisan organization. And the tariff is not a bi-partisan matter. It has furnished the chief party issue during all these years when party issues were scarce. A lot of Democrats have come out in favor of protection of certain specific things, and some have even adopted the idea of sufficient protection to overcome the difference in labor costs here and abroad. But it is not quite possible yet to get the two parties to lie down together on the same tariff bed. Not even in the agricultural bloc.

You see, tariff isn't essentially an agricultural question, although it of course affects agriculture. So the bloc members and the Farm Bureau leaders very wisely agreed right at the start not to touch the tariff problem as a bloc. Tariff has never been discussed at a single meeting of the agricultural bloc.

Now a new bloc has arisen in the Senate—a so-called agricultural tariff bloc. It includes some twenty-five Senators, all Republicans, and mostly from the mountain States and the Pacific coast, but for some unexplained reason including Senator New of Indiana, Senator Willis of Ohio, and Senator Keyes of New Hampshire. Its chairman is Senator Gooding of Idaho, and it includes several members of the regular agricultural bloc, notably Senators Capper and Ladd. It holds regular meetings and works on the Senate tariff-making committee with considerable effect.

But this is not an agricultural organization. Certain agricultural groups, like

the poultrymen, the wool men, and the butter producers, who want high tariffs on their products are glad enough to accept the help of the tariff bloc. But the big and powerful agricultural organizations like the Farm Bureau and the Grange take little notice of and have very little to do with the tariff bloc as such. The reason is that all the bloc's efforts are to increase tariffs; they are doing nothing to get schedules cut down on the products the farmer and the consumer have to buy.

The opportunity for this unsatisfactory situation arose when certain farm organization leaders, with more vehemence than logic, asserted last fall, "We are going to ask for the same tariff protection the manufacturer gets." This statement was later corrected to read, "We insist that tariffs be such only as are necessary to overcome the difference in the cost of production in this country as compared with costs in foreign countries." But the damage had been done. The manufacturer said: "All right; we are perfectly willing to give you the same kind of tariffs we take. We want high tariffs; you may have high tariffs, too, on your farm products."

Right there the farmer was out-traded. Whether or not he can improve his position before the Tariff Bill is finally passed remains to be seen.

What the farmers' organizations are working for now is to take the tariff out of politics.

They want a non-partisan tariff board that will make scientific determinations as to just what duties must be laid to make up the difference between labor costs here and abroad, investigate special exceptions to this general rule, and then present a Tariff Bill to Congress to enact with but brief discussion and few modifications. The American Farm Bureau Federation has indorsed and is working for the Frelinghuysen Bill designed to accomplish this purpose.

Can it be enacted?

Senator Gooding says: "Not until the South is educated away from the free-trade idea."

Senator Ladd says: "Tariff can and must be taken out of politics. It will only be a little while longer now until this is accomplished."

Give the farmer a little more time, and he may yet learn how to handle the tariff without getting burned.

AMERICANS WORTHY OF

(C) Harris & Ewing

**STATUE OF THOMAS H. GALLAUDET, TEACHER OF DEAF MUTES, BY
DANIEL CHESTER FRENCH**

Dr. Gallaudet founded the first school for deaf-mutes in the United States, and Gallaudet College, on the grounds of which the statue has been erected, is the only college which gives degrees to deaf-mutes. The fund for the statue was subscribed to by alumni and alumnae of the College in all sections of the country.

A NEW STATUE OF ALEXANDER HAMILTON, BY J. E. FRASER

This is the first clay model of a new statue of Alexander Hamilton, designed by James Earle Fraser, which will be cast in bronze and mounted on a pedestal of Stony Creek granite, at the entrance to the Treasury Building, Washington, D. C. The statue, it is announced, will be dedicated by President Harding in October

A FEW RECOLLECTIONS OF ALEXANDER GRAHAM BELL

BY GEORGE KENNAN

IT was with a shock of deep personal grief that I received, a few days ago, the announcement of the death of Alexander Graham Bell. I had been closely associated with him for more than thirty years, and had come to know him intimately, not only as a scientist, but as a comrade and friend who was interested in all the things that I most cared for, and who shared with me the happiness that he himself derived from the study of science, the love of nature, and the pleasures of outdoor life. For twenty-five years I sailed with him, hunted with him, and camped out with him in a country which was then little known, but which afterward attracted wide public attention on account of his love for it and long association with it. In the close intimacy of camp, log cabin, sailboat, and wilderness I came to know him well and to feel for him the deepest affection and respect. I never made any notes of my association with him, and I have doubtless forgotten many incidents that would throw light on his character and life; but I still remember a few, which may have interest for those who did not know him personally.

I made his acquaintance in the city of Washington nearly forty years ago; but I did not come to know him well until 1889, when we began to spend our summers together in eastern Nova Scotia. There, on the island of Cape Breton, where we both had summer homes, we were very closely associated, and there I first became interested in his scientific work. His house and laboratory were situated on the southeastern side of Baddeck Bay, nearly opposite our cottage, and, as all his more spectacular experiments were tried either on the bay or on the side of the promontory beyond it, they were in plain view from our veranda. Soon after he made Baddeck his summer home he became interested in the problems of aeronautics, and after studying the action of the wind on movable planes he took up the development and improvement of the cellular or box kite. This seemed to have great lifting power, and he hoped that by increasing the number of cells and making them tetrahedral in form he could create a structure that when forced through the air by a powerful motor would actually fly. Scores of times, in the first years of our life in Baddeck, we rushed out on the veranda, glasses in hand, to watch one of Mr. Bell's kites as it rose, like a huge empty honeycomb of red silk, into the upper air. These kites, which were made in Mr. Bell's laboratory under his direct supervision, were carefully built structures of bamboo, silk, and piano wire, and were as perfect in workman-

ship and finish as a Stradivarius violin. He finally made a monster kite, of a hundred cells or more, which was capable of supporting the weight of a man; and Lieutenant Selfridge,¹ who had been sent to Baddeck by the War Department to observe Mr. Bell's experiments, offered to go up in it. The kite carried him successfully to a height of a hundred feet or more, but finally settled down with him into the lake. Subsequent experiments showed that, while the cellular kite had great lifting power when flown at the end of a cord, the surface friction in the multitudinous cells was so great that no motor then available could force it through the air rapidly enough to make it rise. Mr. Bell afterward co-operated with Curtiss and Selfridge in flying-machine experiments at Hammondsport; built a successful airplane in Baddeck, and suggested various modifications in structure which made the machine much more safe and stable in the air.

Some of his experiments, in the early stages of his aeronautical work, seemed to me as queer as they probably were instructive. One day, I remember, in Baddeck Mr. Bell, Professor Langley, and Simon Newcomb spent an hour or two in dropping a cat, back downward, from a balcony, in order to study the way in which she turned herself in the air so as to alight on her feet. I presume it was Mr. Bell's idea, but none of the trio seemed to be conscious of the humorous incongruity between the fame and scientific standing of the experimenters and the trivial nature of the experiment. To them it was interesting as a problem in physics, while to the unsentimental observer it was chiefly notable as an amusing eccentricity of great minds. To see the most noted inventor, the most eminent physicist, and the most distinguished astronomer in America solemnly engaged in dropping a cat back downward from a balcony seemed to me funny enough to make even the cat laugh. It was reported in Baddeck that summer that when Professor Langley returned to Washington he contrived and constructed a mechanical cat which turned itself in the air precisely as the living animal did. Whether this was true or not I never knew; but it seemed likely enough, because Professor Langley at that very time was engaged in flying-machine experiments with whirling planes.

Mr. Bell's kite experiments occupied several years, but he did not confine himself to problems of aeronautics. His

active brain was amazingly fertile in ideas and expedients; the range of his interests was very wide, and he thought of and constructed all sorts of things, from the induction balance and the telephonic probe to the graphophone and a machine for the resuscitation of the apparently drowned. A series of experiments that interested him for a long time—in fact, almost up to the day of his death—had for its object an improvement of the Nova Scotian breed of sheep by means of artificial selection and mating. He gave a great deal of thought to questions of heredity and eugenics, and long before he discontinued his kite experiments he was engaged in an attempt to create a variety of sheep that would bear twins regularly and triplets frequently, and thus reproduce itself with great rapidity. These experiments were completely successful so far as the establishment of the desired breed was concerned, but whether the gain in fertility was not counterbalanced by a deterioration in flesh and wool I do not know.

Any matter that happened to interest Mr. Bell he studied with patient care and investigated by means of original and often highly ingenious experiments. At one time, I remember, his attention was drawn to the waste of heat that results from the burning of fuel in open fireplaces. He at once began a series of experiments to show how great this waste is and to prove that most of the lost heat might be conserved. One afternoon he took me up into the attic of his house to show me a wool-packed tank holding a hundred gallons or more of water whose temperature had been raised to 168° by the conserved heat of an ordinary kerosene lamp burning in a room two or three stories below.

At another time he became interested in the distillation of salt water for drinking purposes. Off the coast of Nova Scotia fishing dories frequently get lost from their ships in fog, and their occupants suffer greatly from thirst before they can reach the land. To Mr. Bell this seemed unnecessary, and he invented a compact and portable still, which occupied very little room, but which could turn salt water into fresh fast enough to sustain the life and mitigate the suffering of two or three men who might happen to get adrift in an open boat. When the miniature yacht Typhoon sailed from Baddeck for England, two or three years ago, it was provided with one of these stills for use in case of accident or emergency.

At one time Mr. Bell was greatly interested in astronomy and meteorology, and in the fall of 1897 I was present at

¹ Killed September 17, 1908, by an accident, while he was flying with Orville Wright at Fort Myers, Virginia.

the laying of the corner-stone of an observatory which he erected near the point of his promontory and in which he afterward installed a fairly large celestial telescope. About the same time I happened to see the fall of a very brilliant meteor in bright sunshine and in the middle of the afternoon. Mr. Bell made me write an account of it for "Science," and a few days later, learning from farmers that it had fallen near the source of Middle River, he drove thirty or forty miles in search of it. But the country in that region was wild, wooded, and mountainous, and he did not succeed in finding it.

Mr. Bell's working methods were painstaking and systematic. When he took up for investigation any matter, great or small, he went back to the beginning of research in that field and experimented for himself, regardless of all that had been done later by other students. When I once suggested to him that he might economize time by accepting facts already well established and pushing on from the known to the unknown, he replied that he got more useful ideas by finding things out for himself than by relying on the work of other men. Perhaps he did. He was untiring in experiment, had wonderful industry, and never allowed himself to be discouraged.

The daily routine of his life in Baddeck was very simple. In the forenoon—generally the *late* forenoon—he went to the laboratory to watch the work there in progress, and then to his office, in a small detached building, where he looked over records, considered problems, and made notes of matters that he wished to discuss with his engineer assistant, Mr. Baldwin. He was always a voluminous note-maker. Perhaps the long litigation over his telephone patent made him appreciate the importance of dates and records; but certain it is that he committed to paper every constructive idea that occurred to him, and every stage of its development into a plan, an experiment, and finally an invention. He also published on his estate a weekly paper called the "Beinn Bhreagh Recorder," which contained notes of his kite, sheep, and other experiments, as well as items of interest to his friends and employees. It was a mimeographed journal and had a circulation of only fifteen or twenty copies; but from it might be compiled a fairly comprehensive history of his experiments and their results.

In the late afternoon, when he had finished his work, Mrs. Bell usually came for him and they walked home together along the beautiful road that he had built from the head of the bay to the point of the promontory. In the evening he read his mail, talked with his family or friends, looked over the newspapers and magazines, or went to the piano and played an accompaniment for chorus singing, of which he was very fond. His serious reading was generally done late at night, after everybody else had gone to bed. He was semi-nocturnal

(C) Harris & Ewing

ALEXANDER GRAHAM BELL

in his habits, and often sat up until two or three o'clock—sometimes later—and made up arrears of sleep in the early hours of the next day. Once a week, on Sunday, he retired to a house-boat, anchored or drawn up on the beach in some beautiful, secluded place, and there became absolutely incommunicado for twenty-four hours. It was an inflexible rule that during this one day he should not be visited, telephoned to, or disturbed unless in case of death, fire, or other great calamity. In this house-boat he prepared his own meals, ate them alone, and took care of himself generally.

Among the many tastes and feelings that Mr. Bell and I had in common, the one that made him most sympathetic to me was his love of nature. It was that, more than anything else, which first made Cape Breton Island attractive to us both. He took delight in water, woods, and mountains, and was never happier than when he was out on the inland sea of Cape Breton in one of the various boats that he designed and built. Frequently, for a week at a time, he and Mrs. Bell would live in a house-boat in some secluded harbor or cove, fishing, dredging up oysters, and exploring in skiff or canoe the neighboring coast. Then, when they next took an outing, they would drive in a "gypsy wagon"

along one of the many picturesque roads that intersect the island, or follow up some clear, dashing trout stream which tumbled down in rapids and cascades from the higher hills. Always on such excursions they bivouacked or camped out wherever night overtook them.

In the fall of 1893, while exploring with E. J. Glave¹ a wild part of the island, twenty-five or thirty miles north of Baddeck, I visited for the first time a group of small but beautiful lakes situated at a height of twelve hundred feet above the sea on the forested watershed where the Baddeck River has its source. The largest of these lakes seemed to me particularly attractive, and a little later, that same fall, I bought from the Government one hundred acres of wild land on its eastern shore and put up there a comfortable log cabin which we named "Cariboo Camp." The next fall Mr. and Mrs. Bell came out to visit us, and were so delighted with the woods, the scenery, and the exhilarating air that they built a cabin of their own, about half a mile from ours, and persuaded Professor Langley to join them in buying two square miles or more of wild land around the whole group of lakes, so as

¹ For six years one of Henry M. Stanley's pioneer officers in Central Africa. He died of tropical fever on the lower Congo about two years after his visit to Baddeck.

to protect them in future from timber speculators and lumbermen.

For the next twelve years we all went there every September and spent from two to six weeks in boating, trout fishing, exploring, and blazing trails through the forest. There Mr. Bell, who loved solitude and the wilderness, was perfectly happy and contented—at least for a time. The nearest farmhouse was many miles away over a difficult trail, and when night settled down on the lonely lake the profound stillness was broken only by the soft hooting of owls, the occasional bark of a fox, or the wild, wailing cry of a loon. But even in this congenial environment Mr. Bell wanted something that would give occupation to his active mind, so one fall he proposed to me that we make a survey and a map of the lake without instruments. As the lake was fairly large and extremely irregular in outline, I did not see how it could be done until he took a large sheet of paper, adjusted it so that its sides were exactly north and south, laid a ruler across it, took a sight along the edge of the ruler at a cape on the other side of the lake, and then with a pencil drew a line across the paper in the direction of the sight. "That," he said, "shows the compass bearing of that particular cape from this particular spot and, to a certain extent, locates both. Now if you keep the paper adjusted in the same way with reference to the points of the compass and take, say, twenty sights across it from twenty different positions at that and other features of the coast, the intersections of your lines, when connected, will make a rough outline of the shore." The scheme worked perfectly. We took hundreds of sights across the lake that fall, and made a large detailed map of it, with a possible margin or error of only a few feet. Then, by measuring a base line stretched across the lake on floats, we got the scale, which was 456 feet to the inch. This method of mapping a lake seemed to be Mr. Bell's own idea. I had never before heard of it, and I don't think he had. At any rate, he seemed to be greatly pleased when it "worked out" successfully.

Although Mr. Bell was born in Edinburgh and spent a large part of his later life in Nova Scotia, he was a patriotic American and loved and admired his adopted country. His greatest invention was made in Boston, his permanent home was in Washington, and American institutions represented his ideals of freedom, opportunity, and progress. When the United States went into the World War, he established a boat-building plant near his laboratory in Baddeck, increased his force of workmen, and turned out a large number of lifeboats for the Allied fleets.

During all this time he took an active interest in the affairs of the little village where he had his summer home. He helped to support the public library and the fisheries' protective association that I founded in Baddeck; he lectured fre-

quently on scientific subjects in the court-house or in his wife's "Gertrude Hall;" and fitted up a large recreation-room in his warehouse, where he met his workmen once a week and interested them in talk, discussions, and entertainments which he himself planned and directed. On the eve of the four hundredth anniversary of the discovery of Cape Breton Island by the Cabots he called the attention of the village to the historic importance of the day by emblazoning the name "John Cabot" on the side of his mountain in huge illuminated letters, and a little later he and his father, Alexander Melville Bell, impersonated John and Sebastian Cabot at a costume ball given by the villagers in the courthouse.

Mr. Bell spent the summer and fall of every year, and sometimes half the winter, in Baddeck; but he always maintained a permanent home in Washington, and some of my pleasantest recollections of him are connected with the informal receptions that he and Mrs. Bell gave, on Wednesday evenings, to the scientific men of the city. They were not "society" affairs, nor were they ever reported in the newspapers, but they were more instructive and entertaining than anything of the kind that I have ever known. There was always a definite programme, planned and arranged by Mr. Bell himself, but the programmes were infinitely varied and covered almost every known field of exploration and research. If a man had done, planned, or found out something new, it was always at one of Mr. Bell's "Wednesday evenings" that he first made it known. Usually, one of the scientific men would talk or read a paper on some subject that he had recently studied or investigated. Then the experts present would discuss it, ask questions, or make pertinent comments and suggestions. The subjects presented were of great diversity and ranged from the indigenous races of China to the life history of eels, and from the latest volcanic eruption to cancerous growths in living plants with highly interesting specimens.

At these weekly gatherings Mr. Bell was at his best. He guided and stimulated the discussions with infinite tact, and if the proceedings threatened to become dull his wide knowledge and fertility of resource enabled him to enliven them with suggestive comments or turn them suddenly into a new and wholly different channel. One evening, I remember, a well-known geographer and explorer read a paper on the Alaskan boundary. The paper was interesting enough, but it was not provocative of animated discussion and only a few of those present had anything to say about it. Then Mr. Bell, remembering that I had just been expelled from Russia, gave a new turn to the proceedings by saying:

"Our friend Mr. Kennan has recently had an interesting experience with boundaries; perhaps he will tell us what

happened when he last crossed the boundary of Russia."

Although taken by surprise, I gave a brief account of my arrest in St. Petersburg and my expulsion from the Empire.

"To be suddenly arrested," said Mr. Bell, "is an unpleasant experience. I wonder how many of us have had it. Will those of you who have been arrested for crime please hold up your hands?"

There were present fifteen gentlemen of the highest social and scientific standing, all of them with a National and most of them with an international reputation. Among them were the secretary of the Washington Academy of Sciences; the chief curator of the Department of Biology in the National Museum; the president of the Washington Anthropological Society; a gold medalist of the Société Géographique de France; the chief of the Weather Bureau; the Surgeon-General of the Army; the chief hydrographer of the Geological Survey; the inventor of the telephone; and half a dozen biologists and geologists of the first rank. To suppose or suggest that any one of them had ever committed a crime seemed preposterous; and yet eleven of them, with Mr. Bell at their head, held up their hands. The effect of this bombshell of inquiry upon the audience was highly amusing. Every one of the eleven looked at his neighbor with amazement, as if to ask, "What did you do?"

Finally, Mr. Bell, with a beaming smile, said:

"Only eleven out of fifteen! That's not so bad. We might all have been arrested. Suppose now we confess what our crimes were."

Amid laughter and humorous banter from all sides, Mr. Bell admitted that he had been arrested on the Canadian border as an escaping embezzler. The president of the Anthropological Society told us how he had been chased and arrested for running by a German toll-gate, and the chief of the Weather Bureau described an encounter that he had with the police in Chicago when, after a desperate fight in the dark, he was dragged downstairs and taken in a patrol-wagon to the station-house as a bank burglar. I cannot now remember the crimes or misdemeanors of which the other eight scientists had been accused, but I still have a vivid recollection of the skillful way in which Mr. Bell turned an evening that threatened to be dull into one of the gayest and most entertaining of the season.

Mr. Bell's last work in Baddeck was connected with the water. He had always been interested in boats, and had tried many experiments with sails, hulls, and methods of propulsion. Shortly after the war he invented and built a flying-boat, driven by aerial propellers, which rose into the air on submerged planes and attained a speed of seventy miles an hour. At the time of his death he was engaged in perfecting a naval target of improved form which could be

towed swiftly by a destroyer while another warship fired at it.

All of his experiments, successful and unsuccessful, were characterized by novelty and originality, and his work in

many fields added greatly to human happiness and left a permanent impress on the world.

It was eminently fitting that he should be laid to rest on Beinn Bhreagh, the

"beautiful mountain" where he had enjoyed so many years of happiness, and where his grave will have almost the sacredness of a shrine for those who loved him and worked with him.

IRELAND REVISITED

BY FREDERICK W. CLAMPETT, M.A.

TRINITY COLLEGE, DUBLIN

"RETURN trip to Cork, please," said I to the agent in London, as I was booking for Ireland.

"Sorry, sir, but we can't book you beyond Dublin—things are too uncertain over there," he replied, smiling.

"Right-o, Dublin it is," I added, and he stamped my ticket. Then the music began.

Avoid the night express, if you can. It was two o'clock in the morning, bleak, cold, and wintry, when the London express pulled into Holyhead Station. The Kingstown steamer was at the dock, under full steam, ready to start, but a close line of military had yet to be passed.

Napoleon speaks somewhere of the value of "two in the morning" courage. It is a great asset.

Although there are no custom duties between England and Ireland, every passenger is obliged to undergo the closest inspection. Nobody is immune. There's no royal road to Dublin. It was a minute search for firearms—for any kind of weapon.

Then we embarked and pointed towards Ireland's Eye. It is a comparatively short run to Kingstown, but, as much always happens during that turbulent trip, let silence reign. Suffice it to say, 'twas a rocky road to Dublin.

Right on the dot of seven we steamed into Kingstown Harbor. The sun was well up, and the freshness of things, the glorious deep green of the sloping hills, was a picture for the gods.

There was much hurrying and scurrying when the train, a few minutes later, slowed up in Westland Row Station, in the heart of Dublin. At once I was struck with the martial air about the place. It reminded me of the Gare Saint-Lazare in Paris during the great war. Uniformed men of the National Troops, as young-looking as senior Boy Scouts, were in evidence on every hand. With bristling arms they expressed authority and claimed respect.

A small army of jaunting-cars, drawn up in line, awaited the call of weary passengers. Strange to say, there was no shouting, no yelling of hotels. "First come first served" was the order of the day, and there was no delay.

"Jury's Hotel," I called out to the driver, as I jumped up on the seat, satchel in hand. In my college days that was a well-known meeting-place for the "Trinity boys," and I was hoping to renew acquaintance. The driver smiled

at the name of "Jury" as he flourished his whip and started his horse.

When we got outside the station he slowed up and quietly remarked: "Jury's Hotel is no more, sirr." That was my first surprise.

"The Gresham," I ordered, and I began to sense an alteration in my plans. The cold morning, acting on an empty stomach, was not conducive to happy thoughts. The driver seemed to realize this, for he dropped his jaunty air as he replied: "Begor, sirr, I was searchin' the other day in the ashes of the 'Gresham' for a 'momentum' when the Free State fellows drove me off with the point of their guns."

He drove aimlessly on, while my mind was working.

"How about the 'Metropole' on Sackville Street?" I asked, wondering what the reply might be.

"Sure, 'twas turned into a cinema hall long ago, sirr, and the front of it is riddled with bullets," he sadly replied.

My trump card was the "Shelbourne," on Stephen's Green, but I was holding it up my sleeve, for the rates were like the Ritz of London and the stakes too high. I made one more try.

"Bring me right away to the 'Ham-mam'!"—and there was a tone of desperation in my voice. The sympathy of the driver was at last aroused.

"You're out o' look, sirr," and he added, lowering his voice: "'Twas mined tin days ago by De Valera, and is fined in to keep the dust from flyin', sirr."

I had reached my limit. So far, the driver was a distinct negation. His charges were piling up as we drove around the circumference looking for the center. His manner, I confess, irritated me.

"Dublin Castle!" I shouted, and I seemed to crumple up with a feeling of despair.

That driver had a delicious sense of humor, sure enough. He pulled up his horse with a close rein and settled down for the heartiest laugh I have heard in Europe. Even the horse seemed to sense it, for his ears were turned towards his master and he tried hard to turn his head. When the laugh-wave swept by, the driver's face assumed a solemn tone as he said:

"Dublin Castle, God forgive us! Dublin Castle! Hotbed of murderers and adults! Ireland's hell! War and pestilence and famine all in one! Divil a Dublin Castle for yer honor! No, sirr, the name's not fit for the like o' ye. Lave it to me. Ye'll be in a feather bed to-night that Daniel O'Connell himself might envy!"

He was the son of a prophet. As it turned out, not a hothouse plant in the Hotel Crillon of Paris was as snug and cozy as I found myself during the days that followed.

When the room was secured, I turned to my driver and asked, "How much?" Tim (his name was Tim) had a quizzical look in his kindly eye as he turned his cap around in his hands.

"Sure, I'll lave it to yer honor."

MR. CLAMPETT'S JAUNTING-CAR

a long wait at the station, and didn't I keep ye out o' Dublin Castle?"

We parted on good terms.

Breakfast over, I wandered down Dame Street into College Green, on my way to Trinity College. Reports had crossed the Irish Sea that old Trinity had gone the way of the Four Courts. Visions of wreckage were imaged in my mind.

My old Alma Mater, founded in 1590, with its massive buildings and classic walls, stood out in noble, bold proportions, complete and beautiful. I stood at the entrance, as the names of world-known men, who did honor to her memory, floated before my vision. Dean Swift and Berkeley, Burke and Goldsmith, Lecky and—but why continue? Their names are legion. Pride and gratitude filled my heart. I doffed my hat to the statue of Edmund Burke and bowed my head before that of Oliver Goldsmith, and crossed the entrance.

Old Williams, porter of the generations, dread of tardy freshmen, was at his post. After the first word was over, I asked, "How are things in the city?"

His answer was unique, forceful, true.

"They call it civil war, sir, but the name is too respectable. A small army of highwaymen, brigands, under De Valera and Childers are trying to outdo the Germans in wanton destruction, but the end is in sight."

That sentence told the story in its bare truth. No truer statement was made to me in Ireland.

After two hours of sacred wanderings within old Trinity I walked down Westmoreland Street, over O'Connell Bridge, and entered the finest boulevard in Ireland.

Sackville Street was filled with soldiers. Reserves of the British army in their khaki, soldiers of the Free State in their dark-green uniform, numerous bodies of young men in civilian clothes—"Irregulars" in disguise—armed lorries rushing by, bristling with rifles ready for action, men of the Constabulary moving slowly on.

But the strangest thing of all was the attitude of the people. Peaceful London was over-serious, gloomy. Warlike Dublin was gay. And this in the very face of wholesale destruction.

Sackville Street is in ruins. In the very center of the boulevard, the invincible Admiral Nelson, lifted high on his monument, stands, one-armed, commanding, as if in the throes of Trafalgar. The man and the pillar are covered with bullet marks. The beautiful buildings below Nelson's Pillar, once as graceful as the best in the Champs Élysées in Paris, are in ashes. The General Post Office, greatest of them all, is in ruins. Between the Post Office and Gilbey's wine store stands the gutted Y. M. C. A. building.

In big, golden letters were the words, "Seek ye first the Kingdom of God," and every letter was mutilated with shot.

The lamentations of Tim, my driver, "me home to me."

The Gresham, the Hammam, the Metropole hotels were in ashes, mined by the forces of De Valera.

From Nelson's Pillar to Parnell's Monument was pile upon pile of ashes. The Huns took revenge upon a hated enemy on their soil. The Irish "Irregulars" wantonly destroyed their own.

Hailing a jaunting-car, I drove towards the North Wall to view what was left of the Custom House. Then, turning in our tracks, we drove along the banks of the Liffey to study the most wanton destruction of all in this cataclysm of blind hate.

The great law buildings, known to the

A WILDCAT GOES BACK TO FRANCE

Soldiers of the A. E. F. are finding their way back to France to revisit the battlefields upon which they and their comrades made history. Mr. Thatcher T. P. Luquer, of the 306th Engineers and the 81st Division, which wore on its shoulders the insignia of the wildcat, tells the story of the change in the devastated regions of France since the A. E. F. came home, in a forthcoming issue of *The Outlook*.

world as the Four Courts, are blotted out. Its Library, precious as that of Louvain, was burnt with fiendish design. Thus records of priceless value in the history of justice in Ireland were turned into ashes.

This was enough for a day. I envied the light-heartedness of the people.

For five busy days I moved about Dublin, renewing old friendships. My business was to find out the sentiment of the people. How was all this idiotic destruction viewed by the "man in the street"? I met clergymen, of Catholic and Protestant Churches, physicians, attorneys-at-law, and the verdict was unanimous. "The Free State movement has come to stay. Childers and De Valera are doomed."

My friends were not in favor of my entering the interior. Bridges were blown up. Tracks were destroyed. There was no train schedule. Frequent ambushes, raiding parties.

The outlook was not encouraging; but I determined to visit my relatives in the south.

The Southwestern train to Waterford was impossible, as a bridge at a town called Ballyhale had been mined. After a weary day of it I reached Waterford by way of New Ross.

That historic city of some 25,000 peo-

ple is known as the "Urbs Intacta" (city untouched). When Oliver Cromwell threatened to destroy it, the Mayor of the city handed him the keys of the city, and it was saved; hence the name.

In the strange paradox of history it was saved by Cromwell and wrecked by De Valera.

Dublin was repeated. Hotels, post office, destroyed or gutted. Wanton destruction on all sides.

In Hearn's dry goods store on the Quay there was a cheap sale. Bullet-riddled blankets were offered at reduced prices. There were "Fire Sales" along the water front. This beautiful city, the joy of tourists, looked like a watering-place "out of season." The "Irregulars" left behind them the chaos of brigandage.

For seven days I was the guest of my relatives. We visited the home where Lord Roberts, once Commander-in-Chief of the British forces, was born and reared, passed by the residence of the Redmond brothers, once high in the ranks of the Nationals in the British House of Commons. Strange memories were ushered in.

Chums of my childhood, fellow-scholars of old Trinity, were rounded up. Olden days revived. Everywhere, without exception, the yearning of the people was for the Free State Government.

"If an election took place to-morrow," said a prominent attorney-at-law, "ninety per cent of the electors would vote Free State."

Bernard Shaw was in Waterford, awaiting a train for the Fishguard steamer *en route* to London. Interviewed, he had this to say of De Valera:

"Of course he can enjoy the luxury of dying for Ireland after doing all the damage he can. 'What matter if for Ireland dear we fall?' is still the idiot's battle song. The idiocy is sanctified by the memories of a time when there was nothing to be done for Ireland's freedom but to die for it; but the time has now come for Irishmen to learn to live for their country—instead of which they start runaway engines down the lines, blow up bridges, burn homesteads and factories, and gain nothing by it except such amusements as making my train from Waterford to Rosslare several hours late. Ireland would be just as free at this moment if I had arrived punctually. You see, the cause of Ireland is always dogged by the ridicule which we have such a fatal gift of provoking and such a futile gift of expressing."

"I suppose it will have to be settled, as usual, by another massacre of Irishmen by Irishmen."

The words were scarcely uttered when, at a point not far from where they were spoken, the idol of the common people, the man who won the respect of Lloyd George, the romantic figure of the whole tragedy, Michael Collins, fell by the bullet of a fellow-countryman, with the prayer "Forgive them!" on his dying lips.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER IV—FROM A DIPLOMAT'S NOTE-BOOK

AND now that I had been received and entertained by about everybody in Constantinople, it was time for my audience with the Sultan, who came last, like the prima donna. The official functions at the palace under Abdul Hamid were always dignified and punctilious. Royal carriages were sent with escorts for myself and staff. At the entrance of the palace I was met by the Introducer of Ambassadors, and we proceeded to the *salon* of the Grand Master of Ceremonies. I was then joined by the Minister of Foreign Affairs and conducted into the presence of the Sultan by the distinguished soldier Osman Pasha, famed as the hero of Plevna, who was then the Grand Marshal of the Palace.

The Sultan, standing, received me in the audience room. He was small, spare in frame, with a short, full black beard. A few years later, when his beard turned gray, he dyed it henna. He wore a plain black frock coat, buttoned to the neck. His complexion was sallow, his nose prominent and aquiline, and his eyes dark, sparkling, animated.

The formalities, presentation of credentials, and brief set addresses on both sides were soon over. His Majesty sat down and invited me to do likewise. Turkish coffee and cigarettes were served—the coffee in egg-shaped cups resting in jewel-studded holders. The conversation was interpreted by my dragoman (the Turkish name for an interpreter). The audience concluded, we returned to the Legation in the same stately manner. Then we gave a reception to the American colony, almost exclusively composed of the missionaries resident at Constantinople, the President and Faculty of Robert College, and the Home School, which was then located across the Bosphorus at Scutari.

On the day preceding my audience I presided at the Commencement of Robert College, located at Roumeli-Hissar, of which the venerable Dr. George Washburn was President. The Commencement was similar to commencements at home, excepting that the orations of the graduates were spoken in the various languages of the East, besides English and French. The Turks at that time could not understand the benevolent purposes which inspired, on the part of the Americans, the establishment of colleges and schools throughout the Empire. Their experience with the various institutions of other nations made them extremely suspicious.

THE SULTAN SAYS HIS PRAYERS

Friday in the Turkish Court was *Selamlık*, when the Sultan attended the mosque for prayers. It was always cele-

(C) Underwood

Sedans in America roll on wheels. But the originals are carried by camels in Cairo. The autobiographer visited Cairo in 1888, in connection with a series of conferences with the governors-general of various Turkish provinces

brated with pomp and splendor. The Ministers and Ambassadors were expected, as a matter of good will, to attend this ceremonial occasionally.

A description of this ceremonial which I jotted down a long time ago is as follows:

The Sultan's residence is known as Yildiz Palace, Yildiz signifying star. The mosque he usually attends is in the vicinity of the palace grounds, distant about four hundred yards. The visitors are received in a small house or kiosk beside the mosque, where a special suite of rooms is reserved for the diplomatic corps. Ten or more regiments on horse and foot are stationed around the elevation stretching from the palace grounds encircling the mosque.

All is in readiness. At about eleven o'clock the gates of the palace inclosure are thrown open. The Sultan is seen in an open barouche, Osman Pasha sitting opposite him. Following the barouche are usually the leading officials of the Government and army officers. The regiments are drawn from different parts of the Empire, and are dressed in glittering uniforms denoting the section from which they come. The most resplendent are the Nubian and Arabian regiments. As the Sultan passes, troops and officials, as from one throat, cry thrice, in Turkish equivalent, "Long live the Sultan!"

He then enters the mosque, and all is still while the prayers are being read. This occupies about thirty minutes. The Sultan then stations himself at a window in the mosque, and the troops file by, the band playing the national march. The Sultan is known to be constantly in fear of assassination, and seldom appears in public except on these occasions. He shows timidity in his expression.

One of his aides-de-camp reports to him the diplomatic representatives and other distinguished persons who are present, and thereafter returns with some gracious message for each. While the prayers are going on in the mosque coffee and cigarettes are served to the guests in the little kiosk. Several carriages, open and closed, together with several saddle horses from the royal stables, are brought down to the mosque. The Sultan chooses which shall be his conveyance for the return to the palace. He usually selects a two-horse topphaeton, and, himself taking the reins, he drives back to the palace, accompanied again by Osman Pasha.

DIPLOMATIC TANGLES

The decorative things are what many people think of exclusively when considering the career of a diplomat. These

International

The Sultan's private mosque in Constantinople, where Turkey's ruler said his prayers amid pomp and splendor

are necessary enough in the promotion of good relations, but diplomats do not get their work done at functions.

There were a number of important diplomatic questions between the United States which gave rise to recurring vexatious differences.

Like China, Turkey had treaties with various European nations granting extra-territorial rights to their nationals. Foreigners were to be judged by their own ambassadors and consuls in both civil and criminal suits between one another. In crimes or offenses committed by foreigners against natives jurisdiction, by long usage, was exercised by the consular court of the person accused. Foreigners were to be exempt from all taxes except on exports and customs.

Such a juridical anomaly is necessary where foreigners have no confidence in the administration of the government under which they reside. These rights of foreigners were very irksome to the Turkish Government and derogatory to

its sovereignty. Some countries, especially Russia, in return for other advantages were not insisting upon their claims under the capitulations, and this encouraged the Ottoman Government under various pleas to resist claims, especially as to criminal jurisdiction over the nationals of other countries, including our own.

We had had a series of treaties with the Sublime Porte since 1830, but there had been many disputes as to the interpretation of the various articles. The treaty of amity and commerce of 1862 was abrogated upon expiration at Turkey's request, which left various controversies subject to the discrepancies of the earlier treaty of 1830, about which was a dispute as to translation—an irritating condition.

Similar troubles arose from the treaty of 1874 of naturalization and extradition. This treaty, after conclusion, was amended by the Senate to provide for a requisite of two years' residence in the country of naturalization after issuance

of naturalization papers. The amendment was accepted by the Sublime Porte with a declaration of interpretations. The United States Government, however, did not accept the interpretations, and the treaty remained in abeyance.

During this time a number of Christian subjects of the Porte, principally Armenians, Greeks, and Syrians, came to the United States and remained just long enough to become citizens. Thus freed from Turkish jurisdiction, they returned to Turkey. Many were arrested on charges of being involved in alleged conspiracies against the Ottoman Government. These frequently recurring cases produced considerable irritation. At many times there was a severe strain upon the relations of the two countries.

It was felt that the treaty of naturalization and extradition, with the two-year clause, the same as we have with other nations, would prevent subjects from seeking naturalization in America for no other purpose than to escape liability as Turkish subjects on their return.

One of my first diplomatic efforts was to effect an adjustment of these difficulties either by a new treaty or acceptance of the treaty of 1874 as amended by the Senate. After long and tedious negotiations by an exchange of notes, the Ottoman Government accepted the treaty as amended. I received a flattering cable of congratulations from Secretary Bayard and a letter from Assistant Secretary Adeed, in which he wrote:

Whatever may be the outcome of this negotiation, you are to be congratulated without stint on having achieved a decided diplomatic success by causing the Government of the Porte to recede from the position which it took in 1875, with respect to the Senate amendments, and to which it has so pertinaciously adhered ever since, until you wrought a change of heart and induced it to take a more rational view of the subject. This makes it far easier for us to deal with the question now as justice and equity and due respect for the rights and privileges attaching to American nationality may demand.

As fourteen years had elapsed since the negotiation of the original treaty, it was thought best that the matter should be again submitted to the Senate. Some of our leading missionaries, instigated by prominent Armenians who had become naturalized and returned to Turkey, opposed ratification. No action was taken by the Senate. It was a discouraging situation and difficult to explain to the authorities of the Porte, as by instructions I had assured them that by their acceptance of the amendments negotiations would be concluded.

In the meantime many cases arose, some of a very serious nature, regarding the protection of American citizens of Turkish origin who, upon return to Turkey, became involved in political agitation or who were accused of crimes. Ten years later, on my second mission

to Turkey, I was instructed to renew the negotiations, but the Ottoman authorities were unwilling. We were left without a treaty of naturalization.

REOPENING AMERICAN MISSIONARY SCHOOLS

Governmental hostility to the four hundred American missionary schools in Turkey was stimulated by Russia and by the priests of the French Jesuit and Catholic institutions. The Turks were accustomed, besides, to look for sinister motives underlying the spending of so much money. The Greeks and other nations had fostered political designs there under the cover of scientific and benevolent organizations.

Before my arrival, beginning with the winter of 1885, thirty American schools were closed by the authorities. The pretexts were flimsy. Schools, it was alleged, had not submitted study programmes, text-books, and teachers' certificates to the Government. This was quite contrary to the facts.

At the same time the Sublime Porte used another method to hamper the schools. A new law was proposed by the Sublime Porte for the governing of foreign schools in the Empire. Schools, according to this law, must have the Sultan's *irade* or sanction. Such schools as did not receive this sanction within six months were to be closed by the authorities.

It was no easy matter to have this proposed law modified so as not to disturb existing schools or further development of these schools.

Though I argued the matter again and again with the Minister of Foreign Affairs and got him to permit the reopening of the schools, it remained an unexecuted promise. In order to take the promise out of the nebulous atmosphere of officialdom and make an actuality of it, I decided to visit the various consulates and confer with the missionaries on the spot. In the middle of February, 1888, I visited Cairo, Jaffa, Jerusalem, Beirut, Mersina, and Smyrna and conferred with the *valis* or governors-general of the respective provinces. I instructed the missionaries to prepare for the opening of the schools, and under my directions such schools as had been closed were immediately opened. The progressive closing of these schools since 1885 seriously threatened the existence of all the American schools, and therefore it was important to reverse the Government's policy. Secretary Bayard on May 24, 1888, wrote me as follows:

The ability, tact, and energy displayed by you in the prosecution of this delicate and important question is deserving of the greatest credit, while the success which has finally crowned your efforts is exceedingly gratifying and entitles you to the Department's special acknowledgment.

SALE OF THE BIBLE DEFENDED

At the same time that the Turkish authorities made their drive against the

(C) Raphael Tuck & Sons, Ltd.

The smoking hour in a cafe in Cairo. At the time of Mr. Straus's visit, Egypt was still under Turkish suzerainty

missionary schools they arrested the agents of the American Bible Society and the British Bible Society who went about selling Bible tracts. These agents were known as colporteurs.

I protested against these arrests and secured the release of the agents one after the other. Then I argued for the rights of these colporteurs before the Grand Vizier, the venerable Kiamil Pasha, the most enlightened statesman of the Turkish Empire. I based the right to dispose of these tracts upon the general principles of commerce, arguing that, once the authorization of the censors for printing and publishing a book had been obtained, a prohibition of its sale was in restraint of commerce. There was no reason why different regulations should be made for book hawkers than for hawkers of any other article.

The subject being presented in this matter-of-fact way, the Grand Vizier agreed with my conclusions. Orders that no further arrests be made were issued. Those already arrested were ordered released. The British Bible Society, which benefited equally by this decision, conveyed its thanks and appreciation through my colleague, Sir

William A. White, the British Ambassador.

A JOURNEY TO EGYPT

As I have stated, I obtained permission from the Secretary of State in March, 1888, to visit some of our principal consulates to bring to a conclusion on the spot various matters about which I had negotiated with the Porte.

My wife and my little five-year-old daughter, Aline, with her nurse, accompanied me. We took a steamer to Alexandria, and from there went to Cairo. At that time Egypt was still under Turkish suzerainty. Our Consul-General and diplomatic agent there was John Cardwell. We also had the pleasure of frequently meeting Anthony M. Kelley, to whom I referred earlier in this account. After his unfortunate experiences with the appointments to Italy and Austria-Hungary, President Cleveland appointed him one of the American judges of the Mixed or Reform Tribunal at Cairo. We saw much of him and his charming wife. He was a learned jurist and was highly respected as one of the ablest judges of the international tribunal.

I had also a pleasant conference with Sir Evelyn Baring, afterwards Lord

Paul Thompson

Yildiz Palace, Constantinople—"The official functions at the palace under Abdul Hamid were always dignified and punctilious"

Cromer, the British agent and Consul-General in Egypt, who was then at the height of his career in the reconstruction of Egypt. I also came in contact with Major-General Sir Francis Grenfell, Sirdar or Commanding General of the Egyptian army.

Nubar Pasha was the foremost statesman of Egypt. He was an Armenian, educated by the Jesuits in France. His general knowledge was extensive. He had the wide outlook of the European statesman of the first rank with all the subtlety of an Oriental. It was he who conceived the plan of introducing a legal system and good government into Egypt and of creating the mixed tribunals or international law courts. He acted in sympathy with Lord Dufferin's programme for the reorganization of Egypt. Consequently, he was highly regarded by the British.

The Khedive, Mohammed Tewfik, son and successor of the extravagant Ismail, of Suez Canal fame, entertained us. He was about thirty-six years of age. Without his fez he might have been taken for an Englishman. He spoke English perfectly, and his conversation showed he was well informed about the governments and peoples of Europe.

He desired to bestow a decoration upon me, but I informed his aide-de-camp that under our system our diplomatic representatives were not permitted to accept such distinction. Within an hour after my first call upon him, which was made by appointment, he, accompanied by his aide-de-camp, called upon me at the Hotel Shepherd. Next day he decorated the manager of the hotel, which, it was stated, was done in my honor.

A few days later Mrs. Straus and my-

DRAMATIC PHASES OF DIPLOMACY

The inside stories of a number of dramatic episodes in Mr. Straus's diplomatic career are related in next week's installment of the Autobiography. Mr. Straus describes his journey to Jerusalem, where he found under arrest by the Ottoman authorities hundreds of Jewish pilgrims to the Holy City. He at once demanded the release of these immigrants, holding that they were imprisoned contrary to treaties with the United States, Great Britain, France, and other Powers, and secured their release. The distinguished autobiographer tells how he secured the Sultan's permission for American scholars to undertake important Babylonian excavations. He describes Baron de Hirsch at odds with the Turkish Government regarding railway and other concessions, and tells of the invitation extended to him by both parties to arbitrate the disputes in return for an honorarium of 1,000,000 francs, and his declination for diplomatic reasons of the astounding offer, but his willingness to sit as a mediator should the negotiations at any time require it. The story of the Sultan's farewell to America's Minister on the latter's return home is included in next week's installment.

self were invited to lunch with the Khedive. It was an unusual menu. The names of the dishes had been devised for the occasion, and included such oddities as "crevettes à l'Américaine," "bombe à la Lincoln," etc. I recall the Egyptian quail as specially delicious. It is larger and plumper than our quail. In season, when they migrate from the north, they are trapped in great numbers, and they can be bought in the markets for a plaster (less than five cents) each.

A CARGO OF MISSIONARIES AND RUM

From Cairo we went direct to Beirût, where, in connection with the opening of the schools, I came in close relationship with our leading missionaries.

The missionaries at Beirût of the Presbyterian Board of Missions and the members of the Faculty of the Syrian Protestant College were an exceptionally fine lot of able and devoted men. The nature of their work was not, as generally supposed, to convert Mohammedans to Christianity; the number of such converts was few and far between. Mohammedans are sincere and intense upholders of their faith, which they look upon as the one faith. They regard Christianity as inferior and less rational.

The converts were almost exclusively among native Christians, Armenians, Syrians, Greeks, and Maronites. The chief result of their work has been educational, carried forward by a religious spirit among people who have a less enlightened form of religion and among those whose form of Christianity is of a semi-pagan character. At the time of my visit, the Presbyterian Board alone had over one hundred schools throughout Syria, mostly located in places where previously there had been no schools of any sort.

Chief among the missionaries who consecrated their lives to their work I recall the venerable patriarch, the Rev. Dr. Henry H. Jessup, a man of learning, energy, and wisdom. In 1910, near the close of his career of service, his book "Fifty-three Years in Syria" was published. He gives in much detail a description of his departure from Boston in December, 1856, on the Sultana, a bark sailing for Smyrna, which had on board besides himself nine other missionaries and a cargo of New England rum. Truly it may be said the cargo was spirited as well as spiritual.

One of the missionaries aboard that interesting vessel was the Rev. Daniel Bliss, who became President of the Syrian Protestant College. I found him to be a minister and educator of the finest type. The first President of the College, he was succeeded in 1902 by his already distinguished son, the Rev. Howard S. Bliss, who continued with renewed vigor the work of his father, enlarging the scope and curriculum of the College, so that it became through its thousands of graduates in arts, science, and medicine a potent force

throughout the whole Near East. I became very intimate with the younger Bliss during my subsequent missions to Turkey, and lastly in 1919, when he was present at the Paris Peace Conference in behalf of Syria. He was then suffering from a serious malady, and died the following year in America, honored, beloved, and respected in both the Old World and the New.

While writing of these men I want to express my admiration for several other of the American educators and missionaries in Constantinople: Dr. George Washburn, President of Robert College;

Dr. Albert L. Long; and Dr. Edwin A. Grosvenor. Dr. Washburn was a statesman no less than a college president. His knowledge of the diplomatic East was thorough and reliable. Bulgaria at one time was largely governed by officials who had graduated from Robert College, and they looked to Dr. Washburn as their chief adviser. The British Ambassador frequently consulted him and was much influenced by his advice. He understood the Turks and, like others of the College Faculty, spoke their language.

In the year 1888 I secured, after ardu-

ous negotiation, permission for the erection of a new building for Robert College and a house for the President. After the permission was obtained and the papers were being prepared in the office of the Grand Vizier, some enemy of the College so manipulated its permission as to strike out the permit for the addition to the College. This caused great anxiety, as the building was in process of erection. But by reason of my good relationship with the venerable and enlightened Grand Vizier, Kiamil Pasha, I secured for both buildings the Sultan's *irade*.

THE WIND TERROR OF THE EAST

BY LIEUTENANT-COMMANDER K. C. McINTOSH, S.C., UNITED STATES NAVY

FORTY thousand Chinese have perished within the past few weeks, victims of a storm of wind and rain which swept ashore at Swatow. In 1913 thousands were drowned in the harbor of Hongkong by a similar storm. Only recently Congress was asked to provide relief for the planters of Guam, many of whom had been ruined by a hurricane. Not long ago a great passenger liner, loaded with passengers, was destroyed in the China Sea. Macao and Manila are constant sufferers from these terrible winds, and hundreds of houses are unroofed and blown down every year on the shores of the Inland Sea of Japan and the southern coast of Hondo, the largest island of the Japanese Archipelago.

These terrific winds, called typhoons, are noticed by the world only when they cause some disaster appalling in its totals of lost life and destroyed property. They are noticed by the world *only when they come ashore*. Every year, however, seamen fight them week after week, month after month, from early June to late November. Hardly a fortnight passes in the summer and fall without its Pacific typhoon; and the most terrible of them stay at sea during their entire course.

We have disastrous hurricanes that sweep our Southern coastal States, but these hurricanes are born in the Caribbean Sea or the Gulf of Mexico. Their course is broken by islands, large and small, and the shores of the mainland are very close. A circular storm is like a rolling wheel—any little pebble or bush can affect its course and speed. A patch of woods or a moderately high hill can materially diminish the storm's force. The hurricanes which damage the coast of Louisiana and Mississippi are those which have managed to slip through the narrow channel between islands off Yucatan, and so reach our shores with their fury still immature but unhampered. In the broad Pacific there is nothing to stop them. Day after day the typhoons swing across open water, gathering speed and strength as

they gradually curve northward, until by the time they reach the broad side of China they have becoming yelling, destructive giants.

Two things are necessary to start a circular storm: a quiet, sheltered, windless area and a hot sun. When these two things combine, a typhoon is invariably started. If the earth's blanket of air revolved with the earth, there would be areas of perpetual typhoon, and China and Florida would escape. However, as the earth spins it trails the air behind it, like streamers on an electric fan; and so, once started, the typhoon begins to slip to the westward, left behind by the hurrying earth. When the birthplace of the storm is surrounded at fairly close range by hills and rocks, forests and cliffs, the storm soon breaks up. When it has the open sea for a playground, it grows in size and violence, gradually drifting northward, pushed by the resisting quiet air which it is disturbing, until its strength

wanes and the backlash of its own fury drives it northeast and out to sea again, dying as it strikes the cold air currents of the fortieth parallel.

The physical laws involved are the simple ones that heated air rises and that two bodies cannot occupy the same space at the same time. The hot sun beats down on the still air and overheats it. Immediately it begins to rise, leaving a partial vacuum. Cooler air from all sides moves in to fill up the depression; but air from all sides at once cannot reach it, so a whirl of air forms around the hot area as water running out of a bathtub whirls down the pipe. In this case the air whirls *up* instead of down, pulling up the sea and increasing the vacuum itself. Once firmly established, this air eddy starts to roll westward, and the mischief is on its way.

Contrary to one's first and natural conclusions, a typhoon travels very slowly—usually between five and ten

Underwood

THE TYPHOON AREA

miles per hour, and practically never over eighteen or twenty. The movement of the storm itself is not dangerous. The intruding currents of cool air, radiating from the still, empty, slow-moving center like sparks from a pin-wheel, however, reach terrific speed. Their velocity is roughly the square of the rate of progress. That is, if the storm is moving forward at five miles an hour, the concentric winds are running twenty-five miles an hour. By the time the center has reached a speed of ten miles the whirling winds are making one hundred. The upper limit of possible velocity of typhoon winds has ever been measured—the instruments blow away at anywhere from one hun-

dred to one hundred and twenty miles. When one considers the power of such frightful wind velocities, the amount of damage done does not seem unreasonable; but when we stop to consider that as the storm center passes, the wind, which has been constant, suddenly and without warning starts to blow just as hard in the direction exactly opposite to its former course, the wonder is that anything survives. I have seen sturdy coconut trees stand for hours of the first half of a typhoon bent double, their fronds trailing out in the wind as rigid as steel rods. And with the first screaming assault of the reversed wind of the second half those same trees were ripped to splinters, solid twenty-pound green

cocoanuts as big as footballs sailing down the gale like scraps of paper. The terrible loss of life in the "sampan cities" of China, where thousands of people live their entire lives in houseboats moored in regular streets and blocks along the fringes of the bays, is inevitable once the typhoon center comes near. Row after row of floating homes is hurled on the beach in a smother of stinging foam and green water; then the wind shifts and the tangled mass is carried shrieking out to sea. When a steamer's only hope is to run away, upon what can a houseboat depend for safety?

Ordinarily, whirling tropical storms do not occur before July 1 nor after November 1, inspiring the old "Western Ocean" warning of—

June, too soon.
July, stand by.
August, you must.
September, remember!
October, all over.

An unusually warm spring or an unduly lengthened summer sometimes causes storms in June and November, and these storms, when they do occur, are often the worst of the season. These calendar limits are fixed by the semi-annual shift in prevailing winds across the two oceans. From November to June the trade winds blow briskly from east to west, and nowhere except in the Gulf of Tehuantepec, under the lee of Mexico, does a "quiet, sheltered, windless area" exist. The Caribbean and the Pacific are cool and the air is constantly moving. In May or June of each year the trades die out and the monsoon, blowing from the southwest, hot, sickly, and moist, takes its place. The mountains of Honduras and Nicaragua shelter an area large enough to breed hurricanes during this time; and to the northward of the high mountains of Borneo, ten degrees "above the line," the island of Yap lies in the hot sun, without a breath of cooling breeze until the trades come back in November. Yes, the same island of Yap which tried to brew trouble of another kind last year—Yap of the Pacific cables and the stone money. The Swatow typhoon, like all other typhoons, was born in Yap.

A wonderful old man in Manila, called Father Algué, has told the world a great deal about typhoons. His instruments are known in every weather-forecasting station. His books are on board every modern vessel; but his greatest work has been the cable service of the observatory he founded, a service which saves thousands of lives a year. Years ago, in Guam, before the first symptom of a storm developed locally we used to receive Father Algué's cables telling us of a coming typhoon, its course, and the hour and minute it would reach us. Sometimes he became personal, as in one message reading: "Tell transport Sherman to leave Apia Harbor before six o'clock to-night if she wishes to see Manila this voyage!"

Father Algué's records of storms, ex-

tending over many years, show that all typhoons follow three general tracks—two usual, one eccentric. Those that start slowly take an initial course nearly due west, gradually gathering headway, until by the time they have reached full power and swing sharply to the north they have also reached the Philippine Islands or the China Coast. (Track No. 1 on the chart.) If they begin violently, their full force has passed in the empty sea before they sweep across southern Hondo. (Track No. 2.) And about once or twice a year, for reasons not yet thoroughly understood, a typhoon attains its maturity too soon, goes insane, and flies the wrong way. (Track No. 3.) These maniac typhoons are short-lived, like other maniacs, and rarely last longer than just long enough to uproot the coconut trees from which Guam makes its livelihood.

Outwitting a typhoon is an exhausting but exciting adventure when a ship is not too close to shore—"has plenty of sea room." First of the many warnings that presage the storm is a thick, still heat. Then the wind begins to sidle about in tiny puffs, its direction veering 180 degrees in two or three minutes. The second day long, thin fingers of white cloud radiate from some one point on the horizon, like bony fingers of a giant hand, and an opaque white haze hangs in the far distance, although the sky is bright overhead. Then for two or three days the clouds, at first white, then gray, then purple black, climb steadily, massing higher and higher. The fitful gusts grow stronger, and at night you wake, straining your ears. There is nothing to hear but the palm leaves rattling in the gusts; but you have an eerie sensation that some one in the distance has screamed. By this time the islanders are watching the wind anxiously. If it keeps on shifting, well and good, for the center is passing by. If it steadies to one point of the compass and slowly rises, the storm is heading straight in the observer's direction, and it is coming from a point forty-five degrees to the *right* of the direction of the wind. The wind is tangent to the side of the center, so a steady wind means a constant bearing of the storm itself. If the shipmaster finds himself to the south and west, he need not be particularly apprehensive. He has only to keep the wind on the left side and astern, changing his course as the wind shifts, for he is outside of the storm's curve, is keeping a constant, wide angle between his course and the bearing of the storm center, and consequently, every mile he steams is a mile farther away from trouble. When he finds that his ship is inside the curve of the typhoon, however, he has an anxious time ahead of him. To try to cross ahead of the center is perilous. To go back may be to run full into it. Once caught, his only course is to slow down to bare steerage-way and keep his ship from falling into the trough of the sea, broadside to the wind. He may put out a

Brown Bros. THE BRITISH SLOOP-OF-WAR PHOENIX WRECKED BY A TYPHOON

"sea-anchor"—a triangular sail stayed out with spars, thrown over the bow and towed as his ship is blown backwards, its drag "keeping her nose up into it." In this way, if his ship is stout, he may ride through a very severe typhoon indeed.

On shore of course the problem is different. One cannot maneuver his house across a thousand miles of territory to evade a dangerous wind. One can only try to make his house secure. The

islander's thatched and wattled shack cannot be closed up; so the entire family work like busy ants guying up the walls like a tent. To hold down the roof, the man of the house takes ten-foot or twelve-foot sections of old bamboo, punching out the joints until he has a dozen or more long buckets about four or five inches in diameter. He ties these bamboos together with a foot or so of rope, in pairs, and throws them, open and up, across the ridgepole of his hut, until his entire roof is covered. The rain quickly fills the buckets, and the weight thus gained is sometimes enough to save the roof. With the more solidly built houses of the white men there is but one salvation—to keep the wind out of the house. Doors must be closed and bolted, the cracks stuffed with rags. Heavy, solid wooden shutters, sliding in grooves outside the windows, are closed and fastened with hooks. The wind must not be allowed to enter, for, once inside, it will explode a frame house like a bursting shell or blow the windows and roof away from a stone building. A defective lock on the massive front doors of the Kow Loon Yacht Club in 1913 gave way under the blast of a typhoon, and as the roof flew away it carried with it the ruined fragments of the finest collection of Chinese antiques in Hongkong Harbor. The interior of the building was completely wrecked.

The problem was simple in my house in Guam. It was squat and low and coral-built, and was in the lee of a high cliff. It was uncomfortable to sit for hours in the hot, wet dark of the tightly sealed house, watching the rain leak through where the gale had driven it under the tiles, but the only real sufferer was my cat. Unable to hunt for rats during the storm, she had to be fed on salmon and sardines, and it invariably gave her indigestion.

"GREEN GOLD OF THE TROPICS"

The tropics raise some things besides typhoons—green gold for instance. Newton Fuessle, in *The Outlook* of October 4, tells the story of a vast industry built up in our American tropics by American enterprise and American money.

THE BOOK TABLE

SWINBURNE'S HOME LIFE

BY HERBERT S. GORMAN

THE home life of a genius is often so disappointing, so sedentary and uninspired a process of incubation that it is always wise to approach books that treat of such intimacies without too great a measure of expectation. This warning is hardly necessary to lovers of Swinburne, for his home life with Walter Theodore Watts Dunton at The Pines, Putney Hill, was no secret. Mrs. Watts Dunton's "The Home Life of Swinburne,"¹ if we except the hodge-podge of tea-table anecdotes and small talk which gives it a gossip interest, brings hardly anything new to the subject. Watts Dunton's valiant rescue of the brandy-drinking pagan poet from a sick-bed, in Great James Street and the nursing of that poet (a process that took thirty years) is ancient history. Most readers know all that they need to know about the carefully regulated days at The Pines, and, indeed, Mrs. Watts Dunton's book proves that they know all that there was to know. The whole thing formulates itself into a rapidly ossifying brain and childlike existence that assuredly was not stemmed in any degree by Watts Dunton. It is impossible to assert at this late date that The Pines did, or did not, destroy Swinburne as a great poet. It may be true that he would have destroyed himself, anyway, if Watts Dunton had left him on his sick-bed in Great James Street. Indeed, evidence would seem to favor such a theory. Mrs. Watts Dunton is furious enough about those critics who have ascribed Swinburne's lessening vitality as a poet during the last thirty years of his life to the influence of Watts Dunton. "There is no chapter in literary history," she asserts, "dealing with men's friendship more lovely; and yet envy and spite have tried to disfigure the public aspect of this sweet and sacred thing."

In the past I have leaned toward the theory that Watts Dunton's influence on Swinburne was as bad mentally as it was good physically, and nothing that Mrs. Watts Dunton has to say in this volume would seem to shake that theory. She looked upon her husband apparently as a sort of reincarnation of Alfred Tennyson's good old Victorian King Arthur. He possessed toward Swinburne what Mrs. Watts Dunton quite rightly calls "the mothering instinct." She asserts of her husband: "His anxiety for his [Swinburne's] physical welfare, his great interest in his mental output, his concern for his domestic comfort and for his amusement were beautiful to witness." "Walter," she re-

marks in another place, "ruled him by love, guided him by advice, and influenced him by suggestion." All this, it must be remembered, is written about him who, as Max Beerbohm once put it, "erstwhile clashed cymbals in Naxos."

Now, there have been two theories prevalent concerning the sad débacle of Swinburne's later years. One is that the poet needed alcohol to whip his brain up to the proper point of ecstasy in order to write his greatest poetry, and this is the sole theory to which Mrs. Watts Dunton pays any attention. She is horrified at it, and quite properly so, for there is no proof that Swinburne wrote any of his greatest poetry while under the influence of alcohol. But the second theory is not disposed of so easily, and perhaps this is why Mrs. Watts Dunton ignores it. That theory is based on the premise that Swinburne's poetry fell off during his later years because Watts Dunton's stodgy mind began to permeate and influence the inspiration of the poet. Of course Swinburne would not write about Faustine again with Walter's careful eye upon him. The poet had been set down in surroundings that made such a procedure impossible. He was in a Victorian household where everything moved like clockwork. He got up and breakfasted about ten o'clock, read the daily paper, ambled about Wimbledon Common, drank a bottle of Bass at the Rose and Crown, had luncheon, an afternoon nap, wrote from four o'clock until six, read aloud until 7:45, had dinner at eight, and then retired to his library. And that for thirty years was the life of the man who shifted the values of mid-Victorian poetry! One can but regret Watts Dunton's "great interest in his [Swinburne's] mental output" and the fact that he guided the poet "by advice and influenced him by suggestion."

Nothing but gratitude can be extended to Watts Dunton for his activity in 1879, but it is to be regretted that it had to be Watts Dunton. His was a calm, moderate, machine-like, critical mind, full of the milk of human kindness, but hardly capable of intensifying the vagaries of genius. Swinburne did not live his own life at The Pines, whatever Mrs. Watts Dunton may say. The evidence is too strongly on the other side. The poet led Watts Dunton's life. In spite of the dynamic qualities of Swinburne's brain, it is obvious that he was weak and easily dominated. He had no head for practicalities, and it was easier to let other people do things for him than to do them himself. And because of this, because he took the line of least resistance, was nursed back to health and then permitted himself to be coddled for

the rest of his life, we have the figure of the dapper little gentleman who would observe the picture of a baby and coo, "Oh, the little duck! Did you ever see such darling dimples? Just look at those sweet little arms! Isn't he perfect?" Mrs. Watts Dunton, by the way, sets this speech down with the utmost gravity.

Except for inconsequentialities and a number of minor anecdotes of some interest there is nothing new in Mrs. Watts Dunton's volume except the rather touching chapter recording the poet's last days. Here she does reach a certain height of poignancy, although, to be quite honest, she fumbles it through an inveterate sentimentality which makes itself manifest throughout the book. I do not remember that the last days of Swinburne have ever been so minutely described before, and it may be of some interest to set down part of Mrs. Watts Dunton's narrative. She writes:

A nurse was stationed on the landing outside his room with the door open, for in his lucid moments it would have irritated him to see a strange woman sitting by his bedside. Walter prepared both nurses for the possibility that their presence might excite their distinguished patient to the utterance of "Elizabethan language," and requested them not to go near him except when absolutely necessary. Upstairs in his room, although by now he was gaining strength, Walter lay in bed strained and nervous, wondering what the issue would be. At intervals I would go down to Swinburne to take little messages to him from Walter. I found that he absolutely refused to allow the nurse to administer oxygen. Though he was sometimes delirious, he was conscious enough to know that a stranger was bending over him, and when she attempted to place the tube near his mouth he beat it away with his hands, crying out in an enfeebled voice, "Take it away, take it away!"

But the nurse's science told her that oxygen was necessary, and accordingly Walter's influence was asked for and promptly used. Acting as Walter's proxy, I went to Swinburne's bedside and told him that Walter considered the oxygen to be akin to a sea breeze, and that it would do him all the good in the world. He opened his eyes and gladly allowed me to put the tube quite near his mouth as he inhaled the vapor without another murmur.

It was painful sometimes to watch him hurl the blankets off his chest and shoulders as he tossed about in a state of high fever. No sooner had the nurse or I replaced them than he would again try to fling them off. Occasionally he would talk wildly for a long while without stopping. I remember the nurse asked me in what language he was talking. I could catch a word here and there as he muttered long sentences with aston-

¹The Home Life of Swinburne. By Clara Watts Dunton. The Frederick A. Stokes Company, New York.

ishing rapidly, and an occasional phrase in his disjointed monologue made me guess that he was speaking or reciting in Greek.

It was in this manner, the victim of double pneumonia, that Swinburne died on the morning of April 10, 1909. It is pathetic to note that the dying poet, dreamer to the last, would take his oxygen only after it had been urged upon him as something akin to a sea breeze. He who had been a stormy petrel in his younger days never lost his passion for the sea.

The picture that Mrs. Watts Dunton draws of Swinburne as a bibliophile is pleasing, but it is hardly as arresting a portrait as that furnished some years ago by Max Beerbohm, who passed an afternoon with the poet among his rare first editions. Swinburne's passions were few, and Mrs. Watts Dunton is careful to note them all. There was Victor Hugo, for instance, and there was Dickens. Several pages are given over to a description of Swinburne as a reader of Dickens. He was a very bad reader, according to Mrs. Watts Dunton, although in later years she became rather fascinated by his delivery. It seems that Swinburne would attempt to convey character by the tones of his voice as he read, and, as the poet was far from being an actor, the attempt was generally a failure. His high falsetto voice must have been a surprising thing. Another enthusiasm was the blossoming hawthorns on Wimbledon Common, and great was Swinburne's excitement the season he wheedled Mrs. Watts Dunton into accompanying him on a trip of inspection to them. "I found that he knew each one separately and individually," writes Mrs. Watts Dunton, "as one knows old friends. He ran from one to another, jumping over the numerous intersecting dikes and ditches and giving me his hand to help me to leap over to his side. When he got to one large hawthorn of divine loveliness, he paused for a long time in front of it and drew in long deep breaths, as though he were inhaling the subtle emanation of the blossoms he so rapturously adored, and softly and repeatedly ejaculated, 'Ah-h-h!'" And of course his enthusiasms for the sea and babies are repeatedly emphasized. One chapter deals almost wholly with efforts to find a likely shore resort for the poet, and there is quite a pathetic touch in the account of Swinburne's sad discovery that he was getting too old to remain very long in the water.

Although unimportant, there is much to amuse the reader in the two chapters concerning Swinburne's fads and his difficulties as a man of business. He never would let a tailor measure him, because he did not like the idea of foreign hands travelling over his body. This necessitated all his suits being cut from the one he possessed. Checks were an abhorrence to him and he never cashed them, sometimes thrusting large ones away in odd corners, where they

remained hidden for months. He was averse to carrying small coins, and this appears to be part of his aristocratic heritage, for he feared contamination from them. Christmas was a gala time at The Pines and many were the mysterious proceedings on Swinburne's part as the holiday drew near. He was meticulous in his selection of Christmas cards, and great was his delight when he discovered any with ships upon them.

From a photograph (O) by Elliott & Fry, London
SWINBURNE

Of all the people who came to visit Swinburne but one is selected by Mrs. Watts Dunton for special mention, and this proves to be the novelist F. Marion Crawford. Swinburne got on very well with him, and so too, apparently, did Watts Dunton and his wife. Mrs. Watts Dunton even mentions such trivial things as Swinburne's predilection for blue writing paper and for Samphire Soap. She informs us that his newspaper was the "Daily Telegraph," there being "too much 'We-lishness' about the 'Times.'" Although Mrs. Watts Dunton is careful to state that Swinburne was not eccentric, it is hard to resist a smile at her description of the poet's appearance. He braced his trousers so high, she asserts, that he showed several inches of white sock. "Furthermore, he had a curious prancing gait, and his deliberate way of flinging out his feet before him as he trod the ground reminded one of a dancing master or a soldier doing the goose-step."

An entire chapter is devoted to the bard's humor, but the evidences of it offered are pretty sad. For instance, Mrs. Watts Dunton covers a lot of paper describing one anecdote which culminates in the fact that Swinburne read "Walter Watts" into the obituary of "Richard Watts" in Dickens's "The Seven Poor Travelers." There is nothing brilliant in this, and as one looks through the book, observing the various remarks ascribed to Swinburne, one

wonders at the dullness of the poet. We have Mrs. Watts Dunton's word for it that he scintillated at times and that his exhortations were fearsome and wonderful to hear, but there are certainly no examples of any such wit or exhortations to be discovered in the book. One cannot but reach the conclusion that the author of "The Home Life of Swinburne" has left much unsaid and has carefully selected those few tidbits of information with which she does interlard her appreciation of the poet. In no sense of the word does this volume close the door to the biography of Swinburne. Edmund Gosse did not do it, and neither does Mrs. Watts Dunton. Of course the hostess of The Pines is attempting no such thing, but even the ground which she has selected for herself is so meagerly scraped at as to make it imperative that an authentic history of those last thirty years be yet written. It must be remembered that she did not become a part of the menage at The Pines until the very fag-end of Swinburne's life, and much of her observation was made through the eyes of a girl, and a girl very much in love with Theodore Watts Dunton at that. It was but natural that she should have seen Swinburne through the eyes of her husband.

Certain sillinesses creep into the book. For instance, there is the gravely delivered information that Swinburne carefully folded up his napkin after a meal. Did Mrs. Watts Dunton imagine that her readers would jump to the conclusion that the poet flung it upon the floor after he had satisfied his appetite? It is easy to perceive why certain people have asserted that this volume is in bad taste. It is really not so, for the enthusiasm and undoubted love for the poet of the woman who wrote it lift it from any such quagmire. But it does have its lapses, and a rather serious one is the unconscious belittlement of Swinburne that runs through it. It is a loving belittlement, but it is insidious. It strips and presents as practically helpless a character that must have possessed many sound masculine traits. True enough, Swinburne's anger is hinted at, but, being hinted at, it is quickly slurred over. Mrs. Watts Dunton is striving to place a halo on a head that had been haloed long before she was born, and with a flaming halo that she can hardly comprehend. There is no doubt that the young pagan Swinburne gradually metamorphosed into the quaint little Victorian gentleman who never ran far from his masculine nursemaid, Watts Dunton, but there is hardly any need to rub it in so vigorously.

There is a psychological problem implicit in the career of Swinburne that will be worked out some day, and it is safe to assert that Mrs. Watts Dunton's volume will prove valuable at that time. And it will prove valuable, not for the conscious information she gives, but for the unconscious betrayals which she does not perceive and never will be able to perceive.

As if across a desk

"New York is calling!" says the operator in San Francisco. And across an entire continent business is transacted as if across a desk.

Within arm's length of the man with a telephone are 70,000 cities, towns and villages connected by a single system. Without moving from his chair, without loss of time from his affairs, he may travel an open track to any of those places at any time of day or night.

In the private life of the individual the urgent need of instant and personal long distance communication is an emergency that comes infrequently—but it is imperative when it does come. In the business life of the nation it is a constant necessity. Without telephone service as Americans know it, industry and commerce could not operate

on their present scale. Fifty per cent more communications are transmitted by telephone than by mail. This is in spite of the fact that each telephone communication may do the work of several letters.

The pioneers who planned the telephone system realized that the value of a telephone would depend upon the number of other telephones with which it could be connected. They realized that to reach the greatest number of people in the most efficient way a single system and a universal service would be essential.

By enabling a hundred million people to speak to each other at any time and across any distance, the Bell System has added significance to the motto of the nation's founders: "In union there is strength."

THE PIONEER

BY ARTHUR GUITERMAN

LONG years ago I blazed a trail
Through lovely woods unknown till
then,
And marked with cairns of splintered
shale
A mountain way for other men;

For other men who came and came:
They trod the path more plain to see;
They gave my trail another's name,
And no one speaks or thinks of me.

Another's name my trail may bear,
But still I keep, in waste and wood,
My joy because the trail is there,
My peace because the trail is good.

MY PIECE OF GARDEN

A WHITE COTTAGE, green blinds and ivy vines. A garden filled with flowering shrubs, pink peonies, blue larkspur. There is a soft tinkle of a fountain, and a sweet, delicate fragrance fills the air. A porch shaded by elms and pines. On the porch a white-haired gentlewoman of about threescore and ten, knitting her lovely yarn of blue, lavender, pink, and yellow.

The gate latch clicked. A young girl in organdy and leghorn hat walked slowly up the cool, shady path. Her eyes were full of sorrow, perplexity. A smile of welcome, a loving kiss. "This is a wonderful place, dear Lady Lavender. 'Tis peace, perfect peace. No sin nor trouble could live in here, yet just outside greed makes the world hideous. There is so much that is wrong. I am young, my life before me, but I have no aim. Tell me, dear Lady Lavender, what can I do to help destroy this ugliness of the world?"

Patiently sat the little old lady, listening once again to the cry of the young. "What can I do? My dear child, once upon a time there lived a boy who desired great riches and power. He gained the coveted riches by advertising his wares upon huge painted signposts along highways, destroying beautiful views, disfiguring the landscape, stealing from all who passed by the beauty that might have been theirs. Stealing that which is far more precious than mere money, yet the criminal went unpunished, though truly hated, this man behind the painted signs.

"With riches in the bank, he longed for happiness and began wandering the world over hunting happiness, contentment. He built hospitals, organized uplift societies. At last he came to a beautiful gate, knocked, heard a voice say, 'Enter, stranger.' It was the sunset hour—all about was enchanting beauty: a waterfall in the distance, a stream of sparkling water. Flowers covered the ground beneath ages-old trees. 'At last,' thought he, 'I have found perfect beauty, happiness.' Then, turning, he

saw an ugly spot, not large, but covered with rank weeds, unsightly sand, and ant-hills. Indignantly he turned to the man by his side and said: 'Why is not this spot attended to? Why is it left to mar the garden?' 'It mars the garden far more than you know, stranger,' the man replied. 'From this miserable spot millions of weed seeds fly over the place. Hours are spent each day weeding, ever weeding; many a man, many a woman, might have had time for greater things but for this cursed spot. It has stolen hours of ease—hours that might well have been filled with nobler things. Only hard labor has saved the beauty of the garden.' 'Then why, in the name of beauty, don't you care for it?' 'That is the tragedy, stranger; we cannot. It is the law of the garden that each man must care for the piece of ground given him, his work cannot be done by another; and the man to whom this ground was given was not willing to work here; he wanted to do greater things—build hospitals, organize societies for the relief of the weary. Had he remained and attended to his ground, he might have saved many from being ill and weary.'

"The stranger flushed with indignation. 'Tell me, who is this wretch that has so neglected his piece of work that little children grow tired, men and women downhearted? Tell me the name of the man who builds hospitals and allows such carelessness as this to harm mankind.' 'John Brown, of Yorktown.' The stranger staggered, grew pale, and muttered to himself: 'John Brown, of Yorktown. My unkept piece of ground. Hours wasted undoing the work of those seeds, and I thought the task given me of no consequence; too small a piece of work for me. And here, too late, I find it's a piece of ground in the midst of beauty, destroying beauty.' His head dropped, he would have fallen but for the quick arm of the gardener. 'I am old; oh, for my youth, my strength, that I might make this spot like unto the rest of the garden, or even strength enough to clear my small piece of ground! Yes, to even leave it bare, but not, oh, not a curse to mankind!'"

The sweet-voiced woman looked up, and saw a tear in the little visitor's eye. She put her arm about her. "Shall we, dear, have tea under the trees? And now tell me about your pretty new frocks." A half-hour passed. Later the girl in organdy, with a bright, happy, contented smile, entered an old-fashioned home. She kissed the crippled father and put her arm about the gentle woman at his side. "No need, mother, darling, worrying about me any longer. I am not going away. I am going first to attend to my piece of the garden." She ran upstairs singing. The father turned to the mother. "Why, Peg is like a ray of sunshine to-day." "Yes, father, I feel ten years younger since she entered that door. And did you hear the happy ring in her voice when she said, 'I am not going away'? But I wonder what she meant when she said, 'I am going to attend first to my piece of the garden.'" L. A. G.

1,115,000 carloads of farm products have been hauled to market in the past twelve months by the New York Central Lines.

Better Farming and Better Railroading

"MAKING two blades of grass grow where one grew before" means more prosperous farming communities, more prosperous towns, greater buying power and a higher standard of living.

All of which spells an increased demand for the service we have to sell—transportation.

That is why the New York Central Agricultural Department operates demonstration trains; cooperates in the distribution of limestone in counties where the soil is impoverished; aids in solving local drainage problems; invites county agricultural agents to inspect terminal marketing systems—and generally interests itself in the development of agriculture.

A large part of our day's work is hauling the products of the farms, and the goods these products buy.

FINANCIAL DEPARTMENT

The Financial Department is prepared to furnish information regarding standard investment securities, but cannot undertake to *advise* the purchase of any specific security. It will give to inquirers facts of record or information resulting from expert investigation, and a nominal charge of one dollar per inquiry will be made for this special service. All letters of inquiry should be addressed to THE OUTLOOK FINANCIAL DEPARTMENT, 381 Fourth Avenue, New York.

"CAPITAL IS INTELLIGENT"

BY PAUL TOMLINSON

CAPITAL and labor are almost always fertile topics of conversation. The coal strike and the railway strike have brought them prominently to the fore once again, and talk of the strikes usually leads to a discussion of our whole industrial system. It is to be expected that many divergent opinions are held of the merits of capital's stand as opposed to that of the unions, and on the other side the unions' actions as they affect and are affected by capital. It is not my purpose here to express an opinion on this absorbing subject, but merely to quote an opinion I heard offered a short time ago, and

pass it on to my readers for their consideration. It offers interesting food for thought.

Capital and labor were under discussion. "I don't by any means approve of all the methods and practices of either," said one member of the group. "I hold no brief for capital any more than I do for labor—of course I use the terms in their widest application—but personally I am for capital."

"Why?" he was asked.

"Because it's intelligent."

That remark is worth thinking about. No reasonable man

STRAUS BUILDING-CHICAGO

STRAUS BUILDING-NEW YORK

The House Which Has Never Sold An Unsafe Investment

THE shrewdest way to judge any investment offered to you is to investigate the record and reputation of the Investment House which offers it. Ask these questions:

Has the House offering the investment ever recommended and sold a security which has suffered default?

If not, has its business been large enough in volume, long enough in time, to afford a real test of the safety of various offerings?

The House of S. W. STRAUS & CO. urges you to ask these questions of every investment house which offers securities to you.

Our own answer is clear and unequivocal: we have sold securities for 40 years without loss to any investor, and our business is nation-wide in scope, involving the sale of hundreds of millions of dollars in safe securities. Let us tell you the reasons for our record. Write today for our booklet which describes the safe bonds we offer in \$100, \$500 and \$1000 amounts. Ask for

can object to labor unions, for, properly run, they have in them great possibilities of good. In union there is strength, is a saying which may apply to organizations of laboring men as well as to bodies politic. But simply because a thing is inherently good is no guarantee that in practice it will work out for good. Further, it is an unescapable fact that a nation, or a business, or an individual, or an association of any kind which ignores everything but his or its own desires and wishes is due for trouble.

Labor—meaning many labor unions—has in numerous instances during the past few years pressed its own claims without regard for their effect upon the rest of the community. That is not only a selfish policy, but short-sighted, and the result has been a great loss of prestige to the unions and a sharp decline in the number of men enrolled on their lists of members.

Labor has not been intelligent, and is paying the price. Ill-advised strikes have not only alienated public opinion, but caused serious dissension in the ranks of the unions themselves. While waiting at a railway station the other day I fell into conversation with one of the company's employees. I asked him what he thought of the shopmen's strike. "My own union was on strike a couple of years ago," he said. "I was out for three months, and the only result was that at the end of the strike I was five hundred dollars poorer than when the strike started. If my union strikes this time, I resign."

Actually many union men have surrendered their cards because they are unwilling to strike themselves or pay assessments for the support of those who are out. In other words, many union men are in doubt about the degree of intelligence being shown by their leaders.

Production is the source of all wealth, strikes hinder production, and the strikers can no more escape the results than any one else. Unions in many cases consistently aim to keep down production, having the misguided notion that by so doing they are benefiting themselves, when, as a matter of fact, it is the laboring man who is the greatest sufferer from such a condition. Another assumption on which the unions are prone to act is that every man's work is equally valuable. But it isn't, and it never can be. This assumption kills the efficient man's initiative, however, and deadens his ambition. The good man earns no more than the shirker, so what's the use in trying? Any system which breeds this attitude cannot rightly be termed intelligent.

The argument may be advanced that capital is not intelligent, but merely powerful. The answer to that is that power which is not backed by brains is always of short duration, and capital has not only been powerful for a long time, but is still fairly robust even in these days of sovietism and communism and syndicalism. Capital is strong because it has recognized the existence of economic laws, while labor, to its sorrow, has frequently assumed they can be

Expediting business abroad

AN AMERICAN export firm cabled its representative in care of our Paris Office to call upon an important customer in Naples.

Our travel expert looked up schedules and connections for the representative, purchased his tickets, helped him secure passport visés and gave him a letter to our Naples correspondent. While the salesman was en route, our office wired ahead to reserve hotel accommodations.

Upon his arrival in Naples, our correspondent there accorded him a number of courtesies in our name and honored his Equitable Letter of Credit, paying him the equivalent of his dollar drafts in Lire, at the prevailing rate of exchange.

Facilitating the transaction of foreign business and saving the valuable time of our customers' representatives are daily services rendered by our offices abroad.

The officers of our Foreign Department will welcome an opportunity to explain our facilities for handling foreign business.

Bridges to Wealth

VENETIAN nobles of the sixteenth century inlaid their gondolas with jewels and gold—a fashion abolished by a famous edict, curbing extravagance, which stipulated that all gondolas be painted black.

Today it is not legislation that enforces careful expenditure, but the burden of increased taxes and commodity prices, and the swift changes of modern life.

Foresight points to the need of building an income for the future, which is met by systematic bond-buying, year by year. The sound basis of municipal bonds makes them a most satisfactory investment for that purpose.

Our lists of bond offerings, selected with the experience of thirty years' specialization in municipal issues, are a reliable guide for the investments of individuals and institutions demanding absolute safety.

Our latest list, O-10, will be sent at your request

overlooked or ignored. Russia, of course, is the "horrible example" of what happens when these fundamental facts are disregarded.

Supply and demand is the basic principle on which all business is conducted. Men who conduct successful businesses must keep constantly in touch with the demand for their products and fix the supply to meet it. There is considerable agitation for year-round employment for everybody, and some day it may be possible to accomplish this. But is it fair to an employer to expect him to keep his whole force employed, when he knows he cannot find a market for the goods produced? Every one knows that at harvest time a farmer needs lots of help, but who expects the farmer to keep all of that help on his pay-roll throughout the winter when there is little work to do? Businesses also have their harvest times and their winter seasons, and their help, too, must be regulated to meet these requirements. If it is not, the business is doomed to certain failure. No employer throws men out of work for the fun of the thing; he realizes that if his plant can be operated at capacity he personally will benefit along with the others, and it is not human nature willingly to forego profits.

Similarly, most employers—capital—realize that it is good business to keep their employees contented, to pay them good wages, and furnish them with good working conditions. Supply and demand, however, must largely determine wages, and when wages are cut it is because of this economic law and not capital trying to grind down labor. All of which is bound to bring hardship upon individuals; but no workable suggestion has ever been made as to how this situation can be avoided. In our present state of development it seems impossible to make everybody happy, and the policy which does the most good for the greatest number is the best one to follow. Moreover, if any one argues that the laboring man is not well off under a capitalistic system, let him compare the condition of labor under such a system with its condition in a place where capital does not control.

Capital may not always be as generous as it might be, and yet there are hundreds of instances to prove that it is not as "hard boiled" as it is sometimes pictured. Whether the motive is philanthropic or shrewd, is beside the point. Probably it is a combination of both; but the fact remains that capital has for years been growing constantly more alive to the interests of labor and working in those interests. Which is no more than intelligent.

Many people may not agree with all these sentiments. But, I believe, most people must agree that capital is powerful whether it is intelligent or not. And its power comes from the possession of

BUY BONDS WITH BANK SAFETY

When you buy high-grade bonds from this bank, you know at all times the strength and responsibility of the institution you are entrusting with your monthly payments.

The Atlantic Trust Company has a capital and surplus of \$2,000,000 and resources of more than \$6,000,000.

The bank is supervised by the State Bank Commissioner; its books are examined twice a year by State officials; it is required by law to publish a financial statement in the newspapers five times a year.

Under the Atlantic Trust Investment Plan you can buy the same high-grade bonds in which this bank invests, and your money earns bond interest from the date of your first payment.

AMERICAN BIBLE SOCIETY

FINANCIAL DEPARTMENT (Continued)

money. Money may be the root of all evil, but in this world, to date, nearly every man is for himself, and money is a very convenient weapon to have in the battle of modern life. Labor appreciates its value just as much as does capital, and dues and assessments are an important part of union activities. And every intelligent, far-seeing man realizes that with money—or capital—his chances for success are greatly enhanced. Intelligent use may not always be made of money, but no one can deny that it is intelligent to save and invest money. Capital, no matter how small, spells power, and power means independence, the goal of every ambitious man.

QUESTION AND ANSWER

Q. I understand that you have an investment department that gives good advice about investments. I would like to know as to what is your opinion on the South American bonds, such as Brazil, Chile, and Argentina. I inclose you \$1, which I notice in your magazine is your charge.

A. This personal inquiry referring to the South American bonds issued by the Governments of Brazil, Chile, and Argentina has general interest.

Most of the South American Governments have found it necessary to finance themselves in this country and have floated bond issues, interest and principal of which are payable in dollars. Some of the South American countries have not had a particularly good record in meeting their obligations. Argentina has the best record in this respect, and we consider the Argentine bonds to be a good investment. Bonds offered by Brazil, Chile, Uruguay, and Bolivia might probably be considered a fair investment for a business man who can watch political and business developments in these countries. Most of these bonds are now selling on the New York Stock Exchange to yield from 7 per cent to 8 per cent—the high yield is a measure of the possible risk involved in holding these securities. We believe, however, that all of these Governments are becoming more stabilized and that they will make a much better record in meeting their obligations than some of them have done in the past. We therefore believe that these bonds are deserving of consideration as part of an investment fund where the bulk of one's holdings is made up of more conservative securities.

Organizing a Company?

Save expenses and taxes by organizing on the popular, COMMON LAW plan under a pure DECLARATION OF TRUST. Anyone, anywhere, can fill in DEMAREE STANDARD FORMS, issue shares and begin doing business at once. Insist upon DEMAREE FORMS, the original, nationally-accepted forms, approved and used by well known attorneys. Send for large, free pamphlet (D-19) containing much information that you will need. C. Can YOU Answer These Questions ?

The affairs of all the world are now a daily topic of conversation. Such questions as these are asked by your children, your friends, the acquaintances you meet on the train and on the street. Not to be able to answer them is embarrassing; yet the answers are *not* to be found in newspapers or reference books.

OUR WORLD is an illustrated monthly magazine whose sole purpose is to place in your hands each month a full, accurate, authoritative narrative of what is going forward in every part of the world. It is written by active participants in world affairs and by men and women who tell you what they have seen with their own eyes. It is like a great motion picture which throws the vivid drama of the world's activities on the screen before you—the strife, the intrigue, the tragedy, the comedy and the inner significance of current events, portrayed without bias or prejudice, but with informative comment and explanation.

The Service of The Institute of International Information is FREE to Annual Subscribers to OUR WORLD

Your subscription entitles you to the service of the Institute of International Information, *without charge*. Under the Directorship of the great geographer, Dr. Wallace W. Atwood, President of Clarke University, the Institute gives full and accurate information on such topics as industry, finance, science, labor, religion, education, agriculture, etc., throughout the world. It gives access to the great body of information that has been brought together by a large number of international organizations in the United States and other countries.

This is a *special offer*, made to introduce OUR WORLD to thousands of new readers. Take advantage of this opportunity *now*, while you can get both the Institute service and a year's subscription to OUR WORLD for only \$3.

Send your subscription direct, or through any responsible subscription agency, or in a club with other magazines

New York Chicago (4)

BY THE WAY

SOME tourists tell stories of unpleasant experiences in Europe, and the "Ocean Ferry" finds pleasure in offsetting these by relating the following incident: "A steward on the liner Lapland, following the ship's arrival at Antwerp, found a large roll of American bills under a pillow. He promptly took it to the purser, who found it totaled \$750. The two men hastened to the pier and found the woman who had occupied the stateroom just entering a taxicab. She was astonished to find that she had left her money behind, and, accepting it with thanks, entered her cab and departed without mention of reward. The steward was commended by the management."

"There is a gratifying note to most of us," says the "Ocean Ferry," "in the statement made by the chief steward of the Majestic to the effect that bacon and eggs hold their own against fashion on board the Majestic and lead in popularity as a breakfast dish, while apple pie is the most popular dessert at lunch." Thus all the frothy inventions of French chefs beat in vain against the rock-ribbed conventions of the Anglo-Saxon and his American collaterals.

Visitor from the home of baseball (as reported by London "Punch"): "Well, I'm glad I've seen cricket. I've seen St. Paul's and the Abbey, and they are good goods. But when it comes to hush and the subdued atmosphere, old cricket's got 'em beat."

A man recently left his glass eye in a New Jersey hotel where he had stopped and wrote to the manager asking its return. The manager sent the lost article back and said that it was the first eye he had found since the hotel opened. Articles most commonly left by guests, he added, are pajamas and nightgowns, of which he has a choice collection awaiting their owners' return. Other things frequently left behind by travelers are jewels, umbrellas, canes, brief cases, and razors.

Bishop Candler, of Atlanta, condemning a certain theological controversy, said he was reminded of the colored preacher who began a sermon, "Bred-ern and sistern, when de fust man, Adam, was created, he was made outer wet clay and set up 'gainst the palin's to dry." A dissenting member of the congregation arose and said, "Pawsin, if Adam was de first man, den who-all made de palin's?" "Bre'er Simpkins, set down," said the parson disgustedly: "sech fool questions as yourn would upset any system of theology."

The Chicago, Rock Island, and Pacific Railroad will celebrate on October 10 the seventieth anniversary of the operation of its first passenger train. The Rock Island was the first road to reach the Mississippi River, building into the city whose name it carries in 1854. Originally only forty miles long, the system now controls eight thousand miles of railway in fourteen States.

A New FOSDICK Book

Christianity and Progress

HARRY EMERSON FOSDICK

Cloth, \$1.50

This is a striking book written in the inimitable Fosdick style and will undoubtedly be enjoyed by thousands of readers. Simple and direct in its presentation, yet forceful and brilliant, this volume is a welcome addition to Dr. Fosdick's remarkably popular books. It was originally presented as the Cole Lectures at Vanderbilt University.

With amazing speed and accuracy, punctuated by concrete examples to make his points clear, the author carries the reader through the history of the world's progress.

Train Your Children for Success

In sport, in business, in life, it's the clean "hit" that counts. You want your children to play the game of life right. Now, while they are young, is the training period. Equip them by giving them interesting instruction—and they cannot fail to succeed.

In St. Nicholas, your children receive a guiding hand in sports, history, travel, science and stories—all written to grip and hold the attention of the children. Contests in writing, drawing, instruction in photography, science and so on, develop them. Their imagination and initiative are given a healthy field to work in.

Let St. Nicholas become a comrade and tutor to your children. It will prepare them for the future years when "clean hits" count.

One year's subscription is only \$4—half what you pay for your morning paper. Send check or money order to St. Nicholas Subscription Department, M-22, 353 Fourth Avenue, New York.

A NEW BOOK which amazes and thrills those who have read its romantic story.

MOONLIGHT SCHOOLS

By CORA WILSON STEWART

Chairman Illiteracy Commission of the National Education Association

Tells for the first time the full story of how the appalling illiteracy of one Kentucky county prompted the author, then Supt. of the Rowan County Schools, to open a night school session for adults.

She expected an attendance of perhaps one hundred and fifty; twelve hundred came. From every part of the county, no matter how rough the road, or how hard the day's work had been, men came to be rid of the humiliation of having to make a mark instead of signing a name.

Before that campaign ended the illiteracy figures for Rowan County had dropped from 1,152 to 23, of whom only four were wilfully ignorant.

The movement spread to other counties, other States, a U. S. Commissioner of Education praised it in special bulletins, and the author has often been asked for a book telling the story of a movement so stimulating and of such profound importance to the welfare of the nation.

With 26 illustrations. \$2.00

HEREDITY AND CHILD CULTURE

By

HENRY DWIGHT CHAPIN, M.D.

President of the Children's Welfare Federation of New York, etc.

By discussion of questions of organic and social inheritance, of selective breeding, of the points to consider in fostering proper development the author stresses the importance both of a good constitution and of a good-character-building environment and how to attain it. \$2.50

SELF-TRAINING IN MYSTICISM

By H. L. HUBBARD

A clear simple guide to the way of closer union with God which is the science of mysticism. \$2.00

The Negro in Chicago

A Study of
Race Relations and a Race Riot

Chicago Rioters Leaving the Beach

Every American should read the detailed story of the Chicago race riot of July, 1919, as told by

THE CHICAGO COMMISSION ON RACE RELATIONS.

The knowledge contained in this book of the living conditions among the Negroes in the North, of propaganda used to influence migrations from the South, and of the commission's recommendations to civic organizations, city officials, State militia, employers, labor unions, boards of education, and the press will help to prevent future racial difficulties. An important volume for everyone interested in America's race problem.

Fully illustrated. \$6.00 net.

The Negro Press in the United States

By Frederick G. Detweiler

Is there a Negro Press? What is it like and how far does it represent the race? What is its contribution to the problem of racial aspiration? This book presents a multitude of facts on the Negro press question, a knowledge of which will help to a better understanding of the racial problems facing American citizenship today. \$3.00

THE OUTLOOK COMPANY
381 Fourth Avenue, New York

CONTRIBUTORS' GALLERY

THATCHER T. P. LUQUER graduated from Columbia in 1889 with the degree of C.E., and started private practice in 1900 as a supervising and consulting engineer. As soon as the World War began he attended the Plattsburg M. T. Camps, drilled with the New York Training Battery and attended courses of lectures on military subjects. He received his commission as Captain in the Officers' Reserve Corps in 1917, and in a little over a year rose to the rank of Lieutenant-Colonel. Overseas he was cited in Division orders and recommended for promotion to Colonel for his signal services. At present he has a colonelship in the Engineer Officers' Reserve Corps and is assigned as Corps Engineer of the XIIth Corps of the Organized Reserves.

SENATOR DAVENPORT, at The Outlook's request, is sending us a series of letters on the political situation in the Middle West. The first of his correspondence appears in this issue under the title of "Giving the Middle West the Once Over." This will be followed in the October 11 issue by a second letter on the League of Nations and the attitude of the Middle West toward the Tariff Bill.

NEWTON FUESSLE, author of "The Green Gold of the Tropics," gives from his own experience, gained while on a trip through Havana, Panama, and Costa Rica, an account of the development of the banana industry.

THE much-abused and frequently slandered profession of teaching should be congratulated on having so doughty a defender as Mr. William McAndrew. Mr. McAndrew is Assistant Superintendent of the Public Schools of New York City.

BARRETT HARPER CLARK, who contributes to our Book Table an article on "Booth Tarkington, Dramatist," was at one time an actor and assistant stage manager with Mrs. Fiske. Since 1919 he has been instructor in the drama every summer at Chautauqua, New York, and has been of remarkable service to dramatic art. Mr. Clark is a most prolific writer on his favorite subject. He is the author of "The Continental Drama of To-day," "British and American Drama of To-day," "Contemporary French Dramatists," and other volumes, and has edited and translated many plays from the French and Spanish. He was dramatic director at Camp Humphreys and a member of the Committee on Public Information during the war.

PHOTOGRAPHS of interesting and newsy scenes and events are wanted by The Outlook; and for such as are accepted a cash payment of from \$3 to \$5 will be made. Photographs should be sent with return postage inclosed. Address The Editors of The Outlook, 381 Fourth Avenue New York City

ABINGDON

Forceful Pages

NOW and again we need to hear some clear voice call us to a realization of the finer emotions of life, to stir within us a consciousness that we may be building a lop-sided heritage for tomorrow's citizens.

From the Abingdon Press have come some sincere volumes written by people with a fine understanding of what is worth while. These books are offered because they will abide with the intelligent reader through many profitable hours.

THIS MIND

By Bishop William Fraser McDowell

These lectures were prepared and spoken with the desire that they might really assist members of the student body in making their decisions for lifework and service in the world to which they are so rapidly coming.

Price, net, \$1.00, postpaid.

THE PREACHER AND THE PEOPLE

By Bishop Francis J. McConnell

Bishop McConnell has restricted the range of these lectures so that they deal only with the minister as a preacher. It is, therefore, an intensive rather than an extensive discussion. It is essentially a book for the younger men in the ministry, although it contains much that will prove profitable to those of larger and wider experience.

Price, net, \$1.00, postpaid.

JESUS AS JUDGED BY HIS ENEMIES

By James H. Snowden

It is a strong case that can be surrendered to the judgment of enemies. Jesus Christ triumphantly stands this test. He had his enemies in his earthly life, and they had many things to say about him and against him. More than three score of these sayings are scattered through the Gospels. They form a remarkable body of testimony that is of the greatest value.

Price, net, \$1.75, postpaid.

THE DIVINE RIGHT OF DEMOCRACY

By Clarence True Wilson

In this straightforward discussion Dr. Wilson reminds us of certain forgotten sources of our federal constitution; that Jesus Christ is the embodiment of democratic ideals; that we are, after all, a Christian nation; and he likewise presents certain phases of present-day conditions that should awaken the moral and political conscience of the nation.

Price, net, \$1.00, postpaid.

A LITTLE BOOK OF SERMONS

By Lynn Harold Hough

A number of these sermons "grew out of particular occasions and were connected with particular places," as, for instance, the sermon on "The Ampler Puritanism," which was preached at Plymouth, England, at the Pilgrim Tercentenary Service, in September, 1920.

Price, net, \$1.25, postpaid.

OUR PROTESTANT HERITAGE

By W. Wofford T. Duncan

In order to meet the claims of the Roman Catholic Church made through paid advertisements in the daily press, Dr. Duncan felt constrained to discuss in his pulpit certain questions in dispute between Roman Catholicism and Protestantism. The discourses made a profound impression at the time of their first public presentation, and are entirely worthy of the close attention of the more dispersed audience to which they are now addressed.

Price, net, \$1.00, postpaid.

A RIGHTEOUS WAR

By Carl G. Lewis

THE LATTER DAY SAINT CHURCH

The Latter Day Saint or Mormon Church, as it is often called, is divided into two principal factions. One of these factions under the leadership of F. M. Smith has headquarters located at Independence, Missouri, which place was appointed Zion or principal and permanent gathering place of the Saints by Joseph Smith, the first prophet, seer, and revelator of the Latter Day Saint church, and the man through whom Mormonism originated. The other faction is called the Brighamite or Utah Mormon church, and has its present headquarters located at Salt Lake City. My reference books, however, consisting of the Book of Mormon, Doctrine and Covenants and Corrected Bible, are those of the Reorganized faction, with headquarters located at Independence, Mo., yet the quotations produced here are parts of those communications which, coming through Joseph Smith, the first prophet, have been accepted as revelations from God by the general vote of not only the Reorganized faction, but the Brighamite faction, as well; the sections, etc., of the Brighamite books being numbered somewhat differently than the Reorganized.

GOD APPROVES OF WAR

The question of the legality of war making has been much discussed in all parts of the country and I am anxious that God's law concerning it, given through the grandfather of the present President F. M. Smith, be given to people who are not of the Latter Day Saint faith. I am doing something unusual in directing those not of the Latter Day Saint faith, or the Gentiles as they are called, in how to find those parts of the Reorganized books which so far have been withheld from them, but I feel that I am justified because of the great need of all people for Godly laws to govern them in their actions toward each other. First, I will reproduce paragraph six, of the revelation composing section ninety-five of the Doctrine and Covenants, to show that a command from God is always necessary before war can be engaged in legitimately. It reads as follows: "Behold, this is the law I gave unto my servant, Nephi; and thy father Joseph, and Jacob, and Isaac, and Abraham, and all mine ancient prophets and apostles. And again, this is the law that I gave unto mine ancients, **that they should not go out unto battle against any nation, kindred, tongue, or people, save I, the Lord, commanded them.** And if any nation, tongue, or people should proclaim war against them, they should first lift a standard of peace unto that people, nation, or tongue, and if that people did not accept the offering of peace, neither the second nor the third time, they should bring these testimonies before the Lord; then, **I, the Lord, would give unto them a commandment, and justify them in going out to battle against that nation, tongue or people, and I, the Lord, would fight their battles, and their children's battles and their children's children**" (this means that God would do the fighting but would exercise his power through them as is shown by the following four words given special emphasis) "**until they had avenged themselves** on all their enemies, to the third and fourth generation behold, this is an ensample unto all people, saith the Lord, your God, for justification before me." Nephi, of Book of Mormon fame, Joseph, Jacob, Isaac, and Abraham, the men

referred to above, were all great prophets of the Lord through whom the Lord communicated his will to the people, and as President Fred M. Smith is the leading prophet of the Reorganized Church of Jesus Christ of Latter Day Saints today, it would be through him that a commandment to make war would of necessity have to come to the Reorganized people.

I now wish to reproduce paragraphs eight and nine of the revelation composing section one hundred two of the Doctrine and Covenants, in connection with the paragraph quoted above. Paragraph 8: "Now, behold, I say unto you my friends, in this way you may find favor in the eyes of the people, **until the army of Israel becomes very great; and I will soften the hearts of the people, as I did the heart of Pharaoh, from time to time, until my servant Baurak Ale, and Baneemy, whom I have appointed, shall have time to gather up the strength of my house, and to have sent wise men, to fulfill that which I have commanded concerning the purchasing of all lands in Jackson county (Missouri) that can be purchased, and in the adjoining counties round about; for it is my will that these lands should be purchased, and after they are purchased that my Saints may possess them according to the laws of consecration which I have given; and after these lands are purchased, I will hold the ARMIES of Israel guiltless in taking possession of their own lands, which they have previously purchased with their moneys, and of throwing down the towers of mine enemies, that may be upon them, and scattering their watchmen, and avenging me of mine enemies, unto the third and fourth generation of them that hate me.**

9. But firstly let my ARMY become very GREAT, and let it be sanctified before me, that it may become fair as the sun, and clear as the moon, and that her banners may be terrible unto ALL NATIONS;" (please notice that this nation is included also) "that the kingdoms of this world may be constrained to acknowledge that the kingdom of Zion is in very deed the kingdom of our God and his Christ; therefore let us become subject unto her laws."

After reading these revelations we can understand why it was that the Saints maintained an army. An army is not formed, trained, and equipped with arms of war without a reason. It is intended for the prosecution of war providing war should become necessary. However, this army, due to lack of obedience to the revelations of Joseph Smith, and to a lack of numbers, failed to meet the emergency, and when the crisis came some of the Saints were killed and the rest driven out of the country by armed mobs.

But a belief that this reverse to the Latter Day Saint cause could have any permanent results, has never been entertained by the followers of Joseph Smith, who are justified in their firm belief of ultimate success by this revelation, composing paragraph eight of section sixty-four, of the Doctrine and Covenants. "And even the bishop, who is a judge, and his counselors, if they are not faithful in their stewardships, shall be condemned, and others shall be planted in their stead; for, behold, I say unto you that Zion shall flourish, and the glory of the Lord shall be upon her, and she shall be an ensign unto the people, and there shall come unto her out of every nation under heaven. And the day shall come, when the nations of the earth shall tremble because of her, and shall fear because of her terrible ones. The Lord hath spoken it."

An article of equal interest is to follow in the next number of The Outlook. Do not fail to read it.

BRITISH WARSHIPS IN THE BOSPHORUS, WITH ROBERT COLLEGE AT THE LEFT

TURKEY AGAIN A EUROPEAN POWER

WHATEVER else may be the result of the concessions by Great Britain, France, and Italy to Mustapha Kemal's demands, it is certain that Turkish power will be re-established in Europe on an extent not dreamed of at the close of the Great War. Even if it is granted that liberal concessions were necessary after the complete victory of the armies of the Turkish Nationalist Government, it is certainly humiliating to the Great Powers of Europe, and demoralizing especially to British prestige, that so complete and far-reaching submission has been made to their former enemy, the ally of Germany. When Kemal was asked to meet the representatives of the Powers in conference, he refused to do so unless in advance of such a conference assurances were given him that his principal demands would be granted. Now that he has been given that assurance, he has shown no hurry to accept the offers made him. The note of the Allies to Kemal was dated on September 23, and up to September 26 no reply had been made.

The terms of the joint note were almost submissive in tone. Poincaré for France, Curzon for Great Britain, and Sforza for Italy asked the Turks "to be good enough to let them know" whether Turkish representatives would be sent to a conference of those nations

and of Japan, Rumania, Jugoslavia, and Greece to be held at Venice or elsewhere. They "take this opportunity to declare that they view with favor" Turkey's demand to be put in power again in eastern Thrace along the line of the River Maritza, which includes Adrianople and territory that most of us supposed had been lost to Turkey forever. The note does not even mention the willingness of the great nations to let Turkey keep all of her former territory in Asia Minor; she holds that, or most of it, by force of victory, and it is tacitly agreed that she shall retain what she has. As to the other points of real importance such as the freedom of the Dardanelles and the Sea of Marmora and the Bosphorus and the protection of non-Mohammedan peoples, the note of the Allies proposes to leave the matter under the guidance of the League of Nations and offers to support the admission of Turkey to the League. They confirm their former assurance that Allied troops will be withdrawn from Constantinople as soon as the final treaty of peace has been settled. In return, they warn the Turks under Kemal from entering into the zone of neutrality on the Asian side. This seems to be about all that the Powers still urgently insist upon, and Kemal has at least twice since negotiations have begun allowed his troops to violate the neutrality of the zone, with constant danger whenever this happens that fighting may begin

between the Turks and the British forces near Chanak.

THE NEAR EAST STILL A DANGER CENTER

DESPITE Lloyd George's optimistic view of the situation that followed his first alarm, the situation in the Near East is still dangerous in the extreme. As we write, reports both from Smyrna and Constantinople say that there is imminent danger of a renewal of the massacres in Smyrna and of an attack upon non-Turks in Constantinople. The Earl of Balfour, for instance, is reported on September 26 as saying that he had information that showed "danger of a great calamity in Smyrna," and one despatch from Constantinople even names the exact day upon which it is believed that the Christian section of the city may be attacked by the worst element of the Constantinople Turks. Such outbreaks, if they occur, would complicate the general danger of disorder and might simply demand military intervention from the Powers.

The result of the conference indicated by the note of the Allies would, of course, be to destroy completely whatever may be left of the Sévres Treaty, which was signed but never ratified. The occupation by Turkey of eastern Thrace would make a new and always threatening situation in the Balkans, and the attempt to draw new lines for the neutral zone as it exists and to guar-

ante the freedom of the Straits presents many difficulties.

Lloyd George said only a few days before the note was signed, "It would be a peril of the darkest kind if we permitted the army which has left Smyrna a heap of blackened ruins to cross over into Europe until permanent peace has been established, and until the conditions of that peace are clearly defined." Yet Kemal, as we write, is reported to be insistent upon the immediate entrance of his army into Thrace to drive out the Greeks from territory assigned to them by the Powers after the Great War.

Features of the situation as it strikes an American observer in London are shown in the following cablegram, dated September 22, from a special correspondent of The Outlook, Mr. W. C. Gregg:

The safety of Europe at present seems to lie in its physical weakness rather than in the strength of its diplomacy. The British Government announced its programme of armed resistance to certain Turkish advances and afterwards consulted its allies. To an American observer this looks like a mistake. They also seem quicker to appreciate a Turkish threat against their commercial use of the Dardanelles than to appreciate the emotions of France at delayed German reparations. The London press is almost unanimous in condemning the Turkish bungling of the Lloyd George Government, and there is more talk about a general election. Winston Churchill's prominence in the present crisis reminds the people of his Gallipoli campaign. One paper prints a picture of a vast British cemetery in Turkey with a heading, "No more of this." There is much clamor for calling Parliament. As yet the Prime Minister has made no sign of compliance. If this were America's tire-trouble, our President as well as our people would be looking for Congress to put on its overalls. It will all blow over shortly, unless the Turks get brash and try to cross the Dardanelles. We must not forget the two other sore spots in Europe, Austria's imminent financial collapse and Germany's ugly mood. Germany carries a pistol in her overcoat pocket; her fingers feel for the trigger as her mind dwells on the success of the Turks.

Another interesting view of the situation will be found in the London correspondence from General Sir George Aston on another page.

THE HERRIN GRAND JURY DOES ITS DUTY

THE country has followed with keen interest the progress of the investigation into the horrible murders committed near the Herrin mines last June. The local spirit of apathy and indifference as regards the punishment of the criminals was marked. But the spirit

of the people of the State of Illinois, once thoroughly aroused, insisted through its State officials that the arm of justice should not remain inert. Now the special Grand Jury which has been hearing evidence at Marion has returned a long list of indictments. It not only finds indictments against individuals for crime, but it charges the authorities with failure to protect life and property and even criticises the mine owners as "woefully ignorant of the danger or blindly determined to risk strife and conflict if profit could be made."

The number of indictments found indicates that the Grand Jury was fully convinced that this was a group crime, not a spontaneous outbreak of rage among

THERE are those who dream of Mauretania's docking at the wharves of Proctor Knott's "zenith city of the un-salted seas."

There are those who claim that the whole proposal to carry ocean-going steamers through the St. Lawrence to the Great Lakes is chimerical.

The arguments for the practicability of the proposed development of the St. Lawrence waterway were never more simply or clearly stated than in Gilbert H. Gilbert's forthcoming Outlook article.

It should be read by both dreamers and congenital pessimists.

individuals. The total number of indictments was 214; 44 of these indictments were for murder, 58 for conspiracy to murder, 58 for rioting, and 54 for assault with intent to murder. Among the men indicted for murder are two important officials of labor unions.

The report of the Grand Jury which accompanied the indictments was a full and graphic account of all the circumstances that led up to the crime and all the terrible barbarity of the crime itself. The Grand Jury declared forcefully that the attack of June 21 was the result of a conspiracy which had been gathering and organizing for several days; it quotes the telegram from John L. Lewis, the President of the United Mine Workers of America, which states that members of the organization "are justified in treating this crowd as an outlaw organization"—the posting of this telegram in the neighborhood of the mine has been

regarded as one of the inciting causes of what happened. After describing the cold-blooded murder of the employees after safe conduct had been promised them, the finding of the Grand Jury remarks: "The atrocities and cruelties of the murders are beyond the power of words to describe. A mob is always cowardly, but the savagery of this mob in its relentless brutality is almost unbelievable. The indignities heaped upon the dead did not end until the bodies were interred in unknown graves."

The Grand Jury of the county in which this crime took place has now faithfully and thoroughly done its duty. The country will continue to follow with the utmost intentness the progress of these criminal cases as they come before trial juries.

THE LABOR INJUNCTION

As was generally expected, Judge Wilkerson, of the Federal District Court at Chicago, has sustained the sweeping injunction recently issued by himself as a temporary measure. It is now binding as a preliminary injunction, which may be made permanent or may be passed upon by the United States Supreme Court.

In statements made by Judge Wilkerson he sustains broadly the contentions made by Attorney-General Daugherty. His main point is that the evidence of illegal and criminal activities by the striking shopmen, their unions or their supporters, is such that there was proof of a criminal conspiracy to interfere with inter-State commerce. Judge Wilkerson declines to admit as valid the contention of the defendants that participation by them in any illegal act had not been shown. The Judge says that the acts committed were "on such a large scale and in point of time and place so connected with the admitted conduct of the strike that it is impossible on the record here to view them in any other light than as done in furtherance of a common purpose and as part of a common plan." He cannot, therefore, he says, reach the conclusion that "those who were at the head of this combination did not actually know that these things were being done."

The injunction order as it stands forbids any participation in acts tending to interfere with railway operation by officers or members of the shop crafts belonging to the Railway Employees' Department of the American Federation of Labor.

The weak point in this kind of dealing with labor matters is that, when the question is as to the actual decision whether a given individual has in fact committed an illegal act or has com-

bined with others to commit acts amounting to a conspiracy, the truth or falseness of the allegation must be decided by a judge without a jury and that the person arrested is dealt with for contempt of court in disobeying the court's orders and not for having committed acts against the statute criminal law.

Meanwhile the strike of the railway shopmen is growing feebler, and it is quite probable that actual prosecution under the injunction will not take place.

THE FEDERAL RESERVE SYSTEM

It will be a disaster if political partisanship is permitted to damage or destroy the Federal Reserve System. If the Federal Reserve Board had not been in existence during the great European war, we should unquestionably have had a currency panic and a financial crisis in this country more disastrous than the three or four which struck the country down during the life of the National Banking Act.

In spite of the fact that the richest manufacturer in the United States is reported to have said that "history is all bunk," it is a good plan occasionally to recall history in discussing current political questions. The Federal Reserve System works so well, so smoothly, and seems so well established, that the man who fears its destruction by political partisanship is called an alarmist. But the United States Bank, which a hundred years ago saved the country from the same kind of economic disaster from which we have been saved in the last eight years by the Federal Reserve Bank, was destroyed by political partisanship. History shows over and over again that what has been done once can be done a second time. Perhaps a National banking system might be devised which would be more efficient, more just, and more uniform in its social benefits than the Federal Reserve System, but so far it has proved itself to be the best system that this country has ever had, and better than those of many other civilized countries. Nevertheless, it is being attacked, and the center of attack is the Governor of the Federal Reserve Board, Mr. W. P. G. Harding. His term has expired, and the President has not yet made an appointment to fill the vacancy. Governor Harding is at present holding the office until his successor is appointed. We think it may be said that the soundest and wisest financial advisers of the President are urging his reappointment. Indeed, the name of one alone of his sponsors is enough to carry the confidence of the country. We refer to Senator Carter

"No man knows more about the

operation of the Federal Reserve Law than Senator Glass; no man has a greater interest in its continued success as a public institution; and no one man had more to do with the successful legislation which established it. If Senator Glass believes that W. P. G. Harding is the best possible nominee for Governor of the Federal Reserve Board, we do not much care to consider the arguments or criticisms of the opponents of the appointment.

A LIVING CHURCH

AMONG the more important communions in America, the Protestant Episcopal Church is by no means the largest, but it exerts an influence out of proportion to its size. Its triennial Convention which recently had its session in Portland, Oregon, was an event of wide public interest. The proceedings of that Convention were reported in the daily press as news of importance to readers not affiliated with that Church or any Church.

One reason for this is the strategic position which the Protestant Episcopal Church holds in certain centers of population. Another reason is its place in the early history of the Nation. Perhaps the chief reason, however, is the fact that it is what may be called a root communion.

It is the same reason that explains the influence of such relatively small countries as Ireland and Scotland. Numerically, the Irish of Ireland are almost negligible in the total mass of humanity; but they constitute a root nationality, they are a parent stock. Millions of people, therefore, who are not Irish at all are concerned with what is happening in Ireland as they would not be with the doings of four or five million people without history or common origin who might happen to inhabit the same island.

Somewhat similarly, the Protestant Episcopal Church constitutes a parent stock in Christian faith and practice. The symbol of its ancestorhood is the Book of Common Prayer. Though it is the authoritative compendium of Episcopal liturgy, it is in practice the heritage of as many Protestant bodies as may wish to claim it. Its collects are the common possession of all churches. Its phraseology has entered into the language almost as definitely as that of the English Bible. The fact that the Protestant Episcopal Church is in a peculiar sense the trustee for this treasury of worship and literature is an indication of the special responsibility that rests upon that Church and the public concern in its actions.

On this account, the most important

action of the recent Convention at Portland was the revision which it made of the Book of Common Prayer. In The Outlook for September 6 the Rev. Dr. E. C. Chorley, Historiographer of the Protestant Episcopal Church, in special correspondence gave an account of some of the more important changes recommended by the commission appointed nine years ago for that purpose. It is not practicable here to refer to all these revisions. A number of the changes which were adopted merely record a change in point of view of the Church as a whole toward certain customs and in certain human relationships. For example, it is no longer contrary to the rubrics of the Church to read the burial service over the body of an unbaptized person or of a suicide. This is not to be interpreted as a change in the conscience of the Church, but rather a greater charity and sympathy. The new prayers that have been added are also a record of a new understanding of fraternity, as is indicated by the prayers for social justice and for missions. It is significant of a changing view of the marriage relation that simultaneously with the removal of the word "obey" from the vow of the wife there is added a prayer for fruitfulness in marriage.

In a despatch from Portland to the New York "Tribune" Dr. Chorley emphasizes the action of the Church in reference to modern social problems, and he quotes from the pastoral address of the bishops to the members of the Church which lays upon corporations and labor unions alike the duty of public service. The pastoral indicates also an understanding of what is commonly regarded as the modern revolt of young people and a sympathy with certain objectives of that revolt—the "readiness and determination to level social distinctions and forego social privilege, a larger freedom of social habits and a real democracy of thought and activity." and with this expression of sympathy and understanding the pastoral later couples a warning against the lack of parental control and leadership.

THE EPISCOPAL CHURCH AND SOCIAL PROBLEMS

THE Episcopal Church has not relaxed its rule against authorizing the Episcopal clergy to perform a marriage ceremony for a person divorced except for the innocent party in case of infidelity. On the contrary, it has made that rule more stringent by making it now a cause for excommunication for persons so remarried.

The Church also recognizes the principle of spiritual healing; but safeguards it by providing that such work

Paul Thompson

THE OKLAHOMA OF THE PACIFIC FLEET FIRING A SALVO OF TEN FOURTEEN-INCH GUNS AT TARGETS TEN MILES AWAY

(For result see picture below)

should be carried on only in co-operation with qualified physicians.

On social problems, in addition to the declaration of the bishops on the relations between capital and labor placing human rights above property rights, declaring a living wage as the first charge on industry, for a substitution of co-operation for competition, for providing the worker with a voice in the control of industry so far as determining his conditions of work and life, the Episcopal Church has expressed its views on social questions as recorded by Dr. Chorley in his despatch to the "Tribune" in these words:

The Convention has gone on record against the marriage of defectives, mob violence in all its forms, secret organizations which stir up strife between man and man and set race against race and creed against creed. Raffles and gambling in any form are condemned as methods of raising money for churches and charitable institutions, obedience to the Constitution of the United States, especially concerning prohibition, was urged, and war as a means of settling disputes between nations was declared to be unchristian. A joint commission has been appointed to organize men's institutes, and the Convention has de-

clared itself as favoring free speech, free discussion of social problems, and a free press.

Whatever opinions one may have concerning the actions of the Church as thus recorded, it is evident that the Protestant Episcopal Church, while it holds fast the form of sound words, is also pressing forward with life and vigor.

MAINTAINING THE NAVY'S EFFICIENCY

DESPITE decreases in appropriations, limiting the amount of battle practice which the United States Navy can carry out, officials in charge are doing everything possible to keep the efficiency of the Navy up to a high standard; and they believe that their efforts are meeting with success. Like a prudent housewife whose allowance has been diminished, they are obliged to "cut corners" and to economize to keep their house in order, so that if "visitors" should ever come they would be able to "receive" them.

In times of peace battle practice is the life of the Navy. Without it, officers and men alike would soon lose, not only the efficiency, but also the morale and the

unity of action without which they would be helpless if ever faced by a real enemy. Unless the officers and men of the Navy keep fit by almost constant practice every vessel in the American fleet might as well be scrapped at once.

There has been no apparent lessening of efficiency in the American Navy, as far as can be observed from what can be made known without betraying secrets to foreign Powers, in regard to the latest battle practice operations of various units of the Navy. These show that the man behind the American gun still has a good eye, and that if he were ever called upon again to defend the rights of mankind he would give a rattling good account of himself. He can pepper targets full of holes, although the mark he is aiming at is many miles away—just how far and just what percentage of shots he makes is only for the eyes of a few Navy officials. The officials of some foreign navies would like to know also; it would be very interesting to compare it exactly with the marksmanship of their crack gunners; but the Navy guards this information zealously.

In a general way, however, they allow

Paul Thompson

THIS PHOTOGRAPH SHOWS THE TARGET AFTER THE FIRING OF THE FOURTEEN-INCH GUNS FROM THE OKLAHOMA

something to be shown—even with pictures—of what the Navy is doing in the way of battle practice. They believe that the people of the Nation are entitled to know what the Navy is doing to keep fit for any emergency to which it might be called.

While the Navy is being cramped at the present time in the amount of battle practice of various kinds in which it can indulge, nevertheless by combining different operations, performing as much as possible in the way of actual maneuver and drill within a given steaming radius, the officers responsible for this part of the Navy's welfare—and a most important part—are succeeding in getting good results. The efficiency of the Navy, it is believed, is being maintained; at least, it is holding its own and not going back.

How long it could do this, however, under skimmed appropriations is a question which cannot be answered with any degree of definiteness. It seems to be certain, from the best opinion available on the subject, that a few years of such limited battle practice would begin to tell on the general morale and efficiency of the Navy. With considerable periods of lying idle in port, with some portions of battle practice conducted while lying at anchor instead of "riding the waves" as in genuine battle practice, and with insufficient drill at times perhaps along certain lines of ship operation, there will of necessity come a time when there will be a drop from the high mark of efficiency which the American Navy has maintained up to the present time.

The American Navy is being limited in size; it must not be limited in its ever-ready attempts to excel its own previous records in efficiency.

BOYS AND BOOKS

THE recent occurrence of the hundredth anniversary of the birthday of "Oliver Optic" (W. T. Adams) has raised the question whether the taste of boys in reading has improved or deteriorated in the last fifty years. We doubt if there has been much change. Then, as now, the boy cared more for the substance of the story than for the manner of its telling. Then, as now, parents were glad to have their boys interested in reasonably wholesome tales like those then poured forth in such profusion by Oliver Optic and Horatio Alger, later by Henty, and in our day by the football authors of whom Barbour is king, if thereby they could be kept from sensational trash. Beadle's dime novels and the similar Munro series of that day were no more objectionable than the Cap. Collier and Old

Sleuth tales a generation later. The hundred stories built up mechanically by Oliver Optic were perfectly proper—he was a school-teacher and an advocate of moral training. If they had no literary grace or quality and if their boy heroes were marvels of ability beyond belief, this did not interfere with their popularity.

Emphatically, with the boy "the plot's the thing;" he has inherited the prehistoric taste of primitive man for the story of adventure and action. It was the tale, as distinguished from the novel, that Sir Philip Sidney had in mind when he spoke of "that which holdeth children from play." But for the boy fifty years ago who could see that there was something in the books of J. T. Trowbridge that simply didn't exist in the Oliver Optic stories—that, for instance, Trowbridge's Civil War tales, "Cudjo's Cave" and "The Drummer Boy," had imagination and character depiction, whereas Oliver Optic's "Young Lieutenant" and the long series of military and naval heroes that followed were perfectly wooden—for that boy there was a certainty that literary taste could be developed.

What the boy needs is for some one—librarian, teacher, parent, or, better yet, other boys of a taste a little more advanced than his own—to steer him at just the right time from the pithless, machine-made story to the book that retains the excitement of adventure and yet has the glow of imagination. If it is something that he hasn't been told to read as an educational duty, so much the better. "Ivanhoe," for instance, has pretty nearly been killed for boys in just that way. And if the boy finds it himself, that is the best of all. Happy is the chap who has discovered by his own browsing that there is something more lively and satisfying than the conventional "juvenile" about school life in Stevenson's "Kidnapped" or Kipling's "Kim" and "Captains Courageous," in Reade's "Cloister and the Hearth" or Blackmore's "Lorna Doone."

A few weeks ago Mr. H. V. Coryell wrote in our Book Table on "What Books Do Boys Recommend to Each Other?" and described interesting experiments in finding the answer. He found that he could get boys to discuss informally the books they read, to tell other boys the books they like and why, and the very process improved their own taste. Moreover, "the honest recommendation of one boy to another carries far more weight than the recommendation of any grown-up; for boys, through sad experience, have come to suspect us adults of wishing to force 'dry old stuff' down their throats." The boys' opinions just after they read the books were

divided into those about books no boy should miss, fairly worth-while books, and "time killers;" and the first classification was certainly creditable and reasonably free from the curse of most such lists (especially those made by librarians), that of including just what the makers think every one expects them to put in.

We hope that librarians who deal with children will follow out Mr. Coryell's idea; it is educative to the boys as well as helpful in getting a first-hand view of what boys will read instead of what they ought to read. It would be particularly interesting to apply this test to new books; in the flood of holiday books the librarian feels safer in following the good old road and recommending "Hans Brinker; or, The Silver Skates" and "Treasure Island" than in picking out and recommending from among the new books those that will entrance and stir by true imaginative value.

GOING TO COLLEGE

PRESIDENT HOPKINS, of Dartmouth College, has stirred the daily newspapers by asserting in an address to the student body of his institution that too many men are going to college. It is quite natural that just at this time the newspapers should be greatly exercised by the proposal to limit the number of college undergraduates. The football season has just opened. The sport page has grown to be one of the most important pages of American journalism. If college undergraduates are to be limited to those who are really after an education, and who regard athletics as an incident—a pleasant and important incident, it is true, but nevertheless an incident of college life—what is going to become of the sporting page during October and November?

It will not do, however, to treat the discussion with too much levity, for President Hopkins spoke in all seriousness, and what he said is worthy of serious consideration. He regards a college education, which is always given, not at the expense of the student, but at the expense of taxpayers in State institutions and of private donors in endowed institutions, as "definitely a privilege and not at all a universal right." He believes that some way must be found to "define the individuals who shall make up the group to whom, in justice to the public good, the privilege shall be extended and to specify those from whom the privilege should be withheld." He does not wish this privilege to be "restricted to any class defined by the accident of birth, or by the fortu-

tous circumstance of possession of wealth."

The social detriment which results from the overcrowding of our colleges is twofold. Many of those who just succeed in getting their academic degrees would have had a better training and a better development of their gifts or capacities by a working experience in the actual problems of life; and there are now so many men thronging university and college class and lecture rooms that the students who have a special capacity for this kind of training are hampered by the "slackening of pace due to the presence of men indifferent or wanting in capacity."

It may seem paradoxical to assert that many of these difficulties would disappear if more men would go to college. The trouble is that too many boys are sent there, either because it is the proper thing socially, or because their parents want them to be educated along lines for which they have no bent. Going to college is a very different thing from being sent to college. The boy who goes to college because he is determined to get a training in literature, or history, or philosophy, or languages, or mathematics, or chemistry, usually makes good himself, and makes his professors happy. We doubt if increasing the severity of entrance examinations would be of much benefit. Cramming methods can usually overcome such an obstacle. What will come nearer solving the difficulty is a rigorous weeding out of those who are indifferent or incompetent. This is the method which is pursued at Oxford and Cambridge and at the French universities. In France a university student does not recite his lessons. He hears lectures; he is told what to read on a particular subject; and then he is left with occasional consultation with professors or preceptors to dig his way into the subject himself. If he passes a very stiff examination, he gets his degree; if he fails to pass this stiff examination, he retires.

The ultimate purpose of education is not, we take it, to fill a boy's head with facts like an encyclopædia, but to train him to be able to see the proper relations of the facts which he discovers in his own experience, and to be able to make the right deductions from those relations.

There should be some institutions where men who have the intelligence and capacity can be trained to be leaders of their generation in actual life. Just as the high school is an outgrowth of the grammar school, so there might well be some high colleges into which only those should be received who are especially fit for the finest kind of training.

THE NEW TARIFF BILL

CONGRESS has succeeded in conglomerating the Tariff Bill. The latest protectionist measure which has just gone into effect consists of a long and complicated series of clauses, imposing arbitrary duties with very little coherence or relation to one another. This must be the conclusion of even the layman who looks at Mr. Bell's interesting article on another page. The new law has probably less actual corruption and more illogical selfishness at the back of it than any tariff law passed since the days of that great protagonist of protection, Henry Clay. What the President regards as a great contribution to the science of tariff-making—we mean the clause which empowers the President and the Tariff Commission to change specific duties when they think the good of the country demands it—is not a solution, it is an experiment, and it may not work. The motive which inspired this provision was excellent, but the method is dubious. There are two serious objections to giving the President executive power with regard to the amount of duty to be paid on any particular commodity, and these objections cannot be airily dismissed.

The first objection is that it is bad for the President. The Chief Magistrate of the United States now has burdens of decision and duty which are overwhelming. To subject him to the appeals of importers who believe they are unjustly treated or of manufacturers who think they ought to have more profits is to add a new burden upon him which may prove intolerable. The second objection is that it is bad for American industry. The greatest danger to commerce is uncertainty. An importer buys a bill of goods in Europe. After he has paid his duties, and before he has been able to dispose of his stock, the President by executive order lowers the tariff tax on this particular commodity. His competitors are greatly benefited at his expense. Unless the President is most wisely advised and acts with great wisdom, importation under these circumstances may well be not only perplexing but dangerous. And the difficulties awaiting the importer await also the protected manufacturer. A manufacturer sends out his winter line of gloves at a price contracted by him on the basis of a certain duty. After his contracts are made, the President raises this duty and his competitors can, therefore, ask a higher price. Any provision which makes possible inconsiderate meddling with single and particular schedules of a tariff act and the consequent upsetting of the commercial equilibrium is a great peril to the coun-

try; and it is not clear that the present bill has averted this peril.

Whatever tariff changes are made should be based on facts ascertained after investigation in the interest of the whole public and should be put into effect only after full hearings and due notice of the time of change.

Perhaps in this stage the present bill in this particular is as good as could be expected; but its fundamental defect is twofold: It does not provide sufficient safeguards against sudden and unreasonable changes; and at the same time it limits the administrative action of the President and the Tariff Commission by a set of schedules that are unscientific and conglomerate.

One thing in the bill that can be wholeheartedly commended is the defeat of the clause proposing that duties should be levied on an arbitrary and artificial American valuation. Let us at least be reasonable and logical. We either ought to prohibit all importations, or those importations which we do permit to come into the country should be treated with common fairness.

Let it not be supposed that the editors of *The Outlook* have suddenly become theoretical free-traders. We have not. In this stage of civilization protective measures of various kinds are needed in National life, but they should be framed at least with the best intelligence of which the country is capable. A protective tariff law has three reasons for its existence. Its first object is to raise revenue; its second object is to promote and maintain manufacturing, not for the personal profit of the manufacturer, but for the general public prosperity; and third, it should be so framed as to protect its wage-workers from the cheaper wages or the lower standards of living prevalent in other countries, if there are any such. Five hundred members of Congress, pulled and hauled by conflicting interests, can hardly be expected to give these three functions of a rightly made tariff bill proper consideration. Some day, we suppose, the United States will have a scientific and impartial body which will deal with the tariff with an authority equal in extent and analogous in kind to that of the Inter-State Commerce Commission, as an administrative agent of Congress, and an arm of the Executive. Such a body will be able to take the tariff out of politics, for by its investigations it will be able to ascertain and effect such duties as are necessary for revenue, for a subsidy of general manufacturing, and for the maintenance of the highest possible standards of living for wage-workers. Until something of this kind is done, we shall continue to have conglomerations and hodgepodes as the products of tariff legislation.

OUR NEW TARIFF LAW

BY STEPHEN BELL

FOREIGN EDITOR OF "COMMERCE AND FINANCE"

AS no tariff bill of which the writer has cognizance—not even the "Tariff of Abominations" of pre-Civil War days—ever provoked the widespread exhortation for alleged excesses that has been lavished on the Fordney-McCumber Bill, even by professed protectionists, it is not easy for one who differs from the protectionist school of economics to treat it with entire judicial fairness. It must be said, however, that its departures from the Underwood rates are less glaring than has been asserted, and if the principle of excluding imports for the protection of home industries be sound, it has been but inadequately embodied in the new law. If the principle be unsound, its opponents have been derelict in not having discarded it in toto.

The bill, widely heralded as a "scientific tariff law," is of magnificent proportions. As reported to the Senate it made a book of 438 pages. As signed by President Harding it filled, with small type, nearly eight newspaper pages. Small wonder, then, that Congress struggled with it from the House hearings beginning January 7, 1921, to its final passage by the Senate, September 19, 1922, and its signature by the President two days later. Obviously, a bill of this magnitude cannot be adequately treated in a magazine article.

Among the favorable features of this supposedly scientific tariff law may be mentioned its administrative provisions, which, according to S. G. Van Hoesen, Chairman of the Customs Committee of the New York Merchants' Association, will simplify procedure and afford relief to importers in case of errors, which they did not have before. There will be those who differ from President Harding's judgment that the elastic provision of the bill will prove "the greatest contribution toward progress in tariff-making in a century," but that it may afford relief from rates which prove too burdensome is not to be denied. Under this provision manufacturers, importers, and other interested persons may apply to either the President or the Tariff Commission for changes in rates or valuation bases, and the President may, with the approval of the Commission, which is to be enlarged, make changes within a range of fifty per cent of the tax imposed under the law. It is to be doubted if the President realized at the time the bombardment of applications for changes that will descend upon his head.

Opponents of the bill and some legal authorities predict an unprecedented amount of litigation growing out of this "elastic" provision by which the President instead of Congress will make rates, which is said to be uncon-

stitutional, and also out of other provisions of uncertain meaning.

Comparison of the bill as a whole with the Underwood law is made difficult by the fact that so many changes have been made from *ad valorem* to specific duties, or to combinations of specific and *ad valorem* rates, while the "elastic" possibility of upward or downward revision of rates further discourages comparison. From the rates as published I cull these few items:

	Underwood Tariff	New Tariff
Firebrick	10 p.c.	25 p.c.
Glass lenses.....	25 p.c.	40 p.c.
Asbestos manufactures. 10 p.c.		30 p.c.
Glassware	30 p.c.	50 p.c.
Harness hardware.....	Free	35 p.c.
Thrown silk.....	15 p.c.	25 p.c.
Silk fabrics.....	45 p.c.	55 p.c.
Wool, washed.....	Free	31c lb
Woven wool fabrics.....	25 @ 35 p.c.	24 @ 45c yd.
Cotton clothing.....	30 p.c.	35 p.c.
Wheat	Free	30c bu.
Beef and veal.....	Free	3c lb
Butter	2½c lb	8c lb
Sugar	1c lb	1.76c lb
Peanuts, unshelled.....	¼c lb	3c lb
Figs	20 p.c.	35 p.c.
Milled rice.....	1c lb	2c lb
Cocoanut meat.....	2c lb	3½c lb
Hay	\$2 ton	\$4 ton
Furniture	25 p.c.	60 p.c.
Carpets (Brussels)	26 p.c.	40 p.c.
Cutlery	25 @ 30 p.c.	80 @ 175 p.c.
Clocks	30 p.c.	50 p.c.

The dye embargo is dead for this session. Congress could understand an embargo, though it may be doubted if any other than an expert chemist can understand all of the polysyllabic labyrinth of words and figures comprising the chemical schedule. There are lapses from the protective principle in the bill. Leather coverings for the feet are free, leather coverings for the hands are taxed up to 70 per cent. Wood shingles are free, metal roofing is highly taxed. The printer's linotype is free, the housewife's sewing machine is dutiable. The contest over rates and the methods by which agreement was reached have strengthened the sentiment for taking tariff making out of Congress and placing it in the hands of qualified experts, if such can be found.

How will the new tariff affect the fortunes of our people? There are too many factors of uncertain trend to make detailed prophecies of any value. Already Chicago reports an upward revision in dry goods prices, but this may be credited to increased wages and higher prices of raw materials as well as the tariff. Also, Ivy L. Lee returns from Europe and tells Philadelphia bankers that cotton would be selling for 40 to 50 cents a pound if Europe could buy. But Europe has no dollars wherewith to buy, and under the provisions of the new law is unlikely to get any undue number of them. The European food situation is bad, too, but Europe

probably will have to buy her food where she can sell her own products.

Germany in particular is badly off for food, but with a quarter trillion of marks already circulating and more issuing at the rate of twenty billion a week, she has broken her financial emergency brake and is slipping downhill for an upset. And German finances affect all Europe.

Tariffs and tariff making in their international aspects have been insufficiently discussed. The British have been startled at the passage of the new law, for they expected radical changes in it. They feel that it will not entirely exclude British goods, however, since shipments of these afford the only means by which the British war debt or interest thereon can be paid. But Lancashire is discouraged. French papers are bitter, contrasting our expressed solicitude for European recovery with this blow at European trade and industry. They also assert that we have cut off means of paying the debts owed us. Mr. Huntington Adams in an article in a New York newspaper sets forth that all the monetary gold outside the United States amounts to but \$4,680,000,000, of which our debtors have only \$1,720,000,000, and asks how the debts can be paid unless they can create here the credits necessary for their payment. Sir Robert Horne, British Chancellor, is coming here in October to fund the British debt, and perhaps the Government officials will be able to explain this to him.

That the whole question of international trade and exchange is in a critical condition is apparent from Lord Robert Cecil's assertion at Geneva that the economic situation is linked up with disarmament and that disarmament depends on a solution of the international debts. Of course the League knew this before, but it is disconcerting to have the fact advertised just now, while it is still trying to gather the nations together as a hen gathers her chickens.

The consensus of foreign opinion is that we will find we have hurt our own trade quite as much as we have injured that of others. Yet the Department of Commerce is engaged in a world-wide campaign to extol the merits of American products in order to expand our foreign trade, and the proposal to extend foreign credits to facilitate foreign buying is renewed.

We are told that the passage of this new tariff law was necessary because of the debased currencies and lower costs of manufacture in Europe. In the years since the war began our exports have exceeded our imports by 22 billions of dollars, and the balance still runs heavily the same way. In the debate on the tariff 74 exhibits of cheap German

goods were made. In the fiscal year ended June 30 we imported German goods to the amount of \$95,592,000 and sold her \$350,442,500 worth of merchandise. There were four exhibits of cheap Japanese goods. Japan's currency has been at par or thereabouts, yet she sold us goods to the amount of \$307,515,000 and bought only \$248,716,000 worth. Our trade figures in post-war years have been as follows, according to figures of our Department of Commerce:

	Imports.	Exports.
1919.....	\$3,904,364,932	\$7,920,425,990
1920.....	5,278,481,490	8,228,016,307
1921.....	2,509,147,570	4,485,081,356
1922 ¹	1,942,543,249	2,424,045,754
¹ (8 mos.)		

Will the new tariff increase our prosperity? It is obvious that the emergency tariff law, which the new law supersedes, has not benefited the farmers, for whose benefit it was passed. Wheat has in the past few weeks been below pre-war prices and lower than before the law was passed. With Europe prostrate she can buy little. With our exportable products thus backed up, to whom shall we sell? Can labor maintain its standards if the farmer cannot sell and therefore cannot buy, and business again slackens? Has not labor learned that higher wages are valueless if prices advance proportionately?

Heretofore great tidal waves of indus-

trial depression have swept over the earth at intervals of about twenty years, regardless of tariffs, of fiscal systems, of standing armies, of parasitic aristocracies or other differences in national conditions. Count them—1835, 1857, 1873, 1893, 1913, 1921. The stimulus of our Civil War shortened the period several years. The stimulus of the World War, more intense and widespread, spent itself more quickly. The process of recovery has always come eventually, regardless of local conditions. The nations may grow accustomed to their new shackles and again make progress, but can it be said that their progress will be aided by the shackles?

THE BONUS, THE PRESIDENT, AND THE LEGION

THE Adjusted Compensation Bill was, with two exceptions, submitted to the President by Congress in substantially the form reported in *The Outlook* for September 13. The two exceptions were the omission of the clause providing that funds for the bonus might be paid from the interest on our foreign debt, and the withdrawal of the plan for a \$350,000,000 reclamation project which was to be made a part of the rehabilitation programme.

In perhaps the clearest and most cogently reasoned statement which Mr. Harding has yet issued, the bill as submitted to him was vetoed on September 19. The President's statesmanlike veto is in exact line with his previous views on the bonus question, and deserves study in full. But perhaps the following excerpts cover its most important conclusions.

The President says:

In legislating for what is called adjusted compensation, Congress failed, first of all, to provide the revenue from which the bestowal is to be paid.

Moreover, it establishes the very dangerous precedent of creating a treasury covenant to pay which puts a burden, variously estimated between \$4,000,000,000 and \$5,000,000,000, upon the American people, not to discharge an obligation, which the Government always must pay, but to bestow a bonus which the soldiers themselves, while serving in the World War, did not expect.

He goes on to acknowledge the very real obligation of the Government to those "who left the armies injured, disabled, or diseased," and describes what is being done for the men broken by the war. Five hundred and ten million dollars is the charge on the Government on this account in the year 1922, and the President estimates that next year probably more than \$470,000,000 will be required. There has been grave evidence that this money has not all been wisely and advantageously spent, but the President is right in pointing out

that this total indicates that the country wishes to deal properly and generously with its disabled men.

Of the actual benefits which the proposed bill would bestow on uninjured veterans, the President says that the bill states in effect, "We do not have the cash, we do not believe in a tax levy to meet the situation, but here is our note; you may have our credit for half its worth." This," says the President, "is not compensation, but rather a pledge by the Congress, while the executive branch of the Government is left to provide for payments falling due in ever-increasing amounts."

Of the financial arrangements called for by the bill the President further says:

When the bill was under consideration in the House, I expressed the conviction that any grant of bonus ought to provide the means of paying it, and I was unable to suggest any plan other than that of a general sales tax. Such a plan was unacceptable to the Congress, and the bill has been enacted without even a suggested means of meeting the cost. Indeed, the cost is not definitely known, either for the immediate future or in the ultimate settlement. The Treasury estimates, based on what seems the most likely exercise of the options, figure the direct cost at approximately \$145,000,000 for 1923, \$225,000,000 for 1924, \$114,000,000 for 1925 and \$312,000,000 for 1926, making a total of \$795,000,000 for the first four years of its operation, and a total cost in excess of \$4,000,000,000. No estimate of the large indirect cost ever had been made. The certificate plan sets up no reserve against the ultimate liability. The plan avoids any considerable direct outlay by the Government during the earlier years of the bill's proposed operations, but the loans on the certificates would be floated on the credit of the nation. This is borrowing on the nation's credit just as truly as though the loans were made by direct Government borrowing and involves a dangerous abuse of public credit. More-

over, the certificate plan of payment is little less than certified inability of the Government to pay, and invites a practice of sacrificial barter which I cannot sanction.

The President defines the essential elements of public credit thoughtfully and clearly:

It is worth remembering that the public credit is founded on the popular belief in the defensibility of public expenditure, as well as the Government's ability to pay. Loans come from every rank in life, and our heavy tax burdens reach, directly or indirectly, every element in our citizenship. To add one-sixth of the total sum of our public debt for a distribution among less than 5,000,000 out of 110,000,000, whether inspired by grateful sentiment or political expediency, would undermine the confidence on which our credit is buildied and establish the precedent of distributing public funds whenever the proposal and the numbers affected make it seem politically appealing to do so.

The difficulty of arranging for an expenditure at this time which might have been easily accomplished during the war is outlined in the following words:

It is sometimes thoughtlessly urged that it is a simple thing for the rich Republic to add \$4,000,000,000 to its indebtedness. This impression comes from the readiness of the public response to the Government's appeal for funds amid the stress of war. It is to be remembered that in the war everybody was ready to give his all. Let us not recall the comparatively few exceptions. Citizens of every degree of competence loaned and sacrificed, precisely in the same spirit that our armed forces went out for service. The war spirit impelled. To a war necessity there was but one answer, but a peace bestowal on the ex-service man, as though the supreme offering could be paid for with cash, is a perversion of public funds, a reversal of the policy which exalted patriotic service in the past, and sug-

gests that future defense is to be inspired by compensation rather than consciousness of duty to flag and country.

Mr. Harding apparently believes that the passage of the Adjusted Compensation Act would not obviate the need, real or political, of a later passage of pension legislation similar to that which has followed all our wars in the past:

It is to be remembered that the United States played no self-seeking part in the World War and pursued an unselfish policy after the cause was won. We demanded no reparation for the cost involved, no payments out of which obligations to our soldiers could be met. I have not magnified the willing outlay in behalf of those to whom we have a sacred obligation. It is essential to remember that a more than \$4,000,000,000 pledge to the able-bodied ex-service men now will not diminish the later obligations which will have to be met when the younger veterans of to-day shall contribute to the rolls of the aged, indigent, and dependent.

It is as inevitable as that the years will pass that pension provision for World War veterans will be made, as it had been made for those who served in previous wars. It will cost more billions than I venture to suggest. There will be justification when the need is apparent, and a rational financial policy to-day is necessary to make the nation ready for the expenditure which is certain to be required in the coming years. The contemplation of such a policy is in accord with the established practice of the nation, and puts the service men of the World War on the same plane as the millions of men who fought the previous battles of the Republic.

We trust that, with or without an adjusted compensation act, the country will never again witness such a pension scandal as followed the Civil War. Probably the President is right in saying that some form of pension system is

inevitable, but there have been abuses of our pension system in the past which should never be permitted to recur again. Indeed, the War Risk insurance plan, which the Government had the foresight to adopt, was supposed to obviate the need of an aims-like pension system.

THE VETO SUSTAINED

As readers of The Outlook know, the House voted to overrule the President's veto by a vote of 258 to 54. The Senate voted to sustain the veto by a margin of four votes. Among the Republican Sena-

tors who voted to override the veto were Senators Capper, Cummins, Kellogg, La Follette, Lenroot, Lodge, and McCumber. Seventeen Democrats joined their Republican colleagues in an attempt to overrule the President. Among them were Senators Culberson, Heflin, Hitchcock, and Reed.

There were twenty-one Republicans who voted to sustain the veto, and they included Senators Borah, Calder, Moses, Newberry, Pepper, Smoot, and Wadsworth. Senators Williams, Glass, Owen, and Underwood were among the seven Democrats to vote to sustain the veto.

THE LEGION AND THE VETO

The position of the American Legion is defined in a statement sent to The Outlook by its Commander, Hanford MacNider, at our telegraphic request.

SPEAKING before his organization a month or so ago, the President of the Bankers' Association of the State which has the highest per capita wealth in the Union said, "To say that our country cannot afford to adjust in some small measure the difference in compensation between the man who went to war and the man who stayed at home is to indict us for incompetence and to impeach us for ingratitude." The offering of a man's life and his services with the colors at least should receive equal consideration with the services of contractors, manufacturers, railways, and shipping interests. These obligations have been or are being paid, and they are undoubtedly proper debts, but the obligation to the veteran still remains and will remain until some adjustment is made. The Nation stands behind us when we say that the economic handicap of the veteran is not the Nation's intention or wish. Its representatives in Congress time and again have expressed this feeling by the passage of this legislation by large majori-

ties. President Harding has prevented its enactment into law. Heretofore he has stated that he believed some such legislation should be passed. He asked that a revenue feature be part of the measure. He now suggests that a pension system in the future would be the proper solution.

The American Legion feels and always has felt that if benefit to the veterans concerned were provided now, no great pension system, except for the disabled, would be necessary during the coming years to meet their handicap. Not only would immediate adjustment save the Nation billions of dollars, but it would restore the faith of men sorely tried by what they feel to be National ingratitude and injustice.

The battle for adjusted compensation has only just begun. The President has made the task doubly hard, but no one can stand between the wish of the people and fulfillment of what they believe to be a just obligation. The first bills introduced in the next session of Congress will be for adjusted compensation. Postponement for a few months will only strengthen the measure, and we shall win this fight. We are right, and right always prevails in America.

HANFORD MACNIDER.

"OUR BUSINESS"

THE DEFENSE OF THE BOSPHORUS AND DARDANELLES

BY MAJOR-GENERAL SIR GEORGE ASTON, K.C.B.

THE seeds of the present trouble in the Middle East were sown before the Great War. The naval and military aspects of a possible war with Germany were carefully studied in Great Britain in pre-war days by the Committee of Imperial Defense, but no special attention was devoted to conditions likely to arise out of a war against Turkey in alliance with Germany. The result was that, when Turkey came into the war, the Mesopotamian and Dardanelles campaigns were launched by independent authorities without considering the war situation as a whole, the mili-

tary resources available, or the probable aftermath of our war strategy. Our failures in the Dardanelles and in the early stages of the Mesopotamian campaign landed us in a difficult situation, which was retrieved, partly by General Maude in Mesopotamia, and finally by Allenby's brilliant campaign in Palestine and Syria. Turkey was knocked out, and ready to agree to any terms if they could be enforced without delay. The delays have been interminable, and we are still technically at war with Turkey. The situation is now serious.

The trouble began with the extension

of Greek territory over a large portion of Asia Minor under the terms of the Treaty of Sèvres, which has never been ratified. It was chiefly on this account that the Nationalist Turks under Mustapha Kemal defied the Constantinople Government and started their campaign in Anatolia. This brings us to our own part in the matter. We accepted the military responsibility for keeping the Dardanelles and Bosphorus open to the sea-traffic of the whole world. There were heavy drains at the time upon our military resources to provide for contingencies in India, in Mesopotamia, in

Palestine, in Egypt, in the Rhinelands, and in Ireland, in addition to the normal demands upon our army to provide the usual oversea garrisons. The security of the Straits, as we were told by Mr. Lloyd George when the terms of the Treaty of Sèvres were published, was "our business." America was unwilling to accept the responsibility. Neither France nor Italy could spare the troops, so we undertook to provide them. We are still doing so.

Unfortunately, soon after we undertook the responsibility, we found that we could not, out of our own resources, provide a sufficiently strong force to secure both the Dardanelles and the Bosphorus against attacks by Kemalist National troops from the Asiatic side, and we were obliged to call in the aid of the Greeks, who responded with enthusiasm. Unfortunately, the British public at the time was much occupied with home affairs and heartily sick of everything to do with warfare. The press and Parliament devoted scarcely any attention to a situation pregnant with possibilities. In pre-war days press correspondents of the first rank would have swooped down upon the spot, and we should have had constant and reliable information. As matters were we only received information tainted at the source by Greek, Turkish, and Bolshevik propagandists. We gathered that the Greek troops had helped to drive back the Kemalists and insure the security of the Bosphorus. The next thing we heard was that Greek troops were landing at various places in the Sea of Marmora under the guns of British war vessels. Then that the Greek army was undertaking a campaign on a large scale in Asia Minor, far beyond the limits of the territory assigned to Greece by the Sèvres Treaty. We heard of friction with Italian troops on their southern flank, and, later on, of the withdrawal of the Italians from Asia Minor. A definite statement was published, said to emanate from the Greek General Staff, that the Greek army was embarking on the campaign at the request of the British Commander-in-Chief at Constantinople. That statement I do not believe. Then came Greek successes, and a refusal to make peace. Then the French treaty with the Kemalists, affecting most seriously our military position in Mesopotamia by surrendering to the Turks territory forming a corridor to its frontiers. Then came the understanding between the Kemalists and the Bolsheviks, the betrayal of Armenia, and now the débâcle of the Greek armies in Asia Minor and the occupation of Smyrna by the Turks. Such, in brief terms, is the history of the policy which has led up to the present situation in the Asiatic side of the Straits, the defense of which has been proclaimed to be "our business."

From our point of view the situation is as it was before we called in the aid of the Greeks. The security of the

THE REGION OF THE GRECO-TURKISH CONFLICT

Straits may be threatened from the Asiatic side by Kemalist forces. What could they do to interfere with the free passage of merchant shipping through the Dardanelles and Bosphorus? The war, if there is to be one, will be an amphibious war if ever there was one; and this time let us hope that we shall not forget that war vessels cannot climb mountains. The land on both sides abounds in cover, in hills, underfeatures, and woody scrub. Communications, essential to the maintenance of armies of any appreciable size, are deficient on the Asiatic side. The railway from Ismid to Scutari, opposite to Constantinople, is the most important. It is exposed throughout its length to bombardment from the sea. There is also the short line from Brusa to Mudania on the coast, and the line from Smyrna to Panderma. Sea transport is easy, land transport is difficult. This fact, if intelligently applied, puts us on interior lines and enables us to make effective use of such troops as may be available. They can move faster by sea than by land. Responsibility for maintaining order in Constantinople is a handicap that must be accepted. The conditions of the problem are that we have sufficient naval forces on the spot to control the sea communications, but troops will be needed if there should be any attempts by hostile forces to approach the shores of the Straits to snipe at passing steamers, or to harass them with mobile gun, or howitzer fire. Former experience of gunfire from the sea against such pieces, if well concealed, is not encouraging, but, with aircraft available, air observation should greatly increase its effectiveness. Such are the conditions of the problem if (this seems inconceivable) we are to be left to guard the Straits without the aid of other countries in whose interests they are guarded.

So far allusion has been made only to

the Asiatic side. The Nationalist Turks are also credited with a determination to regain Turkish dominion in Thrace, especially over Adrianople, and to do away with foreign control over Constantinople and the belt of territory now administered by the Allies on each side of the Straits. Thrace is in occupation of a Greek army which only a few weeks ago was knocking at the gates of the Chataldja Lines covering Constantinople. There is at present no reason to suppose that the Greeks will be unable to deal with any situation that may arise. As regards ourselves, we have been given a peep into the enemy's brain. The policy both of the Kemalists and of their allies the Bolsheviks has been, and will be, to try to create trouble in other regions, in Mesopotamia, in Palestine, and in India, with a view to forcing us to use there the military resources needed to maintain "our business," the security of the Straits for the flags of all nations.

If the world is to have the longed-for peace, the essential condition is to secure united action between the countries most concerned, France, Italy, ourselves, and, let us hope, America. If this combination can once more be restored, then the abandonment, in the face of military defeat, of Greek ambitions for territorial expansion in Asia Minor may, after all, come to be a blessing in disguise. That statement is made solely from the point of view of naval and military (commonly called amphibious) strategy. I have not touched the urgent question of protecting the Christians in Asia Minor. We have neither the financial nor the fighting resources to save them from what, judging from precedents, may mean wholesale massacre. We cannot, without the whole-hearted support of other nations, make their protection "our business."

Court House, Lower Woodford, Salisbury, England, September 13, 1922.

CONFISCATION AND REPARATION

Wide World Photos

RUSSIAN CROWN JEWELS IN THE HANDS OF THE SOVIET GOVERNMENT

This is said to be the entire collection of jewels of the former rulers of Russia, beginning with Catherine II and Paul I. The glittering array includes the Czar's crown, shown on the dais, made for Catherine II, containing the great uncut Balai ruby, brought from Peking in the seventeenth century. Directly beneath this crown, mounted in the scepter shown in a diagonal position, is a huge diamond, probably the Grand Mogul. The men in the photograph include the Soviet treasure fund administrators and the French jewel expert who made the official valuation (announced as the incredible sum of "sixty billion dollars"). The men in smocks are the peasant guards of the treasures

A CAPTURED RUM-RUNNER AT A NEW YORK PIER

The Government rum-hunters captured a rich prize when they took the two-masted schooner M. M. Gardiner off the Highlands in lower New York Harbor. She is said to have had on board, in addition to a cargo of the "real stuff," a chest containing \$40,000 in gold, apparently the proceeds of a previous expedition

THE GREEN GOLD OF 'THE TROPICS

BY NEWTON FUESSLE

IT is midnight. The steamy tropical air is fanned by Caribbean breezes. Their touch is velvety, like the tropical darkness through which they move.

A long white ship, at rest alongside the enormous dock and loading-shed of Port Limon, rises and falls in languid rhythm with the drowsy motion of the sea.

Suddenly dusky signalmen wave their lanterns, and a seemingly interminable string of freight cars is discovered pulling slowly toward the dock. It is a banana train from the fertile interior of Costa Rica. Workmen are swarming to the shed, fellows of every hue and shade—powerful African blacks, coffee-colored natives, Jamaicans with their peculiar subcutaneous glow, and muscular whites from heaven knows where.

By two A.M. the immense automatic loading machines have been wheeled into position, have been clamped to the side of the ship, and have begun to discharge the contents of the freight train into the enormous holds. Under the glare of the electric lights on the dock an unforgettable scene is being enacted. The polyglot swarm of men who were a few minutes ago loading aimlessly about have suddenly been galvanized into action, and are now working together like orderly parts of one highly perfected mechanism.

The color of jade dominates the strange nocturnal scene. Every loading machine is now connected with the broad side door of one of the freight cars by a continuously revolving chain of dock workers, carrying bunches of bananas as green as emerald. The loading goes on without a hitch, night and day, until the hold is full. Cargoes of 75,000 or even 80,000 bunches are loaded in twelve to fourteen hours; and directly the loading is completed, the big white ship sails for its northern port.

SCIENCE GRAPPLES WITH THE JUNGLE

Back of this drama of the dock there is a monumental drama of modern science and commerce that the traveler behind the rail of the ship does not see or guess. These arriving dunes of jungle-green fruit are fitting symbols of a conquest of the torrid wilderness by private enterprise that has done more for the territories concerned than their governments themselves.

A day or two before one of the big banana ships steams into its port of supply, news of its approach is flashed to the jungle by wireless. This flash of news through the drowsy tropical air is picked up by telegraph and telephone, and is at once transmitted to the plantations and their outposts.

Suddenly the waiting banana lands resolve themselves into swift and orderly

The color of jade dominates the scene. Cargoes of 75,000 to 80,000 bunches of bananas are loaded in twelve to fourteen hours. As soon as the loading is completed, the big white ship sails for its northern port

action. Cutting orders are tersely issued. Glittering blades chop the fruit-bunches from their trees. Ox-carts and freight cars are made ready, and in a few hours' time train-loads of bananas, numbering twenty to forty cars, are winding their way to the waterfront to meet the approaching ship. Not a moment is permitted to be lost between the time the fruit is lopped off the trees and the time it goes aboard ship for its journey to the tables of the world.

Back of the voyages that scores of big, modern refrigerator ships are making to the tropics is a story of the conquest of obstacles that few enterprises have ever been compelled to face. It is the story of stupendous pioneer work in agriculture and commerce. These fruit-growers have been compelled to enter some of the most forbidding jungles on the face of the earth and to tame them. They have had to devise their own methods as they fought their way in. They have had to become experts in hygiene, sanitation, and sociology itself.

These fruit-growers have penetrated regions where organized industry had never been known before. They have taught thousands of natives efficient team-work. They have given steady jobs to thousands of drowsy natives who were never on a pay-roll before. They have cleaned up jungles that used to be death-traps, have cleaned up mosquito-breeding swamps and marshes, and have sent forth an army of doctors to rout out disease. They have built houses, bakeries, laundries, water systems, and electric light plants for their

workmen, and have strung telephone wires through the wilderness.

The northern farmer can scarcely comprehend the terrific fertility of the tropical soil where the rays of the sun descend like swords, and the jungle harbors innumerable slinking foes. Here is the native habitat of deadly fevers. But to-day vast areas of Colombia, South America, Central America, and the West Indies have been made habitable as the result of a great quest for yellow treasure. But it is not the yellow treasure sought by Morgan and his pirates. It is the yellow treasure that you can buy at any fruit-stand or grocery store for a few cents.

HUMID SLOPES WHERE BANANAS GROW

The low, gradual slopes of the Caribbean coasts are ideal for banana-growing. From here the world gets most of its bananas, and its best bananas. Here the hot days and humid nights, with an annual rainfall of from 80 to 200 inches, brood over some of the greatest fruit farms in the world. Hundreds of millions of dollars of American capital have been poured into the development of these great tracts. Railways, tramways, docks, villages, and hospitals have sprung up.

The farmer of the temperate zone would gasp if he could see these enormous farming projects. A selected locality is first thoroughly explored as to its fitness for banana cultivation, with respect to climate, soil, rainfall, drainage, liability to damage by floods and hurricanes, and the feasibility of secur-

ing adequate labor and supplying transportation. Forests and brush have to be cleared away, great drainage ditches dug, and houses, railways, and tramways constructed. Only then does the actual planting begin.

The overseer or "mandador" of a banana plantation has to combine an assortment of executive qualities that would make an ordinary executive stagger under the load. He must understand the naïve simplicity of the laborers under his command, and must organize them into competent working units. He must understand the botany of the banana and the moods of the tropical soil and weather, and must know how to rush large shipments of the fruit, perhaps over many miles of rail, to a ship at a given time. He must understand housing, merchandising, sanitation, and medical requirements.

THE NEW SOLDIERS OF FORTUNE

The banana trade has developed a new soldier of fortune, for this business requires courage and wits and stamina of a hardy quality and large dimensions. From the financiers at their desks in Boston and from the mariner on the bridge, down to ditch-diggers and dock-laborers, the tropical fruit industry has no room in it for weaklings.

Between planting and harvest a banana plantation is subjected to all manner of hazards. Excessive rains may cause rivers to overflow, and may cause great losses. A hurricane may cause a total loss of the crop. Even wind storms blowing only twenty to thirty miles per hour often prove highly destructive, especially where the fruit is about ready to be cut. A drought may seriously retard the crop. Ravages of locusts and other insects sometimes occur.

These fruit growers have been compelled to enter some of the most forbidding jungles on the face of the earth and to tame them

The fruit trees of the north bear fruit year after year, but the banana tree bears only once, a single bunch, and is cut down when the fruit is harvested. Seed bulbs, or "bits," weighing from three to four pounds each, are planted, and it takes the tree from twelve to fifteen months to bear.

THE GENIUS OF THE BANANA TRADE

Great commercial demands invariably produce the genius required to fill them. And the world's demand for bananas produced the leader of the banana trade in Andrew W. Preston. He supplied both the penetrating insight into the

need and the skill and resourcefulness required to fill that need.

Back in the days when an occasional schooner limped into Boston with a cargo of bananas, it occurred to Mr. Preston to organize banana-growing and the banana trade on first-class modern lines. He broached the subject to various business men, but the latter, raised in the sheltered environment of their ancestral New England factories, preferred to stick to manufacture and to known factors of supply and demand. What? Chuck their money into growing bananas, and then import them 1,400 to 2,200 miles to Boston? No. It didn't sound businesslike.

But nine men were finally persuaded to join Mr. Preston. They put up \$2,000 each, and a company was incorporated. Outsiders considered the venture about the biggest gamble this side of Monte Carlo. Perhaps that is why Mr. Preston's nine partners literally remained silent partners. They were shrewd enough, however, to agree that for five years the profits, if any, should be spent in development work.

That was the beginning of the bridge of bananas that to-day connects the tropics with every grocery store in the world.

HEALING BY WIRELESS

A few weeks ago the newspapers carried a remarkable despatch. It described a new system of medical service and consultation by radio for ships at sea, free to the ships of all nations, and primarily designed to assist vessels not carrying medical officers. It is another of Mr. Preston's ideas.

"This means," said Mr. Preston, "that the captain of any steamship requiring medical assistance may radio one of our hospitals or passenger ships through radio stations, details of a ----"

Suddenly the waiting banana lands resolve themselves into swift and orderly action, and in a few hours' time train-loads of bananas are rushing to the waterfront to meet the approaching ship

ness or accident on his vessel, and receive without charge, so far as we are concerned, experienced medical advice. While the service is mainly for ships not carrying doctors, it is also at the disposal of vessels whose medical officers desire the benefit of consultation with other physicians. For instance, in the case of an obscure malady, or one where the patient's symptoms may indicate any of a number of complications, a ship's doctor may call our hospital staffs and medical men into consultation by radio, thus adding their knowledge and experience to his own as in medical practice on land."

WINTRY GALES IN HOLDS OF TROPICAL SHIPS

After the banana's journey to the loading dock, and thence into the hold of the ship, a still stranger drama of modern science enacts itself. Throughout the ship's dash through tropical waters for its northern port, the temperature in the holds is kept at about 54 degrees. The fruit is cooled to the required temperature by refrigerating apparatus. The air is passed over brine-coils, which cool and dry it, and it is then circulated by fans through the fruit holds.

The same careful inspection and rigid temperature requirements attend the fruit on its journey by rail to the final point of distribution; and the ripening occurs only in the banana rooms of the jobber. Ripening consists of vital changes that take place within the cells of the fruit, which is at length placed on the market as a matured product at its highest intrinsic value, having developed the correct color, firmness, flavor, and the highest degree of food value.

FROM THE WORKSHOP OF THE GODS

The banana is apparently as old as tropical fertility itself. The ancients of Egypt and Assyria had their bananas and cream, separately even if not in the same dish. Alexander the Great found large banana tracts in India, and must have consumed the fruit thereof with the same relish confessed in later years by Prime Minister Disraeli, who said:

"The most delicious thing in the world is a banana."

For centuries the banana has engaged the ingenuity of cooks and chefs, and yet the public generally is just awakening to the value of the banana as a daily food. Its use in cakes, fritters, custards, salads, and in the festive banana-split at soda fountains, is, of course, common. But many people are surprised to learn that a banana can be baked, fried, and cooked in numerous other ways.

It comes to the culinary stage ready to play a dual rôle. It is both a fruit and a vegetable. Down near the equator the natives cut it up green and eat it in soup. It is roasted green and fried green in butter. I have even seen banana flour at the grocery store.

The best time to eat a banana is when

the ripening process has advanced to the point where its skin begins to darken and to become slightly discolored, for then its pulp is mellow, its flavor and sweetness are at their best, and it is most easily digested. If a banana is a little under-ripe, don't put it in the ice-chest. Let it ripen at a normal temperature; too low a temperature damages the fine flavor that comes with normal ripening.

If you ever feel any suspicion of bananas because they are cut green, dismiss it. The banana is always cut green, even when consumed by natives in the tropics, for if it is allowed to ripen on the plant it becomes insipid in flavor.

IN A GERM-PROOF PACKAGE

Almost as much fuss is made in food-product manufacturing circles these days about containers and packages as about the goods themselves. The invention of an appropriate patent container has made many a man a tidy fortune. But the pulp of the banana comes to you in a carefully developed container, invented by the lady known as Mother Nature. It is a germ-proof package, hermetically sealed. No worm, blight, or insect sting affects the fruit within.

Are you concerned with calories, vitamins, and such-like scientific novelties?

Then behold in the banana a food brimful of nourishment. It contains three times the protein of the apple, nearly twice as much carbohydrate and three times as much fat as the orange, and exceeds the potato by about twenty per cent in fuel or food value.

Professor Samuel C. Prescott, of the Massachusetts Institute of Technology, finds that the banana provides more actual food for the same cost than any other fresh fruit, vegetable, or fish, and more than meat, milk, or eggs. He reports that the banana is a far more useful all-round food than a pure meat diet. Ripe bananas, with their powerful tissue-building character, are especially recommended for growing children.

During the past ten years Mr. Preston and his associates have grown and shipped 284,000,000 bunches of bananas from the tropics, of which 230,000,000 bunches were served on the tables of the United States. But the continuous flood of this green gold product of the tropics to the tables of the world is much more than an ambitious venture in agriculture and distribution. It has changed ancient civilizations, and has bound together North America, Central America, South America, and the West Indies in a lasting knot that has proved profitable to them all.

ANDREW W. PRESTON

Mr. Preston is the recognized leader of the banana industry

GIVING THE MIDDLE WEST THE ONCE OVER

BY FREDERICK M. DAVENPORT

MEMBER OF THE SENATE OF THE STATE OF NEW YORK
PROFESSOR IN LAW AND POLITICAL SCIENCE AT HAMILTON COLLEGE

We have asked Senator Davenport, who is in the Middle West, to send us some letters of special correspondence from that section of the country, interesting at all times, but especially interesting in a year when politics is in motion. The

Middle West has always made its distinct contribution to change and progress in this country. Events in Indiana, Missouri, Nebraska, Iowa, North Dakota, and Wisconsin indicate that this year is no exception.—THE EDITORS.

AN editor sitting at a desk in the East knows about as much of what the country is thinking as a Congressman sitting in a swivel chair in the House building in Washington. Both rational political changes and irrational political convulsions are more apt to come out of the West than out of any other part of America. This section is full of political laboratories, has always been full of them. So has the Far West. This is the great experimental ground of political America, and it is altogether a good thing, I think, to have new schemes, progressive, reactionary, or radical, tried out in a small area while the country looks on.

During this summer the Middle West has been acting up again politically. First came Beveridge with a triumph over the sitting Senator New in Indiana. There were many of a very regular persuasion who hoped this would not happen again; but it did. Pinchot crossed the line in Pennsylvania. And ever since the crashes have come at intervals. Other new types of United States Senators have arisen over night. Brookhart in Iowa, with a far-reaching programme of economic reform; Frazier, of North Dakota, the Non-partisan Leaguer, only recently catapulted from the Governorship by process of the recall; another Roosevelt leader, Howell, of Nebraska; and last but not least, the erratic and invincible La Follette, of Wisconsin, who is by a great majority restored to his pristine political glory.

And all of them Republicans, coming through in the primaries of their own party. The Democratic party for the time being seems to have lost vitality, is simply marking time, waiting for something to turn up. But the Republican electorate in the Middle West is again on the rampage, looking for change or bound to know the reason why. It is likely to be the shifting of large bodies of quasi-Republicans to the other side which will make the party changes in the House and Senate and in the Governorships, if changes there be.

What is it all about? What has the Middle West in the back of its head? Why is Main Street stirred out of itself? Has it any distinct, conscious urge, or is it all an inchoate protest? I try simply to interpret things as I find them. I may agree with them, I may not, but I record.

The Administration at Washington is regarded out here as in the trough of the sea, where it must be conceded other Administrations have been when half-way over their course. It may come

through without shipwreck. But many persons in the Middle West are beginning to think that the captain must be much more particular about his pilots, at least in domestic waters. The tariff, the bonus, the strikes—she rolls in the trough of the sea. It is time now for genuine friends of both the Administration and the country to determine, if they can, what public opinion of America is trying to say, because public opinion in America has more force and guidance in it than public opinion in any other land. Many persons in the Middle West think that the greatest single criticism which can be made upon the present leadership of Washington is that it has not aroused and inspired the general public opinion of the country. They think it has not informed public opinion, nurtured it, and listened to it sufficiently.

I begin with Indiana. Indiana has a fringe of radicalism, a fringe of stolid reaction, but is in the main progressive. It is usually ready to move forward. There is a reason for the return of Beveridge. The truth of it seems to be that Beveridge fits into the present state of mind of Indiana. The people in that State have been figuring up their taxes. These aggregate sixty dollars a person, three hundred and sixty dollars to the family, as compared with something like four hundred and fifty dollars a family in Massachusetts and more than five hundred dollars in New York. The economic times have been out of joint for farmers and laborers. Something is felt to be wrong. Beveridge fits into the state of protest, as La Follette fits into it in Wisconsin and Pinchot in Pennsylvania.

Another factor favoring Beveridge is his constructive writing of the monumental work upon John Marshall. This may be a curious and amusing phenomenon in politics, but it is reassuring. In Indiana the Negro committeeman in the farthest town seems to know about this *magnum opus* of Beveridge, at least to the extent of believing that something terrible has happened! But the thoughtful people are proud of it—particularly in Indiana, where a piece of work of genuine literary merit counts for so much. This is a good sign, isn't it, that people should generally appreciate constructive work on the part of public servants? There is a returning pride in the ability of Beveridge in Indiana, and a belief that a mind like his will be useful in Washington where the supply of thinkers is certainly nothing like as great as the demand.

And then Beveridge has his roots in the past in the State. He has been previously known as a great antagonist of child labor on the floor of the Senate of the United States and a protagonist of pure food laws and the regulation of packers. He fought his campaign in the recent primaries on very different issues which seem amazingly conservative—attacking the Adamson Law of 1916, with its kotowing to labor, attacking the excess profits tax and the high income taxes as economically unsound, because there is little left, as he asserted, for investment in general industry, and, consequently, a return to "good times" is delayed. He attacked all kinds of blocs—farmers' blocs, capitalistic blocs, whisky blocs, prohibition blocs, anything that looked like a bloc. The progressive people of Indiana do not understand that this indicates any fundamental change in the philosophy of Beveridge since he wrote the Life of John Marshall and studied closely the great Federal conservatives of the post-revolutionary period. In his attitude toward labor, for example, they think that he is driving at the control of government by labor blocs and labor intimidations and unreasonable practices, just as earlier he drove at the reprehensible practices of capital blocs.

He is likely to be elected. It is not a cinch, but a probability. Republicans carried the State by 180,000 two years ago, I believe. There will be a terrible falling off. What beat New for Senator was the unrest. Beveridge will profit by it, and unrest will vote for him at the election just as it did at the primary, and there will be no organized opposition to him on the part of the regulars. There is belief that New is proving a bad loser, but that the regulars generally wish Beveridge elected and expect to help. The progressive element, led now by men like Edward C. Toner, the owner of the Anderson "Herald," are for Beveridge because his career has been sound from their standpoint. Toner was a candidate for Governor a short time ago and is a leading figure. The Beveridge forces seem to be taking nothing for granted, are looking for a big slump in the majority, but expect to see Beveridge the high man on the ticket and the rest of the ticket victorious with him by a moderate margin. If New had been nominated in the Senatorial primary, the whole ticket would probably have been beaten. It is to be hoped that the Republican regulars appreciate what an infusion of life into the politics of various States has come this year from the

recrudescence of the leadership of Roosevelt progressives. Without it, the Republican cause would seem hopeless in a number of important States. The return of Beveridge was at first an awful blow to the regulars of Indiana, but they have reason for bearing up under it.

Colorado and Michigan are two other States where the Republicans might welcome an infusion of the same sort of blood. Both these States seem to hang doubtfully for the Republicans. In Michigan Senator Townsend has made a gallant fight and has been favored by a number of his opponents in the primary who split a majority vote between them. But Townsend is a minority candidate, with stiff uphill work before him over the Newberry issue. The Middle West is against large expenditures of money at elections. The Middle West thinks that large expenditures are both unnecessary and dangerous. This may be Main Street morality, and it may make far more difficult some critical contests for the right which demand greater expenditures than Main Street is willing to stand for; but it is a phenomenon that is to be reckoned with in all parts of the country. In Colorado the Republicans are facing the general country-wide reaction, and something else. "Billy" Sweet, wealthy ex-bond broker and radi-

cal thinker, is running on the Democratic ticket for the Governorship. He was very critical of the street railway strike in the city of Denver two years ago, and was instrumental in having published a report of outside investigators upon the strike which bore heavily upon the good sense and good faith of the railway operators and managers. He represents quite exactly the political freedom of the West as it has manifested itself so frequently in a State like Colorado. He is also helped by the strong feeling on the part of the labor element in that State against what labor regards as the unconstitutional treatment of one William Z. Foster during the recent hectic strike crisis. Colorado authority has always been rough with labor radicals, and the riot and the bull-pen have been in that State confused with synonyms of progress. Foster seems to have been cornered in a hotel room in Denver and marked for deportation. When the prospective deportee inquired for authority under the law to be thus summarily dealt with, the strong arm representative of State authority is alleged to have replied that he hadn't looked for any law, meanwhile gently patting his gun in his hip pocket. Whereupon William Z. was spirited away into another State and left five miles from a town, with instruc-

tions to hobble in, following specific declarations as to what would happen to him if he should return to Colorado.

Speaking of free speech and free coming and going, this is perhaps as good a place as any to say that the Middle West is restive under the meticulous phraseology of oppression in the Daugherty injunction against the railway strikers. It seems to be the overdoing of a good thing that makes more trouble for progress than anything else. The Middle West is not as critical of the use of the injunction for labor disputes as Mr. Gompers, by any means; it is not that there is any great amount of love lost on railway labor; it is that it seems monstrous to the Middle West to deny by court injunction rights of the free speech of entreaty, one man to another, rights of social assemblage, one man at another's home, for the purpose of entreaty. The Middle West seems to think that the Daugherty-Wilkerson injunction went even farther than Congress itself would have the right to go. The Middle West seems to fear that some day in America, if we are not careful, a radical class may come to power that will have been taught by previous un-American example how to treat their foes. At that, the Middle West is a long way from a farmer-labor entente.

KEEPING IT DARK

BY WILLIAM McANDREW

"THERE are a number of teachers on board, but they are keeping it dark."

This is a sentence from a letter written on a transatlantic steamer by a lady on July 6, 1922.

I'd like to write a history of the contempt for teachers. You would see the slave called "paidagogus" whipped like the others when his master pleased; the same name in the Middle Ages shortened to "pedant" and retaining the saturation of scorn it has brought down the centuries. You would see Shakespeare and Shensstone and Goldsmith molding their contumely into verse; Scott and Dickens and the early novelists plying their muck-rakes to collect the ugly, despicable, mean ingredients of mankind and molding the mess into the creature called schoolmaster. You would see our own first literary genius, when searching for a vessel to contain, without suggesting the improbable, a mixture of cowardice, selfishness, pettiness, and conceit, select a receptacle, call it teacher, and name it Ichabod Crane.

I remember a teachers' convention in Elgin in 1887. Will Ray, a cheerful memory, was our principal. There was a group of us who felt that our clothes and personalities were rather like those young business men and nice girls. One proposed a trip through the ch factory. We abandoned the educational meeting for this more interest-

ing adventure. Every girl and every man took off his little association ribbon and hid it safely away. Thirty-five years later, 1922, I attended a National Education meeting in Boston. I saw hundreds of nice girls and attractive-looking men, fully as stylish as any of our old Chicago party which went to Elgin, but they were wearing their association badges everywhere. I used to fold over my "Journal of Education" when reading it in the street car for fear some one would know I was in the business. It doesn't bother me a bit, now. When any ill-bred, new acquaintance asks, "What's your line?" I don't say "Books" any more, nor "Tanner," but "Teaching," without blinking an eye. That is not because I dislike dropping down in one's estimation any less than of old. It is because my business ranks higher in the world's eye than it did. We had an art exhibition here in 1898. We wanted all the children of our school to see it. They must be convoyed two blocks. Out of twenty-eight school-teachers two were plainly willing to take their children over. The others hated to be seen with classes on the street. Last fall, New York presented in a central armory an exposition called "America's Making." Opportunity was given the schools to visit it. So many teachers asked for tickets for their children that the management could only cut the privilege down to a fraction of the de-

mand. For fifteen days, mornings, afternoons, and Saturdays, sixty-two thousand children came in street cars and on foot, each twenty-five accompanied by a teacher, naturally, willingly, apparently with enthusiasm.

It seems only yesterday that a woman suffrage parade marched up Fifth Avenue. There were detachments of women lawyers, interesting; actresses, not so good to look at without footlights; business women, well worth while; nurses, fine. Then a multitude of women teachers, all in white, heads up, step firm and rhythmic (they had drilled themselves on armory floors all over town), faces intelligent, reliable, unafraid, and as of those who give and get affection. There had been approving clapping of hands as other detachments passed, but as this army of gentlewomen swung up the Avenue, the masses on the curbs instinctively, spontaneously, irresistibly, paid a tribute that grew to a roar of approval. You realized that the crowds welcomed these as their own, a fine piece of America itself, as distinctly as any body of military troops ever is. You felt that the man of the crowd was saluting the memory of his own favorite teacher of Litchfield or Johnstown or Carpenter's Corners. Even the reporters, case-hardened against enthusiasm, glorified this section of the parade to the limit.

We have arrived. Our comic-valentine

days are past. We have cur Edward Eggleston, D'Arcy Thompson, Elbert Hubbard, and Otis Poole. Even when we were boys, a popular drama, "M'liss," gave the leading man's part to a clean, virile, lovable fellow, a schoolmaster.

It is suicidal stupidity to look down on teachers. The eminent spirits who conceived the Republic—Washington, Franklin, Adams, Madison, Monroe, Jefferson—made clear expressions of conviction that the Nation must be preserved by schools adopted as an integral part of governmental service. The great historic law enacted even before the Constitution, that "Ordinance of 1787," gave legal authority to the idea. De Witt Clinton got it into New York's Constitution as "an essential" of government. Lincoln called our public education "the most important question we as a people can be concerned with." To carry over from a muddy-brained past the fashion of ridiculing the teacher and to continue it in a new government which had specifically selected the teacher's work as that which should, in Washington's phrase, be "promoted as of primary importance," was as blind as the corn-law legislation of those witless landowners who ruined themselves and starved their country in an effort to keep matters as they were. We have a thousand towns in which school boards have discovered that to try to own the teacher and to legislate the distance between the ground and the hem of her skirt, or the question of her dancing, is only to exclude bright, cheerful, wholesome girls and to keep in a constant state of resentment towards its unnecessary and foolish restrictions the ones whom necessity drives into teaching. We have a hundred towns in which maidenhood is no longer made a stigma by an artificial ban on a woman teacher's marriage. We have cities in which the consideration of employment is not a question of charity, engaging those who most need the money, but a matter of efficiency, securing those who do the service best.

A teacher has no need to "keep it dark" in 1922. In fact one may feel pretty sure that "keeping it dark" is now an invitation to contempt. The late Walter Hines Page, whose inclinations kept him intimately acquainted with school people, while his work as editor and publisher threw him with a wide variety of other folk, remarked ten years back that the general public now regards teachers more highly than teachers do.

To keep one's identity dark may mean that the keeper is ashamed of it. To try to do a big work while being ashamed of it is, of course, psychologically and physiologically absurd—like tying weights on one's feet before climbing, dirtying one's food before eating it. To be ashamed of one's own work is to rob one's self of a natural birthright of happiness. Other men don't do that. Watson comes breezing in with the most wonderful life-insurance policy ever conceived. It's a beauty. Wilson is selling a car that's simply a dream. Wrightson

has a list of houses to offer that will make your life a heaven on earth. Any man who is worth his salt is enthusiastic about his business, no matter what it is. He may be all for the Spintz motor to-day; but if the Sputz Company hires him, there's no machine on earth can compare with theirs.

Goodness me! Why should anybody poison his own delight with a mental treatment that has been repudiated by progressives for years and years? Mother says, "Don't cry, dear," not "Do cry."

Children learn to praise their toys and be happy; boys learn to brag about their fathers; sweethearts tell each other each is the most wonderful being ever released from paradise to gladden the world. The language has no word contemptible enough to apply to the wife or husband who doesn't call her spouse the finest example of the blue-ribbon class. Why not? What's my business is so large a fraction of my life, now, that I must either put into it the zest of happiness or I must go into such available business as will permit of such zest. But even while I am looking and hoping for such business I must so regard my present calling as to make it yield me that satisfaction and joy which sane men know is the natural accompaniment of any worth-while work well done. Unhappiness in work is a sort of laziness. Gounod had it until he found out that, if he made up his mind regarding any distasteful task and determined to see how well he could do it, the drudgery became interesting and enjoyable. Pitacus, of the Greek sages, had the answer to it, for he told his disciples that "the greatest good is to do what you are doing at the moment well." The Preacher had it, too, when he said, "Whatsoever thy hand findest to do"—not do it half-heartedly, as if you believed you were going to be married some day, but—"do it with thy might." And Solomon had it when he said, "Seest thou a man diligent in his business? He shall stand before kings." Come, you Latin teacher, what is "diligent"? *Diligo, diligere*, to love ardently. Seest thou a man that loves his business with a glowing passion? What is the delight of kings compared with his? He stands before them. This is my birthright. My heart is mine. Gounod, Thales, Solomon, and Ecclesiastes have no monopoly. I command me, "This is thy business, love it;" and whether it be piling stone or making mousetraps, it gives me my enjoyment due. I shall wrestle with it as Jacob with the angel until it blesses me. I have no need to be ashamed of a business inherently so important, interesting, and varied, that is stamped with the highest approval of eminent men from Washington to Harding and is adopted as a function of the Government itself.

Perhaps the tendency to "keep it dark" is due to a recollection of unlovely personalities bearing the name of teachers and a wish to avoid being thought

like them. When I recall some of the long-faced, harsh-voiced, dowdily gowned women of old school days, or ungainly, ill-mannered men the powers-that-were used to permit to vitiate the company of children, I can't help commending as praiseworthy any attempt to keep from being thought like them. But, bless me! where can you find that type predominating? San Antonio teachers assembled look like Texas élite; Geneseo teachers need not strain any efforts to supply a beauty show; Sacramento teachers, constituted as a welcome committee, are deemed by the municipal authorities proper representatives of that beautiful city. Our own men and women, here in the metropolis, as you survey them at the evening school banquet, or the dinner to Charl O. Williams, or on any of the occasions that bring them together, look like people you would regard as good company anywhere.

Oh, pshaw! no one is justified in keeping his teachership dark on the ground of not wanting to be set down as of a calling of which the majority is despicable. Almost all of us have been lifted by teaching so much above the grade we should otherwise now be in that we would be justified in carrying with us a spotlight to throw upon ourselves, as who should say, "See me? I'm a teacher. Say, where would I be if I weren't?"

"There are a number of teachers on board, but they are keeping it dark." What were the other people doing? Were the lawyers on board proclaiming their business? Were the women shouting, "I'm a housekeeper," "I'm an accompanist," "I'm a secretary to a railroad president"? In fact, when you are on board ship, or at the Governor's reception, or at any non-business event, isn't the well-bred and proper thing, with regard to your occupation, to say nothing about it? Well, then, why need any one make a fuss about our not wishing to advertise our connection with our important employment? Every naval officer I ever knew appeared to me to regard the service with sincere respect. But if one was given shore leave, did he want to wear his uniform? Not one. Was he ashamed of it? I imagine not. But he had the gentleman's distaste for advertising his employment or for prying into that of any other gentleman.

Therefore, after all, you agents of the Republic do not have to carry any marks on you designed to make it easy for you to be spotted as teachers. In fact, a soft veil of mystery over a stranger is an element of charm.

No great moralist has, as yet, deplored the fact that teachers have lost the distinctions observable in the Ichabod Crane era. One of our New England members of long service on the school board of his little city indicated the situation when he remarked, day before yesterday, "It's come so ye can't tell the difference between a school-teacher and any other nice girl when one gets on the car." IMPRESSIONS OF FRANCE THREE YEARS AFTER THE WAR

BY THATCHER T. P. LUQUER

THE OLD TILLEUL TREE AT ST. DIÉ

It stands in front of the Cathedral with the sign upon it, "This was a famous tree in the year 1400"

LAST May we motored, my sister and I, from Menton to Paris in a little French car that we bought in Menton and were fortunate enough to sell the day after we arrived in Paris. This gave us an opportunity not only to see the objects of interest along the route and the scenery, but also to observe something of the life of the people of the country away from the main routes of travel as well as in the cities. This was of special interest to me for the chance it gave of gathering an impression as to the actual conditions obtaining in those regions three years after the great war, and the trip was undertaken largely in order to revisit easily and comfortably the places in northeastern France with which I had become familiar while serving with the A. E. F. in 1918 and 1919.

Along the Riviera, through Provence and northward by the Valley of the Rhone everything appeared normal. The peasants were cultivating for the spring

seeding and the townspeople seemed busy, the shops doing a fair business, and superficially no evidences of the after effects of war, except for the evident scarcity of men between the ages of twenty and fifty. Prices were reasonable, particularly when translated into American money, and nowhere, even in Paris, did I encounter any disposition to profiteer at our expense because we were Americans. Bargaining is no longer as customary as it used to be, for the "prix fixe" is greatly used and goods in the shops are tagged and marked and the prices are seldom lowered. In places frequented by those of our fellow-countrymen whose one ambition seems to be to spend money and show huge rolls of bills and drink champagne for breakfast there probably is advantage taken of the opportunity to make large profits, and, of course, such persons are the ones to make a dreadful fuss when they find it out.

Lyons, one of the great industrial cen-

ters of France, showed no extraordinary symptoms of unemployment or poverty, although a close investigation might have revealed conditions not apparent to us, while all through the country regions the people, and particularly the children, seemed well fed and happy.

Going north from Lyons we entered a region more affected by the war. The national highways still show the effects of the heavy truck traffic of those times, although some sections have been repaired. The site of the A. E. F. University at Beaune is still littered with debris and marred by the remains of the foundations of the buildings, but the city has resumed its old quiet aspect and the khaki-clad students no longer throng its streets.

Dijon is again normal, and we spent several days of great enjoyment there, studying the quaint bits of architecture in the old streets and visiting its interesting museum and churches. Few travelers visit the city, but it well repays a day or two spent among its treasures.

Here began the portion of our trip which was its main object, our visit to the old battle front in the Vosges, around Verdun and the Argonne, Rheims and Château Thierry to Paris. Cold, rainy weather had pursued us from almost the beginning of our trip until we left Dijon, but there the sun came out and the beautiful region of the Côte d'Or began to justify its name.

Our first objective was Chatillon-sur-Seine, which was the central town in the area where my Division, the 81st, had been billeted for the winter after the armistice. The town itself was in those days wholly given over to the Second Corps Army Schools, but all the surrounding villages had been occupied by the "Wildcats," as the soldiers of the 81st Division were called from the badge which every man wore on the shoulder of his blouse.

My regiment, the 306th Engineers, had been billeted during that winter in three little villages in the valley of the Seine at the extreme southeastern border of the area assigned to the Division. The valley at this point, like most of the valleys in that region, has been furrowed deeply in the general plain by long years of erosion by the river, and as one motors over the smiling, rolling landscape, along a road like a white ribbon on a green table, one comes suddenly to the crest of a hill and looks down into the fertile valley beneath with the little villages clustering beside the stream.

Aisey-sur-Seine, the village in which regimental headquarters had been located, is a quiet, pretty little village, a summer resort in quiet times for Paris-

ians, with two stone bridges centuries old, and several buildings of château type. The church stands on an eminence in the middle of the village, and near it, in an open space where our band used to play every night for retreat, one sees now the monument erected by the village to the men who lost their lives in the war. The inscription on it is, as always, "*Mort pour la patrie*," which means so much to every French citizen. I will always remember the first time I saw the motto inscribed on the cross above the grave of a French soldier buried in the field where he fell near the highway, when we were marching into our first front line position. The simplicity combined with the deep feeling which it expressed made a lasting impression. The patriotism of the French is an ardent and abiding trait.

Arriving at the village hotel, we were greeted most warmly by the proprietor, M. Roy, and his good wife and children, and very soon others came to join in the greeting. It was a most delightful exhibition of the gratitude and affection which so many of the French retain for our soldiers. During that winter after the armistice our headquarters mess had been located in one of the rooms in the hotel, and we had made very good friends of the proprietor and his family. M. Roy invited us to lunch the next day, when we could spend more time in the village and see more of the people, and he gave us one of the most delightful lunches I have ever enjoyed. Our host had risen early and caught two fine trout in the Seine, and, he being an expert chef, they could not have been better served in Paris. Sitting down at the head of the table in his green baize apron, he entertained us delightfully, with Madame Roy waiting on us and joining in the conversation whenever the opportunity permitted. A bottle of old wine was brought out and toasts were drunk with all the good will possible.

A VALLEY IN THE VOSGES

I called on the widow of the Mayor with whom I had been billeted and who had done everything for my comfort in former days, and it was a great regret to me that I could not renew my acquaintance with the Mayor, who had died only a year ago. Madame Millerot is doubly bereaved, for her son and only child was killed in the war, but she bears her sorrows nobly.

A little incident which took place in January, 1919, always comes to mind when I think of these friends. It was New Year's Day, but I was busy at Headquarters all day and until late in the evening in preparation for my departure early the following morning, and when my adjutant, who was quartered with me, and I returned to our rooms we found a fire burning in mine and a little table daintily spread and on it cake and a bottle of delicious wine and a card from our host and hostess conveying their best wishes for the new year and

for a pleasant trip. Such thoughtful kindness from those who could so easily have considered our presence a burden was very delightful and a revelation of the depth and value of French sentiment.

I made several calls on other people in the village, and was received uniformly with enthusiasm and good wishes. They had nothing but good words to say of our soldiers and their behavior. We who knew our regiment were confident that we had an exceptionally fine personnel and we knew the discipline was good, but it was a pleasure to realize that the men had left good feeling and warm remembrances behind them. The village was very quiet, and presented quite a different appearance from my last recollection, when it was full of our boys with their energy and life.

Leaving there, we went by Montigny-sue-Aube and Latrency to Langres for lunch, and spent the night at a charming old watering-place, Bourbonne-les-Bains, then by Épinal to a little village called Fontenay, on the borders of the Vosges, where my regiment had spent a week reorganizing after our first experience at the front. Here, again, we had a most cordial reception. I was particularly glad to see the old Curé, for whom I had acquired a great admiration and liking during our former stay in the village. As usual when behind the lines, we had the proper ceremonies at retreat, the band playing in front of the church, which was close to Headquarters and the only available space in the village. After the first day the Curé brought the children of the village every evening to attend the ceremony, all standing at attention and the boys taking off their caps when the national anthem was played and the colors furled. Of course we always played the Marseillaise as well as our own anthem, and the Curé seized the opportunity to instruct the children in patriotism and inculcate respect for the flag and good will towards

THE BROKEN BRIDGE AT ST. MIHIEL

"A trestle bridge has been built across the river, replacing the pontoon bridge over which we crossed in November, 1918, but no attempt has been made to replace the fine old stone bridge which had been destroyed"

CHATILLON-SOUS-LES-CÔTES, VERDUN SECTOR

the American people, and it was an illustration of the good work he was doing in many directions in the community.

Departing from this little village late in the afternoon, we left the rolling land with groves of hard wood behind and climbed over the mountain ridge, through the beautiful pine forest, into the valley where lies the old town of St. Dié. This is celebrated as the city where the convention was held which gave the name to America, and one of the sights there is the old *tilleul* tree standing in front of the Cathedral with the sign upon it, "This was a famous tree in the year 1400." The town itself was our Division Headquarters for a month in September-October, 1918, and, while very close to the front line, which was only five or six kilometers to the eastward, it suffered comparatively little damage. I think this was because, being close to the old boundary line, a great deal of German money was invested in the town and its industries, and therefore it was not advantageous to subject it to any serious bombardment. Only once during the time that we were there did any shells fall in the town, and then only about twenty late one afternoon, which fortunately did very little damage. Much rebuilding has been done and there is very little evidence now of warfare, and business seems to be going on quite normally.

A few kilometers to the east, however, as one approaches the old trench lines, the conditions are quite different. The villages are still very much in ruins, and the people are living in harracks and cellars and dugouts, and devoting themselves to clearing the land and filling in the old trenches and growing crops again. All along the old battle front, as far as we traveled, we found the same conditions existing, most of the energy being concentrated on the land, leaving the rebuilding of the villages to a later period when there are time and money, although there were many evidences of increased building activity this summer. The energy and courage and cheerfulness with which the French people are doing this work is magnificent. They are working from daylight to dark, men,

women, and children. You see the whole family in the field; the littlest children that can walk doing their part, even, while the baby superintends the job from his baby-carriage.

The most impressive place we visited here was in front of what had been the northern sector of our line, a little spot in a saddle in the mountain called La Chapelotte. This had been a little chapel with a cottage near by and a small cemetery containing the graves of soldiers who had fallen in the War of 1870. It happened to be just where a strong point in the line was needed. The chapel had been broken down, the cottage was a heap of ruins converted

into a machine-gun nest, and the whole territory was seamed with trenches and covered with entanglements. What had been a beautiful pine wood is now a forest of dead trees, looking like some of our Adirondack forests after a devastating fire. The little chapel has been partly restored, and the cemetery now has been enlarged and contains the graves of some French soldiers who died there lately, and the whole is a vivid reminder of the horrors and devastation of war.

From here we motored along the old battle front, sometimes in the old German territory, sometimes in the French, to Nancy and from there on to St. Mihiel and down the Meuse to Verdun.

St. Mihiel looks very much the same as it did on the first of November, 1918, when we marched through it on our way to Verdun. A trestle bridge has been built across the river, replacing the pontoon bridge over which we crossed then, but no attempt has been made to replace the fine old stone bridge which had been destroyed.

Verdun is slowly rebuilding, but is still a ghastly city of ruins. We spent two days here motoring over the terribly devastated region around Fort Vaux and Fort Douaumont and visiting the ruined villages along the eastern slope of the hills and out on the plain of the Woevre, which the 81st Division captured in the last fight before the armistice. Here, as before mentioned, the villages have only had the débris piled to one side and the people are living in temporary barracks and cellars. All along the roadside and the borders of the woods one sees the barbed wire heaped, and along the roadside many piles of salvaged war material, rifles, shrapnel, and cartridge cases, and various bits of soldiers' equipment. In fact, quite frequently there are unexploded shells (duds) lying along the side of the road, and one hears occasionally the sound of the explosion of some of these shells which have been found and are being destroyed.

Throughout our trip, though I do not speak French easily, I talked quite a little with the people, and I observed

PEOPLE ARE INTERESTED IN PEOPLE

This is no new discovery. Pope was well aware of it when he wrote, "The proper study of mankind is man." It is a fact which has never been lost sight of in the editing of *The Outlook*. That is one reason why we are particularly glad to be able to announce three forthcoming articles which deal with three diverse personalities. One is a great musician, Leopold Godowsky, whom Europe loaned to America. One is Gifford Pinchot, whom America produced. And a third is Wu Pei-Fu, a Christian general of China, who borrowed both his religion and military training from the Occident.

These articles will appear in early issues of The Outlook

them in the fields and in the villages, and I was greatly impressed with the wonderful recuperative power which they show, and, as I said before, with their courage and cheerfulness under the adverse conditions. They feel, I think very naturally, that America has not backed them up as an ally should since the armistice, and they sometimes show a little resentment, but as a rule the sentiment towards America is friendly and would easily respond to friendly action on our part. I could see

no indications of a militaristic tendency, no desire for a war in the future, but a strong feeling that in a few years France will be attacked again and that they must be ready to resist to the utmost when that time comes. I think their feeling of antagonism is stronger against England than it is against America because of England's efforts to have the amount of the reparations reduced. The French feel, and I think they are right, that Germany, as long as her taxes are not as great as the taxes

in France and England, has no excuse for refusing to pay the reparations, particularly when it is well known that so much of Germany's cash capital is held in Holland and other neutral countries and pays no tax in Germany.

My recent visit has only added to the strong admiration and affection that I feel for the French people, and I trust I was right when I told them that there were many in America who felt for them as I did and who would gladly aid them in every way they could.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER V—DRAMATIC PHASES OF DIPLOMACY

I HAD a longing to visit Jerusalem. Besides, a serious question was pending regarding the rights of Jews to settle in the Holy Land. From Russia and Rumania oppression was driving them to emigrate to other countries. Rumania was placing restrictions upon her Jewish subjects contrary to the Treaty of Berlin, which guaranteed equal political and civil rights in this newly created principality. The Ignatieff laws of 1882 were being enforced in Russia. It was the irony of persecution that Russia claimed such Jews as came to Turkey as her subjects and protested to the Porte against their being accorded Ottoman nationality. Besides, the Russian Patriarch and dignitaries of the Roman Church in Turkey objected to the settlement of foreign Jews in Palestine.

The Ottoman authorities had long been tolerant, even hospitable, to Jewish immigrants, but under outside pressure promulgated a law interdicting Jews from coming to Palestine as permanent settlers.

The subject came to the fore with our Government when the Turkish Minister at Washington, Mavroyeni Bey, communicated to Secretary Bayard the stipulation that the passports of Jewish immigrants "should expressly state that they are going to Jerusalem in performance of a pilgrimage and not for the purpose of engaging in commerce or taking up their residence there."

Secretary Bayard sent the following instructions to me for transmission:

To require of applicants for passports, which under our laws are issued to all citizens upon the sole evidence of their citizenship, any announcement of their religious faith or declaration of their personal motives in seeking such passports, would be utterly repugnant to the spirit of our institutions and to the intent of the solemn proscription forever by the Constitution of any religious test as a qualification of the relations of the citizen to the Government, and would, moreover, assume

Baron Maurice de Hirsch, to arbitrate whose controversy with the Sultan Mr. Straus was offered an honorarium of one million francs

an inquisitorial function in respect of the personal affairs of the individual, which this Government cannot exert for its own purposes and could still less assume to exercise with the object of aiding a foreign Government in the enforcement of an objectionable and arbitrary discrimination against certain of our citizens.

Our adherence to these principles has been unwavering since the foundation of our Government, and you will be at no loss to cite pertinent examples of our consistent defense of religious liberty, which, as I said in my note to Baron Schaeffer of May 18, 1885, in relation to the Kelley episode at Vienna, "is a chief cornerstone of the American system of

Government, and provisions of its security are imbedded in the written chapter and interwoven in the moral fabric of its laws."

The Secretary also desired me to confer with my colleagues, the British and French Ambassadors. Some of their subjects had also been deported. While they agreed with the views of my Government, they had taken no action, but now expressed a willingness to take action similar to that outlined in my instructions.

On May 17, 1888, I called on Saïd Pasha, the Minister for Foreign Affairs, and left a note wherein I stated that my Government could not, under any circumstances, accede to the requirements. After having been furnished with copies of this note, my diplomatic colleagues sent notes of similar tenor.

JEWISH PRISONERS RELEASED

Upon our arrival at Jaffa the *vall*, or governor, of Jerusalem sent one of his aides with an official conveyance to take us to Jerusalem. There were several vexatious questions besides the restrictions upon Jewish immigrants pending between the *vall* and our Consul, Henry Gillman. I deemed it good policy to show my resentment against his arbitrary methods by declining the courteous offer. Thereupon we took a Cook's conveyance, stopping overnight at Ramleh at an inn kept by a naturalized American citizen, formerly a German subject. The next day we drove over the hills of Judea, reaching Jerusalem the same afternoon, where our Consul met us and conducted us to a pleasant, comfortable hotel outside the walls.

We had scarcely arrived at the hotel when a large number of Jews, some of the women carrying infants in their arms, came to plead with me to obtain the release from prison of relatives and friends who had come to the Holy City to settle there, and who were imprisoned because of the interdiction against Jewish immigrants. Of course I had not

Church of the Holy Sepulcher, Jerusalem, the city in which vexatious questions relating to the restrictions upon Jewish immigrants were pending on Mr. Straus's arrival in 1888

known before my arrival of these conditions. Four hundred in all were in prison awaiting deportation.

Instead of calling on the vali as would ordinarily have been proper, I declined to do so. Instead, I sent a note demanding an immediate release of these immigrants who, I claimed, were imprisoned contrary to treaties with the United States, Great Britain, France, and other Powers. Unless this request was complied with promptly, I stated further, I would appeal to the Sublime Porte for the vali's removal.

While negotiating this matter with the Grand Vizier I did not know that the Jewish immigrants who had arrived were being held in prison. I felt authorized, therefore, in view of the Vizier's promise to abrogate the regulations, to serve this drastic notice upon the vali.

The result of my firm stand was that they were all released the following day. I was informed that the vali had communicated my message to the Porte, and that the Grand Vizier had instructed him to comply with my request.

The following morning there were several thousand people gathered outside the hotel. They came to express their attitude. At the same time I received

a beautiful engrossed memorial in Hebrew signed by Rafail Meir Panisel and Samuel Salant, the chief rabbis of the Ashkenazim, Perushim, and Hasidim communities of Jerusalem.

The following day I called upon the vali, who received me with great courtesy. I thanked him for his compliance with my request, and informed him of our understanding with the Sublime Porte that no discrimination should be made against Jewish immigrants coming to Jerusalem. It seemed that he had had no knowledge of the provisions in the treaties I referred to. I expressed the hope that in the future I should not have to complain of any infringement upon this understanding.

Official calls followed. I was accompanied by the Consul and his staff and preceded by several halberdiers of the vali. These, as was the custom, preceded high officials when going through the streets of the Holy City, so as to give them distinction, protection, and a clear passage through the streets.

As my time was limited, I could remain in Jerusalem only three or four days. I had to stop at such ports as Alexandretta and Smyrna to inquire into commercial matters which our Con-

suls had been unable to adjust with the local authorities, and which had caused much vexation.

My trip, which lasted six weeks, was valuable to me and gratifying in its results. My colleagues, the British and French Ambassadors, were much pleased that I succeeded in having the objectionable regulations abrogated.

DIGGING FOUR THOUSAND YEARS INTO THE PAST

The subject of Babylonian excavation received diplomatic consideration during my stay in Constantinople. In January, 1888, I received a letter from my friend the Rev. William Hayes Ward informing me of an expedition which the University of Pennsylvania was organizing for excavations in Babylonia under the direction of the Rev. John P. Peters. Dr. Ward had headed a prior expedition to Babylonia in 1884-5, known as the Wolfe Expedition and financed by Catherine L. Wolfe, of New York. Based upon the results of this preliminary expedition Dr. Peters organized the Babylonian Exploration Fund.

The subject was shortly thereafter brought officially to my attention, Assistant Secretary Adees writing me:

We find ourselves between two fires—on one hand is the Philadelphia organization under the lead of Dr. Peters, which has the money, and on the other is the Johns Hopkins enterprise, which has the most solid ballasting of Assyriological talent; but unfortunately its dollars are limited. As the Johns Hopkins people deposit all their collections in the National Museum, Professor Langley feels kindly disposed towards them. We shall probably have to look to you as the *deus ex machina* to prescribe a solution.

Dr. Peters met me in London while I was on my way home on a short leave. He handed me a letter from President Cleveland asking my good offices in the matter. The entire subject interested me very much. I told him that when I returned to my post six weeks later I would immediately broach the subject to the Porte.

Upon my return early in November, 1888, I had an audience with the Sultan. I explained to him the purposes of the excavations, the great interest of the universities and the societies of scholars, and also that the President of the United States in a personal letter had requested me to obtain the necessary permission. A few days later I dined with the Sultan and afterwards went with him to a play in the little theater located in the palace grounds. During a pause in the performance, the conversation touching upon some matters in the United States, I again referred to the question of excavation, stating that some of the representatives were waiting in Constantinople for a decision. Then he consented graciously, and permission was formally granted a few days later.

The permit was far more restricted

than had been promised, yet it enabled the excavators at Alexandretta to go forward in their work. Dr. Peters's attaché at Constantinople was John Dyneley Prince, then a recent graduate of Columbia College, who later became Professor of Slavonic Languages at Columbia.

The exploration under the able direction of Dr. Peters and Professor H. V. Hilprecht was very successful. Its large collection of archaeological "finds," now enriching the museum of the University of Pennsylvania and the Museum at Constantinople, are yet in the process of deciphering. Dr. Peters left a full account of the exploration in his two-volume work, "Nippur," a lasting memorial to his services in the cause of archaeology. Some of his "finds" date back earlier than 4000 B.C.

At that time Mr. Budge, of the British Museum, and Theodore Bent, another well-known archaeologist, were endeavoring to obtain similar permits for excavations. Bent, because of his disappointment in reference to some excavations he made in the island of Thasos, wrote an article for the "Contemporary Review" in which he made a scurrilous attack upon Hamdy Bey, director of the Museum at Constantinople, who had charge of the entire subject of excavation. Bent stated that the Americans were able to receive a favorable firman because I had bribed Hamdy Bey.

Of course this was absolutely untrue. Hamdy Bey was a scholar of high repute and a man of exceptionally fine character.

The truth is that the Sultan at that time felt under special obligations to me. I had been of service to him in a matter which threatened the good relations between Turkey and Persia. The circumstances, in brief, were as follows: There were in the Ottoman Empire about a million Persians, many of them rug dealers. A number had married Turkish women. The Sultan claimed that when a Persian subject in Turkey married a woman who was a Turkish subject his nationality followed that of the wife. The dispute had become so definite and sharp that the Shah of Persia was about to recall his Ambassador.

It was finally agreed between the two Governments to leave the matter to me for decision. I took the subject under advisement, and wrote an opinion in accordance with the universally accepted doctrine that the nationality follows that of the husband. Instead of rendering my decision, I advised the Sultan what the conclusion would be, and suggested that it would probably make for better relationship if he would anticipate my decision by agreeing with the Shah's contention. This at the same time relieved me from the necessity of deciding against the sovereign to whom I was accredited.

The Shah's Ambassador, Mohsin Khan, who had the position practically of a viceroy in the Ottoman Empire, desired to confer upon me Persia's highest

Facsimile of the engrossed memorial in Hebrew received by Oscar S. Straus from the leading rabbis of Jerusalem as a token of gratitude for his release of Jewish prisoners

decoration, the Lion and the Sun, set in brilliants, which of course I did not accept.

BARON DE HIRSCH AT ODDS WITH TURKISH GOVERNMENT

About this time the question of building a railway from Constantinople to the Persian Gulf was very much agitated, especially in Germany and at Constantinople. The Grand Vizier referred to this subject several times and expressed the desire to be brought into communication with reliable American railway builders. I wrote to Carl Schurz, suggesting that perhaps Henry Villard would be interested.

Just before this time William K. Vanderbilt came to Constantinople in his yacht. I tried to interest him in the Bagdad railway project and introduced him to the Grand Vizier. Mr. Vanderbilt, however, was on a pleasure trip, and did not feel inclined to take up the cares and burdens that such a project involved.

Baron and Baroness Maurice de Hirsch came to Constantinople in the latter part of 1887. The Baron was known no less as the generous philanthropist than as one of the world's greatest railway builders. He financed and constructed the railway through the Balkans to Constantinople, thus connecting Constantinople by rail with the European cities.

The Baron came to Constantinople in order to adjust his financial differences with the Ottoman Government. The latter claimed that 132,000,000 francs were due them on the kilometer guaranties and other concessions.

While I was making a call upon the Grand Vizier one day he asked my permission to introduce some one. He said it was Baron de Hirsch. Having often heard of the Baron and of his benefactions, I was glad of the opportunity. The Grand Vizier summoned the Baron to his room, and we were introduced.

Baron de Hirsch was a man of notable appearance and of attractive address

(C) Underwood

Scene of Babylonian excavations, for which work Mr. Straus secured special permission from the Sultan

—tall, dark, slender, with full black mustache, and something of the dandy in his dress. We had a pleasant conversation.

Two days later I was invited to dinner by the Sultan. He spoke about Baron de Hirsch and the claim which the Turkish Government had against him. All mutual efforts to arrive at a settlement having failed, appointment of a disinterested arbitrator was proposed. The Baron suggested the French Ambassador and afterwards the Austrian Ambassador, but the Sultan declined, expressing a preference for me as arbitrator. To this choice the Baron agreed. The Sultan added that it had been agreed to pay me as an honorarium 1,000,000 francs.

I told the Sultan I felt complimented by his request, but that I would have to consult the Secretary of State. He replied that he had already communicated with his Minister in Washington; that his Minister reported Secretary Bayard expressed no objection. I said I would communicate with Mr. Bayard myself and give him a reply later.

Mr. Bayard confirmed what the Sultan told me. He saw no objection to my acting as arbitrator and to my receiving the honorarium, provided it appeared to me advisable to accept.

I thought the matter over carefully. While desirous of complying with the Sultan's request, I felt that it would not be advisable. Any such transaction was always open to the suspicion of improper methods and of bribery. Should I become the arbitrator and make a decision disappointing to the Turkish Government, I would in all probability come under such a suspicion. So I advised Secretary Bayard of my attitude, and

subsequently informed the Sultan frankly why I could not accept.

I added that, while I could not accept an honorarium, I would be glad to sit as mediator if the negotiations at any time required it. As the negotiations went forward the Baron and the Grand Vizier had frequent disagreements and personal altercations. Each of them came to me with their grievances, whereupon it fell to me to give opinions and bring them together again. Finally, a legal question was submitted to Professor Gneist, the eminent German international law authority. After his decision the Baron paid to the Turkish Government something like 22,000,000 francs.

DE HIRSCH PHILANTHROPIES IN AMERICA

In the course of these negotiations, which lasted several months, I became quite intimate with the Baron and with his exceptionally fine and admirable wife. She was a remarkable woman, learned and able. Her main purpose in life seemed to be to learn how she could be most helpful to others. While at Constantinople she frequently visited the poorer quarters, both Christian and Jewish, and extended help generously. She was rather short and trim, with a benign face. She was dressed in deep mourning, as they had only a short time before lost their only child, Lucien.

I heard of an incident occurring two years before I met her which was typical. The Baron's railway passed through a little village near Constantinople, and in order to locate a station in that village they had been obliged to tear down a number of houses belonging to poor people. The wrecking was done

by the Turkish Government, with the understanding that the Government would recompense the dispossessed people. Not receiving redress or relief, they appealed to the Baron and Baroness in Constantinople. De Hirsch said that it was the Government's affair, but the Baroness told her husband that she did not propose that this railway should be the cause of bringing unhappiness to people. It would probably be a long time before they would receive any compensation from the Turkish Government. She insisted upon taking from her own private fortune the funds with which these people could immediately build new homes and be happy.

The Baron and Baroness frequently came to the American Legation and took family dinner with us. Because of their recent bereavement, they refused the many official invitations which were extended to them. The Baron spoke about his benefactions, which up to that time had been chiefly in Russia. His purpose was during the rest of his life to devote his fortune to benevolent purposes. America interested him greatly, because, driven by persecution, many Russian Jews were emigrating there. He wanted to help these emigrants re-establish themselves.

For several years prior to my coming to Turkey I had been intimate with Michael Hellprin, the distinguished American-Jewish scholar, who worked incessantly to aid the arriving immigrants. I wrote to Hellprin to furnish full information about conditions among the Jewish immigrants in America, together with suggestions for aiding them constructively. Receiving Hellprin's reply, I sent it to Baron de Hirsch with a list of names of men who were foremost in works of benevolence among the Jews in New York. I included Meyer S. Isaacs, President of the United Hebrew Congregations; Jacob H. Schiff; Jesse Seligman, President of the Hebrew Orphan Asylum; and my brother Isidor.

Out of Baron de Hirsch's communications with these men arose the Baron de Hirsch Fund and the trade school. Subsequently, after conferring with my wife, the Baroness endowed the Clara de Hirsch Home for Working Girls. Neither my wife nor I claim any credit for the foundation of these benevolent institutions. We were simply a medium for communication of such information as was necessary.

THE SULTAN'S FAREWELL

The National election of 1888 resulted in a Republican victory. As I had adjusted all outstanding differences between the United States and Turkey, I felt justified in resigning. I would have resigned even if Cleveland had been re-elected. With no urgent diplomatic questions before me to occupy all my attention and energy, I felt more and more that I could not afford to absent myself from my private affairs any longer. In the interim between Cox's

resignation and my appointment the salary of the post was reduced from \$10,000 to \$7,500 per annum. The following year it was restored to the original figure. This barely covered my house rent, as I secured the best house available for entertaining.

In diplomatic life the social functions are of real importance in establishing proper relations with one's colleagues and officials of the Government to which one is accredited. Besides, it is important so far as one's own nationals are concerned to be able to show them such hospitality as they expect from their diplomatic representative.

My immediate predecessors, General Lew Wallace and "Sunset" Cox, lived in hotels, and consequently did very little entertaining. General Wallace felt compelled to decline dinner invitations from his colleagues because he was not in a financial position to reciprocate.

In diplomacy *noblesse oblige* has its widest and most emphatic application. Americans are usually supposed to be rich. If an American diplomat does not show the usual hospitality, it is attributed to penuriousness.

When I returned to Washington on leave, Mr. Cleveland asked me how I got on with my salary. I told him I could live fairly well as a diplomat on four times that amount. My stay in Constantinople cost at the rate of between \$35,000 and \$40,000 a year.

With the inauguration of a new Administration, the heads of missions tender their resignations to the new President through the Secretary of State. This I did. I was unofficially advised that, for fear I would be displaced, numerous letters and memorials from individuals and from missionary societies and various Protestant churches were sent to the President requesting that I be retained at my post. Dr. Pepper, the Provost of the University of Pennsylvania, together with the presidents of several other leading universities, asked for my retention. I wrote Dr. Pepper advising him that I could not continue, that it was imperative for me to return home.

On June 5, 1889, I received a letter from James G. Blaine, the new Secretary of State, accepting my resignation and commending me for my conduct of the mission.

A few days before I left Constantinople I was invited to dine with the Sultan. Expressing regret at my departure, he said that at no time during

his reign had the relations between our two countries been more agreeable. He referred especially to a large claim pressed through the Legation by an American citizen. It was based upon a dynamite gun which the American was permitted to exhibit. I examined the claim carefully, and found that it was not justified either morally or legally, and accordingly informed the Porte that the claim was withdrawn. It seems that the Porte was not accustomed to such fair treatment. The result was that whenever I presented a matter it was always believed to be justified.

I had frequently dined with the Sultan, but this time he was especially affable and spoke quite freely about his affairs. He was very well informed, holding the Government closely, too closely, in his own hands.

On this occasion he said he had heard of the great disaster and loss of lives in the Johnstown flood, and that he desired to transmit through me a contribution of 200 pounds. The following day I cabled this amount to the Secretary of State, who replied:

Express grateful appreciation of the President and the Government of the United States for the Sultan's generous relief for flood sufferers.

The waiting place of Jews in Jerusalem

The missionaries at Constantinople sent me a joint letter on the eve of my departure, June 22, expressing regret at my leaving and satisfaction for the manner in which the prestige of the United States had been sustained. The letter read in part:

As missionaries, we are grateful to you for the effects of this care, seen in important and we hope permanent advantages incidentally secured for various of our enterprises. As fellow-exiles from the homeland we would assure you of the high value which we have placed upon those social relations with yourself and Mrs. Straus which lead us to desire always to be numbered among your friends.

We boarded the steamship to make the passage through the Black Sea to Varna. A royal *caïque*, one of those graceful Bosphorus rowboats manned by six oarsmen, came alongside. An aide-de-camp of the Sultan boarded the ship and presented to Mrs. Straus, in the name of the Sultan, the highest order of the Shefekat decoration, a star set in brilliants. The reasons which would have prohibited me from accepting a decoration did not apply to her, so it would have been ungracious to decline it.

NEXT WEEK—CLOSE-UPS OF GROVER CLEVELAND

A FASCINATING account of Mr. Straus's long and intimate relationships with President Cleveland comprises next week's installment of the Autobiography. Cleveland's war on "free silver," his defeat in 1888 because of his uncompromising stand on coinage and the tariff, and his renomination and election in 1892 are authoritatively discussed. His conversion

of Nathan Straus's home in Lakewood, New Jersey, into "the little White House," and his calm conduct while under fire by political enemies are described. Unusual Cleveland letters are presented. He is described on vacations in New York; his theatrical tastes, his midnight suppers and flair for humor are all delightfully reported.

THE ANONYMOUS NEW YORK BANKER SEEN ON HUDSON

THERE is a banker down in Wall Street whose evening newspaper sometimes becomes an unnoticed sketch-book. A member of The Outlook's staff discovered the banker's *penchant* for sketching faces, and persuaded him to let us prove to readers of The Outlook that New York banking circles are not wholly engrossed with deposits, loans, collateral, compound interest, and foreign exchange. Last May we published a group of his sketches of commuters. The present group shows types observed on a Hudson River ferry-boat. Other examples of sketches by the financier will appear in The Outlook from time to time.

This is not Samuel Gompers, although it looks something like him. Perhaps he's a labor leader on his way to a big conference. Or, he might be mistaken for one of the men who own Broadway. But he undoubtedly knows what the public wants—whether his line is real estate, neckties, billboards, or women's wear

He doesn't mind living in Jersey, since the ride gives him ample time to read his paper without missing any of the news. Moreover, the Jersey side is the place to raise his family

She regards the big ocean liner with longing eyes and wonders if she will ever be lucky enough to shelve short-hand and filing cabinets for a deck-chair

He is usually first off the ferry at Hoboken and plays a resourceful game of pinochle in the smoker of the 5:50 on the Lackawanna that roars through the Oranges

TURNS HIS PENCIL LOOSE ON TYPES
 RIVER FERRY-BOATS

THE ABOVE LIST OF REMOVED NAMES IS FOR THE REGISTRATION OF ALL NAMES. Names need not be so, and otherwise credited to their respective and give the local news published therein.

THE ORDER OF THIS PAPER IS TO OFFER, AMONG THE PROPER CURRENT INFORMATION ON ALL INTERESTING SUBJECTS, IN CONNECTION WITH PARTICULARS IN HISTORY, SOCIAL, AND POLITICAL; AND TO CELEBRATE A TALENT AND NOVEL LITERATURE. (Proceedings of the Evening Post, No. 1, November 1, 1861.)

Genoa as a Beginning

THE BOOK TABLE

BOOTH TARKINGTON, DRAMATIST

AN IDLE CONVERSATION BETWEEN AN INDOLENT REVIEWER
AND HIS CAPTIOUS FRIEND

BY BARRETT H. CLARK

THE Friend. I warn you, my mind is made up; but if you want to air your ideas, go ahead. However, if you intend to write a review, why not write it? You surely aren't going to use my ideas?

The Reviewer. No; but you offer me just enough in the way of half-way intelligent opposition to stimulate my own thoughts. Besides, I don't like the notion of sitting down and dissecting Booth Tarkington's plays.

The Friend. You agree with me, then, that they are not worth writing about! Right. His books are a different story. Now, take "Alice Adams"—

The Reviewer. I have not read "Alice Adams," and I prefer not to discuss the novels. I have been reading the three newly published plays—"Clarence," "The Country Cousin," and "Penrod," and if you will allow me to tell you about them—

The Friend. Let me look at them. Why, these are simply the prompt copies, evidently reprinted from the stage manager's scripts—

The Reviewer. Intended for production in theaters. That's what a play is. I hope I sha'n't have to make such an obvious statement in my review.

The Friend. Why didn't he publish them as books?

The Reviewer. Why not as tone-poems? Shall I never convince you that a play is a play, and that when you are privileged to read it you must always think of it as a play?

The Friend. But these are simply skeletons: dialogue and a few scraps of description—hardly literature, I should say.

The Reviewer. You must accept the conventions of the form.

The Friend. But listen to this bit of "description"—I read at random from "The Country Cousin:"

Sitting-room at Mrs. Howitt's, Centerville, Ohio. A June morning. A pleasant, homelike, incongruous interior of the eighties and nineties. Two windows, rectangular oblongs, plain (with no small panes) in back. Cream-colored shades and lace curtains.

And they say Tarkington can write! "In back"!

The Reviewer. You don't understand; that is only—

The Friend. Wait. I want to read you the description of Mrs. Howitt: "She is a gentle but rather careworn forty-five; wears half-mourning." That's

It reads like a telegram—

Samuel French, New York.

202

The Reviewer. But—

The Friend. I make that a night letter.

The Reviewer. The description is sufficient.

The Friend. Not for me.

The Reviewer. It is for the manager and the actress.

The Friend. But I am neither the manager nor the actress. I prefer de-

BOOTH TARKINGTON

scriptions of houses and people as the author writes them in his novels.

The Reviewer. Did you see "The Country Cousin"?

The Friend. Yes. That was different.

The Reviewer. Exactly. You are now reading the "night letter" directions, purposely laconic and to the point, that are intended merely to guide the manager and the actors. You insist on comparing a printed play with a printed novel, and you miss a delightful experience. You have a mechanical piano, haven't you?

The Friend. Yes. What has that to do with the case?

The Reviewer. You crank it, or touch the self-starter or whatever it is, and it does the rest?

The Friend. Yes.

The Reviewer. And you like it?

The Friend. Yes.

The Reviewer. I don't. I beg your pardon, but I don't like your machine. I prefer the old-fashioned work-it-yourself pianola, where I use my hands and feet—and incidentally my head. I feel I am running the show; I often used to imagine myself the conductor of a great orchestra, and to this day no one can

persuade me that my own reading of the "Ninth Symphony" is not finer than that of Nikisch. I am sure I enjoyed it more than I did any subsequent rendition of it.

The Friend. And this little chapter from your autobiography is intended to show—

The Reviewer. That my own imagination filled the gaps. The pianola roll supplied the barren notes and I the inspiration. And so it is with plays. Did you never declaim "Hamlet" to yourself in the bath-tub and imagine you were Booth? I have played a violin and thought I was Kreisler as I accompanied myself on the pianola, playing the Beethoven Violin Concerto!

The Friend. I don't imagine the neighbors thought so.

The Reviewer. I was oblivious of the neighbors—to put it politely.

The Friend. But what about Tarkington and his plays?

The Reviewer. Simply this: Take these "skeletons," as you call them, use your imagination, fancy yourself the stage director, the actors, the entire audience, and be the whole show yourself. That's practically what you do when you read a novel. Only, I beg you, when you read a play, forget that there is such a thing as a novel. And I venture to suggest, if you will try the experiment in a sympathetic mood, that you will find more in some plays than you do in a trilogy of novels.

The Friend. Your customary exaggeration.

The Reviewer. I speak the literal truth. For example, compare "Antony and Cleopatra"—or "Caesar and Cleopatra," to make the test a little fairer—with, well, with "Nicholas Nickleby." Do you miss the descriptions in Shakespeare? And as for Shaw, you get a small novel together with the play.

The Friend. Booth Tarkington is not Shakespeare, nor even Shaw.

The Reviewer. But they have one thing in common: they are all dramatists. For the sake of argument, I maintain that what Booth Tarkington omits in the way of detailed description serves only to stimulate the imagination.

The Friend. Tell me, why do writers take such infinite trouble to describe people and places?

The Reviewer. Sometimes the description is beautiful in itself; sometimes, unfortunately, it indicates intellectual laziness; and sometimes, of course, it takes the place of actual dialogue. The effective play tells a story by means of action, supplemented by speech, and, since the play is usually concerned with critical moments in the lives of people, the dramatist is forced to present his characters more vividly, more saliently, more dramatically than is the novelist.

The Friend. Would you say that

"Clarence" is as complete a revelation of character as "Penrod"? I refer of course to the "Penrod" of the novels, not of the dramatization.

The Reviewer. That depends on you.

The Friend. On me?

The Reviewer. Yes. Suppose you read "Hamlet" at the age of ten. You naturally lack the background of experience, and of course the play will mean little to you. If as a child you prefer Mother Goose rhymes, that cannot be urged as proof that the rhymes are greater than the play. The fault, dear Brutus—

The Friend. And so—

The Reviewer. And so with the reading of plays. You require a certain amount of background, a point of view, in order to get out of a play everything that the dramatist has put into it. An ingenious French critic once declared that Molière's Harpagon (in "The Miser") was as great a character as Balzac's Père Grandet (in "Eugénie Grandet"), but insisted that the comparison should not be made until Harpagon was in the surroundings proper to him—that is, in a theater. What you do in reading a play is simply to mount it, in your imagination. But to return to Tarkington—

The Friend. You spoke of "The Country Cousin." I saw it acted a few years ago, and I confess that I blush for two ex-Presidents of the United States, both of whom seemed to think the piece worthy of serious attention.

The Reviewer. I grant you "The Country Cousin" is at best a flag-waving bit of propaganda, thoroughly Hundred Per Cent. But you will note that the play is the child of two parents: Julian Street is named as collaborator. I do not of course know what part each writer is responsible for, but it seems as if both compromised over the transaction and omitted the best of himself, for the result is mediocrity. But give it credit for a generous amount of good character drawing, exactly the sort of thing you profess to admire in "Seventeen" and "Penrod." Take, for instance, Sam Wilson. Sam opens the play. There is no description of him until after his entrance, and at that it is merely a matter of three short sentences, but you *know* Sam the moment he opens his mouth. Let me read you his opening speech:

You take the fellows that loaf all their vacation, where'll they be time I'm in politics, Congress? I'm goin' to get somewhere in this short life we got, I tell you! . . . I get a lot out o' Shakespeare; he's a good writer. Every now and then, when I'm workin' on an oration I come up against somep'n that sticks me—somep'n I can't seem to work out right. Well, sir, time and again, if I got a copy of Shakespeare handy, I find he's got just what I want, and half the time he's got it worked out better'n I could myself.

And there you have Sam. It's living speech—"

The Friend. Do you think that way of presenting character is better than the same writer's method in a novel?

The Reviewer. Not of necessity better, but certainly not worse. Read a dozen plays, and you will find novel-reading just a little dull. You will miss something, surely, but you will be compensated by receiving impressions which no novelist can give you. I am surprised that in America we have not adopted play-reading as a time-saving device. He who runs may read a play! The play eliminates the non-essentials, particularly the sort of padding that turns a good short story into a third-rate novel.

The Friend. Would you prohibit novels, or rather permit them only in dramatized form?

The Reviewer. Novels *will* be prohibited sooner or later, and I shall be sorry, for what is finest in a great novel cannot be put into a play, just as a great play can never be adequately novelized. But most novels could with advantage be reduced to plays, thus saving some three or four hundred pages of valuable paper.

The Friend. Now, here is "Penrod," "a comedy in four acts adapted for the stage from Booth Tarkington's Penrod stories"—

The Reviewer. Let us pass at once to "Clarence," which is not a dramatization. You saw the performance?

The Friend. Yes, and very good entertainment it was. But nothing more.

The Reviewer. Nothing more! Good heavens, what do you want? Surely you are not one of those people who insist that a play shall be "as good as a sermon"? You don't expect to be uplifted and all that?

The Friend. No, but I demand something besides entertainment.

The Reviewer. It all depends on what you mean by "entertainment." "Hamlet" is "mere entertainment" for me; I am interested and excited by "Hamlet," but I surely don't go to see it in order to learn philosophy. "Clarence," I grant you, does not "entertain" me as does "Hamlet," but—like "Hamlet," remember—it shows human beings in interesting and critical situations. And that is why we go to the theater.

The Friend. Granted. But "Clarence" is trivial. It does not grapple with human problems; it fails even to reveal a pale reflection of life. The characters are puppets who do nothing, think nothing, and say nothing of exceptional significance.

The Reviewer. Look at "Clarence" as you would at a spectacle. Without unriddling the secret of life, Booth Tarkington has managed to throw together a number of genuinely American people. Isn't it interesting to see ourselves on the stage? How seldom do we have the chance! Here is Clarence. Can you imagine any one but an American doing and saying what Clarence does and says? The whimsicality and sly humor

of that extraordinary entomologist would not, I think, raise the shadow of a smile on the face of a German, and a Frenchman would be bored by it. The humor is quaint, it is quiet, it is not forced; above all, it emerges from the situations and is not gratuitously grafted upon the play, as conventional humor is so apt to be. You may have noticed how in many plays the dramatist seems to have gone over his MS. at rehearsals, seasoning it with "laughs." Well, Tarkington gets his laughs, not by bright lines and last-moment inspirations, but by allowing his people to reveal themselves at the right time and under the right circumstances. That is why "Clarence" is a genuine comedy. Listen to this (I omit the stage directions):

Cora. Do you wear spectacles because your eyes got gassed?

Clarence. No. They say the liver affects the eyes very much.

Cora. How did it *feel* when you first enlisted?

Clarence. It felt all right. There was nothing the matter with it then.

Cora. I don't mean your liver. I mean how did *you* feel when you first enlisted?

Clarence. I was drafted.

Cora. Were you just a private all the time?

Clarence. Yes, all the time after I was drafted, I was.

Bobby. I hope there'll be another war in about a couple of years or so.

Clarence. You want another war?

Bobby. You bet!

Clarence. So you could be in it?

Bobby. Yes, sir!

Clarence. I wish you'd been in this one. What would you do?

Bobby. Flying Corps. That's the life!

Cora. What did *you* do in the war?

Clarence. I drove a mule.

Cora. What in the world did you do that for?

Clarence. Somebody *had* to.

Cora. But what *for*?

Clarence. They won't go where you want 'em to unless you drive 'em.

Bobby. Did you meet Major Brooks-Carmel in France? He's a cousin of ours.

Clarence. No. I didn't meet him.

Cora. Did you meet Lieutenant Whitcomb?

Clarence. What was his first name?

Cora. Hobart. Lieutenant Sir Hobart Whitcomb, really. He was English—in the Royal Flying Corps.

Clarence. No. I didn't meet him.

Cora. It's *right* to be personal to soldiers, isn't it?—so as to look after their welfare?

Clarence. It's very public-spirited.

Cora. I think our American uniform is *so* becoming, don't you?

Clarence. Do you mean you think I'd look worse in other clothes?

Cora. No, but I *would* like to know why you drove a mule.

Clarence. I didn't *select* that branch of the service myself.

Cora. You mean somebody told you to?

Clarence. Yes; so I thought it was better to do what they said.

Cora. Did you have to learn to

swear at the mules to make them obey?

Clarence. No. No, I didn't.

Cora. Were you ever wounded?

Clarence. Yes, I was.

Cora. Oh, he was wounded! Where was it?

Clarence. At target practice!

There you have it. No smartness, no epigrams, not a false note. It is not great literature; it can hardly be called great comedy, but it is genuine.

The Friend. It is, as far as it goes. But tell me, do a string of scenes of that sort make a fine play?

The Reviewer. Yes. You miss the plot, but let me tell you that in pure comedy the plot matters little. It is at best a thread which holds the characters together. It may be conventional, it usually is; in "Clarence" the plot is little more than an excuse for the presentation of a number of very human and very amusing people. Clarence himself is a delight, and Bobby is surely as fine

an example of youth as Tarkington ever conceived.

The Friend. You seem, then, to think that the story is nothing, and the characters everything?

The Reviewer. In comedy, the plot—

The Friend. Yes, yes, you've said that before. But tell me, what would "The Bat" be without a plot?

The Reviewer. Nothing, because "The Bat" is not a comedy. It is solely the plot that is of interest; the people are of no importance or interest. In order to enjoy "The Bat"—and I did enjoy it—I must be in my seat before the curtain rises and remain in it until the last curtain falls after the mystery is revealed. Not so with comedy; you would enjoy seeing the second act of "Clarence" without the others; but imagine seeing the second act of "The Bat"! In "Clarence" I am willing to let the plot go hang—

The Friend. So was Tarkington!

The Reviewer. So was Tarkington. It would have been almost impossible to

develop so many characters if the dramatist had concentrated his attention on the story as well. Think of "The School for Scandal" and "As You Like It." Does the plot in either instance amount to a row of pins? Some day some one will discover a new way to write a comedy—without a plot—

The Friend. You're quite mad!

The Reviewer. Shaw has almost done it. Or rather he has written plays which, if they had been good as character comedies, would have proved my point, for they are nothing as regards plot.

The Friend. Let me give you a word of advice. If you intend to write an article on Tarkington as a dramatist, you'll have to think of something to say about him.

The Reviewer. You think I need a plot?

The Friend. Something at least besides trivial dialogue. Are you going to do the article?

The Reviewer. I hardly think so.

THE MAIL BAG

BITS OF TEXAS POLITICAL HISTORY

I HAVE read your editorial "Merely a Choice of Two Evils" in The Outlook of September 13, 1922, based upon a telegram from Mr. John A. Lomax concerning the recent Senatorial race in Texas. I am a native of Texas, a graduate of the State University, and a Rhodes scholar from Texas. By virtue of the last fact, I was in England during the greater part of the campaign. In the spirit, accordingly, of an interested observer I am taking the liberty of sending you the facts outlined below as a follow-up article, based upon the complete returns as recorded by the Texas Election Bureau.

The conclusion drawn in your editorial comment on the Senatorial race in Texas is not sustained by the facts.

To correct a slight error, may I state that Mr. John A. Lomax is not Secretary of the University of Texas? He has not been connected with that institution since the summer of 1917.

The essential error lies in the suggestion that Earle B. Mayfield's candidacy did not appeal to the people of Texas. That it did is evidenced by these figures. In the first primary, with a field of six, polling a combined vote of 596,333, Mayfield received 163,910—27 per cent, or slightly less than one-third, of the total number of votes cast—which gave him a plurality of 32,602 over Ferguson, who ran second, and 59,911 more votes than Senator Charles A. Culberson, the incumbent.

In the run-off 582,824 ballots were cast, or 13,809 less than in the first primary. It would therefore appear that mething under 14,000 Democrats—and 100,000 as Mr. Lomax suggests—ed to vote. With respect to these, it air to note that Mayfield's nomination

was assured after the first primary, so of the 13,809 who failed to vote it is safe to assume that the most of them were Mayfield's adherents. Ferguson, on the other hand, appealed to every element of dissatisfaction and polled a maximum vote. It is likewise interesting to record that more people voted in the second primary than in any other Texas run-off.

Mr. Mayfield announced for the Senate in July of 1921 upon the distinct proposition of undertaking to preserve the life of the State Railroad Commission. He made 169 speeches in the first primary and never mentioned any one of his five opponents, refusing to be drawn into a campaign of mud-slinging or personal abuse and sticking to his platform. In the second primary he delivered thirty speeches of the same character.

In 1906, when twenty-five years old, Mayfield was elected to the State Senate, carrying every county in the district. In 1910 he was re-elected, again carrying every county in his district. In 1912 he ran for the State Railroad Commission, winning by 16,000. He was re-elected in 1914 by a majority of 130,000, and in 1920 was elected for the third time by a majority of 150,000, carrying all but one of the 252 counties in Texas.

His chief source of strength has been and is now an unyielding opposition to the liquor traffic. He launched his political career when the brewing interests dominated Texas politics from the precinct organizations to the State Convention, and he has waged six fights with stubborn opposition, the last one culminating in his nomination for the Senate.

Austin, Texas.

ROBERT M. FIELD.

[Mr. Lomax had already written us when this communication was received, pointing out the error in our statement concerning his connection with the Uni-

versity of Texas. Mr. Lomax retired from his professorship at the time when Governor Ferguson overthrew the management of the University. When a new board of regents of the University was created, Mr. Lomax was again invited to resume his professorship. He is now executive secretary of the Ex-Students' Association of the University of Texas.

In his letter to us Mr. Lomax gives the following information:

"You may be interested to know that on Saturday, September 16, the independent Democrats of Texas nominated George E. B. Peddy to oppose Mr. Mayfield in the race for United States Senator. Immediately after the Democrats had nominated Mr. Peddy, the Republicans also indorsed him as candidate for Senator."

NO PUSSY-FOOTERS WANTED

PLEASE accept my hearty congratulations on the editorial in the September 20th Outlook headed "Pussy-Footing." From start to finish it is admirable both in sentiment and in expression. It puts the matter so plainly that he who runs, unless he is a fool, may read. At first I had felt that a governmental investigation would be only an expense, since everybody who has read the news of recent years, not to mention the history of the past, must realize that Islam is not capable of exercising civilized government. If those whom you ironically call statesmen would only stop thinking that they know it all, we should see something practicable and reasonable done to meet the situation. I wish that this editorial might rouse a public sentiment in the two great Anglo-Saxon nations that would make itself felt in season to accomplish something worth while.

WILLIAM J. SEELYE

For 120 years
du Pont

Chemical Engineers
have contributed to the
country's safety in
times of war!

SINCE the nation's founding, War, terrible but inexorable, has five times visited the land—and five times has the du Pont Company proved a dependable source of strength in the country's time of danger—ready with sufficient explosives to meet the needs of the nation's defenders.

* * *

THE story of du Pont's service to the country is an inspiring one. For since its earliest days, the country's means of defense has been among the most important of this Company's service.

And rightly so, for since 1802, when at Thomas Jefferson's invitation, E. I. du Pont de Nemours set up on the Brandywine River the first powder mill in America, du Ponts have been powder-makers to the United States Government.

The history of the du Pont Company is a story that is inseparably interwoven with the nation's history—a story that ranges through the century from Perry's jubilant "We have met the enemy and they are ours," to Pershing's reverent "Lafayette, we are here"—a story in which "Old Zach" Taylor across the Rio Grande, Grant before Vicksburg and Dewey at Manila Bay are heroic figures—a story of work and research always with the thought in mind that when America was forced to fight, she might have at her hand the best explosives and munitions science knew, and in the ever-increasing quantities that she needed.

There is, indeed, no finer illustration of du Pont's service and efficiency than in the records of the last war. Starting in 1914 with a capacity of only 12,000,000 pounds of smokeless powder a year, it increased its volume until it was producing 440,000,000 pounds a year, supplying 40% of the Allies' explosives, and at the same time voluntarily reduced its price in the course of three years from \$1 a pound to less than 50c!

* * *

YET, great as the du Pont Company's services to the country have been in times of war, those are only the occasional services, for, happily, war comes but rarely. And it is the unsung services of the du Pont organization in times of peace that are truly remarkable.

The du Pont Company has been one of the leaders in the application of chemistry to the country's industries—one of the leaders in developing the most remarkable figure of the twentieth century—the Chemical Engineer.

Since its earliest beginnings, the du Pont Company has been building upon the foundations of chemistry. Not only was

E. I. du Pont de Nemours himself a chemist, who had studied with the celebrated Lavoisier in Paris, but the manufacture of explosives was then and is now one of the industries that most require the services of the chemist.

As explosives increased in complexity and called for increasing chemical knowledge, the du Pont Company, little by little gathered to itself many of the keenest minds in the science and built up one of the finest chemical staffs in America, a staff not only of research chemists, but of men who knew manufacturing as well as the science of chemistry—men who were Chemical Engineers.

Now, the Chemical Engineer is a rare mingling of abilities. He is a chemist who can take the discoveries made on the experimental scale of the laboratories and put them into production on the larger scale of commerce. He is the man who has brought to the doors of industry new substances, new uses for long-used substances, uses for products that once were waste, and processes that cut the cost of manufacturing and made possible the century's wonderful strides in commerce.

And the du Pont Company's assistance in developing the Chemical Engineer and introducing him into his rightful place in American industry is not the least of the du Pont Company's services to the country.

* * *

BUT yet another service has come through the Chemical Engineer—the family of du Pont products that carry the du Pont Oval. There is Fabrikoid for upholstery, luggage and bindings of books, not to mention half a hundred other uses—there is Pyralin from which toilet-ware for your wife's dressing table is made and many other articles—there are paints, varnishes, enamels, lacquers—there are dyes—there are many chemicals that America's industries must have—seemingly non-related, yet all of them the legitimate children of a manufacturer of explosives, for the basic materials or processes that go to the making of each of them are similar to those that du Pont Chemical Engineers use in the making of explosives—and it is only through the manufacture of such products as Fabrikoid and Pyralin and dyestuffs in times of peace that the du Pont Company can be sure of being prepared for its larger service—that of insuring means for the nation's defense in times of war.

This is one of a series of advertisements published that the public may have a clearer understanding of E. I. du Pont de Nemours & Co. and its products.

Electric Light and Power Plant at Miles City, Mont., and two of the 47 buildings now heated by steam that was formerly wasted.

Waste Steam Used For Community Heating

After facts brought out in court showed that Miles City, Montana, was losing more than \$100 a day by not selling exhaust steam, permission was given the electric station to proceed with a plan for distributing this waste steam to heat nearby buildings.

A bulletin has been prepared showing the development of this profitable municipal venture. Today, some 47 buildings are heated from the central station plant. Heat sales run over \$32,000 a year. Fire hazards are reduced because individual heating plants are thrown out of these buildings. Dirt and dust of coal and ash handling are eliminated. This is one of over four hundred installations of Community Heating designed and installed by our engineers.

If there is an electric light plant or factory in *your* city wasting steam, why not use it to heat nearby buildings? Buy your steam heat as you buy gas or electricity—by meter!

Write for Bulletin No. 20-O covering AdSCO Community Heating of a group of buildings from Central Station Steam Plant. Bulletin No. 158-O covers AdSCO Heating for individual buildings. Architects, engineers and heating dealers should also ask for Bulletin No. 159-O.

ADSCO HEATING

WHAT IS HAPPENING TO THE GERMAN MARK?

BY ROGER C. HOYT

THE answer to this question is being eagerly sought by two classes of Americans. First, the many thousands who immediately after the armistice, deluded by the specious promises of over-optimistic brokers, "invested" their savings in German marks and have since watched the steady march of the mark towards the vanishing point. Secondly, that large group of American business men who wish to transact business with Germany but find it practically impossible to make contracts because of the rapid shift of prices in Germany due to the wide fluctuation of the mark. Perhaps a simple statement of the economic principles involved will, therefore, throw some light on the probable outcome of this perplexing situation.

The complexity of civilized life makes money absolutely essential as a medium of exchange and as a measure of value. In primitive times men resorted to barter, which was the simple exchange of commodities. But this very quickly grew cumbersome and inadequate. Men then cast around for some article which could serve as a unit of value. In savage communities the unit was seashells, cattle, beaver-skins, corn, cocoanuts, salt, or some other article of general consumption. But these units in turn were soon found to be unsatisfactory and a unit of greater intrinsic value was sought. Men then turned to the use of metals which had many desirable qualities as money, and gradually gold, the most valuable metal, became accepted as the most universally satisfactory unit which could be found. And so, in course of time, what is known as the "gold standard" became the basis for the currency systems of practically all modern governments. This means that the underlying unit of value is gold and that all other forms of currency are ultimately redeemable in gold.

Unfortunately, however, many governments, led astray by financial stringency and false economic theories, have attempted to issue currency not redeemable in gold, but basing its value on the mere word or fiat of the issuing government. This form of currency is known as "flat money." Our own greenbacks issued after the Civil War are an example of this "flat money." But the issue of flat money by a government immediately brings into action an old economic law known as Gresham's Law. This in simple language is that "bad money drives out good money." When bad money is issued, people will hoard their good money, and in time the bad money will depreciate in value because there is no real intrinsic value back of it. There are many such cases in the monetary history of the last two centuries. During our war of the Revolution the Continental Congress issued over 241 millions of paper money. This

depreciated rapidly, and in a few years became practically worthless. Pelatiah Webster in "Political Essays" says:

"If it saved the state, it also polluted the equity of our laws; turned them into engines of oppression and wrong; corrupted the justice of our public administration; destroyed the fortunes of thousands who had most confidence in it; enervated the trade, husbandry, and manufactures of the country; and went far to destroy the morality of our people."

This statement of the effect of a depreciated currency, made by a writer in 1791, might be applied with equal force to the Germany of to-day.

Professor Edwin R. A. Seligman, of Columbia University, speaking of this same period in our history, says:

"The spurious prosperity occasioned by the high prices during the war soon vanished and turned into the contrary after the collapse of the paper money. During the eighties the suffering was extreme. Only with the greatest difficulty could the Revolution be brought to a successful close; while the ensuing business depression and universal distress well-nigh destroyed the very fabric of the state. So alarming was the situation that almost the first thing accomplished by the convention which framed the new constitution was to prohibit the issue of bills of credit by the States and to adopt a provision which was supposed to apply the same inhibition to the Federal Government as well. And when the National debt was funded in 1790 the remnants of the old paper money were accepted at the rate of 100 to 1. Thus came to an end an inglorious chapter in our fiscal history."

France had a similar experience during her Revolution. The treasury then issued the famous assignats or paper money presumably based on public lands. The original issue of 400 million livres steadily grew until it reached the enormous total of 45½ billions. The inevitable depreciation rapidly took place and the bills became practically worthless. A French writer, M. Marion, describes the result as follows:

"It was now that there appeared in all their gravity the innumerable calamities, political, administrative, economic, moral, and social, which inevitably follow the ever-growing issue of a depreciated paper money; the ruin of the treasury, crushed, on the one hand, by the insignificance of the revenues paid in paper of a nominal value, and, on the other, by the growth of the expenditures necessarily met in actual values; the increasing difficulty of procuring food, the commodities fleeing from a paper sunk so low; impotence and inertia of the administration deprived by the worthlessness of this paper of all its means of activity; the upsetting of fortunes; the sudden enrichment of all debtors except the state; and the ruin of all creditors through the payment in illusory values of sums contracted for and expressed in real values; universal demoralization, fever of gambling and stock jobbing taking the place of

SEVEN-ROOM HOUSE No. 702

Designed for the Service Dept., American Face Brick Assn.

This attractive Dutch Colonial Bungalow is one of the ninety-six beautiful homes shown in our "Face Brick Bungalow and Small House Plans." The charm and simplicity of the exterior suggests the cosiness and comfort of the interior. The grouping of the living room, dining room, porch and hall is one of the distinctive features of this house.

Homes of Lasting Satisfaction

BEAUTY, durability, fire-safety, comfort and economy are the things every builder wants in his home. All are to be found to a surpassing degree, in the one material—Face Brick.

The realization of this fact by home-builders, who view home-building as a permanent investment, is responsible for the amazing increase in the number of Face Brick homes, both large and small, which are being built in all parts of the country.

Every prospective home-builder should have "The Story of Brick," an attractive booklet with beautiful illustrations of modern homes. It discusses such matters as Comparative Costs, Basic Requirements in Building, The Extravagance of Cheapness, and other kindred subjects. It points out how, in a few years, the savings that go with a Face Brick house more than wipe out the slightly higher first cost of Face Brick over less beautiful and less durable materials. "The Story of Brick" is sent free on request.

"Face Brick Bungalow and Small House Plans" are issued in four booklets, showing 3 to 4-room houses, 5-room houses, 6-room houses and 7 to 8-room houses, in all ninety-six, each reversible with a different exterior design. These designs are unusual and distinctive, combined with convenient interiors and economical construction. The entire set for one dollar. Any one of the booklets, 25 cents, preferably in stamps.

We have the complete working drawings, specifications and masonry quantity estimates at nominal prices. Select from the booklets the designs you like best and order the plans, even if you are not going to build now, for their study will be not only interesting and instructive, but helpful in formulating your future plans for a home.

You may want "The Home of Beauty," fifty designs, mostly two stories, representing a wide variety of architectural styles and floor plans. Sent for 50 cents in stamps. We also distribute complete working drawings, specifications and quantity estimates for these houses at nominal prices. Address, American Face Brick Association, 1739 Peoples Life Building, Chicago, Illinois.

NOT HOW CHEAP—BUT HOW GOOD

WHAT IS HAPPENING TO THE GERMAN MARK? (Continued)
the love of work and the practice of thrift."

Is not the above statement fully as applicable to the Germany of to-day?

The monetary history of almost all civilized governments contains similar examples of the evil effects of a fiat paper currency.

And now, with the above economic and historical background, what can we reasonably expect to be the outcome of Germany's experiment with a depreciated paper currency? Depreciation of the mark has reached almost ludicrous proportions. We have the now familiar example of Russia before us, where the printing-presses find it impossible to keep up with the demands for a constantly depreciating currency. Russian rubles are now the "stage money" of the world and have little more value than the paper on which they are printed. The German Government appears to be following the same path of illusion which leads to the graveyard of the paper mark. It was recently reported that the great German Central Bank, the Reichsbank, was compelled to shut its doors and refuse payment of currency to its depositors because of an actual deficiency in the available supply of bills. In other words, depreciation had gone so far that the printing-presses were unable to keep up with the demand for paper money. The measure of depreciation is shown by the present quotation of seven one-hundredths of one cent for a mark which has a normal or par value of 23.3 cents. Thus far has the mark plunged from the gold unit of world value toward the abyss of oblivion. With the issue of billions of paper marks still unchecked, ultimate redemption in gold has become an impossibility.

As an evidence of this tremendous inflation, it is reported that the Reichsbank's note circulation in the last week of July increased over 12½ billion marks. Between July, 1921, and July, 1922, the note circulation increased over 122 billion marks, and discounts of treasury bills and private loans increased nearly 128 billion marks. The total outstanding bank notes on September 15 amounted to the incredible total of over 271 billion marks.

The best that the "investor" in marks can look for is partial redemption at a greatly reduced ratio. This is in effect partial repudiation. But more probably the paper mark will be almost if not completely repudiated and a new currency standard set up. In our opinion, therefore, the holder of marks has very little to hope for and his best course would seem to be to find some method of investing his holdings in German property or industrial securities which have some measure of real value. This of course is not an easy thing to do. We might state, however, that a company has just been formed in New York for the purpose of investing American holdings of marks in German securities. It remains to be seen whether such a venture will prove of any success.

The best that the business man who

"I Will Put My Insurance in Trust"

WHEN a certain business man died, about two years ago, his wife received a considerable sum of insurance-money. Knowing little about investments, she consulted her brother. He recommended that she purchase stock in the company of which he was president.

Last year the business went into the hands of a receiver. The widow's income has ceased, and her principal is practically lost.

Such cases as this point the moral that it is often as essential to provide for the future protection of insurance money as it is to pay the premiums.

One of the many important services rendered by trust companies is the care of life insurance. Trust companies are today the trustees for many millions of dollars of insurance money.

Your insurance can be made payable to a trust company as trustee. The company will invest and distribute it according to such instructions as you leave, by which you can provide for many possible contingencies.

The trust company will protect your insurance fund by all the safeguards with which it surrounds the administration of estates and trusts.

Ask a Trust Company

or write to the address below for the booklets, "Safeguarding Your Family's Future" and "Your Wife and Your Insurance." If you intend that the money you leave shall provide family protection, these booklets will interest you.

FIVE NASSAU STREET, NEW YORK

WHAT IS HAPPENING TO THE GERMAN MARK? (Continued)

for is that the German Government will be able to find some means of stabilizing its currency so that a measure of price stability can be attained. Here again this will probably be brought about by a partial or total repudiation of the paper mark. In any event, no improvement can be brought about until the German Government calls a halt on the printing-presses and in good faith makes the attempt to re-establish its monetary system on some basis of real value.

We can learn much from history, and history teaches us that a fiat currency has always invited disaster.

THE SUBSTANCE AND THE SHADOW

BY NOEL SARGENT

THE author has recently made some interesting investigations into what might well be termed the "practical" side of the open and closed shop controversy.

Fifteen cities in which building is at least seventy-five per cent on an open-shop basis were compared with the same number of cities where at least three-fourths of the construction in 1921 was performed under closed-shop conditions. The former group included Minneapolis, St. Paul, Detroit, Atlanta, Milwaukee, Richmond, San Antonio, Grand Rapids, Seattle, Duluth, Salt Lake City, Spokane, Akron.

The closed shop cities listed were: Cleveland, Indianapolis, Newark, Kansas City, Missouri, Chicago, Cincinnati, Dayton, Pittsburgh (including McKeesport), Syracuse, Louisville, New Orleans, Providence, St. Louis, Scranton, Butte.

Lest it may be alleged that the cities were "hand picked," we must note that twenty-five of the thirty (a majority in each group) are among the fifty largest cities of the country, and that twenty-one, or seven out of each ten, are among the forty largest, according to the 1920 Census figures.

The "American Contractor" in a recent issue presents statistics as to building wages prevailing in different cities December 31, 1921. Figures were presented for nine of the open-shop cities and eight of the closed-shop cities. For purposes of comparison, the author has selected six occupations—carpenters, hod-carriers, plasterers, painters, bricklayers, and plumbers. The average hourly wages were as follows (in two of the cities, both upon an eight-hour basis, the "day" rate instead of the "hour" rate was given in the "American Contractor"):

	Rate Per Hour:	
Trade	Open Shop.	Closed Shop.
Carpenters	\$.82	\$1.01
Hod-carriers	.61	.74
Painters	.78	.96
Plasterers	1.04	1.16
Bricklayers	1.04	1.18
Plumbers	.95	1.02
Average	\$.82	\$1.01

We see, therefore, that the average wage in the closed-shop towns is 16.1 per cent higher than that of the open-shop towns.

You can depend upon it

With Listerine near at hand in your home you enjoy that comfortable feeling of knowing the antiseptic you use is both efficient and safe. It's been that way for half a century—always uniform, always dependable.

Some of its many uses

A safe, unirritating antiseptic for cuts, wounds and scratches, affording protection against infection while Nature heals.

As a gargle for sore throat to ward off more serious ills.

As a spray in nasal catarrh.

THE SUBSTANCE AND THE SHADOW

(Continued)

popular cartoonist, "it doesn't mean anything."

The average per capita building permits for the year 1921 in the fifteen cities of the closed-shop group was \$41; in the open-shop cities the average was \$64. In other words, 56 per cent more building existed in towns where construction was upon an open-shop basis.

Which is best—to have 16 per cent higher wages—"on paper"—or to have 56 per cent more building in actual practice?

Let us take 100 building workers in an average city in each group. In the closed-shop town they work 100 hours for \$1.16 an hour—a total of \$116 received by the group. During the same period the workers in the open-shop city, receiving only \$1 per hour, can work 156 hours, receiving \$156. Thus the total wage of the group of workers in the open-shop town is 34 per cent greater than the group wage in the closed-shop town. To which group would you prefer to belong if you were a worker?

THE AMERICAN MECCA

BY ELIZABETH CANEY PARKER

WE had to go to Oyster Bay. It was really most inconvenient and upset our plans substantially, for we are Navy people and were hurrying from one billet to another, and there was scant time or money for side-trips. But, as I said before, we simply had to go. Embarrassedly ashamed of my sentiment, I suggested the trip to my husband. Equally embarrassed, he admitted that he had thought we must make the pilgrimage.

So a hot Sunday afternoon found us tracing and retracing our way around the little village of Oyster Bay. Other cars were turning and backing at every crossroad and lane, as there were no signs to guide us. But our general drift was the same, and we came finally to a shady three-corners, where dozens of cars were parked, incongruously enough, in that quiet country spot. Limousines with correct chauffeurs glided into place, middle-class cars exuded large family parties, and uncountable Fords, backing and starting noisily, filled every space. The confusion irritated me, but I thought we would probably walk away from it to the quiet grave at some distance. But no—we had arrived.

Just across the road at a little gate a procession was forming. Quite involuntarily, each man's hat came off and every woman stopped talking or clutched her child firmly by the hand and said, "Sh!" There were no guards, no signs, nothing to enjoin silence. But we were approaching Mecca, and we knew!

We went up the little winding path in complete quiet—old and young, rich and poor, black and white and yellow, infirm and hearty, soldiers and sailors, ministers and Broadway tawdries. One stately and expensive dowager kept pace with the very dirtiest little gamin. Neither was abashed, for neither saw

THE AMERICAN MECCA

(Continued)

the other—or, if so, it was through Roosevelt's eyes. How I hated it at first, that shuffling, heterogeneous crowd where I had expected peace and no other people! Only for a minute; then I gloried in the fact that only at a Roosevelt's grave could such a thing be—all humanity paying its homage—and that I was a part of the throng.

Roosevelt's grave—a plain slab with simple name and dates of birth and death, and under his name that of his wife, the eagle's mate, with date of birth. A high iron fence surrounds the grave, on which were stately wreaths placed there by the rich and great of the world. And through the fence had been thrust every variety of growing things from orchids to little flowers and bits of shrub picked by the roadside.

We walked slowly around the inclosure and there was no sound. Then a woman sniffed, a man cleared his throat, and presently each one contributed a gulp, a sob, or a frantic blowing of nose. Real grief, real sorrow, for a man most of us had never seen was in every heart. Each person stood beside the grave of his own dead. But for all the sorrow there came a feeling of renewed strength and vigor. It really seemed that even after death that tremendous personality gave us a power as Mother Earth did to Antæus.

Then down the slope we made our way and heard such bits as these. An Italian said to his boy, "Verra brav' man, verro brav'." An old Irishwoman to a young girl, "He'd a-sittled our troubles for us, wan way or another." A Frenchman to his friend, "A personality of a greatness indescribable." A plain American to his boy, "He loved kids and he loved animals, son, and he always played the game." A sailor to another, "Gee, I felt a lot surer of what I was working for when he was alive." One man answered his wife's question with: "Darned if I know what his religion was. Whatever it was, it took in all of 'em."

An Oyster Bay woman said to me: "He was big and famous and clever and President and author and statesman and fighter and all that, I know. But we Oyster Bay people lost the best neighbor in the world, and none of the rest of it means much to us."

As we all drifted apart I heard a scholarly-looking old man say to his companion, "He truly loved the world and lived for it."

WANTED—CARTOONS

THE OUTLOOK wants to receive cartoons from its readers, clipped from their favorite newspapers. Each cartoon should have the sender's name and address together with the name and date of the newspaper from which it is taken pinned or pasted to its back. We pay one dollar (\$1) for each cartoon which we find available for reproduction. Some readers in the past have lost the dollar bills to which they were entitled because they have failed to give the information which we require.

WITH FACTS BEFORE YOU, it is a question of conscience—of patriotism—of the honor of Uncle Sam—of justice for ALL who toil with hand or brain.

There are not "two sides" to such questions. That is why we meet no opposition but "silence"—side-stepping—camouflage. The book more than confirms every claim of the advertisements.

Incidentally, it is a question of dollars in your pocket—many of them—reduced taxes, better business, because of general prosperity.

Thrift and Prosperity

The Gist of It All

The nation has had a Postal Savings Bank since January, 1911.

Every other savings bank in the world makes at least the pretense of serving the interest of depositors, getting for them the largest possible returns consistent with safety and availability.

The Postal Savings Bank has been shackled by the opposite rule, attempting to get from depositors as much money as possible for the least possible interest, paying them only 2 per cent per annum, on money left in the bank at least one year. In practice this return is less than 1½ per cent. Furthermore, the law permits the funds now in the Postal Savings Bank to be loaned to commercial banks at 2¼ per cent, the banks loaning it to the Government, and to the people, at anywhere from two to four and five times that rate, and yet at no time has the market price for money on the solidest security been less than 3½ to 4 per cent, and today, as everyone knows, is 6½ to 8 and 9 per cent. It is now proposed:

First—The Postal Savings Bank shall be open and accessible to all without limit as to amounts that may be deposited, and interest thereon paid for any period of time, as is customary with commercial banks.

Second—These deposits shall be loaned at the market price for money on security that is good beyond question. This should make, in these times, the net income for deposits at least 6 per

For details, facts uncontroverted, arguments unanswered—unanswerable—see "THRIFT AND PROSPERITY," by Senator Morris Sheppard, of Texas, and John E. Alden, Neshanic, N. J., farmer, editor and book publisher; \$1 at book stores, or free at Public Libraries.

PUBLIC OPINION is irresistible. YOU help make it. READ the book for facts, simple, overwhelming logic. SEND THIS to Congressmen, Senators, Editors, Public Men; ask them "Why not?" Tell your thought. Inclose in all letters. Discuss with neighbors. These slips for letters at rate of 5 for 1c, postpaid, from Alden.

Honesty is the best POLICY. Godliness is PROFITABLE—economic truth, not buncombe, not cant. Pleased customers more PROFITABLE than "skinned" customers. Dropping water wears stone—Keep at it. Ink beats dynamite. Pen mightier than sword—swing it!

Sept. 12, 1922

Advertising Manager,
The Outlook,
381 Fourth Avenue,
New York City

Dear Sir: An advertisement inserted in your "Help Wanted" column for two weeks brought 187 replies from all parts of this country. It was possible to see personally only a dozen or more of these applicants, but, besides the large number, the quality of the applicants impressed me. Evidence has been given me, as the advertiser, of the excellence of The Outlook as a medium for reaching a very fine class of applicants for positions.

Yours very truly,

Try an Outlook "Want Ad." The rate is only
Ten Cents a Word.

Department of Classified Advertising

BY THE WAY

THE fact that American initiative is still alive and going strong is evidenced in the career of the new President of the University of Arizona, Dr. Cloyd Heck Marvin. Twenty years ago he was a newsboy—but an ambitious one. He worked hard and studied hard, and in 1909 he graduated from the Riverside (California) high school and immediately entered upon preliminary legal studies in Stanford University. In 1915 he received a Master's Degree in Business Administration at the University of Southern California. Later he received the degree of Doctor of Philosophy at Harvard. He is reported to have worked his way through all these educational institutions. Meanwhile he had done service in the Great War as captain in the Aircraft Service in Portland, Oregon, and commandant of the Officers' Training Camp in the State of Washington. At the age of thirty (he is now only thirty-three) he became Dean of the southern branch of the University of California at Los Angeles. He was born at Findlay, Ohio, but later moved to California, where he seems to have "made good."

One of the world's greatest literary undertakings never saw the light of print. This was the stupendous encyclopædia planned by the Chinese Emperor Yung Lo. It was completed in 1408, and consisted of the original manuscript and two copies. It covered the whole range of Chinese learning, and ran to nearly a million pages. The original and one copy perished at Nanking on the downfall of the Ming dynasty. The remaining copy, consisting of no less than 11,100 volumes twenty inches long, twelve inches in breadth, and half an inch thick and bound in yellow silk, was destroyed during the siege of the Legations in Peking in 1900.

A colored physician in one of the Southwestern States called up an oculist, according to a contributor to the "Journal" of the American Medical Association, and said, "Doctor, I have a patient that has been shot in the eye; would you examine him for me?" "Yes; you can bring him up now," was the reply. "Well, how much will you charge?" was then asked. "Oh, we can only charge what he can pay. What has he got?" the oculist inquired. "Doctor, he's got a family," was the appealing reply.

Under the head "Intelligence in Mules" a soldier of the World War tells in a recent book about an incident at the front illustrating his theme. "Tom, the older of my pair of mules," he says, "was an out-and-out Hun-hater, and whenever a German prisoner was loading my wagon I had to warn him to keep away from Tom or he would do damage. He used to watch out of the corner of his eye, and if an unsuspecting 'Jerry' came within striking reach he got it

WINTER VACATION VOYAGES

As winter draws near, thoughts of the sparkling azure Mediterranean and of the sunny and colorful West Indies make an imperative call upon the imagination of all who love travel at its best.

BY THE WAY

(Continued)

hoofs. He would even stop to kick at a convoy of prisoners who were marching past us on the road. Yet I never knew him to lift a leg to a French or American soldier, though he had plenty of chances."

An English weekly prints some "extraordinary questions" which ex-service men who wish to enter the civil service are asked in an examination paper. Here are samples:

Write here the name of the first drink in the following list, if it is only drink, but if it is not put a cross instead, and if it is, put an "E" under it. Underline whatever you have put. (The list was: House, bean, sugar, paraffin, coffee, milk, cheese.)

"Earth, the, the, warms sun." Rewrite these words so that the word that would be the middle word if it were rearranged so as to be true now comes last, whilst the remaining words are in the right order, but the one now first is spelt backwards.

"One of the official excuses for the list," is the comment, "is that such questions have been tried with success in America and on children." A compliment to both!

The Rev. Joseph Fort Newton, pastor of the Church of the Divine Paternity in New York City, says in the "Atlantic" that when he first came to New York he "by happy accident" ran into Edwin Markham, and that the poet sat down and wrote a quatrain for him summing up the preacher's faith, as follows:

No soul can be forever banned,
Eternally bereft;

Whoever falls from God's right hand
Is caught into his left.

The Japanese constable, or country policeman, is ever ready to act as guide, philosopher, and friend to the foreign traveler, so an article in the "National Geographic Magazine" says. For the policeman's guidance in dealing with the tourist the police department some years ago issued the following counsels:

"No criticisms should be made, either by gesture or words, regarding the language, attire, or actions of foreigners.

"If a foreigner pulls out his watch and looks at it, you should think that he has business elsewhere, and that it is time for you to leave.

"It is a mistake to suppose that a foreigner will always respond to a request for a loan of money."

A serio-comic testimony to the absorbing interest of the books of a popular novelist is found in the reports in the New York newspapers of the recent electrocution of a condemned man at Sing Sing. "During the afternoon," the report says, "he occupied himself reading one of Robert W. Chambers's novels. After dinner he returned to his book, reading as rapidly as possible so that he might find out how it ended before he was killed. He did not learn, but a guard who had read the book told him that it came out all right."

IN DEFENSE OF PROHIBITION

In a city located in northern Michigan with a population numbering between fourteen and fifteen thousand there were before the advent of prohibition sixty-five saloons, all doing a flourishing business. The major portion of them were little other than "hell-holes." In that part of the country it is customary to pay the men their wages semi-monthly with the result that with the advent of each pay day we were forced to prepare for at least two days' operations short-handed, for a large percentage of our men would be incapacitated by drink. This was a pretty general condition among the workers in those parts. With the coming of prohibition this ended and stayed ended; and in its place came better clothes for the wives and families, phonographs, player-pianos, etc. (taking the place of whisky jugs and beer bottles), a large increase in attendance at the moving-picture houses, and many families buying Fords, and in a great many cases better cars.

Take again, as example, a small village in central New York State. That village before the coming of prohibition was more or less distinguished for the amount of drunkenness and unpaid bills which, taken together, sadly detracted from the merits of an otherwise beautiful town. It is now, under prohibition, a much more prosperous little town, still maintaining its original beauty, and with the added blessing of a main street free from drunks. I might add that they are seen occasionally; but where it used to be ten quarts of whisky to one phonograph record, or might be safe in saying it is now ten phonograph records to one drink of concoction called whisky behind somebody's door.

The writer has always used liquor moderately, and has seen its use abused, with all the attendant suffering and unhappiness; has seen it lead clean characters into vice; and also on occasion seen it change a dull evening into a decent and enjoyable one. He has seen it at its work in two-thirds of the States in our Union, and is not hypocritical enough to try and convince anyone that there are not occasions when he would like to fall back in something a little stronger than reminiscence; but not being selfish, and believing that after all, there are only a few of us who really miss it, he says to them and to them: Let us be broad-minded regarding this subject, acknowledge the good that the masses are deriving under prohibition at the present time, the great good our posterity will derive, and if we who still look back upon the time when we could, under the law, take our glass must suffer the deprivation for our few remaining years, let us be men and make the sacrifice. Live as well as to morals, and back up prohibition in the knowledge of the good we know it is doing.

E. Haldeman-Julius Says: "We Are Not A Nation of Low-Brows"

Reproduced right here is an advertisement on which I have spent \$70,000 to put before 5,000,000 magazine and newspaper readers. Perhaps you have seen it. Its headline is, "Are We a Nation of Low-Brows?" It is a query and a challenge in one. And over 100,000 people have been America's proxy in giving their answer.

E. Haldeman-Julius

MORE than 100,000 Americans have said, "We are not a nation of low-brows. We do not want to read 'literary marshmallows,' pot-boiling literature. We are not mentally flabby. America is *not* a nation of low-brows! America is ready to read these twenty-five books!" Read the titles and you will see that you are ready, too—and that they are books that you have always wanted to read. *And now that they are offered to you at the amazing price of 8 cents a volume on a no-money-in-advance basis here is your chance to get them at once!*

Over 100,000 Americans have been the nation's proxy in answering this question—"Are We a Nation of Low-Brows?"

America IS Ready to Read These 25 Books

Schopenhauer's Essays. For those who regard philosophy as a thing of abstractions, vague and divorced from life, Schopenhauer will be a revelation.

The Trial and Death of Socrates. This is dramatic literature as well as sound philosophy.

Meditations of Marcus Aurelius. This old Roman Emperor was a paragon of wisdom and virtue. He will help you.

The Discovery of the Future. H. G. Wells asks and answers the question: Is life just an unsolvable, haphazard struggle?

Dialogues of Plato. This volume takes you into Plato's immortal circle.

Foundations of Religion. Prof. Cook asks and answers the question: Where and how did religious ideas originate?

Studies in Pessimism. Schopenhauer presents a well-studied viewpoint of life. The substance of his philosophy.

The Idea of God in Nature. John Stuart Mill.

How the idea of God may come naturally from observation of nature is explained in this volume.

Life and Character. Goethe. The fruits of his study and observation explained in this volume.

Thoughts of Pascal. Pascal thought a great deal about God and the Universe, and the origin and purpose of life.

The Olympian Gods. Tichenor. A study of ancient mythology.

The Stoic Philosophy. Prof. Gilbert Murray. He tells what this belief consisted of, how it was discovered and what we can today learn from it.

God: Known and Unknown. Samuel Butler. A really important work.

Nietzsche: Who He Was and What He Stood For. A carefully planned study.

Sun Worship and Later Beliefs. Tichenor. A most important study for those who wish to understand ancient religions.

Primitive Beliefs. Tichenor. You get a clear

idea from this account of the beliefs of primitive man.

Three Lectures on Evolution. Ernst Haeckel's ideas expressed so you can understand them.

From Monkey to Man. A comprehensive review of the Darwinian theory.

Survival of the Fittest. Another phase of Darwinian theory.

Evolution vs. Religion. You should read this discussion.

Reflections on Modern Science. Prof. Huxley's reflections definitely add to your knowledge.

Biology and Spiritual Philosophy. An interesting and instructive work.

Bacon's Essays. These essays contain much sound wisdom that still holds.

Emerson's Essays. Emerson was a friend of Carlyle, and in some respects a greater philosopher.

Tolstol's Essays. His ideas will direct you into profitable paths of thought.

25 Books—2,176 Pages—Only \$1.95—Send No Money

IF this new Library in 25 books were issued in the ordinary way they might cost you as much as a hundred dollars. We have decided to issue them so you can get all of them for the price of one ordinary book. Here are 25 books, containing 2,176 pages of text, all neatly printed on good book paper, 3½ x 5 inches in size, bound securely in blue card cover stock.

You can take these 25 books with you when you go to and from work. You can slip four or five of them into a pocket and they will not bulge. You can investigate the best and the soundest ideas of the world's greatest philosophers! No, the price will not be \$25 for the 25 volumes. Nor will the price be \$5. The price will be even less than half that sum. Yes, we

mean it. Believe it or not, the price will be only \$1.95 for the entire library. That's less than a dime a volume. Surely now no one can claim he cannot afford to buy the best. Never were such great works offered at so low a price. You don't have to send any money. Just mail us the blank and we will send you the New Library of 25 volumes described on this page—you will pay the postman \$1.95 plus postage. And the books are yours.

Are we making a mistake in advertising works of culture? Are we doing the impossible when we ask the people to read serious works? Are we wasting our time and money? The amazing response to the advertisement reproduced above ("Are We a Nation of Low-Brows?") gives unmistakable

proof that we are *right* in making America this remarkable offer. Mail the coupon at once for *your* set of these 25 great books.

A New FOSDICK Book

Christianity and Progress

HARRY EMERSON FOSDICK

Cloth, \$1.50

This is a striking book written in the inimitable Fosdick style and will undoubtedly be enjoyed by thousands of readers. Simple and direct in its presentation, yet forceful and brilliant, this volume is a welcome addition to Dr. Fosdick's remarkably popular books. It was originally presented as the Cole Lectures at Vanderbilt University.

With amazing speed and accuracy, punctuated by concrete examples to make his points clear, the author carries the reader through the history of the world's progress.

Outlook

THE LAMANITE

BY CARL G. LEWIS

People in general of the nation do not understand the importance which those of Latter Day Saint faith attach to the conversion of the American Indian.

In the earliest days of the church, in 1830, the same year in which it was organized, revelations were given commanding some of the most prominent and gifted of its men—Oliver Cowdery, a councillor of Joseph Smith and second to him alone; Parley P. Pratt, one of the twelve apostles; and Peter Whitmer, one of the eight who witnessed the gold plates from which the Book of Mormon was translated—to go and establish the church among the Lamanites. We read in the Doctrine and Covenants 27:3:

“And now, behold, I say unto you” (Oliver Cowdery) “that you shall go unto the Lamanites, and preach my gospel unto them; and inasmuch as they receive thy teachings, thou shalt cause my church to be established among them.”

Doctrine and Covenants 31:1:

“And now concerning my servant Parley P. Pratt, behold, I say unto him, that as I live I will that he declare my gospel and learn of me, and be meek and lowly of heart and that which I have appointed unto him, is that he shall go with my servants, Oliver Cowdery and Peter Whitmer, jr., into the wilderness, among the Lamanites; and Ziba Peterson, also, shall go with them.”

However, after the Saints were driven from the central states because of their refusal to be fully obedient to the words of the Lord, and numerical inferiority, the work among the Indians of this locality largely ceased, but in recent years the work among these wealthy tribes has been greatly revived. Frederic M. Smith, president of the church, has visited them personally, adding his efforts to the efforts of such prominent men as E. E. Long and H. Case to convert the Indian to the Book of Mormon, which is a history of his forefathers and contains prophecies which are great and wonderful promises to be fulfilled in the very near future. One of these promises, given in the Doctrine and Covenants 49:5, is:

“But before the great day of the Lord shall come, Jacob” (the Jacobites are also Lamanites, Jacob, of Abraham’s time, having been their first forefather, followed some generations later by King Laman) “shall flourish in the wilderness; and the Lamanites shall blossom as the rose.”

The efforts of the Indian to gain the rights of citizenship, and thereby gain possession of property held in trust for him by the Government, are considered with great interest and approval by the church, as much of the great wealth which the Indian claims shall ultimately come into its possession for the final building up of Zion (Independence, Mo.), in which the Lamanites are to have the principal part, assisted by the Gentiles who are willing to be converted. In the Book of Mormon, chapter ten, verses one and two of the last book of Nephi, which is separated from First and Second Nephi and located near the back of the book, we read:

“I. But if they” (the Gentiles) “will repent, and hearken unto my words, and harden not their hearts, I will establish my church among them, and they shall come in unto the covenant, and be numbered among this the remnant of Jacob, unto whom I have given this land for their inheritance, and they shall assist my people the remnant of Jacob.

2. And also, as many of the house of Israel as shall come” (however, there is nothing written to show that participation by a large number of Jews should be expected), “that they may build a city, which shall be called the New Jerusalem.”

We see that the hopes and expectations of Latter Day Saints and the future of the American Indian are entwined. As is stated in the Book of Mormon and Doctrine and Covenants,

they cannot be separated. The two peoples combined will be the staunch and finally undefeatable defenders of Zion, of whom the Gentiles who are not willing to repent shall stand in great fear. Doctrine and Covenants 45:12, 13:

“12. Wherefore, I the Lord have said, Gather ye out from the eastern lands, assemble ye yourselves together ye elders of my church; go ye forth unto the western countries, call upon the inhabitants to repent, and inasmuch as they do repent, build up churches unto me; and with one heart and with one mind, gather up your riches that ye may purchase an inheritance which shall hereafter be appointed unto you, and it shall be called the New Jerusalem, a land of peace, a city of refuge, a place of safety for the Saints of the most high God and the glory of the Lord shall be there, and the terror of the Lord also shall be there, insomuch that the wicked will not come unto it; and it shall be called Zion.

13. And it shall come to pass, among the wicked, that every man that will not take his sword against his neighbor, must needs flee unto Zion for safety. And there shall be gathered unto it out of every nation under heaven; and it shall be the only people that shall not be at war one with another. And it shall be said among the wicked, let us not go up to battle against Zion, for the inhabitants of Zion are terrible, wherefore we cannot stand.”

The Indian is also to have an additional, exclusive, and prominent part in the bringing down and punishing of the unconvertible Gentiles. The Book of Mormon, Nephi 9:98–100, says:

“98. Therefore it shall come to pass, that whosoever will not believe in my words, who am Jesus Christ, whom the Father shall cause him to bring forth unto the Gentiles, and shall give unto him power that he shall bring forth unto the Gentiles (it shall be done even as Moses said), they shall be cut off from among my people who are of the covenant;

99. And my people who are a remnant of Jacob, shall be among the Gentiles, yea, in the midst of them, as a lion among the beasts of the forests, as a young lion among the flocks of sheep, who, if he go through both treadeth down and teareth in pieces, and none can deliver.

100. Their hand shall be lifted up upon their adversaries and all their enemies shall be cut off.”

Book of Mormon, Nephi 7:38–41:

“38. But if the Gentiles will repent, and return unto me, saith the Father, behold, they shall be numbered among my people, O house of Israel;

39. And I will not suffer my people, who are of the house of Israel, to go through among them, and tread them down, saith the Father.

40. But if they will not turn unto me, and hearken unto my voice, I will suffer them, yea, I will suffer my people, O house of Israel, that they shall go through among them, and shall tread them down,

41. And they shall be as salt that has lost its savor, which is thenceforth good for nothing, but to be cast out, and to be trodden under foot of my people, O house of Israel.”

My reference books, consisting of the Book of Mormon and the Doctrine and Covenants, are those of the Reorganized faction of the Latter Day Saints, or Mormon Church, with headquarters located at Independence, Mo., yet the quotations produced here are parts of those communications which, coming through Joseph Smith, the first prophet, seer and revelator of Latter Day Saintism and its founder, have been accepted as revelations from God by the general vote of not only the Reorganized faction, but the Brighamite, or Utah faction, as well; the sections, etc., of the Brighamite books being numbered somewhat differently than the Reorganized.

The Outlook

OCTOBER 11, 1922

A LULL IN THE NEAR EAST

REPRESENTATIVES of Great Britain, France, and Italy are, as we write, entering into conference with Mustapha Kemal at Mudania, an unimportant port on the Sea of Marmora. This conference is nominally of a military nature and aims to frame an armistice between Greece and the Nationalist forces of Turkey. The plan is that it should be followed by a full peace conference at Venice or elsewhere, at which the political and international questions involved should be taken up for final decision. It is, however, probable that at Mudania other than purely military points will be taken up, for the reason that Kemal is still insistent on committal by the Powers to his demands, including his proposal that his army should at once occupy Eastern Thrace up to the Maritza River, and therefore including Adrianople.

In the week ending October 3, Kemal withdrew his troops from some important points in the neutral zone, and in other ways showed that he did not intend to attack the British position at Chanak. It seems obvious that if he ever intended to yield to the pressure of his soldiers to begin war at that point he would have done so at the first possible minute and before reinforcements in troops and naval ships strengthened the position as they have now done. His demonstrations in the neutral zone were largely intended to emphasize his declaration that he does not recognize the existence of such a zone on the Asian side, as his Nationalist Government has never had any part in establishing such a zone. The occupation by Kemal's forces of Erenkeui looked like a serious threat because of its advantageous position for an attack on the little foothold of the British on the Asian coast.

Even now, however, Kemal's reported statements are extreme in their demands. For instance, M. Bouillon, who has been trying to get reasonable terms from Kemal, reported on October 2 that Kemal would not even agree to suspend military movements during the armistice conference except on condition of receiving formal guarantees for the evacuation of Thrace, the establishment of Allied garrisons in the cities of Thrace, the occupation of the line of the Maritza River by Allied troops, the admission of Turkish Nationalist gendarmes into Thrace, the transfer of the civil administration of Thrace to Kemalist officials,

Underwood

SMYRNA IN FLAMES—"FROM THE SEA THE SPECTACLE PRESENTED AN UNBROKEN LINE OF FIRE TWO MILES IN LENGTH"

and the evacuation of Thrace in eight days by the Greek army. These are matters that ought to be fixed by an armistice rather than conditions for it, and it seems overbearing in Kemal to make such conditions a prerequisite.

GREECE AND THRACE

THE abdication of Constantine was the natural and inevitable consequence of the collapse of his weak and incompetent administration, which brought about the defeat of the Greek armies in Asia Minor. His son has been accepted, at least temporarily, as ruler by the revolutionary committees and is to be known as King George II. His accession has been informally recognized by Great Britain. Meanwhile, those who have hopes for Greece in the future are still trusting that the wisdom of Mr. Venizelos will be utilized by his country. It is understood that Venizelos has been authorized by the new Government of Athens to act as a sort of special Greek ambassador to all the European capitals to aid the cause of his country.

Thrace seems now to be the center of danger. The Turks declare that the withdrawal of the Greek forces in Thrace is being accompanied by deplorable incidents and massacres, just as the withdrawal of the Greeks in their retreat on Smyrna was accompanied by atrocities and destruction directed against the Mohammedan population. On the other hand, bearing in mind what happened in Smyrna, the danger of evil-doing by the Turks, if they are

allowed to take possession of Thrace, is far from negligible.

AMERICA AND THE NEAR EAST

SECRETARY HUGHES has taken a firm and positive position as to the relations of the United States to the new Near Eastern problem. He declares that, there is nothing to justify this country in any effort to pacify the Near East by armed force, or to attempt to bring political influence to bear on the international questions involved in which we have not been and are not concerned. On the other hand, our Government proposes to exert all influence possible for humanity, peace, and the protection of American interests. American warships have already aided effectively in the rescue work in Smyrna.

There has been an earnest but not altogether well-balanced effort by those interested in American benevolent and religious effort in the Near East urging our Government to take action. Dr. James Cannon, a Bishop of the Methodist Episcopal Church, South, urged the United States to use its Army and Navy. One newspaper statement, probably exaggerated, says that there have been demands from "hundreds of church organizations that this country fight, if necessary, to protect Christians from the Turk."

The statement by Secretary Hughes was largely in answer to Bishop Cannon's representations. Mr. Hughes declared that we have already done everything possible for relief and in aid to refugees and have exerted influen-

against cruelty and oppression and in aid of "the protection of the Christian minorities and the freedom of the Straits." He says: "These points of the proposal are clearly in accordance with American sentiment." A moderate statement from Dr. Barton, Secretary of the American Board, expresses his belief that, while conditions are serious, they are not alarming, that the Turks are on the whole favorable to American activities in Turkey, and that he does not think that there is reason to fear for the personal safety of our missionaries in Turkey.

QUIET DAYS IN IRELAND

IN the six weeks following Michael Collins's death there have been in Southern Ireland less of fighting and disturbance than in any such period since De Valera and his supporters defied the authority of the Free State. One reason is found in the wide sweep of dismay and indignation at Collins's death; another, in the previous defeat of the Republican forces at important points; another, in the serious, business-like way in which the Free State Government is proceeding with the work of organization. It has already made progress with framing the Constitution on the lines of the London agreement, has refused positively to negotiate peace with the insurgents, has demanded surrender rather than an armistice, and has organized a Civil Guard to protect life and property in localities from which the Republican forces have been driven out. The Government has a majority of 65 to 23 in the Provisional Parliament.

One welcome result of all this firm action by the Free State has been the report that Ulster is showing signs of conciliation with Southern Ireland. Its own Parliament is full of dissension; two counties are Catholic and four have a strong Labor representation, so that the old-time Carson Unionist and separatist fervor is no longer what it was. Under the London "Treaty" Ulster has a month after the Free State is formally established in complete form to decide whether she will come in or stay out. Three months ago the Ulster leaders all but raved at a suggestion that little Ireland could get on as one Dominion; now there are signs that it may not be impossible, after all.

GERMANY'S PROFITABLE COMMERCE IN PAPER MARKS

A FEW weeks ago one of the foremost publicists of France made a statement to a member of the Outlook staff that Germany had received in gold as the result of the sale of the Government's paper marks abroad more than

Germany had paid out in reparations. In other words, Germany was engaged in a very profitable transaction as a result of the war, for she had sold worthless money for more than she had been willing or forced to pay in repair of the wanton damage she had done in her neighbor's territory. Such an allegation coming from a French source might be answered by the argument that it was an *ex-parte* statement. Now the New York "World" in a copyright article gives figures based on information from German banks and confirmed by records in America, "checked by a canvass of the big cities of the United States and the scrutiny of eminent, thoroughly experienced banking and foreign exchange specialists" (to use the "World's" own phrase), which thoroughly uphold that statement of the French publicist.

According to the "World's" article, all the German paper marks in the world are worth to-day, at the current price, about \$175,000,000; and yet for the paper marks that have been sold in this country alone Americans have paid \$960,000,000 in gold.

In the end of course such business as this can only bring distress to the German peoples as well as loss to the "investors;" but it is highly profitable to the German Government and to those speculators who have been getting their rake-off on the multitudinous transactions that have constituted this commerce in virtually worthless paper. So great was the business carried on at one time that the German Government printing-presses were unable to print marks fast enough to supply the demand. On an average, the marks were bought in America at \$12 a thousand. Now they are worth less than 70 cents a thousand. The deluded American buyers have got the paper and Germany has received the gold. Most of those who bought these marks were Germans in America or Americans of German descent. This is the way that Germany has got the gold to pay her reparations. In fact, as the "World" article states, in this way the buyers of German marks "have given to Germany more than twice as much gold as Germany has paid in gold in war reparation payments to date, \$365,637,000."

All this does not lessen the suspicion that the German Government has been quite willing to find itself in what to a private business concern would be insolvency.

KALEIDOSCOPIC CHINA

NOTHING better illustrates the rapid shift of Chinese politics than the fact that since the writing of Upton Close's study of the relations of Wu Pei-fu and Sun Yat-sen in the recon-

struction of China (printed in this issue) most encouraging progress has been made in accommodating the divergent views of these leaders. The compromising of position has been facilitated by the insistence of President Li Yuan-hung, acting as the chief executive in Peking, that a settlement be reached securing the support of Sun Yat-sen.

The attempted betrayal of Sun by his chief General, which sent Sun from Canton in midsummer, has reacted in Sun's favor and has left him, as the leader of revolutionary republicanism, in a pivotal position. From Shanghai headquarters he has become a veritable clearing-house of opposing factions. To the present moment there has been no settlement of China's internal political difficulties, however, as the followers of the erstwhile South China Government are sticking by Sun Yat-sen. It appears that a fusion of North and South in the Peking Cabinet is in the wind. Its success depends upon how far Sun Yat-sen is insistent upon a house-cleaning in China's capital, to what extent Wu Pei-fu and other moderate military leaders will support it, and whether or not the "father of the Chinese revolution" will consent to a compromise settlement.

At this time there looms in the Manchurian offing Chang Tso-lin, the defeated but far from vanquished rival of Wu Pei-fu in last spring's North China hostilities. In Peking Li Yuan-hung, temporary President in China's emergency, holds forth as an old friend of Sun Yat-sen and his fellow-workers bent on securing the co-operation of all factions in the troubled Republic or resigning in an admission of defeat. Dominating the military situation in the eighteen provinces, Wu Pei-fu stands as a censor of the politicians and a patriot seeking unification on the best terms possible. In Shanghai there is Sun Yat-sen, perhaps the key to China's future, holding relentlessly to what he would make the realities of Chinese democracy in Peking.

KATO, THE LIBERAL

WHEN Admiral Baron Kato became Prime Minister of Japan last June, it was natural for Americans unacquainted with the details of Japan's politics to assume that, with a naval officer at the head of the Government, the military party of Japan would be strengthened. As a matter of fact, however, Admiral Baron Kato, as we pointed out at the time, is of liberal mind and believes in civilian control and party responsibility. The task of such a man in the Government of Japan is not easy; for traditionally, both the

THE HELPING HAND

army and the navy are under the control of Ministers who are responsible directly to the Emperor. To change that control without affronting the people's regard for the sacredness of the Emperor's person and authority requires statesmanship, and the fact that a great change was brought about by the late Mr. Hara, who was assassinated for his liberal tendencies, was proof of the statesmanship of that eminent Prime Minister. Now Admiral Baron Kato, according to a despatch from the well-known publicist B. W. Fleisher to the Philadelphia "Public Ledger," is facing a very acute situation in which the militarists and the anti-militarists are ranged against each other, and, as a consequence, the Prime Minister is threatening to resign.

The issue has arisen out of the withdrawal of the Japanese forces from Siberia. The presence of those forces in Siberia long after the war and after the American forces which went in at the same time were withdrawn was one of the obstacles to the belief on the part of many Americans in Japanese good faith. When the Washington Naval Conference was adjourned last February, Japan had given promises to withdraw from Siberia as soon as possible consistently with the protection of Japanese civilians there. The cynical were inclined to regard such a promise as worthless, inasmuch as there would always be a good excuse for keeping troops to protect civilians under the circumstances. Nevertheless, Japan has been taking measures to fulfill her promise, and Japanese troops have been evacuating the region. Indeed, so far as the evacuation goes, it was reported that Russian Communists and Russian Anti-Communists have troops concentrated ready to dispute with each other the right to take the place which the Japanese troops are leaving. The crisis in the Japanese Government has arisen, not over the withdrawal of the troops themselves, but over the disposal of arms and ammunition, which include some of the material left by the Czechoslovakian army which evacuated Siberia two years ago. It is now reported that, contrary to Japan's promise to keep out of factional fights in China, a large quantity of these munitions have been sold to the Manchurian military despot, Chang Tso-lin. The disposal of these munitions in this way puts Japan in a position of ally to one of the most disturbing factors in the Far East. It had been repeatedly charged that Japan has been secretly abetting Chang's aggressive tactics, and this sale of arms seems to confirm that allegation. According to the "Public Ledger" despatch, this sale was made under the authority of the Japanese military chief of staff without consulting with the Japanese Government.

It is such action on the part of military authorities without the consent of the civilian Government of Japan that has repeatedly put Japan in an embarrassing position in her relations with other Governments. Admiral Baron Kato is evidently undertaking to make this a test case. On the one side, there are the Japanese army officers who want to be accountable to nobody but the Emperor, and on the other side are Admiral Baron Kato, his War Minister, General Yamashina, and the former War Minister, General Tanaka, who wish to have the military party subordinate to the authority of the civilian government. "If the chief of staff is unyielding," says the special despatch from the correspondent of the "Public Ledger," "Baron Kato will offer to quit the Cabinet as an alternative."

It is evident that Japan is passing through a period of development in which political decisions will be of the utmost moment and consequence. Not only will Japan's own prosperity and progress depend upon these decisions, but also good relations between Japan and other nations. All the evidence which has come to us indicates that Admiral Baron Kato is on the side of progress in Japan and international justice and peace. The very fact that he is making a fight on this issue is reassuring to the best friends that Japan has in other countries, and it confirms their faith in her.

HOW FRANCE AND AMERICA ARE HELPING EACH OTHER

ON the steamer Chicago, from Havre, France, on September 19, sailed a large number of American students returning from a summer abroad to their respective colleges and universities.

But there also sailed forty-two young French men and women who attracted equal notice. They had been selected for the scholarships offered by our colleges and universities. These students will join about a dozen others, also scholarship-holders, who are remaining in America for a second or third year of study.

The French Government furnishes transportation to and from the American institutions. A large number of the students will remain in the East because of the expense involved in traveling to our Western colleges and universities; perhaps most of the students will be attracted to our institutions of the Middle West.

As to scholarships and fellowships in French universities for our college men and women, it is gratifying to note that the number of them has been increased from 50 to 62. These fellowships are in addition to those—some thirty in num-

ber—maintained by the American Field Service Fellowships Society, and also to those privately founded. The last named were in large measure established to commemorate the heroism of Americans who died in France during the war.

Further information concerning the scholarships in French universities may be obtained by writing to the American University Union, 1 Rue de Fleurus, Paris.

OXFORD DEBATES IN AMERICA

AS readers of The Outlook know, there is at present in this country a debating team from the University of Oxford. Already Oxford has met Bates on its home grounds. The decision in favor of Bates was rendered both by judges, according to the American plan, and the audience, according to the British method. An editorial discussion of Anglo-American methods of college debating has already appeared in The Outlook, and in a forthcoming issue there will be an article by Ralph M. Carson, the American Rhodes Scholar who was President of the Oxford Union last year.

Concerning the Oxford-Bates debate the New York "Evening Post" says:

The three Bates debaters regarded themselves as a team, they carefully divided their "points," they shunned repetition, and they filled their speeches with a maximum of unassailable "evidence." The British debaters, on the other hand, spoke as individuals, did not mind contradicting one another slightly, were intent on thought rather than facts, and gave no attention to rebuttal.

The Oxford team is to speak at several Eastern universities before its return to England. At Harvard, at any rate, the debate is to be carried on according to the English system, as the audience will give the only decision which will be rendered. At Harvard each speaker will have the floor for fifteen minutes and there will be no rebuttal. The Harvard debate will be held before this issue is published, and the subject defended and attacked will be: "Resolved, that the United States should immediately join the League of Nations."

A NEW UNIVERSITY ATHLETIC CODE

YALE, Princeton, and Harvard have formulated an athletic agreement which is admirable. Of course this agreement does not indicate any radical departure from present practices, as some commentators would have it, but is very largely merely a codification of the public opinion of these three universities. It puts in explicit terms ideals which have been generally held by

graduates and undergraduates of Yale, Princeton, and Harvard.

The terms of this agreement are worthy of study by all those who are interested in cleaning up the amateur athletic situation in America. The present regulations, supplementary to those already in existence, include, first, a requirement that—

The university committee on eligibility shall, in advance of competition, require of each candidate for competition in any sport a detailed statement of the sources of his financial support, including any sums earned during vacation. In the case of each athlete who is shown to have received financial aid from others than those on whom he is naturally dependent for support, the committee shall then, in advance of his competition, submit the facts to the committee of the three chairmen (representing the three universities), which shall decide upon his eligibility.

In cases in which the motives for extending aid to an athlete are not clear to the committee of the three chairmen, that committee shall take into account failure on the part of the athlete to maintain a creditable record in his academic course in character, scholarship, and willingness to meet his obligations, as evidence that a continuance of financial aid to the athlete on grounds of character, scholarship, and conduct seems unwise, and that therefore the committee may have to declare him ineligible.

An athlete is barred from participating in college sports if at any time he has received any pecuniary reward from any connection with athletics, and a student is also barred from any athletic team or crew who receives, "from others than those on whom he is naturally dependent for financial support, money by gift or loan, or the equivalent of money, such as board and lodging, etc., unless the source and character of these gifts or payments to him shall be approved by the committee of three chairmen on the ground that they have not accrued to him primarily because of his ability as an athlete."

Two important sections of the new agreement state that any student who transfers to Yale, Harvard, or Princeton from any college or university shall be ineligible to represent these institutions in any sport in which he represented his former college or university except when playing against the university from which he transferred, and that the "three universities wholly disapprove of all propaganda, either through special inducements or through disparagement of other institutions, to induce boys in the schools to go to a particular institution."

Concerning coaches, the agreement says that "it should be the aim of each university, as far as practicable, to have

Levick
MISS GLENNA COLLETT, WINNER OF THE
WOMEN'S NATIONAL GOLF CHAMPIONSHIP
AT WHITE SULPHUR SPRINGS

the coaching of all teams done only by members of its regular staff," and that "while under contract no coach shall write for publication on the subject of athletics without first submitting for approval by the university authorities any articles intended for publication."

The agreement prohibits athletic practice prior to the week before the universities open, reduces the length of athletic schedules, and forbids post-season contests. Two wise provisions require that athletic schedules shall include so far as possible only contests with teams representing institutions setting similar standards of eligibility and that athletic publicity shall be subject to constant supervision and study in an effort to lessen undue emphasis upon athletics in general and football in particular.

THE WOMEN'S GOLF CHAMPIONSHIP

YOUTH has been served in the women's amateur National golf championship as well as in the men's, for the victory in this year's tournament has gone to Miss Glenna Collett, of Providence, Rhode Island. In the finals she defeated Mrs. William Gavin, of England, by five up and four to play. Four former American title-holders fell by the

way during the progress of the tournament. In the final match Miss Collett scored a forty-three and a thirty-eight for a total of eighty-one strokes in the morning round. Any man not in the first flight who plays nine difficult holes in thirty-eight strokes generally feels like going home and buying himself a cup. Such a score is ample testimony of the quality of Miss Collett's golf.

The tournament was held at White Sulphur Springs, Virginia.

LÉON BONNAT

WE hereby express our gratitude to the New York "Times" for printing on the editorial page of its issue for September 22 a delightful article on the late Léon Bonnat, the French artist who died last month at the ripe age of eighty-nine. Bonnat was one of the most popular and successful of French portrait painters during the last half-century, and made a fortune with his brush. Many well-known American artists were pupils in his studio from time to time, such as: Edwin H. Blashfield, President of our own National Academy; H. Siddons Mowbray and Henry Oliver Walker, the distinguished mural painters; Charles Y. Turner, widely known for his figure and historical paintings; and William A. Coffin, of the National Academy, and author of the "Times" article.

Bonnat was apparently a great personality as well as a successful artist. Indeed, it is his personality as portrayed by Mr. Coffin that is of special interest to the layman. He did not indulge in "blurbs" in his studio; the highest commendation which he ever gave to a pupil was, "*Pas mal!*"—not bad. It is evident that he believed that genius is composed of perspiration as well as of inspiration, for, "a remarkable and accomplished draughtsman himself, he insisted upon his pupils working incessantly to arrive at the fairest measure of success they might show themselves capable of achieving." Although he had what some painters scorn, a social success as a portrait painter, it did not spoil his intellectual standards, as the following anecdote related by Mr. Coffin indicates:

One time when I was in his studio in his fine house in the Rue Bassano, Bonnat had, among other canvases on his ten or twelve big easels, a portrait of Mayor Hewitt, a most excellent work by the way, and a full-length picture of an American gentleman socially well known, in hunting costume, as he appeared on his estate in Scotland. He told me he was one of my compatriots, naming him, and then, indicating the Hewitt portrait, he said: "*Mais, voilà un homme intelligent.*"

During the war Bonnat worked actively in an association, of which he

was the founder, for the benefit of families of artists who had been killed in the conflict, and co-operated in full sympathy with the American Artists' Committee of One Hundred, which was organized for the creation of a relief fund for the families of French soldier-artists. That Committee, by the way, is still in existence and is proposing to continue its aid to the dependent widows and children of French artists during the calendar year 1922. It may be that there are some who read these lines who have had pleasure from the canvases of Bonnat and may like to express their pleasure by sending a contribution to William A. Coffin, Chairman of the American Artists' Committee of One Hundred, 58 West Fifty-seventh Street, New York City, for the benefit of these artists' families.

CLARK OF THE OREGON

We do not think often nowadays of the anxieties and feats of the Spanish War. The death of Rear-Admiral Charles E. Clark brings back vividly, however, an adventure which was rightly a nine days' wonder at the time of its occurrence. It will be remembered that while Cervera's whereabouts were unknown Captain Clark was intrusted with the dangerous task of bringing the Oregon from the Pacific coast to augment the Atlantic Fleet. He left San Francisco on March 19, 1898, and sixty-seven days later steamed into Jupiter Inlet, on the coast of Florida, unharmed and ready for battle. There was no Panama Canal in '98, and between Captain Clark and his destination lay the turbulent waters of the Horn and possible attack by a Spanish torpedo-boat.

During Captain Clark's historic voyage he passed Captain Joshua Slocum voyaging alone around the world in the little nine-ton Spray. Slocum did not know of the declaration of war against Spain. It was therefore an alarming sight to find the Oregon flying the signals C B T, which meant, "Are there any men-of-war about?" Captain Slocum signaled back, "No," and as the Oregon passed by hoisted the international code flags which meant, "Let us keep together for mutual protection." In the account of his voyage he wrote that Captain Clark did not seem to regard this signal as necessary! We wonder if any naval officer can tell us whether or not Slocum's signal was made out on board the Oregon. Slocum says that the Oregon's great flag dipped beautifully in reply to the lowered colors of the Spray. We suspect that if Captain Clark had made out the Spray's final signal he would have replied to it in a manner worthy of Slocum's gallant jest.

Rear-Admiral Clark was seventy-nine

years old at the time of his death. He belonged to a great naval tradition, for he was in a ship which followed Farragut over the torpedoes and past the forts in the battle of Mobile Bay. Rear-Admiral Clark retired from active service in 1905 on his sixty-second birthday.

THE PASSING OF TOM WATSON

BETWEEN democracy and demagogism the dividing line is not always easy to trace; and yet there are no two qualities of government which are more contradictory. Originally the name demagogue was applied to a man who suc-

(C) Underwood

THOMAS E. WATSON, OF GEORGIA

cessfully led the people in the art of self-government, which is the art of political and social self-restraint. Nothing could be further in purpose and character from such a man than one who seeks and obtains power over the people by inciting their passions and intensifying their prejudices; and yet it is to this opposite extreme that the name demagogue has come to be applied. Undoubtedly, many a true leader of the people in self-government has found it impossible to lead by virtue of reason alone, and undoubtedly many a man who has mounted to power through popular passion has served some good end at one time or another in his career; and therefore the determination whether a man is a demagogue in the one sense or the other has been at times a matter of opinion rather than of demonstrable fact.

To many thousands of persons in the South, and particularly in his own State of Georgia, Tom Watson (as he liked to be called), who died on September 26, was a demagogue in the good old sense. He was regarded as a leader of the op-

pressed and unprivileged in their struggle for emancipation. As one eulogist, writing in the Atlanta "Constitution," said of him on the day after his death: "As a practicing lawyer, when he traveled from one end of Georgia to the other in criminal cases, in which he specialized, he invariably fought the battle of the defendant and not the prosecutor. . . . It was this spirit for the man who was down, for the farmer who was struggling, for the laborer who was fighting the tide, that made him the idol of the poor." As a consequence, Watson gained a following which he commanded as few officers can command their men even in time of war. As another eulogist said of him in the same newspaper: "When 'Tom' Watson appeared before his people, he played on their emotions like a master of the violin plays on his delicate instrument. . . . He molded the opinions and thoughts of his followers like so much putty, and with most of them it was only for him to say and for them to do."

No man can attain this position in any community without exceptional ability. Tom Watson was a man of mental vigor and brilliance. Proof of his ability abides in some of the books he wrote, notably his two-volume work "The Story of France," which is a picture of France as distinctive as Carlyle's "French Revolution," and, like Carlyle's book, is as much a portraiture of the author as of his subject.

Unhappily, the gifts of Thomas Edward Watson were ill employed. His power to sway the people by eloquence was perverted again and again to the arousing of racial animosities, religious prejudice, and class hostilities. His influence was immeasurably hurtful to right relations between whites and blacks in his State and elsewhere. He aided the unthinking hate of the Jews as Jews. He made it more difficult rather than less difficult for conscientious Roman Catholic and Protestant citizens to live in amity side by side. And he tended to arouse in the minds of all who were poor a feeling of distrust for all who were rich, without regard for character. During the war he was an obstructionist. He sought to prevent the sending of selective service men for the war overseas. His periodicals, "The Weekly Jeffersonian" and "Watson's Jeffersonian Magazine," became so hostile to the effective prosecution of the war that they were excluded from the mails. After the war he made himself notorious by bringing unsubstantiated charges of the most atrocious character against American overseas officers. His constructive record is very slight.

Born in Columbia County, Georgia, Thomas E. Watson was a student for

(C) Underwood

ALFRED E. SMITH

two years in Mercer University, taught school, and was admitted to the bar. He was elected to Congress as a Populist and was the Populists' Vice-Presidential candidate in 1896 and Presidential candidate in 1904. He was elected in 1920 to the United States Senate, having defeated both Senator Hoke Smith and Governor Dorsey in the Democratic primaries, and died before eighteen months of his six-year term had elapsed.

TWO SIGNIFICANT POLITICAL CONVENTIONS

THE Republicans and the Democrats have held their conventions in the State of New York, the one at Albany, the other at Syracuse. Each gathering marked the return of the convention system for the nomination of State officers.

A friend of The Outlook who was an eye-witness of the Republican Convention at Albany writes to us of it as follows:

It seemed strangely something that hadn't the reason it once had. There were over a thousand persons (delegates), I believe, all very much alike in appearance and manner of speech. I never saw so many people together who were so much alike.

"What does your political-philosophical makeup say to this?" asked a friend.

I said it seemed much of the same thing.

"Yes," said he. "It is all Governor Miller."

I told him I didn't object to that, and I didn't. But I kept on thinking, "Is this the best we can do with a serious job?" Groups here and there were talking like stock brokers. About twelve men were upstairs slate-making at the Ten Eyck [a well-known Albany hotel]; and in the lounge both men and women were yawning and asking, "When do we eat and is it fixed yet?"

Really, at both Syracuse and Albany one man has been doing all the thinking for the State. This is not so anywhere else in the world to-day. We are back in the good old '90's, bag and baggage, in this State.

Not quite, we believe, for now the delegates to party conventions are chosen by direct election by the party voters in the direct primary. As a consequence, in the conventions this year the personal quality of the different delegations was much improved over the old days of unrestricted selection by the bosses; but the failure of the Convention as a deliberative self-governing body was as marked as it always has been and always will be, except in those special cases when the public is greatly aroused over political conditions. A thousand men and women meeting for two days only are incapable of reflection or of self-mastery. A convention is essentially a social function; useful enough in its way as a means of bringing a thousand representatives of the party from all parts of the State into closer touch and unity, and sometimes helpful to the leaders as offering an opportunity for a test probe of public opinion while the slate and platform are being made. But the real work of preliminary jockeying and final decision is always done by a few outstanding political personalities who meet more or less secretly in a hotel suite, and not in the convention. It is in the human nature of the situation, and it cannot be changed by statute.

The chief surface features of the two Conventions appear to have been somewhat as follows. The Republican gathering was dominated almost completely by the leadership of Governor Miller. His term of office has been marked by an economical and intelligent direction of government, and his unusual ability both as a party manager and exponent of public opinion has made him the chief asset of the Republicans in New York. He swept the slate practically clean of the State officers who served with him during his first incumbency, and selected an entirely new ticket, with the exception of State Treasurer, to stand with him for his second campaign. There seems to have been a reason in every case, and the Republican public has taken little umbrage at the Governor's drastic action. His course in this matter is a most practical admission of the

(C) Underwood

NATHAN L. MILLER

need of the so-called short ballot in State government, which means in essence that the Governor should have authority to select the chief State officers who really make up his Cabinet and who should be chosen for their team-work qualities. Governor Miller has fulfilled the short-ballot idea by a short cut of gubernatorial pressure upon a Convention which was absolutely beholden to his renomination. Of course nobody but a candidate in the position of Governor Miller could accomplish the reform in this way.

The Democratic gathering was characterized by a struggle for control between the forces of William Randolph Hearst, the well-known editor, and the forces behind Alfred E. Smith, former Governor of New York. This Convention had less of the self-governing quality than the Republican Convention. The Republicans at least nodded assent to what they knew beforehand was going to happen. The Democrats had not the slightest idea of what was going to happen until they heard it from the Tammany machine leader at the final session; and then they also cordially acquiesced. Hearst was repudiated and Smith was again made the standard-bearer of his party. The Republican platform is dignified, orderly, economical in its tendency, conservative, and practical. The Democratic platform has a great deal of humanness in it, but is stuffed with schemes of municipal operation and with ideas and suggestions of government action for human welfare which would probably swamp a Municipal or State

treasury if carried out. The Republican platform favors slow advance, only as fast as the State can pay for and manage it. The Democrats in New York seem to be for headlong advance, whether or no. A wave of "torrential" emotion swept the Convention at Syracuse upon the reading of the plank demanding the legalizing of beer and light wines as beverages of the people. But, as one of the participants said to the man next to him: "It doesn't mean anything. I have lapped up enough of it myself, but I'm glad that my two boys are growing up in a ginless generation!"

Underneath these surface ebullitions and intimations the fact seems to be that the same conservative forces of the country were behind both Conventions, working out their will. There was some alarm in high conservative centers outside as well as inside the State of New York that Hearst might secure the gubernatorial nomination, perhaps be elected, and win the Presidency in 1924, becoming the leader of the radical irresponsibles in the Nation. These influences and the natural trend of desire on the part of the Democratic rank and file united to push Hearst aside with Smith, who has had a sensible career and is now connected with a large business enterprise in New York City. There is no reason to believe that Smith cared to be nominated, except to keep Hearst away from the centers of control of the Democratic party. The conservatives in both parties are now likely to join with the majority of the citizens of the State in electing Miller. Miller is a natural conservative, but it is usually true that honest conservatives under responsibility become liberal, and that is what is happening to Miller. His record is one of moderate rational advance.

The Hearst forces regard this conservative tendency in the State of New York as reactionary and denounce it. Probably the true interpretation is that it really fulfills the present desires of the voters. Throughout the world radicalism and Socialism are just now under the ban of common sense because they are associated with disorder and starvation. Whatever may be said of conservatism and capitalism, they at least have the merit of being able to feed the world.

When we meditate upon such conventions as these which we have described and reflect upon what lies behind, we are more than ever impressed with the lines of the "Rubaiyat:"

We are no other than a moving row
Of visionary Shapes that come and go
Round with this Sun-Illumin'd Lantern held
In Midnight by the Master of the Show.

INSIDE AN EDITORIAL OFFICE LOOKING OUT

LETTERS which sometimes come to The Outlook indicate a curious lack of knowledge and comprehension of the purpose and habits of editors in general. A composite picture of an editorial office, drawn from these letters, would have something of the following appearance.

Between the elevator door and the *sanctum sanctorum* is drawn up a phalanx of grim and determined office boys who have received positive instructions to mislay or reject every tenth manuscript which shows its head over the threshold. Behind these office boys is placed a row of primary school graduates, and behind these primary school graduates a row of grammar school products, and behind them still another row of high school luminaries—and these three barriers are, respectively, commissioned to reject every ninth, eighth, and seventh manuscript upon which their hands may fall. It goes without saying that they are all instructed under peril of death not to read a single line of anything which they may receive.

The residue of this process of decimation and worse is given then to a group of disappointed authors with fixed ideas as to the type of material of which they can approve. The manuscripts which those readers leave intact are then deposited upon the desk of an Olympian editor (probably pictured with sideburns), whose only test for acceptance is summed up in the question, Is or is not this article signed by a PROMINENT and WELL-KNOWN writer?

Possibly this picture is a trifle highly colored, but we think it contains elements of truth.

Those would-be contributors to the magazine field who entertain a notion similar to this ought to take a little time to put themselves, theoretically at least, in an editor's shoes and imagine what it is to sit in an editorial office, looking out rather than in. They might begin by asking themselves, "Why is an editor?" It is possible that we may be able to help them to answer by giving our own definition.

An editor is an architect. He wants to build homes for the minds of people. The better homes he builds, the more people there will be who demand his services and the greater his reward, both tangible and intangible. Of course different kinds of editors have different ideas as to the type of homes which they desire to build and the class of people to whom they desire to appeal. There are editors of specialized periodi-

cals who would not take as a gift a position with a magazine of general circulation. There are editors who prefer to build cubicles for limited cults, and those who are happiest when herding millions of followers into jerry-built bungalows. Mr. Sedgwick, we presume, is eminently satisfied to carry on his successful efforts to make the Georgian architecture of the "Atlantic" livable as well as dignified. Mr. Lorimer probably would not exchange for anything else his task of providing clean and sanitary quarters for the population of the vast hotel that is the "Saturday Evening Post." Each editor to his taste and to his peculiar clientele.

With this architectural parable in mind to explain the function of editorship, let us turn to the details of its practice. An architect determines first the type of house which he desires to build and then proceeds to order from contractors the material necessary for its construction. An editorial architect does much the same thing, but his task is both lightened and complicated by the amount of voluntary material which is brought forth for his inspection. Let us say that he has determined upon building a home of a certain definite architectural type for his readers. Promptly he finds himself confronted with a host of literary contractors bearing all kinds of material, from steel beams suitable for a sky-scraper to rotten timbers suitable only for a bonfire. If he spent all his time explaining to the gentlemen who wish to insert tons of structural steel in a summer cottage or rotten timbers in a city office building why their material was not available, there would be little or no time left for the actual work of construction. Hence, to drop at once and for the rest of this article from parables to painful facts, the reason for the dreaded, formal, and necessary rejection slip.

Editors want the best material they can find. Would-be contributors can rest assured that their offerings will be considered on their merits for special editorial purposes. Men with experience in editorial tasks know that there are certain ear-marks of good workmanship found in almost every manuscript which is worth considering. They know, for instance, that the experienced and effective writer seldom presents his material in a slipshod fashion. They know that writers who are worth their salt do not try to appeal to personal favoritism or influence to secure a hearing for their stories. They know from long experience that a manuscript which begins incredibly badly does not suddenly blossom into a work of genius on page ten. Most amateur writers, by the way, would sell more manuscripts if they would

make it an invariable practice to tear up the first two pages of their articles before they offered them for publication.

Of course there have been many instances when editorial carelessness or editorial inefficiency has failed to discern the merits of a work which has later been accepted and widely read. But the vast number of those who com-

plain of the difficulty of getting past the office boy cannot lay the flattering unction to their souls that they belong in this class of illustrious exceptions to the general rule. The editorial office boy is, O legion of would-be contributors, very much of a myth. In The Outlook office, and in every other editorial office of which we have any knowledge, every

article of any promise is at least tasted (do not worry—we shall not repeat that time-worn story of the egg) by a full-fledged, dyed-in-the-wool member of the editorial staff. No, if writers must find scapegoats for their literary misadventures, let them leave editorial office boys severely alone. If they must vent their wrath, let it be on office cats.

THE RIGHT JOB FOR THE RIGHT BOY

BY CHARLES K. TAYLOR

IT would be well for all of us in general, and for the coming generation in particular, if Secretary of Labor Davis's article in The Outlook for August 9 were taken seriously to heart both by parents and by educators. If our various educational systems have one thing in common, it is the serious lack of attention given to matters most intimately affecting life as it should and could be lived.

The writer remembers well an almost open rebellion on the part of three or four parents who happened to get together one evening on the subject of education. Their sons were attending one of the usual, well-patronized, successful private academies of high standing. After considerable argument, they emphatically decided that the schools seemed to do nothing whatever in giving a preparation for intelligent citizenship, for intelligent breadwinning, and for developing the high idealism that makes for good character. Not at all! All the school pretended or hoped to do was to prepare its pupils for college—which is a very different thing!

The connection between some of the highly preposterous college entrance requirements and efficient living is one that we cannot stop to search out at this time. The point of great interest brought out by Secretary Davis is that every child should have an opportunity to learn a trade, and to learn it in a way that would develop the best attitude toward it and toward work in general. And along with this is the idea that the trade must be fitted to the boy.

This is certainly an ideal toward which we educators should work, although it presents difficulties of which too few are aware. It is not sufficient to ask a boy, "What do you want to be?" or words to that effect. The world is full of carpenters who would rather be machinists, and clerks who would rather be anything else, and architects who would rather be physicians, and so on, who in the beginning picked out their present vocations as the very ones they desired the most!

The fact is that boys and young men are apt to make a very bad choice because they know little or nothing more than the most superficial characteristics of the vocations they have chosen. How

could it be otherwise? For intelligent choice the individual should have some very clear conceptions as to the requirements and possibilities and general characteristics of the vocation he is choosing, and this is something that, unfortunately, our educational institutions are not yet able to provide, though the so-called "manual training" high schools are making steps in that direction. Too few boys go to high school; and those that do not, often make the worst decisions.

It may be interesting shortly to describe an experiment aimed at this particular problem—an experiment that at least developed some interesting data, and we will bring these up in a few minutes, for another general phase of the matter should be mentioned first.

There are some who insist that by means of intelligence tests, or capacity tests, a boy can be guided in the direction of an appropriate vocation. The writer does not believe that any such perfection in intelligence and capacity tests has yet been reached. It seems likely, however, that we are just at the beginnings of this great field of research, and it may well be that, before long, intelligence and capacity tests may point very directly toward the type of vocation best suited to an individual.

Let us now go back to the experiment just mentioned. It was desired to find some method that would make boys of the upper grammar grades acquainted with the general characteristics, possibilities, and requirements of a considerable number of important vocations. Two or three large grammar schools were used in this work, which was carried on in this fashion: In each school a number of "clubs" were organized, each in charge of a young man specializing in the kind of work involved. There was, for instance, an Electrical Club, a House-Building Trades Club, a Mechanical Engineering Club, a Law Club, and so on. These clubs met one afternoon each week, or on a Saturday morning.

No, the members of the clubs did not sit around and hear their leaders give more or less interesting "talks" concerning the various vocations. Not at all. The clubs were given all possible opportunity to learn by direct observation the essential qualities of the kind of work

they had taken up. Let us take for example the Electrical Club. Electrical work covers a wide field, from that of the college-trained engineer to the man who puts in push-buttons on front doors. Well, the boys in this class were taken to where small dwellings were being constructed, so that they could see how such houses were wired for lights and bells. They saw more advanced work in office buildings. They saw the running of great dynamos. They went into shops where electrical machinery was being made. They became acquainted with the general plan of a telephone system, and so on. You may be sure that after a term of this observation, if a boy said he desired to go to a technical high school and to become eventually an electrician of a certain kind, it was quite likely that the boy knew what he was talking about, and would not enter this vocation with illusions that so often go to pieces after the young man has become inextricably fixed to what has become an uninteresting, boring occupation.

That was one accomplishment. Boys were made acquainted with the characteristics, requirements, and possibilities of the vocation in which they were interested, and so could plan wisely for the future.

And there was another very interesting development. It was found during the first few months that there was a great shifting about of individuals from one club to another—for a boy was free to change when he liked. For some soon found the vocation of their interest was actually quite different from the conception they had held of it. So they would drop one club and join a more promising group, and so on, perhaps with several changes, until one came whose subject made a direct appeal—and then the wanderings ceased.

After less than a year of trial this experiment came to an end, a lack of funds making it impossible to continue it—and, of course, it was too much to expect that any typically conservative school board would be likely to adopt at once anything so directly practical—without several years of thinking or talking it over. But the experimenters were pleased to this extent—they had actually found a practical means that

would very definitely aid boys of the eighth grade in making intelligent decisions as to their future vocations.

Now for that part of the subject involving intelligence tests. Despite many faults and glaring failures—all of which would be readily acknowledged by their authors—the intelligence test has come to stay, and is continually being made more rational and more useful. Up to this time these tests have not aided greatly in making a clear decision as to appropriate vocations for different individuals. But they are more and more able to give a rough idea as to an individual's intellectual status, and this aids in eliminating vocations that are obviously beyond one's capacity.

This cannot be accomplished in all cases, but only with a fraction. But that it can be done at all speaks well for the future. And their usefulness will increase the more they keep from purely educational tests and develop tests for special capacities. Tests based on educational acquirements too often lead to absurdities. Here is an example:

A number of years ago the writer, when in a mid-Western city, beheld at the same hotel table a rough customer evidently just arrived from what we often term the "backwoods." He was a huge, rather uncouth man, and he could not read a word. This alone would have ranked him with low-grade morons, according to the usual educational acquirement test. No, he could not read, but did not wish to acknowledge it, so, with enormous stubby finger he pointed out dishes on the menu to the astonished waiter—and received, of course, an astonishing mixture of viands. Keeping his surprise to himself, he piled all on one plate, made a general hash, and then put it down, using knife and fork simultaneously. On asking who on earth the man might be, I was told that he was worth not far from a million, having sold a large farm of many acres for a huge sum when it was found that a few feet below the surface was much iron waiting to be removed with steam-shovels.

He could neither read nor write, but he could hold the anxious purchasers

up for a very shrewd sum of money. Did he go right through it with the usual crude American type of "splurge"? Not at all. He got to work and educated himself—and on last accounts had not only succeeded at this, but was president of his city's board of trade!

On a test for basis capacities he would have ranked high, but an educational test would have given an entirely wrong impression.

Let us hope, then, along with opportunities for learning something definite about the characteristics of various vocations there may be developed capacity tests that will directly aid a boy or girl in making a choice, and, again, that our schools will provide opportunity for all children, even the unfortunate sons of the well-to-do, to gain, through actual manual work, some first-hand acquaintance of their chosen vocation.

So there we have the two great sides of this great question—the making possible of an intelligent choice of vocation, and, then, the giving of a practical acquaintance with the characteristics of that vocation at first hand.

THE TURK WHO DIDN'T GO

EDITORIAL CORRESPONDENCE FROM ELBERT FRANCIS BALDWIN

I

FROM the moment when Turkey entered the World War on the side of Germany men in all the Entente countries and in America came to one conclusion: "*The Turk must be put out of Europe.*"

But he was not. True, his lands were lopped off both in Europe and in Asia. He was practically reduced to Asia Minor. It was hoped that his European days were over. But he still hung on in Constantinople, and his influence in the surrounding region continued to be felt.

There arose in Asia Minor one Mustapha Kemal, a man of singular ability and force. About him came Turks in great number, and an army was speedily organized and perfected. A civil government was set up at Angora, a town well situated to be the seat of government. Clever people were called to the administration.

The Kemalists began to negotiate with the Russian Bolsheviks and an arrangement was made, apparently of mutual benefit. On the other hand, the Kemal Government managed to make an agreement with France. Tired of spending money without much result in the province of Cilicia, the French Government decided to withdraw and concentrate its endeavors in Syria. The arrangement made with the Kemalists provided for the protection of the native Christians in Cilicia, but very many of them, remembering the Adana massacres, placed no faith in such protection and proceeded to follow the French troops into Syria and to find new homes

there. The French, it is rumored, even supplied the Kemalists with arms.

The result of the negotiations in Paris three years ago assured to the Greeks protection of the Greek-occupied territory of Smyrna and of the easternmost coast of Asia Minor. Acting upon this, King Constantine, on reassuming the throne, decided to clear the borderland of Turkish marauders; doubtless his object was quite as much to strengthen himself and his throne as it was to help the Greeks in Asia. After a long and varied war, the Greek troops have now not only been swept from the mountains but into the sea. Smyrna has been taken by the Turks, and the Kemalists troops, inspired by success, are now disposed to march to the Bosphorus and take Constantinople, not only out of the hands of the reigning Sultan, but especially out of the hands of the British and others on guard there.

The question to-day here is: "What will the British do? And if they back up their words by their guns, will the French and Italians stand by and give co-operation?"

The question might be more easily answered if it were as simple as it sounds. It is, on the contrary, a deep problem. In the ultimate analysis, it embraces most of the unsettled questions of the peace settlement resulting from the World War.

Great Britain apparently holds a moral as well as a material advantage.

Yet in one respect Great Britain is at a serious disadvantage. Any overt action against Mohammedanism would be

instantly resented in India, Mesopotamia, Palestine, and Egypt, for, with all the pompous circumstance attending Egypt's new-found freedom, that country still remains profoundly under British domination. France also might be at a disadvantage as she considers her Mohammedan subjects in Morocco, Algeria, Tunis, and elsewhere; but her retreat from Cilicia has given high hopes to Mohammedans everywhere.

II

England and France are at one as to the necessity of keeping the freedom of the Straits—the Bosphorus and the Dardanelles. This is the second thing, as regards Turkey, that should result from the World War. The question is whether such freedom means a necessity to undertake military measures at this time.

The defense of the Straits—no matter how much it may be the defense of the individual and selfish interests of England or France or Italy or Rumania or Bulgaria or any other Power—is really the defense of the general interests of all; the defense is necessary, not only for Europe, but even for lands, like our own, outside Europe.

In this whole matter Great Britain is of course the "biggest toad in the puddle," as becomes her naval preponderance. This would be specially indicated if the Straits were not fortified, because, starting from Gibraltar and Malta, British preponderance would be easily seen. Hence there is much sentiment in Paris towards fortification.

Many Frenchmen also add that

neither Great Britain nor France nor any other Power should be in control, but only the League of Nations. This might seem to involve the problem of the admission of Turkey to membership in the League; when it comes to this, my French friends seem a little embarrassed, although they profess that ultimate good will come out of it too.

No one seems to place any reliance on statements purporting to emanate from Mustapha Kemal as to the freedom of the Straits and that he does not intend to undertake aggressive action against the Allies. He knows as well as does any other Turk that the real aggressive action against the Allies is to do precisely what is being done—namely, to stir up French jealousy of Great Britain. That inter-jealousy game has worked well for years and has been applied by the Sultans, in turn, to all the Powers in any way interested in Turkey. The "Sick Man" remains agreeably "sick" in Constantinople under those circumstances.

III

The third thing as regards Turkey that should have resulted from the World War is the giving of guaranties for the protection of the Christian minorities in Asia Minor. The Turk has massacred hundreds of thousands of Armenians and Greeks, and there is

every reason to fear that his savagery will be continued. We have only to read the ghastly details of what has happened to Christian women and children in this very year; we have only to be informed that the Turkish army subalterns were seen setting fire to the Christian quarters in Smyrna to be sure of that.

What is now needed is some kind of concerted action into which there can be injected no element of disintegration. It is pleasant to know, therefore, that the French Government has instructed General Pelle, its High Commissioner at Constantinople, to concert plans with the English and Italian High Commissioners so that the Angora Government shall know beyond a doubt that the Allies are in accord at least as to maintaining the neutrality of the zone of the Straits. This can be done, the French maintain, without any military demonstration, and in a way to make the Kemalists realize that it is entirely in their interests to respect the decision of the Allies and not to undertake anything of an offensive nature.

The English doubt this, and the English Government has decided to reinforce both its fleet in the eastern Mediterranean and the British troops under Sir Charles Harington, Commander-in-Chief of the Allied forces at Constantinople. Not satisfied with this, England invites her Allies to do as much. She

even asks Rumania, Yugoslavia, and Greece to participate in the effective defense. Finally, she asks her colonists to help the mother country. What Anzac can resist an appeal that carries with it the association of Gallipoli?

The French shrug their shoulders at this. They fear, as I heard them say to-day, that "the Turks will see in it a certain menace." Exactly what the Turks should see!

Again, the French, like the Italians, have a contempt for the Greeks and decline to "line up" with them.

And—most remarkable in a nation of realists—the French actually pretend that the English are seeing a peril which does not yet exist. In this case, it is possible the English may be seeing better than the French.*

Certainly Premier Lloyd George received a setback by the defeat of the Greek troops in Asia Minor. Perhaps, smarting under this, and with the prospect of general elections at home in the near future, he is making "a last desperate throw," as his enemies claim, in the deep political game. But why go still further and call his defense of the freedom of the Straits a wanton war? That statement is hardly warranted.

One thing is sure: the Germans eagerly acclaim any dissension in the Entente.

Paris, September 19, 1922.

AUSTRIA—WHY DYING?

SPECIAL CORRESPONDENCE FROM WILLIAM C. GREGG

NATIONS are not very different from individuals. If they are thrifty, they get along; if not, they don't.

Austria was a monarchy for centuries. Vienna, the capital, grew in size with the growth of the population of Southern Europe.

It became a political, financial, commercial, musical, and artistic center for a hundred million people.

The "Viennese" have been known rather as an easy-going, pleasure-loving people than as a people prone to political domination. Yet the Hapsburg dynasty, which ruled Austria-Hungary, has been influenced and controlled by many of the most corrupt and cruel people that have been placed in power or allowed to grasp power in European history.

I am inclined to accept the statement that the Austrian people did not raise a finger to commence the war, yet they cheered their troops as they marched against Serbia, and thought not of the morrow of world chaos. They had never participated in plans, they had only shared results.

The Empire did grow and prosper; Vienna did increase in importance and wealth. What had been would continue

to be, so "Hail to the old Emperor, his Ministers and Generals." They also cheered the German Empire as it reached forward and took the reins from their hands (if they ever were in their hands), and they did not anticipate trouble to come.

The long struggle ended in defeat, and their Empire was cut up into pieces and handed to different foreign Powers.

When Vienna found itself one-third of a small democracy, it had neither natural gifts nor training to make itself function as a self-government.

Suppose it were left to the passengers, men and women, of a sinking ocean steamer to launch the lifeboats and save themselves. The story would be a sad one. The story of the attempt of Austria to launch a democratic government has also been sad. Fumbling, confusion, and beginning at the wrong end with the best intentions in the world, have marked their efforts.

When we come to think of it, self-government is no snap. It will not run itself except into the ground. The people must govern the state as they govern themselves, with industry, courage, and self-denial. None but a great people can become a democracy in the true sense of

the word, and the Austrians are not a great people.

Let us drop the word "Democracy" and use "Socialism." We will more quickly understand the cause of the present plight of Austria.

Socialism tries to give the "common man," or the "average person," or "the worker," a good time in life. Socialism believes that if every one works, say, two hours a day, all necessities and proper luxuries can be provided and distributed, and that the balance of the time can be given up to recreation and the cultivation of arts and education.

This is only a theory. I have never heard whether the theory went so far as to have the state function as a means of enforcing the theory or not; but the Austrian Socialists passed laws to enforce part of the theory, at least, and provide means to insure a trial for a while.

They said food must be cheap, so it was bought abroad or at home for what it could be obtained, and sold for a song. A loaf of bread was sold for two-thirds of a cent a pound, while the same loaf was being sold occasionally in the open market, when Government supplies couldn't be obtained, for three cents. Meat was handled in the same way.

Photograph by W. C. Gregg

IT IS COOL IN VIENNA IN SEPTEMBER AND LIGHT OVERCOATS ARE THE FASHION

The railways were operated to give the Austrians a ride for almost nothing. Six cents for a hundred-mile ride, third-class, was the published rate in March, 1921.

They couldn't control everything; but they did a lot, and ran behind as fast as their industry in buying high and selling low would let them.

They prohibited increase of rents—a fine thing in theory, but they made street beggars out of the landlords, for houses could not be sold that could not produce an income. Only last week a man with a handsome flat of eight or nine rooms in the center of Vienna told me his rent was \$2 a year.

This Government ran against a deficit mighty soon, but they issued paper currency to meet their obligations. This increase of the paper money made the value fall somewhat in neighboring countries (the paper crown was worth from seven to nine cents at the Armistice), and therefore also in Austria.

Right here is where Austria committed suicide; here is where any benefits of Socialism which might have been demonstrated were stupidly thrown away. They could have made a fairer distribution of the burdens and benefits of citizenship, they could have taken a few steps toward a final self-government, but they didn't realize that the crowns they issued promised "to pay, on demand, one crown in metal currency;" they did not realize that a reserve and actual redemption of the crown were necessary to preserve its value; they failed to be honest, and redeem their word. Hence they failed in everything.

The rest of the story is simply and easily told. They met every deficit with new issues of paper money. When I was in Vienna in March, 1921, I bought 700 crowns for \$1. A year later I bought 7,000 crowns for the same \$1. Now I am

buying 75,000 for \$1. It is a wonder the crown has any value at all. Austria up to September 9, 1922, had, according to official figures, 1,311,000,000,000 paper crowns outstanding.

Get out your pencil and write one trillion three hundred and eleven billion crowns; it will probably be the first time that you have ever written serious figures running into trillions. While you have your pencil out, just divide that huge sum by seventy-five thousand, the number of crowns I am buying for a dollar, and you will see that their entire paper money is worth only seventeen and a half million dollars. This shows why Austria must quit as at present constituted. In spite of the enormous amount of paper in circulation, it isn't worth anything, or, as one of our funny-picture men would put it, "It doesn't mean anything."

They are actually using quite a little foreign currency in buying and selling merchandise. Austria might last several months if the Government could pay its two hundred and sixty-odd thousand employees. It doesn't seem able to print money fast enough to allow them to meet their living expenses.

Cost of living has gone up so that a taxi ride costs 50,000, a dinner 75,000, a pair of shoes 300,000 crowns. The Government issues index numbers on the cost of living and pays its employees accordingly. The increase of pay for September over August is estimated at one hundred and thirty-five per cent—for one month, mind you.

It is estimated also that the employees will each have to receive on the average about one and a half million crowns for the month of September.

Get out that pencil again and multiply two hundred and sixty thousand men by one and a half million crowns, and you will see how much new paper money

must be printed just to provide the Government pay-roll for September—not to speak of the pay for Government supplies. Of course the Government receives taxes and other incomes, but they are a minor detail; they fall hopelessly behind the racing speed of expenditures.

Now comes the strangest part of the story. The people are better off than when I was there last March, and much better than a year ago last March.

I took about three dozen pictures of the people in streets and in parks. They are all well dressed and look well fed. The theaters are crowded (I paid sixty-six cents for a seat)—the movies and restaurants also. I simply couldn't get a seat at the Grand Opera.

Prices have gone up everywhere. When you take a taxi ride, you look at the meter and then multiply by 9,000. You've got to be quick at figures to live in Vienna.

A taxi ride costs nearly as much as in New York. Whenever the Government releases its control over prices, they go up to approximately gold values very soon.

Labor is better paid, but is still too low. The charge I made against Socialism and Labor Unionism a year and a half ago still stands. They have not taken care of labor. It is much worse off than in so-called capitalistic states like America, for instance. One reason the people are looking better is because they have cultivated on special ground allotments 80,000 gardens in the suburbs of Vienna. I saw the exhibition of the results in the City Hall. I was glad they had done so well, and sorry there were not other achievements to show for what Austria had been through.

I saw a good deal of firewood here and there inside and outside of Vienna, considerable coal also. I am told there is a fair supply of fats and meats for the winter.

If Italy could, by common consent, take over the government of Austria, stop the excess of expenditures, circulate Italian money, and discharge fully half of the public employees, the country would soon get on its feet. We would hear nothing more about their "terrible suffering." The suffering has been real enough among those who had bank savings accounts, and old people living on incomes and rents. They found themselves absolute paupers. Naturally, the bulk of these cases have been adjusted, some by death, some by work, and some by relief and by relatives.

If some political change is not made very soon (say in three months), Vienna will, I am afraid, be a howling mob because of confusion and political paralysis. This may be delayed by some loans to quicken the body of the almost dead government. Loans from England, France, and Italy are always imminent, and the League of Nations is gravely reconsidering Austria's dilemma, as it sits in Geneva.

When McKinley was President, the question, "Shall we build a canal at

Panama?" was much discussed. Mr. Dooley, writing an Annual Presidential Message for McKinley to send to Congress, said under the heading "Panama Canal:" "Something must be done about the Panemaw Canal, but what the devil it is I don't know."

I think the League of Nations feels the same way about Austria; something must be done, but what the devil it is they don't know.

This article would be defective if I didn't try to explain why Austria has lasted as long as this and why there is so much ease and comfort in spite of the financial ruin.

(1) The exports of merchandise have been considerable and balance a part of the imports of food, perhaps all the necessary food, because champagnes, liqueurs, silks, and furs have also been imported and sold to Austrians.

(2) Much good money has come into Austria for paintings, antiques, porcelain, etc.—all articles of real value if not art treasures.

Much of the former belongings of Archdukes Ferdinand and Ludwig Victor have been sold—perhaps a million dollars' worth. The art stores always report a good foreign business, and there are hundreds of them.

(3) The American Relief has brought in about fifty million dollars of supplies and cash.

(4) It is reasonable to suppose that the Catholic Church has sent in large sums to assist Austria, which, until the Armistice, was the leading Catholic nation of the world.

(5) Austrians in foreign countries, America, England, and elsewhere, have sent, in the aggregate, huge sums to their relatives in Austria, and bought crowns on speculation.

(6) Foreign buying of Austrian industries, such as the Stinnes purchase of the leading steel industry of Austria, which is reported to be running prosperously.

(7) The ownership by Austrian capitalists of paying properties in Czechoslovakia, Hungary, and elsewhere has

Photograph by W. C. Gregg

GOING TO A MATINÉE, SATURDAY AFTERNOON—VIENNA, SEPTEMBER, 1922

brought into Vienna a fairly steady flow of good money. It must be remembered that Vienna was the financial and banking center of Southern Europe before the War. Vast properties are still held outside of Austria.

(8) Space will not permit a further listing of the many supplies that have helped to take care of Austria; but the chief bladder that has kept them from sinking has been the use of the paper money issued all along as needed. Like a bladder, it will not support anything very long, but has great temporary possibilities. It has been a medium of exchange and has always represented some gold value, even as it does to-day.

If Austria had been entirely self-supporting, no one can say how long she might have functioned on her paper currency.

It is my belief that the above-listed outside helps have kept her going, and account for the evidences of widespread

comfort and even luxury. Most of these helps have been temporary, and they are, in any event, too uncertain to support a political state.

I found out why the trains are so crowded in Austria. A citizen of Vienna told me he and his wife had just returned from Germany, where they had been shopping. They bought linen, underwear, woolen goods, etc., at less than half what they paid in Vienna. Being Austrians, they were taxed only six per cent to export their purchases from Germany. I asked him how much his round-trip ticket cost him (a twenty-hour ride in an express train, third-class). He said, Thirty cents!

You see, Austrian Socialists planned that cheap fare for the benefit and enjoyment of the Austrians, little thinking that it would be used by Austrians to make purchases in foreign countries, to the serious disadvantage of Austria.

Successful statesmanship consists partly in thinking ahead. As I said in the beginning, it takes a great people to be self-governing, and the Austrians are not a great people.

With no reparations paid and no standing army supported; with double the agricultural land of Belgium and with no more population; with a railway and banking system radiating through all Southern Europe; with Vienna a tourist center second only to Paris; with vast wealth to be taxed, and a comparatively small war debt; with the Austrian crown worth as much as the French franc in 1919—they have made the minor after-war difficulties the excuse for failure—a failure ghastly enough, but resulting only from stupid and dishonest Socialism, and not from restricted area and tariff problems, difficulties which could have been surmounted by a stronger race.

A PUBLIC AUCTION OF UNCLAIMED ARTICLES HELD IN THE NEW YORK CITY POST OFFICE

This certainly looks like a rummage sale, but it is held under the auspices of Uncle Sam. All sorts of articles fall of delivery through the mails because of defective addresses, and they have to be auctioned off. The auctioneer seems to be before an unresponsive audience while he dilates on the virtues of the milk can he is holding. Is the statuette which is perhaps next on the sales list that of Napoleon, Edison, or some "great unknown"?

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER VI—GROVER CLEVELAND

HAD diplomacy been a career, nothing would have pleased me more than to continue in such service of my country. On the whole, I cannot say that I advocate changing our system as to a more permanent service for the heads of missions. Our President is now unhampered to select men who are best qualified to deal with the problems in hand at the various posts. This is an advantage over a system that tends to keep in office ministers and ambassadors who are ill equipped to bring statesman-like qualities to their work, though they may be past-masters in routine and social requirements.

But it would be well if, on a change of administration, removals of heads of missions were the exception rather than the rule. Of course, after four or eight years, the return of our diplomatic chiefs from foreign fields to the various parts of our country has an advantage in that these men, by reason of their experience and standing, are enabled to inform and in a measure guide public opinion on questions concerning international affairs.

On my return to New York I re-entered business, but continued to take a deep and active interest in public affairs. I spent much of my spare time lecturing on public questions and historical matters.

CLEVELAND'S WAR ON "FREE SILVER"

In the fall of 1891 I was a delegate to the Democratic State Convention at Saratoga and a member of the platform committee. One of the questions to be solved was, What should be our position regarding silver? Cleveland's statement of his position during his first term had lost him the Presidency.

Quite purposely, Cleveland had boldly accentuated, while in office, the outstanding matters then before the country—the tariff and sound money—without any regard to political consequences. His friend Richard Watson Gilder had said of him in "Grover Cleveland: A Record of Friendship:"

Every once in a while Cleveland "threw away the Presidency," and I never saw him so happy as when he had done it; as, for instance, after the tariff message, and now again after the silver letter.

Cleveland, while not a scholar, was ultra-conscientious and had an honest and logical mind that dealt with fundamentals. He would "mull over" (that is the very phrase I have heard him use) a question until he got to the bottom, and there he would start to build up his premises and arrive at his decisions.

Revenue of the surplus accumulating

Copyright, 1908, Rockwood, N. Y.

Grover Cleveland, from a large photograph specially made for Mr. Straus, the original of which hangs in his library

in the Treasury, he had been impressed more and more with the fact that the taxes and the tariff should be reduced. He realized, during the spring and summer of 1887, that the rapid increase of this surplus was becoming a menace to the stability of our financial system, and he felt it his duty to provide some means for averting commercial disaster. At the opening of Congress that year, instead of a message covering all of the Government activities, as was the invariable custom, he prepared one devoted exclusively to the revenue system and to the necessity of reducing the tariff. He gave much care and deliberation to this message and its subject, but none to the political consequences.

Again, later, when the free coinage of silver became a topic of prominence, the Reform Club of New York invited him to attend a banquet at which this question was to be discussed. Many of his friends advised that he remain silent on the subject, in order not to mar his chances for re-election. Cleveland, however, accepted the invitation and boldly announced his position regarding "the

dangerous and reckless experiment of free, unlimited, and independent silver coinage." That was too much for the machine men of the party; the note of Cleveland's doom was sounded from one end of the country to the other.

After his retirement, partisan bitterness largely disappeared, and it soon became a foregone conclusion that he would again have to stand for the Presidency. Although he had occupied the President's chair only one term, I doubt whether any ex-President of our time, with the exception of Roosevelt, carried with him into private life a deeper interest or a higher esteem on the part of the great body of the people. His rugged honesty of purpose and determined stand for the best principles in our public life were more and more appreciated and valued. During the entire period between his defeat and re-election he was the most distinguished representative of his party.

When the silver question came up at Saratoga, a few others and myself contended for a sound money plank. We met with opposition from a majority of

the committee. Richard Croker, boss of Tammany Hall, had not up to that time bothered much about the subject. I laid before him the reasons underlying the question and got him to throw his powerful influence and help on our side, and we succeeded in the end in incorporating a strong sound money plank.

Cleveland expressed his satisfaction with that accomplishment in the following note to me:

816 Madison Avenue
Sept. 27, 1891.

My dear Mr. Straus:

I have a suspicion that you had much to do with the formation of the silver plank in the platform adopted at Saratoga. I am so well satisfied indeed that you thus merit my thanks as a citizen who loves the honor of his country and as a Democrat who loves the integrity of his party, that I desire to tender them in this frank, informal manner. Yours very truly,
GROVER CLEVELAND.

I may add here that upon his retirement in 1889 Cleveland came to New York to live, and the pleasant relations I had had with him in office became close and intimate.

Early in July, 1892, I wrote Cleveland regarding his position on the tariff, and after the Chicago convention which nominated him for the Presidency, I received the following communication from him:

Gray Gables,
Buzzards Bay, Mass.
July 25, 1892.

My dear Sir:

I wish to thank you for your letter of July 12, and to express my disappointment that while in New York last week I did not have the opportunity to converse with you on the suggestions which your letter contained. You cannot fail to see by some expressions in my address in reply to the notification committee, that thoughts quite similar to yours have occupied my mind in regard to the tariff plank in our platform. I am exceedingly anxious that there should be no misrepresentation of our true position, and I regret exceedingly that there should have been any form of expression adopted which makes us liable to that danger.

I shall continue to give the subject earnest thought and when I write my letter of acceptance if it should then seem to be necessary I shall not hesitate to pursue the subject further. I have heard of your labors at Chicago and of your constant and earnest devotion to my cause and while your previous conduct and our relations have been such as to lead me to expect such things of you, I am none the less gratified and beg to thank you from the bottom of my heart.

With the kind remembrances of Mrs. Cleveland to you and Mrs. Straus, in which I heartily join, I am,
Very truly yours,

GROVER CLEVELAND.

In 1888 his position on these two questions caused his defeat; in 1892, his position still the same, these very issues were the dominant factors that brought about his renomination and election.

During the winter before his second

Cleveland was frequently accompanied by his physician on hunting and fishing expeditions, which were taken not alone for pleasure but as health measures

term of office, in order to get some rest and be freer than was possible in New York from the constant stream of visitors and place hunters, he and his family accepted the invitation of my brother Nathan to occupy a little frame house which my brother had bought from a New Jersey farmer in connection with the property on which stands the Lakewood Hotel.

THE "LITTLE WHITE HOUSE"

The unassuming little two-story house, surrounded by pines, simple as could be, was renovated and painted white, and became known as "the little White House." To it from time to time he summoned the people with whom he wished to confer—with the leaders of his party with regard to policies and the make-up of his Cabinet, and with friends. He had no secretary and wrote all letters with his own hand.

During his stay at the "little White House" he sent for me several times to talk over things with him. On one of these occasions he proposed connecting me with the Administration in some way that might be agreeable to me. While I appreciated his intention, I told him I felt I owed it to my brothers to stick to business for the next few years. He answered that he would have to have one of the brothers in his Administration. I learned later that in his mind he had reserved the ministership to Holland for Isidor. At about this time Isidor had been nominated, and was subsequently elected, to fill a vacancy in Congress, and Cleveland purposely did not fill the Dutch post until after that special election. He afterwards remarked to a friend he and Isidor had in common, William L. Wilson, of West Virginia, Chairman of the Ways and Means Committee and responsible for the Wilson Tariff Bill, that he much preferred Isidor in Congress, where he

could have the benefit of his wisdom and knowledge in financial and tariff matters. Indeed, my brother was largely responsible for Cleveland's calling the extra session of Congress for the repeal of the Sherman Silver Coinage Act.

A PRESIDENT UNDER FIRE

Among my letters from Cleveland at this period I have one concerning a matter that caused a great deal of stir and unfavorable comment: the appointment of James J. Van Alen, of Newport, R. I., as Ambassador to Italy. Van Alen was a very rich man. He was the son-in-law of William Astor and the personal friend of William C. Whitney, the real manager of the Cleveland campaign, whose appointment as Secretary of the Navy was not liked by the "Mugwump" wing of the party, headed by Carl Schurz and others. When Van Alen was appointed, a hue and cry arose from the idealists, and Cleveland's enemies alleged that the appointment was nothing more than a reward for the very large contribution Van Alen had made to Whitney for the campaign, for which Whitney had promised this position.

Schurz, as editor of "Harper's Weekly," wrote a savage editorial against Cleveland on this subject, and in a letter to me he stated that he felt Cleveland's prestige would never recover from the blow he had struck against himself in making that appointment. I wrote to Cleveland about the matter and how it was regarded by some of his friends, mentioning Schurz among others. The President sent me the following reply:

Executive Mansion, Washington
Oct. 20, 1893.

My dear Mr. Straus:

Your letter was received to-day.

I need not tell you how much I value your friendship; and I hardly need confess how touched I am by the manifestation of affection afforded

by the solicitude you evince in the Van Alen matter. I am amazed by the course pursued by some good people in dealing with this subject. No one has yet presented to me a single charge of unfitness or incompetency. They have chosen to eagerly act upon the frivolous statements of a much mendacious and mischievous newspaper, as an attempt to injure a man who in no way has been guilty of wrong. I leave out of account the allegation that his nomination was in acknowledgement of a large campaign contribution. No one will accuse me of such a trade and Mr. Whitney's and Mr. Van Alen's denial that any such thing existed in the minds of any one concerned, I believe to be the truth. I think it would be a cowardly thing in me to disgrace a man because the New York World had doomed him to disgrace. Since the nomination was sent in I have left the matter entirely to the Senate, and I hear that the nomination was confirmed to-day. This ends the matter. I am entirely content to wait for a complete justification of my part in the proceeding.

I am sorry you regard this matter as so unfortunate and if anything could have induced me to turn away from a course which seems to me so plainly just and right, it would be my desire to satisfy just such good friends as you have always proved yourself to be.

I shall be glad to see you, at all times.

Yours very sincerely,
GROVER CLEVELAND.

Van Alen was confirmed by the Senate, but on November 20 he sent in his resignation, which Cleveland reluctantly accepted but urged Van Alen to reconsider his decision, as his (the President's) preference was emphatically that he accept the post and by the discharge of his duties vindicate the wisdom and propriety of his selection.

MIDNIGHT SUPPERS OF DELICATESSEN AND BEER

During the second term I saw little of the President. I was very much tied to business, and went to Washington only when summoned there to discuss a few international matters as they arose. But while I am reminiscing about my relations with Mr. Cleveland, I will jump ahead about ten years and speak of a visit he paid me for three days during March, 1903. He was to deliver an address at the Henry Ward Beecher Memorial Meeting in the Brooklyn Academy of Music on Sunday evening, and he arrived from Princeton on Saturday. He was like a boy out of school.

We were going to the theater on Saturday evening, and I suggested Justin McCarthy's "If I Were King," played by Sothern.

"I hope it is not sad," he said; "I want to see it from start to finish;" and, with a smirk, he added: "For I am a hayseed." I discerned afterward that he would rather have seen a comedy or vaudeville.

When we got to the theater many in

the audience recognized him, and heads were constantly turning in the direction of our box. I mentioned it to him, but he said:

"Oh no, they don't know me any more."

After the theater we had a supper of delicatessen and beer at home, which I knew he would like, and he amused us with several funny stories and mimicry. My wife remarked that he might have made a success on the stage, and he replied that his friend Joe Jefferson had often deplored his having missed that profession. He mimicked the humorous Congressman Campbell of New York, who used to come to the White House, and, pointing to the room occupied by Cleveland, ask the clerk, "Is His Royal Nibs in?" And sometimes Tim Campbell made requests that Cleveland had to deny as unconstitutional; then Tim would come back with: "Oh, I wouldn't let the Constitution stand between friends!"

MORE IMPRESSIONS OF GROVER CLEVELAND

At dinner on Sunday we were joined by Mr. and Mrs. John G. Carlisle, my brother Isidor, his wife, and his business associate, Charles B. Webster. Carlisle, one of the most distinguished Senators in Congress, was former Secretary of the Treasury, and a close friend of Cleveland. When the champagne was served my wife said to the ex-President: "Does Mrs. Cleveland let you drink this? You know it is bad for your rheumatism!"

He answered: "No, but I won't tell her."

They compromised on one glass.

After dinner the conversation turned to the bond loans during Cleveland's second administration, the first made through J. P. Morgan & Co., and the subsequent popular loans—to keep the gold in the United States Treasury. The ex-President referred to his fight against the silver craze and said he had to abandon the fundamental issue, the tariff reform, to combat that dangerous heresy.

When the guests had gone, Cleveland wanted to know whether we would like to hear the speech he was to deliver that evening, and of course we assured him we should be delighted. This led to conversation about Beecher, and I showed him the original letter that Beecher wrote him in 1887 recommending my appointment to Turkey. He said he remembered it perfectly, and it was the thing that turned the scale while he was considering whether or not he could properly appoint a person of my race to a post largely concerned with the protection of Christian missions. I made bold to request the manuscript of his Memorial address to file with my Beecher letter, and he kindly consented, with the words: "Yes, certainly; they are kind of cousins."

After a light supper we drove to Brooklyn. Cleveland was ever punctual,

and I took care that we should arrive at the appointed hour, 7:45. It was pouring rain, and Cleveland anticipated that most people would be kept away; but when we entered the hall it was packed from pit to dome, and several thousand persons were turned away. At the close of the meeting hundreds crowded on to the stage to greet the ex-President, showing that the love and admiration of the people had in no degree waned.

The next morning we prevailed upon him to stay an extra day. He said he knew I had a speech to make at Brown University and would have to be busy. I assured him the speech was all prepared and the subject was "Brown in Diplomacy." He asked me to read it to him, and I did. He pronounced it appropriate and fine, which gave me some confidence in the success of the occasion, for I knew he was not given to flattery and would not have praised it without meaning it; that was not his style.

He had to go to Rockwood, the photographer at Thirty-ninth Street and Broadway, so I went with him. He said he had hundreds of requests for pictures and wanted a new one taken so that when people wrote for them he could refer such requests to Rockwood; similarly he had some pictures made by a Philadelphia photographer. That arrangement would save him much trouble. I asked Rockwood to take a special, large picture for me. He brought forward his larger camera and took one of the best photographs of Cleveland I have ever seen. I had two finished; one for Mrs. Cleveland and the other hangs in my library.

For luncheon we met Isidor at Delmonico's. At the next table sat Charles F. Murphy, successor to Croker as boss of Tammany Hall, who requested me to introduce him to Cleveland. They had quite a chat, after which Cleveland remarked:

"He looks like a pretty clean fellow."

During the meal our guest told us, with language, voice, and manner befitting the tale, how, when he was being spoken of for re-election before his second term, he met a farmer who said to him: "Now if you will go on sawin' wood and don't say nothin', they will give you back that job in Washington." No actor could have given a more vivid characterization of that farmer.

That evening we went to Weber and Fields's Music Hall, on Twenty-ninth Street near Broadway. He suggested this himself. He said he liked to be amused at the theater and not saddened or instructed.

THE FINAL CONFIDENCES OF AN EX-PRESIDENT

At about this period Cleveland from time to time showed evidences of illness. He called them stomach attacks. Whether or not his personal friend and physician, Dr. Joseph D. Bryant, had diagnosed the malady as more serious I do not know; but at times I rather inferred that he had. Dr. Bryant made it

Oscar S. Straus

a point to accompany him on several of his hunting and fishing expeditions, which were taken not alone for pleasure but as health measures, for a change of air and the outdoor recreation.

On and off during those years also, when the family wanted a little change, they occupied "the little White House" of my brother's at Lakewood. Cleveland liked its simplicity and because it was not unlike the parsonage at Caldwell, N. J., where he was born. Early in June, 1908, while the Cleverlands were at Lakewood, the ex-President sent for my brother Isidor; he desired to have a talk with him. He seemed to wish to unburden his mind. This proved to be the last time he spoke to any one outside of his immediate family while still in the

possession of all his faculties. That very night he had another attack of his malady, after which, as I was told, his faculties seemed to go under a cloud. Two weeks later, on June 24, the country was shocked, though it was not unprepared, to learn that the ex-President had died that morning at his Princeton home.

On June 26 Grover Cleveland was laid to rest. The funeral was private; my brothers and I had received a note from Mrs. Cleveland asking us to be present. At his home we met about one hundred of his personal friends. It had been his express wish that there be no eulogy or funeral oration, and his friend, Dr. Henry van Dyke, conducted a simple service at which he read passages from

Wordsworth's "The Happy Warrior." In a carriage with Chief Justice Fuller, Judge George Gray of Delaware, and Governor Fort of New Jersey, I accompanied the body to the cemetery.

For him there were no longer enemies to traduce and vilify. Perhaps no President had ever been so reviled by a hostile press throughout the country as this great man, and, strong as he was, these attacks quite naturally pained him. Like all men who struggle against the tide for righteous things, appreciation is often deferred, sometimes until after death. In his case, happily, it came while he was yet among us in the constantly increasing manifestations of admiration, love, and esteem by the people of the country.

STAR CHAMBER SESSIONS WITH HARRISON AND McKINLEY

NEXT WEEK'S installment of the Autobiography recounts how President Harrison called Mr. Straus to the White House in 1891 to consult with him concerning the persecutions that were driving multitudes of Jewish refugees from Russia to the United States. The upshot was a firm stand on the part of Harrison that forced Russia to curb her methods.

The illustrious diplomat describes how

McKinley summoned him to Washington in his effort to avert war with Spain, and how McKinley later persuaded Mr. Straus to undertake his second mission to Turkey, at a time when Dr. James B. Angell, then United States Minister to the Porte, believed that the only way to bring Turkey to terms was to send warships to "rattle the Sultan's windows."

POLITICAL SKIRMISHES OF THE MIDDLE WEST

BY FREDERICK M. DAVENPORT

MEMBER OF THE SENATE OF THE STATE OF NEW YORK
PROFESSOR IN LAW AND POLITICAL SCIENCE AT HAMILTON COLLEGE

When Senator Davenport wrote this he was in Missouri and Kansas. In Missouri the political contest has raged about the personality and views of Senator Reed, whom former President Wilson denounced in a recent campaign letter as a "marplot." In Kansas the issue centers about

the Industrial Court Law, about which Senator Davenport will write in another letter. How the Middle West views the tariff is important to the country when we reflect upon what happened to the Payne-Aldrich Tariff Bill in 1909 and 1910 under Middle Western leadership.—THE EDITORS.

MISSOURI is politically still a raw State. Rural Missouri is honest and narrow, and I am told that Governor Hyde, who is a progressive Republican and ran on the Bull Moose ticket for Attorney-General in 1912, has had Satan's own time with the farmers in seeking to provide even a reasonably adequate system of education for their own children. But they are learning. The city politics of St. Louis and Kansas City is known of all men as disreputable and commercial. In no State of the Union, probably, is the poison squad, which deceives and lies to public opinion, so vigorous and successful. It seems sometimes, I am told, as if the people preferred to believe the worst of shining marks. The anti-machine fight in Kansas City, which proved unusually successful only yester-year, has declined vitality, and the sordid political cannibals are creeping back into power. hope of the State is in progressive

Republicanism, which is reasonably strong. Old-Guard Republicanism is only another name for Bourbon Democracy. They help each other out.

Those who think that the idealistic issue of the League of Nations played any particular part in the recent contest of Senator Reed for renomination in the Democratic primary would do well to bear the foregoing factors in mind. Missouri is not at present a State to be violently moved by idealism, "super" or any other kind. At bottom it appears to be like most of this Middle Western country, unmoved by the League of Nations issue, pretty stolidly nationalistic and anxious to keep out of European embroilments. Probably that helped Reed, but it was not the issue. They like Reed in Missouri as a sporting proposition. He is a hard and brainy fighter, even though many call him unscrupulous. And the average plain Missourian likes that. I fear that the Reed

personality fits Missouri better than the President Wilson personality.

I have heard it much discussed in the East as to whether the Bourbon Republican vote helped Reed out in the primary. Of course the reader understands that some of these Western primaries are very free primaries into which the voter may go and line up with either party or any party. The opinion seems to be here that in St. Louis, for particular reasons, every effort was made by the Republican organization to keep their voters in line for the Republican part of the fight, but there appears to be no doubt that in the State at large many thousands of Republicans joined in renominating Reed—plenty of them to do the work. He actually won by only 6,000. And the serious and informed view here is that he will have much Republican support at the polls in November, and will probably win then.

In this country the League of Nations

issue is thoroughly in eclipse. Except in spots, it appears that this is true of the whole United States, as completely true still as in the 1920 overwhelming election upon the issue. It certainly had little effect against Lodge in Massachusetts in the primary. It might be decisive at the general election in Massachusetts in a close fight, but in and of itself in Massachusetts it seems to have no vitality. In Nebraska, where United States Senator Hitchcock is running again on his record as a Wilson League supporter, the chances of the progressive Republican, Howell, are somewhat enhanced by the issue. Hitchcock, who is a shrewd politician and has made an able Senator, evidently senses it, as he has sought to counteract it by a clever and incisive speech recently in the Senate in which he denounced before the world the action of the French on the Rhine in employing savage Africans as armed forces and in setting up brothels for them. This propagandist antidote has been put to work in a multitude of German homes in Nebraska, although it is quite likely that it has come too late to be of effective political service. All the irreconcilables about the League—Reed, Johnson, Beveridge, La Follette—have come through with flying colors; on other issues, but their hostility to the League never flected them, rather aided them.

The attitude of the Middle West on the tariff is interesting. They have not waked up to it yet at all. There is no mighty Dolliver to stir their hearts as the great Iowan did against the Payne-Aldrich Bill in 1909 and 1910. Furthermore, the tariff-makers in Washington have prepared in advance at least a temporary bulwark against a recurring Payne-Aldrich tragedy by high duties on lemons and almonds and wheat and other products dear to the heart and the pocketbook of the Western agriculturist. Besides, prices generally are so much higher on everything than they were in 1910 that the Western consumer seems numb to the addition of a mere tariff burden.

The wise ones have told me that they look for the Western consumer to wake up a little later on, if he begins to pay appreciably more for the things he buys. In the wheat country, for example in Kansas, the high tariff duty on wheat is a delusion. The world price of wheat in Liverpool is now so low that the cost of production in Kansas is higher than the Liverpool price. The State of Kansas is frankly worried about its underlying economic condition, which depends as certainly upon wheat as Cuba's welfare depends upon sugar.

There is an agitation growing in Kansas for State-owned elevators, as in North Dakota. The great economic difficulty about wheat seems to be that under present conditions it has to be harvested and marketed within one hundred days. And the system of transportation and storage breaks down in the presence of so great a problem. Vast stores of

"WORKING FOR THE GOVERNMENT"

BY

HERBERT E. MORGAN

The men who work for the Government are not working for something remote from the life of every-day Americans. They are working for all of us, and their problems concern us as directly as though we made out their pay checks ourselves. Those who read Mr. Morgan's article in a forthcoming issue will be reading about men they themselves employ.

wheat lie along the tracks at the stations, without cover, for days together exposed to the weather. These conditions contribute neither to sound quality nor to sound economic price. A counter-wall is going up from the Associated Industries, representing the employing interests, against the so-called Socialistic innovation, with North Dakota held up as a horrible example. But, strangely enough, many Kansas bankers and business men refuse to be stampeded by the display of the North Dakota bogie. They say, "Well, what are you going to do about it? Something must be done or the economic stability of Kansas is gone."

I wonder if those are not right who refuse to foam at the mouth even at the radical experiments of North Dakota, and who say that it is a good thing that we have political laboratories in the Western States where experiments can be tried for the whole country and the mistakes of the original experiments provided against in the later imitation. Kansas may move in co-operative rather than in Socialistic directions in solving her problem, but, like North Dakota, she must get the thing done.

The reflective view of the Middle West is that some of the crucial rates in the current tariff bill are too high. The country doesn't want to be flooded with low-cost German products and doesn't intend to be. It has too great concern for the standard of living and the standard of advance of its own laboring population. The Middle West avers that it is no secret in Washington among the faithful who are supporting the bill that something was put over on them in the sugar and wool schedules, and some others, by the ruling leadership in Congress, and they are very sorry it happened on sugar and wool especially, because they think it will soon show in every home after the measure gets into operation.

And the Middle West may be the first to kick the roof off. But not now. The Middle West doesn't care three whoops

about the tariff issue or the bonus issue or the ship subsidy issue. People here talk about strikes. These are much nearer to them and much more menacing. They are inclined to think that Washington has been wasting a lot of time on the other issues and was as slow as molasses in getting ready to do something about a greater matter. They share, I find, the parodied sentiments of the famed Lackawanna versifier:

How very slow, said Phoebe Snow,
The coal negotiations go.
Both words and might seem useless
quite,
When craniums are anthracite.

You may say that there is a measure of unreason in their attitude, and there undoubtedly is. The West has long combined reason and unreason in its political opinions, as everybody knows. But I am only writing of things as I find them. I am not weighing them in the balances of reason.

Kansas, of course, is in the throes of an experiment against strikes in the essential industries. This is so important that I think it worthy of a separate letter, but I may say here that the relations of the Kansas mines with the new Industrial Court were such that at least a fifty per cent production was kept up through all the period of the recent coal strike, and the railway situation in Kansas proper has been surer than in the surrounding States. One reason has been that the Topeka shops of the Santa Fe System were protected from the outset by the new Industrial Court Law; not by State troopers, but by previous experience with opposition to the provisions of the law itself. As go the Topeka shops, so goes the Santa Fe System. And the provisions of the new law with respect to picketing during strikes upon essential industries are such, and the pressure upon the local authorities under the law to preserve order is such, that, with Alexander Howat and five of his comrades at present in jail as an outstanding example, there was a freedom from intimidation and a freedom for strike-breakers to work which did not exist in the neighboring States or anywhere else in the Union. This may be a reason why the Santa Fe is not one of the roads in the West to come to terms with the striking shopmen under the Warfield agreement, but insists stolidly upon the peace of unconditional surrender. There is much to be said on both sides about this compulsory experiment, and I will return to it in a later letter. It has its good and bad points, and is still distinctly in the laboratory stage.

But this I think can be said here. The Kansas agricultural population, which is the great majority element, is committed to the new law, and their belief in it will give the Republicans the victory in the fall campaign. If it were not for this issue, the unrest in Kansas might be as dangerous to the Republican party as the unrest in Michigan and Colorado.

ENTOMOLOGY

BY ROBERT HILLYER

IN August as I lay upon a hill
I saw black ants and red ones in the grass.
Well-bred, adept, they labored with a will
And stepped aside to let each other pass.

I saw two battling spiders come to terms,
And skate away without another word;
I also saw a beetle and three worms,
Which I just mentioned to a passing bird.

Small jungles, and a ground-mole come to grief
(If one can judge by such a skeleton);
A bob-tailed bug upon a strawberry leaf,
The which I tickled just to see him run.

These I observed, and many other things,
But I'll not bore you with particulars;
At any rate, the afternoon took wings,
And left the insect, Me, beneath the stars.

WU PEI-FU, A CHINESE WITH ONE IDEA

CHINA'S GREATEST SOLDIER, WHO NEVERTHELESS BELIEVES IN
REUNION OF HIS COUNTRY BY TALKING RATHER THAN FIGHTING

BY UPTON CLOSE

SOMETHING is known outside of China of Chang Tso-lin, variously called the "Satrap of Manchuria," "First War Lord of China," and Super-Tuchun, but little has been heard about Wu Pei-fu, the chief obstacle to Chang Tso-lin's ambition to control China south of the Great Wall.

Two years ago thousands of students from middle schools, colleges, and universities throughout China converted agitation into action and flocked to the camp of Wu Pei-fu to enlist in the almost holy crusade against the Anfu clique traitors who were selling their country's sovereignty to Japan. Wu, then a division commander unknown outside of military circles, suddenly sprang into prominence in the summer of 1920, when he executed a strategic withdrawal from Hunan, whither he had been sent to conquer the "rebellious South."

By what foreign military attachés pronounced to be the most brilliant military tactics ever executed by a Chinese general, Wu sent the opposing forces rolling back against Peking, defeated, disorganized, and fighting each other.

Wu Pei-fu's well-disciplined force by slow and careful stages made its way to Peking, disarmed the defeated troops, and relieved the capital, which was ready to do him honor. Then Chang Tso-lin, ex-bandit and uncrowned King of Manchuria, swooped down with his divisions, and, with a slur at "the subordinate military officer," appropriated the fruits of Wu's victory. At the same time he adopted the defeated soldiers into his own ranks. After all, Wu was but a division commander turned popular hero overnight. He had not the prestige nor the numbers to face the Manchurian war lord.

Wu withdrew with his loyal Third Division to the barracks built by Yuan Kai-shih, as the nucleus of his monarchical establishment, in the out-of-the-

way loess hills of western Honan, there to bide his time.

Wu spent the autumn, winter, and spring training his model army. Visitors, among whom was American Minister Charles R. Crane, to his camp in Honanfu (or Loyang, the ancient capital of the Chow dynasty, 1000 B.C.), found him very hospitable—inclined to drink a bit to excess in honor of his guests—and very busy.

In the spring of 1921, through the agency of an American newspaper man, he discovered that a secret pact directed against him had been concluded between Tuchun Chen Shu-fan at Shensi, the province at his rear, and Chang Tso-lin of Mukden. He refused to submit to this threat, and, having made a public oath that this world was too small to hold both Chen and himself, began immediate operations against the Shensi Tuchun.

In the course of this action Wu dispatched to Shensi his subordinate, Brigade Commander Feng Yu-hsiang, popularly known as the "Christian general."

Feng is a man of the same ideals as Wu, and this demarcation of a distinct field of effort for Feng has ended the slight jealousy over popular idolism existing between them, and has united them in a common purpose.

Wu had no sooner established his influence in northwest China than the call came to him to take a hand in the Middle Yangtze situation. Hupeh, the most important province of central China and the one which contains the three "Wuhan" cities (Hankow, Wuchang, and Hanyang) situated at the confluence of the Yangtze and Han Rivers, had suffered for four years under the misrule of Tuchun Wang Chan-yuan, the most reactionary of the militarists. His rule was characterized by extortion, opium trading, and every form of official corruption. Although all the Chinese

armies were unpaid for months, Wang's soldiers had even greater arrears due them than others.

Driven to desperation, and encouraged by a disaffected populace, his soldiers had repeatedly mutinied. In three of these mutinies foreign interests suffered heavily. Some Japanese lives were lost, and Japanese, British, and American consular and commercial property was destroyed.

Chang Tso-lin, fearing for the prestige of militarism, decreed that Wang should stay. Hupeh local leaders, however, bribed the military of the neighboring province, Hunan, to undertake an offensive against him.

Sun Yat-sen, whose Commander Chen Chung-ming had just added the province of Kweichow to his recent conquest of Kwangtung, immediately sent agents to Hunan in an attempt to enlarge the affair into a general Southern invasion of the North. The whole country was thrown into apprehension. The U. S. S. Albany and other foreign cruisers and gunboats cleared for action and lay in the Yangtze off the foreign concessions. Every one was asking: "What will Wu, whose forces, lying half-way between Peking and Hankow, are the key to the situation, do?" At this critical moment and while Wu's troops were moving southward along the railway, not knowing which side they would support upon arrival in Hupeh, the writer visited General Wu, who had calmly remained in his Loyang headquarters.

"My foremost aim in regard to the Hunan-Hupeh situation," said General Wu Pei-fu to me, "is to prevent the interprovincial squabble from becoming a general war between the North and South. Aside from the resultant needless suffering which reoutbreak of strife of this nature would cause the Chinese people and the foreigners in our midst, no possible benefit therefrom could come to the nation. The ultimate reunion of

the provinces would be postponed rather than hastened thereby. Not force, but the convocation of a people's constitutional assembly, is the solution of the problem of reunification."

It was thus apparent that Wu Pei-fu was interested in wider issues than the suzerainty of the Wuhan region. When Wang Chan-yuan fled, and the advancing Hunanese (and Szechuanese, who also thought to capitalize the situation) were repulsed by Wu's merciless strategy (for, like all good generals, he is ruthless in war), Wu found himself in possession of China's richest section. But this did not, as politicians and militarists in the North hoped, satisfy and occupy him. Leaving Hupeh in the control of a henchman, Hsiao Yao-nan, he returned to Honan and resumed the training of a model army.

When I visited him there, General Wu assured me that he remained as enthusiastic regarding the convocation of the constitutional assembly as at the close of his campaign against the Anfu Government. "The country cannot be fought together," he said, using a forceful Chinese idiom. "This method has been tried in vain for eleven years, and promises no more success in the future than in the past. The only hope lies in talking it together."

Yet General Wu is not unaware of the necessity of a powerful armed force to guarantee freedom of action to the delegates who do the talking, as well as to the people in their selection. "My suggestion was ignored last summer," he said, "because at that time I lacked the military prestige to protect it from the attacks of selfish chieftains whose advantage lay in other directions." The Vice-Inspecting-General inferred that, if his plans did not miscarry, his military prestige would soon be sufficient to warrant his undertaking the guardianship of his constitutional scheme.

"But what about the inevitable opposition from Manchuria?" I questioned. General Wu's face took on a wistful look. "Everything I have been for," he said, "Chang Tso-lin seems to have been against. Still," his face brightened, "Manchuria is not vital to the life of China proper. If Chang Tso-lin must have his little kingdom, the Chinese Republic can for the time being do without the territory of the Three Eastern Provinces. And there is no reason why the Three Eastern Provinces should any longer dictate to us of China proper regarding our political changes, or why our political aspirations should lie at the mercy of the Fengtien lord."

This policy clashed directly with the ambition of Chang Tso-lin, who, from his Manchurian seat, hoped to spread his dominion over the intramural provinces.

Wu Pei-fu is a man of one idea—of one scheme. It is founded upon the one bit of American history which he has studied carefully. That idea is the re-drafting of the Constitution and the reunion of the nation through a national

Photograph of himself presented by General Wu

GENERAL WU PEI-FU, CHINA'S GREATEST SOLDIER, WHO NEVERTHELESS BELIEVES IN "TALKING" RATHER THAN "FIGHTING" THE COUNTRY TOGETHER

General Wu, aside from being a commander and strategist, is a scholar, philosopher, and poet. But he is a poor politician

convention, such as that which sat at Philadelphia and created the American Nation in 1787. Wu Pei-fu is obsessed with the idea that a new national convention can produce as much improvement over the Nanking Provisional Constitution of 1911 as the Convention which created the United States and its constitution in 1787 produced over the Confederation of six years earlier.

With this ambition for his country has undoubtedly become mixed a personal ambition bred by conceptions in Wu's imagination as to the part he himself is to play in the new régime.

What comprise his motives and whether or not they lead in the direction of a constructive, or even definite, plan is of prime importance to the Chinese nation to-day, inasmuch as upon Wu now rests the burden of political action involving the territory south as well as north of the Yangtze.

Although a sympathetic understanding exists between Sun Yat-sen's military commander, General Chen Chung-ming, and Wu Pei-fu, it will be seen that for the time being the theories of Wu Pei-fu are in direct conflict with those of Dr. Sun. The Cantonese agitator's

fundamental doctrine is that the Chinese revolution has never been completed; that the overthrow of the men who are the heirs of the Manchu autocracy must, and can, be accomplished only by violence. Wu Pei-fu's position, on the other hand, is that violent methods cannot be decisive, and that the only hope is in a convocation of provincial leaders under the protection and, we might infer, spur of a benevolent military force.

History seems to be with Sun Yat-sen. China's frequent past periods of disruption have been brought to their close not by talking but by the ruthless military conquest of one individual or faction. At least according to the records. But, knowing Chinese traits, we are prone to suspect that there was much compromise and palaver mixed with the fighting.

In comparing the present with past periods of disruption we find also many new elements affecting the situation. It has often been said that the foreign settlements and Legations, providing oases for political refugees, are the greatest obstacle in the way of political stability. Foreign interests in China refuse to undergo the loss occasioned by prolonged internecine strife. Again, there

Snap-shot by the author

A CRACK GUARD OF WU PEI-FU'S TROOPS SEEING HIM OFF IN HIS FORD CAR

The General is proud of his men and specially requested that this photograph of them be taken

are no definite lines along which an issue can be fought out. Wu Pei-fu may just as truly claim to be the exponent of progressivism as Sun Yat-sen—yet the two may easily find themselves in armed conflict. As Wu Pei-fu sees it, there are too many chieftains and too many factions to allow of "fighting the revolution out to its finish." The only real issue upon which any chieftain or faction could push a pan-China campaign would be that of individual supremacy. And democracy in China, although still an infant in mind, is too strong in body to allow the career of the uncamouflaged conqueror to culminate. Yuan Shih-kai's failure is conclusive evidence of this.

Under such circumstances, Wu Pei-fu is justified in his statement that the prospect of fighting China into unity is not hopeful. His trustfulness in palaver may appear ingenuous, but let him be given credit for maintaining some degree of faith in his country's political future. There are too many Chinese who, when they turn occasional attention from private ambition to their nation's predicament, are prone to shake their heads in utter helplessness, and, let it also be said, unhelpfulness.

General Wu, although uttering no word which might be interpreted as treason against Peking, has shown a true conception of the inconsequence of Peking in the life of the people of the provinces. If his suggestions of last year remain unchanged, his constitutional assembly would invite the recognition of the present *de facto* Government at Peking, but would not be discouraged by refusal. It would take upon itself the liberty of reshaping the entire administration of the nation, from the Constitution to the seat of Government. All present arrangements and precedents would simply be swept aside. Wu realizes that he would require a tremen-

dous military prestige to enforce the decisions of such a conference. If his own views and the decisions of the assembly should coincide, the results might be really democratic in trend. If the assembly could agree, as the writer fears, only under coercion from him, the resultant Government would be a camouflaged military dictatorship. This is, indeed, the form of government which those familiar with inland China consider the most practical. That it would be far superior in progressivism and benevolence to the score of dictatorships existing in China to-day is undoubted. The danger is that it would contain within itself the seeds of re-disunion.

Strangely enough, the national assembly has been a favorite idea of Dr. Sun. Some discouraging experiences have, however, inclined the pioneer of republican ideas to rely upon the imposition of new ideas through military force. Paradoxically, Wu Pei-fu, a man of purely military antecedents, concludes that nothing decisive can be accomplished by military force, and turns with hope to the Chinese aptitude for discussion and compromise. In the opinion of the writer, Wu's hope comes to this: If a group of men who can dominate their respective provinces can be brought together and protected in the course of their discussion from outside threat and in a measure from bribe, they should be able to determine the lines of some sort of interprovincial confederacy taking the place of a central government, and intrust to their powerful patron their execution and perpetuation.

The first requisite of a unified and peaceful China under this scheme must be the absolute prohibition of interprovincial alliance outside of the confederation and the abolition of nationally supported provincial armies. Wu Pei-fu

has set the precedent for the immediate squelching of interprovincial strife.

The plan, following the precedent of the selection of provincial delegates, would allow a great deal of freedom within the provinces themselves. The important thing is to get a hold upon those factors which can dominate in their respective provinces, whether for the time being they be democratic or not. If the dominating factor in a particular province be military, it must be accepted as the representative of that province in the confederation, being at the same time well curbed within the lines of its own province. When capitalistic or democratic elements within the province become able to overawe the military, they should succeed to the national representation. The fact that military power is curbed within provincial lines will militate against its downfall. There is hardly a Tuchun to-day who holds his position without the aid of outside-province troops. Again, a military chief dependent for revenues upon his own province will become gradually subservient to the powerful guilds and growing financial interests.

General Wu realizes that he is working against time—that outside nations whose industries demand China's natural resources will not indefinitely let China alone to work out her own salvation.

"Is the idea of foreign intervention virile?" he asked.

"It is dormant, but will not remain so if China continues to disappoint the world," I replied.

"Then we must hasten," the little General concluded.

That Wu Pei-fu will prove a positive factor in the establishment of stable and popular government in China is open to doubt. Although unquestionably the greatest soldier which his country has produced in modern times, he has little political and diplomatic ability.

It is of course well-nigh impossible for a leader in China to do anything for his country, and this is one reason why salvation must come through a general leavening of the people rather than through leadership. The Chinese people, possibly in part as a result of some thousands of years of disappointing experience, but more because of their intense individualism, do not want leadership. Nothing has been more evident in the past ten years of chaos in China than the tendency of the crowd to combine to lop off any head which gets itself above the others. Not only do the tactics of the rising figure's political enemies force him into the traditional paths of Tuchunism, but the very attitude of the common people, who psychologically mistrust any lord of the ascendant and regard power as synonymous with corruptness, bears in the same direction. After all, the Tuchun is the product of his people.

Note.—In a future issue we shall print a brief sketch of Wu Pei-fu's personality, by Upton Close

PLATINUM: ONE OF THE "NOBLEST OF METALS"

BY RICHARD HOADLEY TINGLEY

FOR centuries gold has stood for value. From the beginnings of history to the present time, with the exception of food, the glittering yellow metal has been more sought after than any commodity in the entire category of human desire. Wars have been fought for its possession; innumerable lives have been lost in its pursuit; honor has been sacrificed for it; and the lure is still as compelling as in the days of Solomon, Pizarro, or Bret Harte.

But platinum is worth more than five times as much as gold, although Solomon, Pizarro, and the California Forty-niners and Klondike-rushers knew it not. Indeed, nobody knew it, for its value was negligible until modern metallurgy and chemistry discovered its usefulness in the arts, till the war demonstrated it to be indispensable in the manufacture of modern munitions, and until fashion set its stamp of approval on this metal in competition with gold as a perfect setting for precious stones.

In the young days of the New World gold-crazed Spaniards, gold-crazed Portuguese, Hollanders, and Englishmen embarked on expedition after expedition in search of the "Golden One." Their heroism and hardihood almost beggars description. Tradition had it that, deep in the Andean mountains, was the "Golden City"—the seat of the opulent Peruvian Government of the Incas. Fantastic and romantic stories fanned the flame of the imaginative mind of the gold-crazed men who were ready and willing to believe anything of the incredible gold hoard of the famous mythical city—this El Dorado.

Although the "Golden City" was never found, the Spaniards obtained much gold, and they found platinum also. Not knowing what else to do with the latter,

they threw it away, calling it a nuisance. For centuries natives and aliens who have washed out the sands of the Atrato, the San Juan, and other Colombian and Peruvian rivers for gold have thrown back the platinum as worthless. They, too, called it a nuisance.

The modern picture thrown upon the screen shows bands of explorers in the valleys and beds of the same rivers where once the Spaniards sought in vain for the source of all gold; but they are searching for platinum now, and the gold which is always found in connection with its associate is of secondary consequence. Other remote parts of the earth also are being intensively searched for platinum—Alaska; the beds of the

rivers flowing into the Pacific in Oregon and northern California; in Borneo, Sumatra, Java, Tasmania, New South Wales, and Canada. But the laborious placer pan-washing methods of olden days have been supplanted and the precious metal is now mined by big steel dredges with immense buckets that scoop up the bottoms of the rivers known to contain platinum—virgin platinum nuggets that have been swept down from the "mother lode" that is "somewhere" up in the mountains. Unlike the case of gold, however, no "mother lode" of platinum has yet been found and worked.

What is it that started these big dredges at work digging up the bottoms of the Colombian and other rivers for platinum? It is this. The world's supply is threatened. Russia, up to the beginning of the war, furnished ninety-five per cent of it from deposits in the beds of the rivers flowing down from the Ural Mountains. The war and the anarchy which followed closed this source of supply. Colombia came next as a producer of platinum, and big speculation turned its attention to this premier source.

A short generation has seen platinum emerge from the neglected class of metals of lesser value into the lime-light of prominence. One of the two "noblest of metals" it is now called by Dr. George F. Kunz, of Tiffany's, who is an authority on the subject. It has supplanted its consort, gold, on the throne of popularity in some respects because of its high intrinsic value as a metal. Gold, however, for the mere reason of its being the money standard of the

PLATINUM NUGGET FOUND IN THE CHOCO DISTRICT, COLOMBIA

Natural size of the nugget; one of the largest ever found on this side of the Atlantic. It weighs about one and three-quarter pounds and is worth at to-day's prices about \$1,890. A similar nugget weighing slightly more was stolen from the Panama-Pacific Exposition in 1913, where it was on exhibition. It was never recovered and has probably been melted down and sold. The world's largest platinum nugget was found in the Ural Mountains and is said to have weighed eighteen pounds

PREHISTORIC ORNAMENTS OF PLATINUM AND GOLD

These were found in graves of the aboriginal Indian inhabitants of the island La Tolita, at the mouth of the Santiago River, Ecuador. In most cases a layer of platinum, cut to correspond with a similar one of gold, has been hammered onto the latter, so that one side of the ornament is of gold, the other side platinum

world will continue to dispute the aspirations of its new rival, and will do so successfully so long as gold and money are inseparably associated.

A hundred years ago platinum was worth but half the present price of silver. By the beginning of the present century the price had advanced by very slow degrees to \$14 an ounce, and it is within the last decade that it has reached the level of its associate, gold, in price—\$20.67 an ounce. Since that time, however, its price advance has been spectacular, mounting as high as \$170 an ounce during the war. At the present time it is worth about \$115.

The uses of platinum are innumerable. It is valuable in making sulphuric acid and is an essential in the manufacture

of explosives—indeed, modern warfare would be impossible without a certain amount of this metal in making guns, nitrogen, pyrometers, and other war material. This is why Uncle Sam found it necessary to call upon his patriotic citizens during the war to turn in their platinum jewelry and other ornaments—a call to which enthusiastic response was made. Lightning-rod tips are made of platinum, and for the coloring of pottery and in the manufacture of certain photographic papers and for the preservation of standards of measurements it is the only metal usable and reliable. In the archives of France there is a carefully guarded standard meter preserved in a bar of platinum. A meter is just one-ten-millionth part of the earth's

quadrant measured at the equator, and its determination was made with the greatest of care by Don Antonio de Ulloa in Ecuador early in the eighteenth century. The meter, according to this standard, is that universally adopted. It matters not, so the story goes, that it has long since been found out that Señor de Ulloa made a mistake in his calculations—his meter stands, just the same.

Platinum may be made into the hardest or the most ductile of metals. Combined with ten or twenty per cent of iridium it is the hardest. It is said that one cubic inch of platinum can be drawn to such fineness that a single web of the wire would extend twice around the earth! Platinum is one of the heaviest things in nature, being passed only by iridium, with which that metal is always associated, and by tungsten and molybdenum. Associated with platinum are nearly always found palladium, rhodium, and ruthenium, all precious metals, although the volume of platinum always predominates.

Platinum jewelry began to make its appearance about twenty-five or thirty years ago, when it was discovered that the color and luster of a diamond were materially improved when set in this white metal. As such settings grew in popular favor and as jewelers and refiners learned the art of handling platinum and of hardening it by an alloy of iridium, its use began to spread into the broader field of jewelry of all kinds and designs and into the manufacture of small ornaments and trinkets.

Platinum jewelry carries on its face a guaranty of genuineness and that it has been hand-wrought in that it cannot readily be cast, like gold. This gives it a mark of distinction, and there is no known metal which imparts the appearance of quality as well as platinum. It carries the stamp of "class" on its face. Platinum jewelry will retain its chaste and virgin look indefinitely and it does not oxidize or discolor, like gold, which will tarnish in time. With the proper admixture of iridium platinum forms a metal of such intense hardness and toughness that gossamer webs, scarcely visible to the naked eye, can be drawn from it and subjected to rough usage without serious injury. For this reason the most intricate designs may be carried out in jewelry by the use of an astonishingly small amount of platinum, which fact largely overcomes its high cost per weight.

The statement has frequently been made that the use of platinum in jewelry is a fad—a fad because it is high in price—and it has been pointed out that so long as it was cheap the *beau monde* had little use for it. This statement is vehemently denied by most jewelers. Almost with one voice they declare that the platinum fashion is here on its merits and not because the metal is rare or expensive, strongly asserting that it will stay and increase in popularity. One jeweler was heard to

say when discussing the relative merits of the two "noble" metals: "Recall the parade of nurses in their spotless white gowns and hats as they marched down Fifth Avenue when the war was on; then visualize, if you can, the effect had all these women been gowned and hatted in yellow, and you will have the difference between platinum and gold."

Among other uses to which platinum has been put in the past, it has served as a basis for money. It has also figured conspicuously as a base for counterfeit gold coins of various denominations and values in many lands. This was at times when the price was below that of the yellow metal. Some of these counterfeit coins are still extant in museums. A hundred years ago rubles of platinum were coined and circulated in Russia, but when the intrinsic worth of the metal in the ruble became more valuable than the face value of the coin itself these pieces were gradually retired to the melting-pot.

In view of the varied uses to which platinum now lends itself, it is to be

wondered at that the chemists and metallurgists of Europe were so slow in appreciating its value, for it was not until the eighteenth century that it seems to have attracted any attention. This was when de Ulloa visited what is now Colombia. Ages ago, so the archaeologists tell us, the aborigines of South America—the Incas and their predecessors—worked the metal into ornaments for their priests and kings. In the Museum of Natural History in New York there is a collection of platinum jewels and ornaments taken from tombs in Ecuador supposed to be not less than two thousand years old. But the art of working the metal was lost and not rediscovered till three hundred years after Pizarro's time, and another hundred years elapsed before it was recognized as having unusual qualities, and not until the World War descended upon us did scientists become fully acquainted with it.

What is the future of this remarkable metal? Nobody has any exact knowledge of what is going on inside the do-

main of Lenin and Trotsky. There may, and there may not, be large quantities of platinum stored in that country awaiting a favorable opportunity to strengthen its position with the outside world by using it as a trading base; indeed, it has been recently stated on a semblance of authority that Soviet Russia is about to begin again the coinage of platinum rubles and to adopt that metal as its money standard. The fact remains, however, that the world produces to-day but about twenty per cent of the platinum of pre-war times, and it is pointed out that under the best of conditions Russia cannot again enter the field in a large way for several years—indeed, it was well known even before the war that the existing Ural deposits were becoming depleted.

So long as fashion demands platinum and until some adequate substitute is discovered for its use in the arts a supply must be found "somewhere," and the situation clearly points to Colombia—known before the war to be the second largest producer, now the largest.

THE ST. LAWRENCE VALLEY

BY GILBERT H. GILBERT

THE wealth of the Indies was the objective of Columbus and the early explorers in their search for a westward passage to the Orient.

The Portuguese navigator Antonio Galvao in 1550, in the belief that no channelway existed between the Atlantic and Pacific, recommended that an isthmian canal be built—the precursor of the present Panama Canal.

Hernando de Soto in 1541, or possibly de Pineda in 1519, discovered the Mississippi; Jacques Cartier in 1534 discovered the St. Lawrence, and reported to his master, Francis I, "It is the greatest river that ever has been."

These two great rivers have their sources close to each other near the head of Lake Superior. The Mississippi flows southward through the Great Plains and empties into the Gulf of Mexico; the St. Lawrence, the broadest and deepest river on the continent, flows from its source by way of the Great Lakes, down the valley of the St. Lawrence in a volume of a quarter million cubic feet each second, to the northern Atlantic, a distance of more than two thousand miles.

The Rocky Mountains to the west, the Laurentians to the north, and the Appalachian ranges from Alabama curving north and eastward to Nova Scotia, form the sides of a great trough which runs from the Gulf of Mexico to the Gulf of St. Lawrence by way of the Great Plains, the Great Lakes, and the St. Lawrence Valley.

Robert Cavellier de La Salle, in quest of a passage to China in 1669, voyaged

180 miles from Montreal up the St. Lawrence to Lake Ontario, thence across the lakes to the foot of Lake Michigan, and southward by the Ohio and Mississippi to the Gulf of Mexico, thus establishing the connection between the discoveries of De Soto in the South with the discoveries of Père Marquette, Joliet, des Groseilliers, Radisson, and the other explorers in the North, whose names are still preserved in the nomenclature of the localities and waters about the Great Lakes.

The discovery and establishment of water routes from the ocean by way of the Mississippi and by the St. Lawrence with the rich midland areas about the Great Lakes brought with them a recognition that the potential natural wealth of the vast territory tributary to the lakes was far greater and more real than the fabled riches of El Dorado or the Great Khan. Trading posts were established at the site of Duluth in 1678 by the Sieur de Luht, at the site of Detroit in 1701 by Cadillac, and throughout the region of the lakes and St. Lawrence by the contemporaries and successors of these pioneers.

To-day these regions are productive of greater wealth from manufactures, mines, and agriculture than any other region in the world.

The Panama Canal provides passage-way to the East for vessels of the largest type, but the vastly greater trade and commerce of the tributary areas of the lakes still remains landlocked to vessels of a size that could profitably engage in ocean carriage. The tonnage passing

through the Panama Canal is not one-tenth of the volume of tonnage passing in and out of the ports of the lakes and the St. Lawrence.

Of the white population of this hemisphere more than one-half inhabit New England and the States and provinces that border on or are tributary to the Great Lakes or the St. Lawrence Valley. Two-thirds of the railway tonnage of North America is carried in this region. Iron, coal, and grain are the essential elements of the material predominance of a nation; eighty-five per cent of the iron, seventy per cent of the coal reserve, and seventy-five per cent of the grain are of the resources of this region, and copper, zinc, lead, timber, pork, and wool are of its main products.

The manufactures and distribution of the products of the United States have resulted in a commerce that excels the total international commerce of the rest of the world. The industries produced \$63,000,000,000 of wealth in 1920, three times that of 1910 and five times that of 1900. The Nation's business has outrun its transportation facilities; the transport of an ever-increasing volume of products must be provided for if development is to continue.

Transportation is a link in the chain of costs from producer to consumer. It is an economic maxim that "The total cost is the cost of production plus the cost of transportation."

Judge Gary stated, in commenting on the business of United States Steel for 1921: "Railroad transportation, on the basis of existing rate conditions, aver-

International

THE WATER-FRONT AT MONTREAL—"THERE WAS A GREATER VOLUME OF GRAIN SHIPPED OUT OF MONTREAL LAST SEASON THAN THE COMBINED GRAIN SHIPMENTS OUT OF ALL OTHER ATLANTIC PORTS"

ages, in the case of subsidiary companies, forty per cent of the cost of producing steel." If the average cost of transport on the Nation's business of \$63,000,000,000 in 1920 was forty per cent, the consumer would have paid more than \$25,000,000,000 for transportation.

The commerce tributary to the lakes, under existing conditions, is under the economic handicap of long hauls and great transportation costs when competing for foreign or seaboard trade. The geographical situation of the lakes in the midland of the continent, the great extent of shore-line adapted to ports of accumulation for the vast agricultural and industrial production, and the depth of water in the lakes are a combination of natural conditions conformable to the most efficient employment of large freight vessels, the most economical known means of transportation. The greatest economies can be realized in navigation on through freights—that is, where bulk is not broken from the port of loading to destination.

These conditions cannot be realized in the commerce of the Great Lakes until the deep-water way, the New Welland Canal, now being constructed by the Canadian Government between the upper lakes and Lake Ontario, is completed and the deep-water way down the St. Lawrence River to the Atlantic is developed. This development in its simplest form consists in the deepening and widening of the six canals of the present St. Lawrence system. These canals are from one to fourteen miles in length; their combined length is less than forty-five miles.

The cost of ocean freights averages one-tenth of the cost of rail freights, or in the approximate proportion of one mill to one cent per ton mile.

The augmentation in the cost of transport where bulk is broken and cargo transferred between terminals is emphasized in the shipment of wheat from the lakes by way of the New York State Barge Canal to New York en route to

Liverpool; the figures are approximate percentages of the cost from Duluth to Liverpool:

	Distance, Miles.	Cost, Per cent.
Duluth to Buffalo ¹	1,000	18
Buffalo to New York ²	496	47
New York to Liverpool.....	3,107	35
	4,603	100

¹ In elevator. ² On barges.

It is estimated that half of the cost and about half of the time will be saved in shipping directly down the St. Lawrence to destination. The distance from the foot of lake navigation to Liverpool via the Barge Canal is 3,600 miles, by way of the St. Lawrence it is about 3,100 miles, or 500 miles less, or about the length of the canal system between New York and Buffalo.

In addition to the New York State Barge Canal there is the Canadian canal system down the St. Lawrence to Montreal. The State Barge Canal is designed for twelve feet navigation; there is but ten feet available. The cost of this system was \$200,000,000. The Canadian system is fourteen feet deep in the 75 miles of canalization between Lake Erie and Montreal; the river reaches between the canals would average thirty feet in depth. The distance from the present foot of lake navigation to Montreal is 400 miles; with the opening of the New Welland Canal this distance will be reduced to 110 miles.

By reason of the shorter and cheaper haul down the St. Lawrence there was a greater volume of grain shipped out of Montreal last season than the combined grain shipments out of all other Atlantic ports.

The locks of the New Welland Canal, now being constructed and well advanced towards completion, are seven in number and capable of locking vessels of very much greater capacity than the present lake vessels of 15,000 tons over the difference of elevation of 330 feet between Lake Erie and Lake Ontario at Niagara Falls. When this canal

becomes operative, there will remain but 110 miles separating the deep-water navigation of the lakes from ocean navigation at Montreal. Within this distance there remains to be enlarged and deepened from fourteen feet to thirty feet but 45 miles of canal, a simple and straightforward process along lines familiar to engineers on the St. Lawrence for more than one generation. This undertaking, in its engineering features and in the volume of excavation, when compared to that of Panama, is a minor project. The average width of the Panama Canal is three times as great, and some of the cuts, as in excavating through the continental divide at Culebra, are more than 300 feet deep.

New York is about one thousand miles south of Central Europe, our main foreign market. The St. Lawrence River and Gulf are in the direction of the shortest possible sea lane to Central Europe.

The average rate of travel of an ocean or lake freighter is 250 miles a day. The average travel of a freight car is 30 miles a day. The average cost of ocean freights is but one-tenth of the charge for rail haul. The rates of freighting the bulk cargoes, for which lake vessels are especially designed, are less than seventy per cent of the cost of ocean carriage.

In modern water carriage size means cheapness, the transport of a given weight of cargo in a single vessel being cheaper than in two vessels of half the size. The concentration of carrying power affects economies in officers and crews, their wages, provisions, and accommodation space, and size makes for economy in ship-building. If two steamers of 2,500 tons each were to cost for both, say, \$500,000, one vessel of 6,000 tons could be built for that price, and for double of the cost of a 6,000-ton vessel a 14,000-ton to 15,000-ton vessel could be built.

It is the navigable depths of channels that is the controlling factor in the em-

ployment of the most economical and efficient vessels.

The market will always select the cheapest route for trade; the ports themselves are but the points of collection and distribution of the markets or industrial centers, and their position is determined by this economic relation.¹

There are but two States having ports on the lakes and on the Atlantic: New York, though not a great producer of raw materials, is the greatest manufacturing State in the Union; and Pennsylvania, the second in volume of manufactures, whose main industry is the conversion of the iron ore of Lake Superior into steel, made commercially practicable by the economies of water carriage. Montreal is the head of ocean navigation on the St. Lawrence and is the Canadian metropolis.

New York is the greatest port in America, and is the port of distribution for more than half of the sea-borne commerce of the United States; Montreal is the second port in America. These two ports are the main points for the collection and distribution abroad of the products from the region of the Great Lakes.

In the fall of 1919 the Canadian Government accepted the invitation of the United States Government to undertake a joint investigation of the improvement of the St. Lawrence River with a view to the development of a channel way that would afford through passage-way for ocean-going vessels from the Atlantic to the Great Lakes. An international joint commission was formed and engineers appointed to investigate and to formulate plans and estimate the cost of an international development of the St. Lawrence. The plans and estimates have been made.

Two hundred and seventy million dollars is the estimated cost of a thirty-foot channel way from Lake Ontario to ocean navigation at Montreal, a distance of 182 miles, and the development of 1,500,000 hydroelectric horse-power at the Longue Saulte Rapids.

From the head of the Galops, the first rapid on the St. Lawrence, to Montreal is about 110 miles; the proposed works are virtually all within this distance.

The general scheme is, starting from Montreal and going up the river, to deepen the present Lachine Canal with some variation from the present line. This canal is $8\frac{1}{2}$ miles long and passes the forty-five feet of drop in the Lachine Rapids.

From the head of these rapids Lake St. Louis runs eighteen miles to the entrance of the Soulanges Canal. This canal passes in the fourteen miles of its length the Cascades, Cedars, Split Rock, and Coteau Rapids; the difference in elevation over this series of rapids is 84 feet, and it has the greatest potential horse-power on the river. It is proposed to build an entirely new canal past these rapids.

International

CONSTRUCTION WORK ON THE NEW WELLAND CANAL

Lake St. Francis runs from the head of these rapids to the foot of the Cornwall Canal, a distance of 30 miles.

The Cornwall Canal is 11 miles long and passes the 48 feet of drop in the Longue Saulte. It is proposed to develop about 1,500,000 horse-power through the construction of great dams at and above these rapids. These dams will back the water of the river up for about twenty miles to the Rapide Plat, where it is proposed to build another series of great dams, to back the river up above it to about the level of Lake Ontario, and to serve as regulating works to govern the level of that lake.

The impression in the public mind is that this international power and navigation development will flood out all the rapids of the river and leave great placid pools between the dams. This is far from the conditions that will obtain.

The main rapids of the St. Lawrence are the Lachine, the Coteau-Cascade series, and the Longue Saulte; the proposed development will not lessen the turbulence of these rapids or shorten the length of canals required, about 34 miles, to carry navigation past these rapids. The effect will be to drown out the two minor rapids, the Rapide Plat and the Galops, and the canals around them and to develop 1,500,000 horse-power.

If the present canals were deepened to 30 feet and no dams built or power developed, the cost would probably be less than half of that of the more elaborate scheme with its great structures and the great cost of their installation.

The urgent need is a means of transporting the great volume of Western products to the markets of the world and the substitution of the economies of water carriage for the tenfold cost of transportation by rail.

The development of water power is not an urgent need in Canada. There is more water power available on the St. Lawrence, the Ottawa, and from the runoff of the Laurentians than there are

industries to use it; the population is less than ten per cent of the population of the United States.

In connection with the negotiation relative to a treaty governing the international aspect of the proposed deep-water way and power development, the Canadian Government, in response to a communication from the Secretary of State, replied: "It would not appear to be expedient to deal with the matter at the present time."

The proponents of the project state that the present high cost of transportation of Western products is an avoidable and unnecessary tax and bounty exacted from the producer.

The opponents of the project state that the whole scheme is chimerical and impracticable by reason of the short season of navigation, ice in the Gulf, and fog, and that the cost will run into prohibitive figures; and they also put forward other deep-water way projects that will maintain commerce in its present channels.

The climatic conditions obtaining on the lower St. Lawrence are not more severe than the conditions about Lake Superior, where over 100,000,000 tons are passed through the Saulte Ste. Marie Canal each season; when the St. Lawrence deep-water way is developed, there will not be a more restricted or difficult section for navigation on the route than the present passageway between Lake Superior and Lake Huron. Any climatic restrictions that would apply to the proposed deep-water way apply with equal force to the present conditions on the lakes and to the barge canals and to the port of Montreal—the second port in America in volume of tonnage.

It is to be expected that those ports or States whose present commerce and trade may be deranged or diverted by the proposed trade route will be strenuously opposed to the project, and the seemingly great economic advantages that will accrue to the country as a whole should be weighed against these disadvantages.

THE BOOK TABLE

AMONG THE NEW NOVELS

BABBITT¹ is the reverse of "Main Street;" it packs into the personality of one ordinary citizen the banality, vulgarized energy, and ambition to be a hustler and a good fellow, of a whole class, while "Main Street" took what was alleged to be (but wasn't) a typical town and diffused all over it the meanness and crassness at which the author chose to direct his arrows of irony. Thus "Georgie" Babbitt is the book; the other people are merely what actors call "feeders" to Babbitt. This is why Mr. Lewis's new story will puzzle and disappoint one large class of novel readers—those who demand situation, construction, suspense, culmination, and all the effect of drama. If, however, such readers will lay aside that perhaps Victorian attitude, they will find that Babbitt is in himself an epitome of one kind of American life; he bristles with actuality; he holds the stage of one's attention as closely as Lulu Bett did in Miss Gale's story—to compare as opposite characters as there could be.

Babbitt's literary portrait is a piece of meticulous exactness; the technical skill with which his creator avoids the temptation of making a mere type of him is a triumph. So, too, is the cleverness that endows Babbitt with a recurrent, only semi-conscious, longing for romance and idealism, in his breaking away from his campaigns of "pep" and hurrah to go fishing with his stupid and gloomy friend, or now and then to revolt for a time against the crooked business and politics which usually seem to him just what every "regular guy" does.

Fortunately for the reader, who might otherwise tire of the minute realism of the description of Babbitt's daily acts from the time he throws away his safety-razor blades to his last drink at night, Georgie is a bubbling joy of slang, and his quick, bumptious talk is amusing; whether one laughs at him or with him doesn't much matter. He is vain, uncultured (though a college graduate), a pusher and a boomer and a jollier. He echoes all the slogans, repeats the dubious stories, "orates" at club dinners, takes for granted that whatever is the business practice must be right, gets his politics and convictions at second hand, and is a successful church booster despite bad breaks in his personal morality. In short, he is an amusing scamp, but he is not a villain; he is not meant as a type, yet his vulgarisms and delinquencies are typical of a pretty large number of men who would be terribly outraged if they were to be told that they were not valuable citizens and go-ahead, progressive American business men. Irony is sometimes good for the soul, for it strikes deeper than moraliz-

ing. But the weakness of unrelieved irony is that it borders on cynicism; there are plenty of Babbitts about; but, thanks be, there are also plenty of non-Babbitts.

Eight years ago, in reviewing Mr. Lewis's "Our Mr. Wrenn," I spoke of it as a first story that aroused great

WILLA CATHER

expectation. The author has certainly gone far since then. The young shoe drummer there depicted was less real but more joyous than Georgie Babbitt; perhaps a little mixture of his gay efficiency and personal cleanness and honor might have made Babbitt something better than the man now so sardonically depicted with faultless realism.

In quite a different way Miss Willa Cather's "One of Ours"² is also centered on one person, Claude, the fine and lovable though not very articulate farm lad of Nebraska. As Dorothy Canfield puts it in a review of Miss Cather's admirable book, it "is the whole purpose of the novel to make us see and feel and understand Claude and passionately long to open the doors to his living brothers all around us, imprisoned and baffled like Claude in a bare, neutral, machine-ridden world."

The tone of the story is sympathetic rather than sarcastic, and the subsidiary characters are carefully built up, not merely sketched in. Moreover, we have here, as always in Miss Cather's novels, the atmosphere and charm of outdoor life, realism touched with deep feeling for nature as well as man. Claude is unsatisfied rather than dissatisfied; his natural tendency toward expansion on the side of thoughtful

idealism is hemmed in by his surroundings, by sordid necessities of heavy toil, by a facile and selfish brother, a jocose materialistic father, and finally a narrow, cold, and undomestic wife who insists on going to China to help the missionaries rather than care for home and husband.

The novel is, so to speak, broken apart in the middle by that which broke apart so many things—the World War. It is disappointing that Claude's problems, so well set forth, should not be worked out to any conclusion. The war scenes are vivid; Claude's experiences are in some respects singular and evidently based on authentic war knowledge, and the inevitable tragic end is moving. The two parts of the book are painfully disjointed; as Mr. Lewis has written of this book, Miss Cather might as well, so far as working out its theme is concerned, have pushed Claude down a well as have sent him to war.

There is a clear note of sincerity in all of Miss Cather's writing. "My Antonia" remains her best book, but "One of Ours" is in impressionistic effect far above the average novel.

Mr. Poole's "Millions"³ is in one sense slight, for it is brief, involves few characters, and is centered on one situation. But its very simplicity is its strength. The theme interests one singularly, because it is that of a test of human nature—whether a woman's honor and conscience will give way to the temptation of self-interest disguised as morality. Madge, half-sister of a man reputed to be a millionaire, is summoned to what may probably be his death-bed. He has neglected her and allowed her to fight her own way, yet she knows that he has made a will in her favor. The brother is unconscious for days; other relatives cluster around, but the sister is legally and morally responsible; an actress appears who has been the brother's mistress and thrusts herself into the foreground; the relatives fear she may grasp the millions at the last minute. The brother comes to himself and demands to see the actress. To thwart him may be to kill him. What shall the sister do? In the end she does what her sense of honor and right dictate: she refuses to shift the responsibility to uncle, aunt, and cousin, who would be shocked to admit to themselves that they at heart hope that the man will die. It would be unfair to tell just how the problem is settled; the result is the growth in this woman under severe trial of firm character, power of decision, and resolve to do what is just and right despite consequences. Madge emerges twice the woman she was, and we know that she will now grapple wisely with life's problem, millions or no millions. Intensely the corroding influence of tant wealth on average people

¹ Babbitt. By Sinclair Lewis. Harcourt, Brace & Co., New York. \$2.

² One of Ours. By Willa Cather. Alfred A. Knopf, New York. \$2.50.

³ Millions. By Ernest Poole. T. Company, New York. \$1.75.

respectability is subtly shown. Problems aside, the book has reality and tensility.

Mr. Locke's large circle of admirers will miss in his "Tale of Triona" the whimsicality and humor of "Septimus" and "The Beloved Vagabond;" on the other hand, they will find a note of reality and emotion in the narrative of the plight of John Briggs, a man of lowly origin but imaginative genius, who blossoms into literary fame as Alexis Triona, and neglects to state that much of his raw material came from a notebook he found on a dead man's body. When he falls in love and marries, one he forces another, and when the explosion comes the horror of his bride is not so much at the original fault as at the edifice of falsehood built to sustain

⁴The Tale of Triona. By William J. Locke. Dodd, Mead & Co., New York. \$2.

it. Mr. Locke is at his best in dealing with the incidents of this moral catastrophe; he is not at his best in the early chapters portraying fashionable and gay life in London. The love story is exceptionally fine and pleasing, and the reader suffers poignantly and sincerely with Triona in his reverses. This is one of the novels one is perfectly willing should end happily.

Finally, if you want to laugh irresponsibly, hilariously, and uncritically, read Mr. Hilaire Belloc's "The Green Overcoat."⁵ It has the probably unique honor of being illustrated by G. K. Chesterton, who enters into the author's vein with zest. The book is sheer comicality, but with an undercurrent of humorous satire.

R. D. TOWNSEND.

⁵The Green Overcoat. By Hilaire Belloc. Robert M. McBride & Co., New York. \$1.75.

THE NEW BOOKS

BIOGRAPHY

DIARY OF A JOURNALIST: LATER ENTRIES (THE). By Sir Henry Lucy. E. P. Dutton & Co., New York. \$6.

This covers the period from 1890 to 1910. Sir Henry's knowledge of English society, politics, and journalism is extensive. He gives us here a welcome addition to the Diary published years ago. There are numerous anecdotes about people of note and laughable stories gleaned from various sources.

WORLD WORTH WHILE (A). By W. A. Rogers. Illustrations. Harper & Brothers, New York and London. \$3.

A delightful book of reminiscences about cartoonists by one of them. It tells not only of cartoonists but of their victims—or shall we rather say their subjects? Most of the cartoonists have a saving grace of humor which is often appreciated by those they caricature—as, for instance, Mr. Roosevelt, who is described in this book as getting no end of amusement out of the pictures that represented him as a bad boy. Mr. Rogers's agreeable text is accompanied by a number of reproductions of his cartoons.

ESSAYS AND CRITICISM

DEFINITIONS. By H. S. Canby. Harcourt, Brace & Co., New York. \$2.

Professor Canby always writes with clarity. These collected papers deal with recent literary discussion and the modern trend of criticism. What makes a book popular? What makes it a work of art? What novels do survive and what should survive? Light on such questions is found in these pages. The views put forth are tolerant as well as acute.

TRAVEL AND DESCRIPTION

ADVENTURES IN BOLIVIA. By C. H. Progers. Dodd, Mead & Co., New York.

Few readers will leave the pages of this well-printed book uncut. It tells in simple language the story of an adventurous Englishman's trip to hostile Indians in the hinterland of Bolivia to duce them to sell their rubber. He went unarmed and won their friendship

through his tact and address, making to an assembly of warriors a two-hour speech that saved his life and won them over to his projects. Simple color sketches by the author accompany the text.

LAND OF THE MIAMIS. By Elmore Barce. The Benton Review Shop, Fowler, Indiana.

This is a painstaking attempt to tell the story of the winning of the "Old Northwest" from the Indians. The mass of disconnected material that comprises the sources of the history of our relations with the Indian tribes led by Tecumseh and other less well known chieftains has been carefully worked over by the author, and a comprehensive and significant résumé is the result.

OUT OF THE WORLD NORTH OF NIGERIA. By Angus Buchanan, M.C. E. P. Dutton & Co., New York. \$6.

The author tells of a journey of fourteen hundred miles on camel-back through a practically unknown region of the Western Sudan. He discovered many new species and subspecies of birds and small animals, and proves himself a good story-teller as well as an experienced naturalist.

UP AGAINST IT IN NIGERIA. By Langa-Langa. E. P. Dutton & Co., New York. \$5.

A lively and entertaining account of adventures in Africa and in getting there from England, including the author's narrow escape from death when his ship was torpedoed by the Huns. Conversational and informal to a degree, the narrative by its *naïveté* and humor justifies the plentiful use of the personal pronoun.

HISTORY AND POLITICAL ECONOMY

FROM HARRISON TO HARDING. By Arthur Wallace Dunn. G. P. Putnam's Sons, New York. \$7.50.

This work aims at presenting a political history of the period from Harrison to Harding, but its chief interest lies in its innumerable anecdotes of public men, with many of whom the author became personally acquainted during his long service as a Washington newspaper correspondent. It gives a "behind the

scenes" view of public life which is extremely entertaining, though many of the stories make the reader feel that the author is "telling tales out of school," and some of them will rightly give offense in certain quarters. While bearing some of the marks of the hurried writing inevitable in the habits of the daily newspaper correspondent, the volumes are decidedly interesting and will attract a host of readers.

SCIENCE

BOOK OF THE SKY (THE). By M. Luckiesh. E. P. Dutton & Co., New York. \$3.50.

Not a book about astronomy, as the reader might at first suppose, but one that deals with the sky as seen by the airman. It discusses the phenomena of clouds, winds, and weather in a spirit that is at once poetic and scientific. In the author's description of airplane voyages through the clouds an attractive literary quality is thus skillfully combined with accurate knowledge.

WONDER BOOK OF CHEMISTRY (THE). By Jean H. Fabre. The Century Company, New York. \$2.50.

The amount of book material that still continues to be dug out, so to speak, from the literary remains of that remarkable man, Jean H. Fabre, the naturalist, is surprising. Here we have a series of talks about chemistry, written largely in the form of dialogue, and not only simple, but well calculated to arouse the curiosity and interest of young people.

POETRY

SEEDS OF TIME. By John Drinkwater. Houghton Mifflin Company, Boston. \$1.25.

The delicious coolness and delicate clarity of John Drinkwater's poetry is to be observed at its highest peak in this volume. He is essentially a didactic poet, metaphysical at times, but never so in a heavy manner. While his lyric note is always obvious, it may never be termed of that rippling order that we associate with the most successful lyrics. His poetry flows slower, but its strength is undoubted and the pantheistic urge that is always its undertone reaches the reader like a small clear wind, cool and gentle, essentially lofty at times but never objectionably so. Beauty is a high passion with him, but he is its disciple and not its feverish worshiper. "Thrill" (herewith quoted) might be Mr. Drinkwater's credo:

No beauty beauty overthrows,
But every joy its season knows,
And all enchanted hours prepare
Enchantment for to-morrow's wear.

Who in the just society
That walks with him this hour can
see

But shadows of another bliss
Loses both that delight and this.

Grieve not the parting day, for soon
The nightingales will sing the moon
Climbing the track that now the sun
Leaves when the songs of day are
done.

And grieve not when her beauty
pales,
And silence keeps the nightingales,
For that eclipse again will bring
The sun with all his birds to sing.

THE BUSINESS OF A BANK

SEVEN thousand bankers from all sections of the United States attended the forty-eighth annual convention of the American Bankers Association, October 2-6, in New York City. Bankers are extremely valuable people in this day and age, and in any scheme of finance banks are first and fundamental. The greatest world problems of the present time are to a large extent banking problems, and it is the bankers who must find the solution. Modern business absolutely could not exist without banks; they provide currency and they supply capital, and trade and industry are dependent upon both of these

things. Business is really the collection and distribution of money, and a bank, loosely defined, is an agency for this purpose.

From the point of view of the investor a bank is as important as in the case of the seeker after capital. The very first thing an investor should learn is how to make use of a bank, for without this knowledge he will never get far. And while banks are not philanthropic institutions, every progressive bank will go out of its way to assist its customers, for its prosperity and success are inextricably interwoven with the prosperity and

A Review of Your Investment Holdings

CONSTANT review of your investments may be necessary not only to guard against loss, but to take advantage of opportunities for profitable sale or exchange. Have you considered the following matters in connection with your present holdings:

Are any of your bonds callable before maturity? If so, should they be sold or exchanged for non-callable issues?

Would it be advisable for you to increase the proportion of tax-exempt bonds in your holdings?

Are your bond holdings properly diversified?

We can assist you in answering such questions as these. If you will send us a list of your present holdings, we shall be pleased to give you our suggestions and recommendations.

success of the community it serves. A bank's willingness to help may be in its own interests primarily, but, whatever the motive, this help benefits the customer just the same. And the services a bank can render are manifold.

First of all, a bank is the safest depository for money, for cash in the form of bills and currency. A bank's safe-deposit vault is a larger and stronger place for cash than anything the ordinary individual can afford to maintain. This is protection against fire as well as against robbery, and how many times are bank burglaries successful as compared with those in private residences or offices? No doubt there still exist some people who keep money in stockings, old teapots, or tucked away in bureau drawers, but these people are running big risks which might be almost entirely eliminated if they would avail themselves of the facilities offered free of charge by banks.

When money is placed in a bank, the depositor is thereupon entitled to draw against his account by means of checks. Payment by check is of inestimable benefit to the depositor, for it does away with the expense and inconvenience of paying by cash, and avoids the risks of loss or theft which are always present when cash is carried on the person or kept in the house. A bank makes no charge for this service, and, further, a bank almost always allows a depositor interest on his checking account, the usual condition being that he keep a minimum balance—that is, not allow the amount of money he has on deposit to fall below a certain agreed amount.

A depositor may also call upon his bank to collect checks for him that are drawn on other banks, and usually no charge is made for this service, which is a real one. For instance, if John Doe presents a check at his bank in New York drawn to his order by Richard Roe on a Chicago bank, the New York bank will collect the money from the bank in Chicago and credit it to Mr. Doe's account. This is another service of great convenience to the depositor, and, like many of the other services rendered by banks, has become so commonplace that it is taken pretty much for granted and its full worth not always appreciated.

If a man has a sum of money he knows he will not need for several months, he can arrange with his bank to deposit the money there; the bank will give him an instrument known as a Certificate of Deposit and agree to pay him a certain percentage for the use of his money for the duration of the time fixed upon. This is a very simple method of making a short-term investment, and, although the rate of interest paid is customarily low, it is far better to keep money working all the time, even if the return is low, than to let it be idle.

It is easier for a man to obtain a loan at a bank if he has an account there than is the case otherwise. A bank usually considers itself under certain obligations to its depositors, not only in the matter of making loans, but so far

NO LOSS TO ANY INVESTOR IN 49 YEARS

7%

Not Much Longer

When 8% was the prevailing rate of interest on First Mortgages in the National Capital, we sold our First Mortgage Investments to yield 8%.

During the year 1922 the prevailing rate has been 7%, which we will continue to offer only so long as we can obtain it for our investors with unquestioned safety.

Investments made before a lower rate goes into effect will receive 7% for two years to ten years, depending upon the maturity desired. Payment may be extended over a period of 10 months.

BONDS SHORT TERM NOTES ACCEPTANCES

FINANCIAL DEPARTMENT

(Continued)

as terms are concerned. If a man is a stranger, a bank naturally requires security for any loan it may make him—stocks, bonds, mortgages, or other tangible property. In the case of a depositor, however, the bank is familiar with his affairs, knows his financial standing, and very possibly will consider his note ample security. In times of financial stress the loaning function of a bank is of most value to a depositor, for at such times banks will not customarily accommodate any one other than their own depositors. And often a ready loan may mean the difference between bankruptcy and solvency.

Bank deposits are repayable upon demand. That is to say, a depositor may withdraw the full amount of his deposit whenever he desires, and he may do this either by means of a check to his own order or to the order of whomsoever he may desire. It naturally follows from this that any part of his account may also be withdrawn upon demand. In other words, he may draw against his account in any amount or amounts up to the total sum deposited, and unless the bank pays these sums it lays itself open to a suit for damages.

In the modern business world the emphasis is continually upon short cuts and simplification. The practice of sending receipted bills is growing in disfavor, and here a checking account is very handy. A check sent in payment of a bill must be indorsed—that is, signed—on its back by the person or firm to whom it is made payable, so that when the check is returned from the bank it is itself a valid receipt. Further, the person who draws the check may make a note on its face of the item being paid, and when this is done the check is a complete record of the transaction.

Bond coupons may be deposited in your bank and the bank will collect them for you and place the proceeds to the credit of your account. Many banks sell steamship tickets these days; travelers' checks may be obtained at banks; banks will give advice and help on the income tax; they will act as brokers for the purchase and sale of securities. Many banks have trust departments for the administration and handling of estates. In fine, their business is so varied that in one short article it is impossible to do more than sketch the vague outlines.

For our purpose, however, perhaps the

most important business of a bank is the service it can render investors. It is the duty of a banker to keep informed on this subject, and his knowledge and experience are always at the disposal of his depositors. A bank will not only buy and sell securities for you, but it will obtain information about investments, about the standing and reliability of brokers and investment concerns, and about business concerns as well. If you live in Richmond and want to find out about a firm in Cleveland, your bank will write to a bank in Cleveland and obtain the information you want. Banks are conducted so as to render service, and a man is foolish who does not avail himself of its facilities. Never hesitate to appeal to your banker for help and advice on all matters pertaining to investments. Remember, that is the business of a bank.

YOU CAN MAKE IT SIMPLE

BY THOMAS L. MASSON

ONE of the most constant illusions among all classes of men is that the so-called "deep" subjects are uninteresting and hard to understand. They have been made deadly dull by a whole succession of writers who, in order to make themselves important, have used a whole lot of big words to obscure their meaning. They are hard to understand only because we make them so. Another error is that children cannot be made to understand them. When I was a boy of fourteen, playing baseball, I used to talk constantly with a group of boys of my own age about God and infinity, and the conclusions we arrived at then were about the same as I hold now.

At the present moment there is a great deal of agitation going on all over the world, especially among the so-called thinkers. Bernard Shaw, in England, said only the other day, "The world is going to the devil." Anatole France, perhaps the most illustrious figure in France, declared that "civilization is dying." The biologists tell us that the highest types of people are dying out, giving place to the lowest types. The spiritualists are tremendously agitated, and declare that we are in the midst of a great spiritual revolution. Dean Inge, of London, thinks that we are in a pretty bad way, and his nickname of "the gloomy dean" does not mitigate the force of his criticism of mankind. The churches are a good deal upset. Labor troubles are rampant. Most people are thought to be very indifferent, and the standard of intelligence is said to be rapidly falling. What does all this mean?

Now there are a few men—you can count them on the fingers of one hand as a rule—in every age who are able to define what is the matter with that particular age. They don't show up until long afterwards; then posterity—their posterity—looks back on them and knows them to be wise men. None of us knows now who are the really wise men of this age; many of the critics

During the past year the Financial Editor of The Outlook has helped hundreds of Outlook readers to solve intelligently their particular investment problems. Perhaps you are contemplating a shifting of your present holdings or have fresh funds to invest. In either case we shall be glad to give you specific information on any securities in which you may be interested. A nominal charge of one dollar per inquiry will be made for this special service.

declare that there aren't any—except themselves.

Nevertheless, out of all this apparent chaos of thought and typography it is not so very difficult to sum up the whole matter and put it in a few simple words. After that has been done as a basis, one can go on and think out the rest if he chooses—until he comes to a full stop—as he always will. That is in the nature of things.

To begin with, let us say that philosophy is the science of boiling everything we know down to the point where we can tell where we get off; that is, we know what's what and what isn't what.

Your consciousness is all you have to go by. Eliminate that, and there isn't anything left. It is therefore with your consciousness that you must deal.

Now there are two parts to our consciousness; that is to say, there are two ways in which we come to know things. One is through the visible, and the other through the invisible. The visible world about us appears to be in the utmost disorder. We go into a forest and the trees, dead and dying, are lying any which way, and as we go about everything is piled up and being carted away; if there are regular masses, like cities, etc., they are changing all the time. So much for the outside. But the scientists tell us that they have sifted all this mass of matter down to the electron, and that everything is com-

posed of electrons, which have a speed of 186,000 miles a second. It is the various combinations of electrons that compose all matter—some say all thought.

So that underneath this visible world, as we see it or think we see it, there is an absolute law. It is all founded on mathematics; nothing can happen that isn't based on material law. The sun rises and sets, the planets and the electrons both revolve, according to this law.

So much for the visible world. Now when it comes to the invisible world, the same thing is true, if we are patient enough to work it out for ourselves; this not only takes time, but much pain. We cannot expect to develop ourselves without self-discipline.

How can we come to know all this? The greatest of philosophers, Kant, pointed out the way long ago. It is through experience.

The present moment isn't causing any of us any trouble. We are not worrying about it. We worry only about the future. Let us, therefore, rest upon the present moment, and increase our faith in the moral law by checking ourselves up with our past experience. Looking back upon it, we shall find that there was a good reason for everything, although we did not think so at the time. Start from this point and work ahead for yourself.

THE OUTLOOK CLASSIFIED ADVERTISING SECTION

Advertising Rates: Hotels and Resorts, Apartments, Tours and Travel, Real Estate, Live Stock and Poultry, sixty cents per agate line, four columns to the page. Not less than four lines accepted.

"Want" advertisements, under the various headings, "Board and Rooms," "Help Wanted," etc., ten cents for each word or initial, including the address, for each insertion. The first word of each "Want" advertisement is set in capital letters without additional charge. If answers are to be addressed in care of The Outlook, twenty-five cents is charged for the box number named in the advertisement. Replies will be forwarded by us to the advertiser and bill for postage rendered.

Sept. 12, 1922

Advertising Manager,
The Outlook,
381 Fourth Avenue,
New York City

Dear Sir: An advertisement inserted in your "Help Wanted" column for two weeks brought 187 replies from all parts of this country. It was possible to see personally only a dozen or more of these applicants, but, besides the large number, the quality of the applicants impressed me. Evidence has been given me, as the advertiser, of the excellence of The Outlook as a medium for reaching a very fine class of applicants for positions.

Yours very truly,

Try an Outlook "Want Ad." The rate is only Ten Cents a Word.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, ETC., RE- QUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912, OF THE OUTLOOK, PUBLISHED WEEKLY AT NEW YORK, N. Y., FOR OCTOBER 1, 1922.

State of New York, County of New York, ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Robert D. Townsend, who, having been duly sworn according to law, deposes and says that he is the Managing Editor of THE OUTLOOK, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and regulations, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:
Publisher—The Outlook Company, 381 Fourth Ave., N. Y. City. Editor—Lyman Abbott, 381 Fourth Ave., N. Y. City.
Managing Editor—R. D. Townsend, 381 Fourth Ave., N. Y. City. Business Managers—The Outlook Company, 381 Fourth Ave., N. Y. City.

2. That the owners are: The Outlook Company, 381 Fourth Ave., N. Y. City.

Stockholders of The Outlook Company owning 1 per cent or more of the total amount of stock:

Lawrence F. Abbott.....381 Fourth Ave., New York City	N. T. Pulsifer.....456 Fourth Ave., New York City
Lyman Abbott.....381 Fourth Ave., New York City	Lawson V. Pulsifer.....456 Fourth Ave., New York City
W. H. Childs.....17 Battery Place, New York City	Chas. Stillman, C. C. Stillman, E. G. Stillman (Trustees for J. A. Stillman).....55 Wall St., New York City
Travers D. Carman.....381 Fourth Ave., New York City	Chas. Stillman, J. A. Stillman, E. G. Stillman (Trustees for C. C. Stillman).....55 Wall St., New York City
Walter H. Crittenden.....308 Broadway, New York City	Chas. Stillman, J. A. Stillman, C. C. Stillman (Trustees for E. G. Stillman).....55 Wall St., New York City
William C. Gregg.....330 Prospect Av. H'kmsack, N. J.	Dorothea V. A. Swift.....27 East 62d St., New York City
Frank C. Hoyt.....381 Fourth Ave., New York City	Robert D. Townsend.....381 Fourth Ave., New York City
Helen R. Mable.....Summit, N. J.	
Harold T. Pulsifer.....381 Fourth Ave., New York City	

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; and also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

(Signed) ROBERT D. TOWNSEND, Managing Editor. Sworn to and subscribed before me this 26th day of September, 1922.

(Signed) J. LYNN EDDY.

[SEAL] Notary Public, Westchester County; New York County Clerk's No. 72; New York County Register's No. 4663; Certificate filed in New York County; Commission expires March 30, 1924.

BY THE WAY

"FOR over a period of a quarter of a century when, in an editorial capacity, I was connected with 'Life,' says Thomas L. Masson in the New York 'Herald,' 'we made it a rule never to make any strained effort to get into the paper anything humorous, and it became a venerable joke with us that some day or other we would issue a humorous number. We see 'Punch' constantly publishing the most serious things. For example, one of the most moving poems of the war ('In Flanders Fields') was published in 'Punch.' Humor's true purpose is to act as a leaven. . . . One is reminded of that old anecdote of the one-time editor of 'Punch' when a fellow-guest at a dinner table asked him if he ever got anything good for his paper. 'Oh dear, yes,' was the reply. 'Then,' said the other, 'Why don't you publish it?'"

The catalogues of the great mail-order houses are among the most interesting examples of American typography, issued as they are for gratuitous distribution yet costing hundreds of thousands of dollars in the aggregate. One of these huge catalogues that has lately come to our desk—that of Montgomery Ward & Co., of Chicago—contains one page printed in twelve different languages, for the benefit of the various races that fill America's melting-pot. These are, as printed in the book: Czechoslovakian, Deutsch, Espanol, Français, Hollandish, Italiano, Norsk, Polskie, Portuguese, Russian, Suomea, Svenska. The announcement is made in each language that orders written in that language will receive just as prompt attention as if written in English. "Suomea," in the above list, the reader may be reminded, refers to the Finnish language.

Under the heading "The Best Old One" the "Journal" of the American Medical Association prints this:

There was a doctor by the name of Beck

Who fell in a well and broke his neck.

It served him right;

The fault was his own:

He should have tended the sick and let the well alone.

Behind closed iron gateways at the Palace of Sans Souci, in Potsdam, near Berlin, lies an unkempt and grass-grown driveway. It was once the main approach to the palace, which was built by Frederick the Great. But Napoleon, as the conqueror of Prussia, used that driveway when he lived for a while at Sans Souci, and on his downfall the road he used was blocked up and a new one built. So says a contributor to the New York "Times," who has recently visited Potsdam and found it redolent of the memories of Frederick the Great and trying to forget the sojourn of William II. He recalls Napoleon's tribute to Frederick as he and his officers stood before the old warrior's tomb: "Hats

off, gentlemen! If he who is in that tomb were alive now, we should not be here!"

Who buys a buggy in these days of the omnipotent motor car? Apparently plenty of people, for the Carriage Builders' National Association has just held its fiftieth anniversary jubilee meeting in New York. Its secretary says: "Notwithstanding the growth of the automobile, the carriage trade is not dead and can never die. There will always be a place for the horse and buggy as long as there are farms in America. Prosperous farmers nowadays not only have their automobiles, but keep buggies, too, for traveling over roads that are sure death to rubber tires."

The word "sox" as a plural of "sock" is often seen in placards in shop windows, though it seems to have no place in the dictionaries. A New York butcher has in his window a sign, "Roasting Chix." Perhaps the locksmiths and clockmakers may yet have their signs read, in large letters, LOX and CLOX, for the word smallpox has become the accepted form, though we have to think a moment before we remember that it simply denotes "small pocks," or scars.

A booklet called "Art in New York," which is on sale at news-stands and bookstores in the city, will help the sightseer to find some noteworthy artistic achievements which perhaps he might otherwise miss. "Starred" items picked out at random from the booklet are interesting:

Continents, marble groups by D. C. French, on steps of Custom House.

Peter Cooper, by Saint-Gaudens, Bowery and Fourth Avenue.

Washington, by Henry M. Shrady, Williamsburg Bridge Plaza.

Richard M. Hunt, by D. C. French, Central Park.

Joan of Arc, by Anna V. Hyatt, Riverside Drive and 93d Street.

Maine Monument, by Attilio Piccirilli, Columbus Circle.

Pulitzer Memorial, fountains by Karl Bitter, Fifth Avenue and 59th Street.

Franz Sigel, statue by Karl Bitter, Riverside Drive and 106th Street.

Soldiers' and Sailors' Monument, Charles W. and Arthur A. Stoughton, Riverside Drive at 90th Street.

Horse Tamers, by F. W. MacMonnies, Prospect Park, Brooklyn.

Appellate Court, James B. Lord, Architect, Madison Avenue and 26th Street.

From the "Columbia Jester:"

"I don't see why you call Jamieson stupid. He says a clever thing quite often."

"Exactly. He doesn't seem to realize it should be said only once."

From the Stockholm "Kasper:"

Id Dame—"When I was your age, a man would never let a lady stand in a car."

Man—"No. At that time, people traveled in stage-coaches."

Adv. No. 2

To Men of Business

To men of business, "big" and "little."

To farmers—to all who toil with hand or brain.

To stimulate "thrift and saving" among the millions who labor—such as the world has never before seen.

To stabilize business, build confidence, pour the oil of peace and prosperity on the troubled waters of unrest.

To get for YOU who are now "thrifty" 4 per cent, compounded semi-annually, on your "daily balance" of every surplus dollar you possess—even the dollars in your pocket, cash drawer and safe.

Unfetter the existing Postal Savings Bank, now "shackled"—"hamstrung"—by cunning, short-sighted greed.

THRIFT and PROSPERITY, Peace, Honor

The Gist of It All

The nation has had a Postal Savings Bank since January, 1911.

Every other savings bank in the world makes at least the pretense of serving the interest of depositors, getting for them the largest possible returns consistent with safety and availability.

The Postal Savings Bank has been shackled by the opposite rule, attempting to get from depositors as much money as possible for the least possible interest, paying them only 2 per cent per annum, on money left in the bank at least one year. In practice this return is less than 1½ per cent. Furthermore, the law permits the funds now in the Postal Savings Bank to be loaned to commercial banks at 2½ per cent, the banks loaning it to the Government, and to the people, at anywhere from two to four and five times that rate, and yet at no time has the market price for money on the solidest security been less than 3½ to 4 per cent, and today, as everyone knows, is 6½ to 8 and 9 per cent. It is now proposed:

First—The Postal Savings Bank shall be open and accessible to all without limit as to amounts that may be deposited, and interest thereon paid for any period of time, as is customary with commercial banks.

Second—These deposits shall be loaned at the market price for money on security that is good beyond question. This should make, in these times, the net income for deposits at least 6 per

cent, gradually diminishing to 5 or less as world prosperity returns.

Third—Four per cent semi-annual compound interest will go directly to depositors.

Fourth—The balance of the profits shall be paid twice a year into the United States Treasury, thus making possible the reduction of taxes and thereby benefiting the whole citizenship, including, of course, the depositors. This, it is estimated, should bring into the U. S. Treasury, without taxing anybody one cent, an annual income of at least \$120,000,000, to possibly \$300,000,000 or more.

Fifth—Every banking institution in the United States in good standing may become an agent for the Postal Savings Bank, both to receive deposits and to make loans, receiving for such service a small commission on both deposits and loans.

Sixth—The present gold standard is not affected and will be permanently maintained, yet gold is made no longer either fetish or a scarecrow.

Seventh—The Postal Savings Bank will be placed beyond the power of domination by any interest or class. It will have no power of either inflation or contraction, these powers being left in the exclusive possession of the existing Federal Reserve Banks.

Eighth—It will quickly mobilize and put into ordinary bank channels over three billion dollars (\$3,000,000,000) of money not now in any bank—the identical kind of money that is now the foundation resource of all banks.

Ninth—With this bill in operation there will be scores of millions of depositors, instead of half a million as at present, with deposits exceeding thirty billions, possibly soon nearer one hundred billions, instead of one hundred and fifty-five million deposits as when this is written.

For details, facts uncontroverted, arguments unanswerable—see "THRIFT AND PROSPERITY," by Senator Morris Sheppard, of Texas, and John B. Alden, Neshanic, N. J., farmer, editor and book publisher; \$1 at book stores, or free at Public Libraries.

PUBLIC OPINION is irresistible. YOU help make it. READ the book for facts, simple, overwhelming logic. SEND THIS to Congressmen, Senators, Editors, Public Men; ask them "Why not?" Tell your thought. Inclose in all letters. Discuss with neighbors. These slips for letters at rate of 5 for 1c, postpaid, from Alden.

Honesty is the best POLICY. Godliness is PROFITABLE—economic truth, not buncombe, not cant. Pleased customers more PROFITABLE than "skinned" customers. Dropping water wears stone—Keep at it. Ink beats dynamite. Pen mightier than sword—swing it!

At Book Stores, or of The Outlook, or of Alden, Neshanic, N. J.

To Proprietors of Winter Resort Hotels

Many advertising schedules for the fall and early winter are now being made up.

The special classified Hotel Section of The Outlook offers a most effective and economical means of reaching many thousands of Outlook readers who take winter vacation trips.

A recent investigation in 20 cities shows that 39% of Outlook subscribers visit winter resorts.

The special classified hotel rate is only .60 cents a line. Just send us your booklet and we will prepare copy for your approval.

CONTRIBUTORS' GALLERY

ROBERT HILLIER is a young poet whose work has already met with marked success. He was graduated from Harvard University in 1917, and that same year his first book, "Sonnets and Other Lyrics," was published. His two later books are "The Five Books of Youth" and "Alchemy," and a new volume, "The Hills Give Promise," is in the process of preparation. Mr. Hillier spent the summer of 1917 with the Norton-Harjes Ambulance Corps on the Verdun front. Afterward he served with the A. E. F. and had the rank of first lieutenant at the time of his discharge. He was attached to the American Commission to Negotiate Peace and detailed as courier.

GILBERT H. GILBERT submits an article on the proposed development of the St. Lawrence, written from the point of view of an engineer, and not from any partisan interest. His knowledge of the subject has been obtained over an experience of twenty years while he was engaged as contracting engineer in building canals and channels over that portion of the St. Lawrence that it is proposed to develop. This project is one which the transportation situation makes of vital interest.

UPTON CLOSE is the pen-name of an American journalist of many years' residence in China. Mr. Close writes concerning his association with Wu Pei-fu:

Wu is a man who is remaking China, and doing it on lines which will appeal to the American people. I am the only correspondent who has stayed with him throughout the struggle, and I am writing a 40,000-word illustrated book on my experiences with him through the war. I am handling the material from the standpoint of personal adventure and the daily life and character of a Chinese conqueror and his staff.

AFTER a silence of several months, Charles K. Taylor again contributes one of his valuable papers on the boy and his problems.

Don't send a picture to a man who stands "Hats"

Is this offer too good to be true?

Are we offering a value too great to be credible? Do people "shy" at the thought of receiving too much for their money?

WE recently mailed several thousand circulars to booklovers. We described and pictured these thirty volumes of the Little Leather Library honestly, sincerely, accurately. But we received relatively few orders.

Then we mailed several thousand additional circulars to booklovers, this time enclosing a sample cover of one of the volumes illustrated below. Orders came in by the hundred! The reason, we believe, is that most people cannot believe we can really offer so great a value *unless they see a sample!*

In this advertisement, naturally, it is impossible for us to show you a sample volume. We must depend on your faith in the advertisements appearing in *The Outlook*; and we are hoping you will believe what we say, instead of thinking this offer is "too good to be true."

What this offer is

Here, then, is our offer. The illustration below shows thirty of the world's greatest masterpieces of literature. These include the finest works of such immortal authors as Shakespeare, Kipling, Stevenson, Emerson, Poe, Coleridge, Burns, Omar Khayyam, Macaulay, Lincoln, Washington, Oscar Wilde, Gilbert, Longfellow, Drummond, Conan Doyle, Edward Everett Hale, Thoreau, Tennyson, Browning and others. These are books which no one cares to confess he has not read and re-read; books which bear reading a score of times.

Each of these volumes is complete—this is not that abomination, a collection of extracts; the 30 volumes, pocket size, contain over 3,000 pages; the paper is a high-grade white wove antique, equal to that used in books selling at \$1.50 to \$2.00; the type is clear and easy to read; the binding, while NOT leather, is a beautiful limp material, tinted in antique copper and green, and so handsomely embossed as to give it the appearance of hand tooled leather; it is *five times more durable than leather!*

What about the price

The price of this entire set of 30 volumes, exactly as described and illustrated, is \$2.98 plus postage; please bear in mind that there are NO installment payments—no further payments of any kind!

How can we do it? That is the question most often asked of us. Yet the answer is simple. *These books are produced in editions of a million at a time!* Quantity production—that is the secret.

Testing human nature

These books are made by a body of specially trained workmen. We cannot make a million volumes, discharge these workmen until the edition is sold, and then expect to get the same men again. This body of men must be kept together. The manufacture must be continuous—one edition following the other immediately.

It is worth our while, therefore, to give our customers something valuable if they will co-operate with us by sending in their orders at once. It is worth our while to make an attempt to overcome the bugaboo of procrastination, which haunts so many publishers.

That is the reason, the only reason, we offer you, in addition to the regular set of 30 volumes, **FOUR VOLUMES OF RUDYARD KIPLING FREE, IN EXACTLY THE SAME BINDING AS THE REST OF THE SET**—if you will send in your order at once, instead of waiting.

An experiment—not a precedent

One word more. This offer, as you can gather, is simply an experiment. It must not be taken as a precedent. We do not know whether it will work. We do not know whether ANYTHING can keep people from procrastinating, for it is certainly a deep-seated human trait.

In any case, we hope it will keep YOU from procrastinating. If you want this set of books—if you feel that eventually you will buy them—we urge you to do it NOW, instead of LATER, so that you can obtain not only the thirty volumes, but the four equally splendid volumes of Kipling. Do not send money. Simply mail the coupon below or a letter.

FREE!

4 Volumes of Kipling

If you will order at once instead of waiting

TO those of us who have been forced to lead drab, workaday lives, Kipling opens up a new world—the vivid, colorful world of the East. His stories, every one of them, are steeped in realism, but it is a realism more fascinating than the wildest imaginings of a romanticist. These four volumes include his best work. Among them are the following: *The Vampire, and Other Verses; The Man Who Was; The Phantom Rickshaw; A Conference of the Powers; The Recrudescence of Imray; At the End of the Passage; The Mutiny of the Mavericks; My Own True Ghost Story.*

CAPTAIN L. M. OVERSTREET will be remembered by our readers as the author of the feature article "Will Total Disarmament Prevent War?" which was published in The Outlook last April. His present article, showing the value of our Navy in times of peace, contains a number of ideas which will be strikingly new to many people. Captain Overstreet is stationed at Washington in the Navy Department.

COMMANDER ROBERT A. BACHMAN tells of the work of Admiral Bristol in the troubled waters of the Near East.

THE enlisted personnel of the Navy is represented in this issue by Chief Yeoman William W. Morris, who was on the Maryland, which carried Secretary Hughes to the Brazilian Centennial Exposition at Rio de Janeiro.

SENATOR DAVENPORT'S third letter from the Middle West is published in this issue.

THE author of "Let's Get Together" prefers to keep his name and whereabouts secret. We may say, however, that he is a frequent contributor to The Outlook and an authority on schoolboys.

WILLIAM DENISON McCrackan, author and editor, though born in Munich, Germany, is of American parentage. He is a graduate of Trinity College, Connecticut, and a member of the Authors Club. For three years he was associate editor of the "Christian Science Journal" and the "Christian Science Sentinel" and for one year editor of the "Jerusalem News."

WE know of no one better fitted to discuss the English system of debating than Ralph M. Carson, author of "The World's Greatest Debating Society." Mr. Carson is a graduate of the University of Michigan who enjoyed the honor of

being a Rhodes Scholar at Oriel College, Oxford, and the more distinctive honor of being elected President of the Oxford Union. He was also President of the British-American Club and of the Oxford International Assembly, a miniature League of Nations. Before going to England he was an instructor in English at the University of Michigan. At present he is a senior at the Michigan Law School.

How Ten Minutes' Fun Every Day Keeps Me Fit

By Walter Camp

Famous Yale Coach's "Daily Dozen" Exercises Now on Phonograph Records

ONE night during the war I was sitting in the smoking compartment of a Pullman sleeping-car when a man came in and said, "Mr. Camp?"

I told him I was, and he continued, "Well, there is a man in the car here who is in very bad shape, and we wondered if you could not do something for him."

"What is the matter?" I asked.

"This fellow is running up and down the aisle in his pajamas," the man said, "trying to get them to stop the train to let him get some dope because he hasn't slept for four nights."

I went back in the car and found a man about 38 years old, white as a sheet, with a pulse of 110, and twitching all over. I learned that he had been managing a munitions plant and had broken down under the work because he had transgressed all the laws of nature, and given up all exercise, and had been working day and night.

"For God's sake," he said to me, "can't you put me to sleep? If somebody can only put me to sleep!" He was standing all bent over.

"Don't stand that way, stand this way!" I said, and I straightened him up and started putting him through a few exercises to stretch his body muscles. Pretty soon the color gradually began to come back into his face, and the twitching stopped. Then I said to him, "I am going to put you through the whole set of 'Daily Dozen' exercises once. Then I am going to send you back to your berth."

So I did that and didn't hear any more from him, but the next morning he came to me in the dining car and said:

"You don't leave this train until you've taught me those exercises. I slept last night for the first time in five nights."

I taught him the "Daily Dozen" and two months later I got a letter from him, saying:

"My dear good Samaritan, I am back on the job all right again, and I am teaching everybody those exercises."

The "Daily Dozen" was originally devised as a setting-up drill for picked young men—the boys who were in training during the war. But its greatest value is for those men and women who are hemmed in between four walls most of the time and are beginning to realize that their bodies aren't as fit as their minds.

I applied it to middle-aged men, and men past middle-age too, during the war—including members of the cabinet in Washington—who simply had to do much more work than they were used to doing, without breaking down. In the "Daily Dozen" I soon found I had something that would actually increase their reserve power. They grew progressively more fit as we went along.

People think that they can take an orgy of exercise and make up for a long period of neglect when they do not take any exercise at all. You cannot do that. Do not go to a gymnasium. That tires you to death. That is old-fashioned. We do not have to do that any more. A man or woman can keep himself or herself fit with six or seven minutes a day. There is no reason why a man at 50 or 60 or 70 should not be supple; and if he is supple, then he grows old very slowly—but the place where he must look after himself is in his body muscles.—Walter Camp.

Mr. Camp is famous as a great Yale football coach and athletic authority, but few people know that he is also a successful business man. Although sixty years old he is stronger and more supple than most younger men, and he uses his own "Daily Dozen" Exercises regularly in order to remain so. Since the war, the "Daily Dozen" has been making busy men and women fit and keeping them

so—and the exercises are now proving more efficient than ever—due to a great improvement in the system. This is it:

With Mr. Camp's special permission all the twelve exercises have been set to music—on phonograph records that can be played on any disc machine.

In addition, a chart is furnished for each exercise—showing by actual photographs the exact movements to make for every one of the "com-

WALTER CAMP

Originator of the Famous "Daily Dozen" System

mands"—which are given by a voice speaking on the record. So now you can make your phonograph keep you fit.

With these records and charts a man or woman can keep himself or herself fit with only a few minutes' exercise a day—and it is so much fun that some of the "Daily Dozen" fans go through the whole twelve exercises to the spirited music twice every morning—just as a matter of sheer enjoyment.

Mr. Camp says that the place where we must look after ourselves is in the body or the trunk muscles.

This is so because we are all in reality "caged animals." When a man stops hunting and fishing for food and earns it sitting at a desk he becomes a captive animal—just as much as a lion or a tiger in the Zoo—and his trunk muscles deteriorate because they cease to be used. Then comes constipation and other troubles which *savage* men never have.

The remedy is to imitate the "exercises" of caged animals. They know how to keep themselves fit—and they do it too.

How? Simply by constantly stretching and turning and twisting the trunk or body muscles! When Mr. Camp discovered that men and women can imitate the caged animal with enormous profit to their health, he devised the "Daily Dozen"—to provide this indispensable exercise—the only exercise people really need to keep in proper condition.

Many people have written to the Health Builders telling them of the benefits they have received. Here is part of one letter:

"We wish to express our satisfaction and delight with our set of records and exercises. Our entire family of eight, including the maid, are taking them. The children are fascinated with them and bring the neighbors' children to do them."—Mrs.

CHARLES C. HICKISCH, 828 Vine St., La Crosse, Wis.

The Health Builders' improved system now includes the entire "Daily Dozen" exercises, set to specially selected music, on large 10-inch double disc phonograph records; twelve handsome charts, printed in two colors, with over 60 actual photographs illustrating each movement of each exercise; and a little book by Walter Camp explaining the new principles of his famous system.

Any man or woman who exercises with this system regularly, even if it is only six or seven minutes a day, will feel better and have more endurance and "pep" than they have had since they were in their 'teens—and they will find those few minutes the best fun of their day.

Try the Complete System Free—For Five Days

You cannot fully appreciate the real joy of doing the "Daily Dozen" to music until you try it. So we want to send you, absolutely free for five days, the "Daily Dozen" on phonograph records and charts illustrating the movements. These full-size, ten-inch, double-disc records playable on any disc machine contain the complete "Daily Dozen" Exercises, and the 60 actual photographs accompanying the records show clearly every movement that will put renewed vigor and glowing health into your body—with only ten minutes' fun a day. A beautiful record-album comes free with the set.

No need to send any money. Simply mail the coupon below and get Walter Camp's "Daily Dozen" on phonograph records. Enjoy the records for five days, and if for any reason you are not satisfied, return them and you owe nothing. But if you decide to keep the records, you can pay for them at the easy rate of only \$2.50 down and \$2 a month for four months until the sum of \$10.50 is paid. Thousands of people have paid \$15 for the same system but you can now get it for only \$10.50 if you act at once.

Simply mail the coupon and see for yourself at our expense, the new, easy, pleasant way to keep fit. You'll feel better, look better, and have more endurance and "pep" than you ever had in years—and you'll find it's fun to exercise to music! Don't put off getting this remarkable System that will add years to your life and make you happier by keeping you in glowing health. Mail the coupon today. Address Health Builders, Inc., Dept. 610, Garden City, N. Y.

FIVE-DAY TRIAL COUPON

HEALTH BUILDERS, Inc.,

THE AMERICAN YARDSTICK

BY ISAAC M. COX

THE practical effect of an indiscriminating use of American tables in connection with nutrition work in Hawaii is that these tables will very greatly overstate the degree of undernourishment of children of Oriental ancestry, especially the Chinese. In the case of the Chinese the average divergence from American averages amounts to eight per cent. If, then, Dr. Emerson's rule be applied and all children rating as much as seven per cent below American averages are selected as requiring especial attention, it is obvious that such selection, besides including any that may be seriously undernourished, will also include all those who, if measured by standards appropriate to their racial structure, are entirely normal and average—even some who stand a good one per cent above normal average.

Since no Hawaiian measurements of school-children had been recorded previously to my tabulations, begun in 1916, and since measurements of Chinese and Japanese are not generally accessible, it will be of interest if you will publish the following table.

The table is based on 4,336 weighings and measurements made at Kalihi-waena School, in Honolulu. The school enrollment has run between 600 and 1,000, the tabulations representing the ages of six to fourteen inclusive. Height is given in inches, weight is given in pounds round to nearest integer. For comparison with American standards I have followed the Bowditch tables used by the Children's Bureau of the United States Department of Labor.

ROOSEVELT'S RELIGION

By CHRISTIAN F. REISNER

Dr. Reisner says in the Foreword of this book: "Theodore Roosevelt stands out as the towering, unquestioned illustration of the size and kind of men pure religion builds. He was strongly human and yet devout, admittedly imperfect and yet sincerely seeking the truth, notably self-confident and yet avowedly a worshipful disciple of the humble Teacher of Galilee. He went away from earth carrying the diploma of a completed life course, and hence is a beckoning example to all who would think widely, contest successfully, serve steadily, live happily, and cross the river at the end triumphantly." Illustrated. Price, net, \$2.50, postpaid.

An Architect, A Painter and A Sculptress Joined in Designing This Exquisite Lamp

The lines, proportions and coloring of most of the lamps you see in these days of commercialism are the work of designing departments of large factories. They are the fruits of a deep knowledge of what makes a "popular seller." But some people, the **Decorative Arts League** committee felt sure, would like a lamp designed purely with an eye to good taste, a lamp of artistic proportions and harmonious tones, a lamp embodying grace, symmetry and beauty rather than the long experience of the "salesman-designer" of what seems most in demand in retail stores. Hence this exquisite little lamp you see pictured, "Aurora," as it has been named by an artist, because of the purity of its Greek lines and tones.

A Labor of Love

For the delicate work of designing a lamp that should be a real work of art instead of a mere unit in a factory's production, and yet should be a practical and useful article of home-furnishing, the League enlisted the enthusiastic cooperation of a group of talented artists—one a famous architect skilled in the practical requirements of interior decorating, one a painter and genius in color-effects, and one a brilliant sculptress, a student of the great Rodin in Paris.

They caught the spirit of the League's idea and the designing of a lamp that would raise the artistic standards of home-lighting became to them a true labor of love. Model after model was made, studied and abandoned, until at last a design emerged with which not one of the three could find a fault.

Every Detail Perfect

One style of ornamentation after another was tried out, only to yield in the end to the perfect simplicity of the classic Greek lines. Even such a small detail as the exact contour of the base was worked over and over again until it should blend in one continuous "stream" with the lines of the slender shaft. The graceful curves of the shaft itself, simple as they seem in the finished model, were the results of dozens of trials. The shape, the exact size, and the soft coloring of the shade were the product of many experiments.

The result is a masterpiece of Greek simplicity and balance. Not a thing could be added or taken away without marring the general effect—not the sixty-fourth of an inch difference in any moulding or curve but would be harmful. And yet with all the attention to artistic effect the practical knowledge of an experienced interior decorator has kept "Aurora" in perfect harmony with the actual requirements of the home. It blends with any style of furnishing, it adapts itself to boudoir or foyer-hall, to library or living-room. And wherever you place it "Aurora" will add taste and refinement besides furnishing, with its tiltable shade, a thoroughly practical and mellow light wherever required.

"AURORA"
\$3.50

In the exclusive Fifth Avenue type of shops where lamps that are also works of art are shown, the equal of this fascinating little "Aurora," if found, would cost you from \$15 to \$20—perhaps more. Yet the price of this lamp is but

\$3.50—Think of it!

Only the Decorative Arts League could bring out such a lamp at such a price. And only as a means of widening its circle of usefulness could even the League make such an offer. But with each purchase of this beautiful little lamp goes a

"Corresponding Membership" in the League. This costs you nothing and entails no obligations of any kind. It simply means that your name is registered on the League's books as one interested in things of real beauty and art for home decoration, so that as artists who work with the League create new ideas they can be offered to you direct without dependence on dealers.

Send No Money

No matter how many other lamps you have in your house, you will always find a place just suited for this dainty, charming little "Aurora" 16 inches high, shade 10 $\frac{3}{4}$ inches in diameter; base and cap cast in solid Medallium, shaft of seamless brass, choice of two color schemes—rich statuary bronze with brass-bound parchment shade of a neutral brown tone, or ivory white with golden yellow shade. Inside of shades is tinted old rose to give a mellow light. Shade holder permits adjustment to any angle; push-button socket, six feet of lamp cord and 2-piece attachment plug.

You will rarely, if ever, get such a value again. Send no money—simply sign and mail the coupon, then pay the postman \$3.50 plus the amount of parcel-post stamps on the package. Shipping weight only 5 lbs., so postage even to the furthest point is insignificant. If you should not find the lamp all we say of it, or all you expected of it, send it back in five days and your money will be refunded in full. Clip the coupon now, and mail to

Decorative Arts League, 175 Fifth Avenue, New York, N. Y.

Decorative Arts League (175 Fifth Avenue, New York, N. Y.)

You may send me, at the member's special price, an "Aurora" Lamp, and I will pay the postman \$3.50 plus the postage, when delivered. If not satisfactory I can return the lamp within five days of receipt and you are to refund my money in full.

You may enter my name as a "Corresponding Member" of the Decorative Arts League, it being distinctly understood that such membership is to cost me nothing, either now or later, and is to entail no obligation of any kind. It simply registers me as one interested in hearing of really artistic new things for home decoration.

The Outlook

OCTOBER 18, 1922

THE ALLIES ACT TOGETHER

ONE hopeful and satisfactory result of the conference of the Powers at Mudania is that the representatives of Great Britain and France agreed harmoniously upon the demands to be made from the Turkish Nationalist army as precedent to the proposed peace conference. If only France and Great Britain and Italy had come together in the same way a year ago in their general policy as to the Near Eastern situation, the world might have been saved the spectacle of political jealousy, lack of concord, and consequent flouting of the wishes of the great nations, all of which has resulted in the recent serious crisis.

Even before that crisis reached its climax it was evident that the victory of Kemal over Greece would be followed by large concessions to the Turkish Nationalist movement—concessions that will restore Turkish rule in Constantinople and will hand over to Turkish control a large part of Thrace and the important city of Adrianople. If Kemal had been so ill advised as to attack the British forces at Chanak before reinforcements reached them from Malta and powerful British warships lined up in the Straits ready to shell the Turkish troops if they should advance, it would have been impossible to avoid hostilities on a large scale. The Chanak position is now almost impregnable, but for a few days it was in danger.

The conditions agreed upon by the representatives of the Powers at Mudania are to be submitted by Ismet Pasha, the Turkish delegate, to the Nationalist Government at Angora. If they are accepted, presumably the call will go forth for a peace conference without delay. A principal point involved is that the Greeks shall withdraw their forces from Eastern Thrace, and that the territory shall be occupied by Allied forces for one month in order to give Greek and other Christian civilians opportunity to move out if they wish. This is not satisfactory to Greece; she has earnestly asked that the period of Allied occupation be set at two months, but it is understood that she will submit to the inevitable. Another condition is that the Turkish forces should withdraw from the neutral zone during the peace negotiations; during the Mudania conference it has been more than once reported that the Turks have made new

invasions in the neutral zone and that one or more of these have been in the neighborhood of Istib, which is the natural approach to Constantinople. If this is so, the Nationalists have absolutely no excuse, as that zone was recognized by them long ago, which was not the case with the portion of the zone to the west and near Chanak.

During the two months, as proposed by the armistice conditions, a civil as well as a military administration will be set up in Thrace by the Allies, and it is hoped that thereby conflict between Turks and Greeks and consequent slaughter, burning, and reprisals by both parties will be avoided.

In any event, the Turk returns to Europe and is in every way in a better situation than he has been since the end of the first Balkan War. Whether he can be expected under these circumstances to respect the rights of the racial minorities and to keep down religious fanaticism is at least doubtful.

WHAT SHOULD AMERICA DO?

RECENT reports from the Near East give detailed accounts of the suffering and horrors of the occupation of Smyrna. The Turks assert that similar horrors and bloodshed accompanied the retreat of the Greeks from Anatolia, and it is probable that there is truth in this accusation also. There is urgent need for the practical sympathy of America in contributions for the sufferers. We may be proud of the assistance rendered immediately by Americans who were on the spot; for instance, one despatch states that the American naval ships "took out of Smyrna no less than 180,000 of the total 220,000 persons removed since the terrible fire which destroyed the city."

Extensive efforts are being made in this country by the Near East Relief for the raising of funds, and many thousands of dollars have already been subscribed. The American Red Cross has announced its willingness to spend as much of its \$20,000,000 surplus as is needed for relief in the Near East. Americans certainly may aid with heart and purse in this work of relief and restoration, regardless of their opinions as to international questions involved. It is said that over \$100,000,000 has been spent by American educational, medical, and missionary associations in the Near East, and the extent of our

moral responsibility is indicated by the eagerness of the American people to aid in the present juncture.

In an illuminating article in the New York "Tribune" Dr. A. L. P. Dennis points this out, shows also that our trade and commercial interests in the Near East are extensive, and discusses thoroughly the duty and limitations of the United States in the present situation. He suggests that America might reasonably ask for a limited participation in any Near Eastern conference, in accordance with the precedent set at the Armament Conference at Washington, where national representatives sat only in those conferences in which their countries had a direct interest. Our right to a voice in determining action affecting American property and interests is indubitable. Dr. Dennis names the American interests involved as notably the capitulations, the freedom of the Straits, the protection of our philanthropy and of our trade, and the status of Christian minorities. We have no concern with settling political questions in Europe or the Near East in themselves; and we have not even the right which we had at Paris while helping to settle the terms of peace, for we were not at war with Turkey. We have, however, interests to protect, and we ought to see that they are protected.

BETTER WAGES AND HIGHER PRICES

IN discussing the demand of organized labor for what is termed "a living wage," a return to the workers of a share of their product sufficient to maintain themselves and families in moderate comfort and to accumulate modest savings for their old age, it is commonly taken for granted by the employing interests that any and all wage increases must be added to the price of goods or cost of services. This view was recently expressed by a representative of the great railway systems, who declared that the adoption of the "living wage" for railway workers would add more than \$1,000,000,000 to the annual payments for freight and passenger traffic, with a consequent increase in the price of goods, which would tend to decrease consumption. If this analysis of the effect of higher wages could be established, it would prove that labor has nothing to gain from a general wage advance, since higher prices for labor

products would leave the worker, as a consumer, in just the same condition as when the lower wage prevailed.

The ignored factor in the problem of a wise readjustment of wage scales is that of the greater industrial efficiency in production that has everywhere been shown to accompany increased wages and a higher standard of living. With better pay there comes immediately an effective demand for more and better goods of all kinds. Articles formerly regarded as luxuries, seldom or never purchased, are looked upon as necessities. So far as the average worker is concerned, the only limit to consumption is income, less a small margin for the savings bank or life insurance. By far the greater part of increased wages is promptly exchanged for consumable goods. This in itself would not compensate employers for the higher wage scale, but with increased consumption giving a ready market for commodities it becomes possible materially to reduce the fixed charges for capital invested and overhead expenses. In many lines of industry there are long periods of half-time, or decreased activity, because of overproduction. It is manifest that with increased purchasing power for many millions of workers receiving the "living wage," mills and factories running full time would be able to effect a substantial saving in costs that would be reflected in prices.

There is also the experience of many great industries to prove that higher wages stimulate production by making contented workers more interested in their daily task. A cheerful willingness to give the employer a fair return for a fair wage means a greater output and a lessened manufacturing cost. Once established on the sound basis of equitable wages, it would seem that industry has little reason to fear diminished sales on account of higher prices.

GROUP POLITICS IN ONTARIO

THE people of Ontario, one of the largest and most prosperous provinces of the Canadian Dominion, are confronted with a problem that vexes practically all democratic countries—whether public affairs shall be managed by legislators nominated and elected by organized parties or by groups representing agricultural, labor, or business interests. From the earliest period of parliamentary government in Ontario until a few years ago the party system had prevailed. A general discontent with what was claimed to be the neglect by both old parties of the farmer's interests resulted in the formation of a distinctive Farm Group, that succeeded in overthrowing the Conservative Gov-

(C) Underwood
MRS. W. H. FELTON, OF GEORGIA, THE
FIRST WOMAN U. S. SENATOR

ernment, and under the efficient leadership of Premier Drury has administered provincial affairs. There have been complaints that the new Government did not immediately reform everything and everybody, but the Ontario people, almost entirely of Anglo-Celtic stock, are not given to radicalism, believing in institutions under which "freedom slowly broadens down from precedent to precedent."

In some quarters there has recently arisen a sentiment favorable to the widening of the Farm Group policies so as to make the Government representative not only of agriculture but of the manufacturing, commercial, and labor interests as well. To a small extent labor is represented in the provincial Parliament, though not at all proportionate to the city-worker population. The suggestion is made for the formation of a Progressive party that shall unite the liberals of various schools, in which it is expected the farmers will be the dominant factor. Some of the leaders of the Farm Group in the Dominion Parliament do not regard favorably the proposal to merge with other interests, as they fear that they would be outvoted by their new associates, but it is not believed that they will be able materially to influence the action of their supporters in Ontario. Premier Drury recognizes the necessity for a government truly representative of all the people, and, while adhering to his conviction that the welfare of the farmers should be the paramount consideration, does not ignore the other important interests of his province.

The tendency to abandon party or-

ganizations based on broad general principles, as evidenced by the "Farm Bloc" in the United States Congress, and the growing power of the Labor Party in Great Britain, will have an important effect on future political developments. As a protest against the ultra-conservatism of the old parties the movement may have some value, but as a permanent policy it would seem destined to failure.

The business of government cannot long be efficiently conducted by class groups, each working for its own selfish ends, instead of for the general welfare.

THE FIRST WOMAN SENATOR

THE appointment by Governor Hardwick, of Georgia, of Mrs. W. H. Felton to succeed the late Thomas E. Watson as United States Senator has been praised as a fine tribute to a woman of undoubtedly exceptional ability and character. It has also been praised as a recognition of the present and coming power of women in the National political life. Is there not a third reason for the Governor's action—that his beloved State should have the honor and the *réclame* of being the very first to name a woman as United States Senator? The love of large publicity is not confined to boom towns. Mrs. Felton seemed to recognize this when, in expressing her recognition of the honor, she said: "England borrowed an American-born woman to accept a seat in the British Parliament, but noble old Georgia experienced no need to borrow, and she alone of the forty-eight States in the United States had a Governor with courage to say so."

Probably every one understands that Senator Watson's unexpired term will be filled out by the man elected for that office on November 7. Mrs. Felton, whose abilities even at the age of eighty-seven are unquestioned, now holds the office titularly, but in all human probability will not be sworn in or take part in the Senate's deliberations. The compliment to her is a great one; but it is a compliment. Frankly, and with the highest respect for Senator Felton, there seems to be here a little of what baseball rooters call a grand-stand play on the part of the Governor, who, by the way, simultaneously announced himself as a candidate for the same office at the coming election. Mrs. Longstreet, widow of the famous general, in an article on Mrs. Felton's appointment suggested that if President Harding would just call the Senate together for one week before election Mrs. Felton could be sworn in, and that thus the President had "a rare opportunity to

offer a bouquet to millions of American women." On the whole, it doesn't seem to add to the dignity of the United States Senate to use it as an excuse for handing out bouquets. It wouldn't hurt the Senate—it has stood a lot and can stand more; but proffers of the office of Senator are really not the best material to use in extending courtesies even to so fine a person as Mrs. Felton.

THE ETERNAL MUCKER

THE baseball series for the world's championship between the winners in the National and American Leagues has ended in a fashion unexpected by dopesters, both professional and amateur. Most of the wise gentlemen who edit the sporting columns of newspapers had predicted a victory for the New York Yankees. The triumph, however, perched upon the banners of the New York Giants in four straight games. It is a hard world, particularly for those who have to depend for a living largely upon their records as prophets. The victory of the Giants was unexpected, but there was another feature of the series which, we are sad to say, was unforeseen but which could readily be expected from the average American baseball crowd.

The second game of the series was called on account of darkness, when the score was tied in the tenth inning. Those who attended the game differ as to the necessity for this act. Christy Mathewson, whose record for good sportsmanship and fairness cannot be questioned, states that the umpires were correct in their judgment. The howling fans, however, believed otherwise.

With the intelligence usually displayed by a mob, they proceeded to vent their wrath upon Judge Landis and his wife. Judge Landis, who resigned an honorable position on the bench to become the arbiter of baseball ethics, had a signal exhibition of the ethics of baseball fans when he attempted to leave the grounds at the conclusion of the game. There seems to have been no one present who was quite fool enough to hurl the traditional pop bottle at Judge Landis's head, but the fans apparently stopped short of little in the way of verbal missiles. The American likes to consider himself a good sportsman. He has not earned this title by his acts on the bleachers surrounding American diamonds.

The criticism that the game was called to insure the necessity of additional lucrative contests has been silenced by the gift of the receipts of the game to charities. Half of them ought to have gone to a Society for the Suppression of the Eternal Mucker.

PROHIBITION ON THE SEA

LIQUOR outlawed by the American Constitution has been sold freely and openly and under the sanction of Government authority on ships flying the American flag and even on ships owned and operated by the American Government. This has seemed an inconsistency so glaring as to subject the American people, or at least their Government, to the charge of insincerity, or at least of the lack of the courage of their convictions. It has been argued that unless liquor were sold on board American passenger vessels the business of carrying passengers on the high seas would pass to foreign lines. In other words, as between Constitution and business choose business. That is dollar ethics. Now the ruling of the Attorney-General of the United States has freed the country from the stigma of this practice. "Wet" or "dry," any American who regards the supreme law of the land as worthy of respect and the good name of his country as worthy of preservation should welcome Attorney-General Daugherty's ruling in this respect. Hereafter the provision of the United States Constitution, expressed in the Eighteenth Amendment, that prohibition shall be effective in the United States and all territory "subject to the jurisdiction thereof" will be observed on board American vessels where it has been heretofore officially and openly ignored.

Attorney-General Daugherty's opinion was in answer to a letter from the Secretary of the Treasury, Mr. Mellon. In that letter Mr. Mellon had inclosed an opinion of the counsel to the Shipping Board to the effect that the Eighteenth Amendment did not apply to ships on

the high seas, and had asked two questions: First, whether that ruling was correct; and, second, whether the transportation and possession of intoxicating liquor for beverage purposes on foreign vessels while in American waters is prohibited.

In reply, the Attorney-General took up the two questions separately.

To the first he answered in the negative; to the second, in the affirmative.

The answer to the first question depended on deciding whether an American vessel on the high seas is territory subject to the jurisdiction of the United States. The Attorney-General in his reply cited, not only decisions of the courts, but also statements in Moore's "International Law Digest" and diplomatic correspondence in support of the common-sense conclusion that American vessels on the high seas are American territory and subject to American laws. The word "territory" does not necessarily mean land. As Justice Field says in an opinion which the Attorney-General quoted, wherever vessels under the American flag go, "they carry the laws of their country." It is true that there is a difference between "the United States" and "territory subject to the United States," and that laws which apply to the one do not necessarily apply to the other; but in this instance prohibition applies specifically and explicitly to both. We do not doubt, and we cannot believe that there will be any serious effort to refute the conclusion of Attorney-General Daugherty, that the prohibition of the sale and possession of intoxicating liquors for beverage purposes applies not only to the American States but also to all vessels carrying the American flag.

Attorney-General Daugherty likewise

ruled that under international law prohibition is effective in foreign vessels while in American ports.

This opinion in answer to the second question has been received with considerable doubt and with some attempts at refutation. A careful reading, however, of Attorney-General Daugherty's opinion will, we think, convince most skeptics that the Attorney-General has correctly stated international law. A foreigner who comes to this country does not cease to be a foreigner subject to his own country's laws; but while he is here he is subject to American laws as well and must observe them or become liable to prosecution. He must, for instance, pay an income tax if he has an income that is taxable; he must obey police regulations; he must observe his obligations under contracts he makes; he must, in brief, do what the law directs as much as any citizen of the country. Likewise when a foreign vessel enters an American port she does not cease to be a foreign vessel, but she becomes subject to the laws of the country and is bound to obey those laws and to conform to the usages of the port. And, like a foreign individual, a foreign vessel is not only subject to the limitations of the law but is entitled to its protection. There could be no other way by which vessels of sovereign independent nations could visit one another's ports. Diplomats representing sovereigns of their countries are immune to the law because they are subject to a higher and more sensitive control—namely, the code which governs the conduct of sovereigns. There is no such immunity granted to foreign citizens or foreign vessels.

The New York "World," widely known as a spokesman for the anti-prohibitionists, has expressed a common mental confusion about this aspect of the question. We quote a paragraph from one of the "World" editorials:

Ships chartered in the United States, according to Mr. Daugherty, are subject to the laws of the United States, are, in fact, American territory; but ships chartered in foreign countries are not foreign territory. As soon as they enter American waters all vessels subject themselves to American law, which means, of course, the Volstead Act. How this comes about is not clearly explained. It would naturally be supposed that if an American ship were American territory a British ship would be British territory, and so on. Mr. Daugherty cannot have it both ways. On one point or the other he must change his mind or have it changed for him.

What the "World" seems not to know is the distinction between a vessel on the high seas and a vessel in port. An American vessel on the high seas is sub-

ject to the laws of no other country but her own; but in the port of a foreign civilized country she becomes subject to such laws of that country as are applicable to her. So a British vessel in one of our ports becomes subject to our laws.

Into the question of the method by which our Prohibition Law shall be applied to foreign vessels the Attorney-General does not go in detail. Apparently he holds that the existence of intoxicating liquors on board a foreign vessel in an American port is illegal, no matter how those liquors may be stored. Under the law there is provision made for the transportation within the country of spirits and wine for other than beverage purposes, but, according to the Supreme Court quoted by the Attorney-General, "there is no provision for the transshipment or carriage across the country from without;" and the law prohibits all possession or transportation of intoxicating liquor for beverage purposes. Even a prohibitionist from conviction may doubt whether the most drastic application of the law to foreign vessels can be practically enforced, and may conceivably hold that for all intents and purposes the spirit of the law will be observed if liquor in foreign vessels remain while in American ports under seal, and therefore *non est*. It may be argued that this would be inexpedient, as it would enable foreign vessels visiting America to carry and sell liquors on the high seas, while American vessels in competition with them would be prohibited from doing so. The object, however, of the Prohibition Law is not to control the habits and practices of other nations on territory subject to their jurisdiction. The argument that foreign vessels would have an advantage over their American competitors might be met by an American subsidy. Whether the application of prohibition to foreign vessels in our ports can be determined by administrative regulation or will require further legislation by Congress does not at the moment seem clear. All, "wet" and "dry" alike, will agree that, whether by statute or by legitimate administrative regulation, the principle of prohibition should be applied so as to promote, not the evasion of it, but its observance.

By the Attorney-General's ruling the American Government has asserted the right to require of foreign vessels the observance of the Prohibition Law within American waters; and this right the British Government has acknowledged. We trust that the American Government will exercise that right with justice and with reason. By the Attorney-General's ruling the American Gov-

ernment has also removed all doubt as to the force of the Prohibition Law in American vessels. We trust that the American Government will see that the law as thus interpreted is observed.

THE BATTLE OF THE SKIRTS

HALF humorist, half philosopher, a good friend of ours wrote in his commonplace book a few weeks ago: "To-day, at high noon, saw two young women wearing skirts that reached down, down, down to their very heels. Experienced a sensation not only of bewilderment but of shock. Stared. Then averted my face. Was in the same mood, precisely, as the London fishwife who, on first seeing a girl in bicycle costume, cried, 'Garn! you shimeless 'ussy! You'll never get an 'usband!' . . . Something tells me that all this is laughable."

Two weeks later our friend wrote: "Several more young women have ventured out in long skirts, and wonderful is the effect on wearers of short skirts. A look of icy hate overspreads their countenances. I suppose it was with some such hate that Mr. Harold Hendee, having starred in 'The Very Idea' and arrived in New York with that play, beheld the posters thereof inscribed, not with the name of Hendee, but with that of Mr. Ernest Truex."

Meanwhile others besides the laughing philosopher had their say—especially our feminists. With great solemnity they predicted that the attempt to reintroduce long skirts would fail. "Women will never again submit," they told us. Yet long skirts have multiplied; uptown they already outnumber short skirts six to one, while philosophers remind us that masculine dictation from overseas directs these matters and quote George Fitch's remark, "Ever since the world began men have tried to invent something that women would refuse to wear. Thus far they have not succeeded."

But women have had short skirts ere this, and reverted to long skirts ere this—not always in obedience to masculine dictation, either. In 1898 students at Smith College adopted exactly the costume of the present-day "flappers." By their own choice they abandoned it. Who shall say but that women are now acting as freely? The reversion to long skirts set in just when we had come to sanction short skirts and a shrewd paragrapher had written: "To bring the flapper to terms approve of her. Then she'll stop it."

But she has only half stopped it. The

Brown Bros.

PRESIDENT ROOSEVELT INSPECTING THE UNITED STATES BATTLESHIP CONNECTICUT ON THE RETURN OF THE ATLANTIC FLEET FROM ITS VOYAGE AROUND THE WORLD IN 1908

battle of the skirts still rages—short ones *versus* long ones, with long ones predominating among women of the prosperous class and short ones predominating among women of the wage-earning class. How will this end? In Buffalo during the “bicycle summer” of 1895 bicycle girls on the prosperous West Side adopted short skirts. Immediately East Side girls did likewise. Whereupon the West Side went back to long skirts. So the East Side went back to long skirts also. Once let the short skirt imply a weekly envelope, and its day in America is done, for in America our wage-earning women are without caste pride. It takes Frenchwomen to develop that. How airily the little *midinette* trips forth, hatless and in attire jauntily proclaiming that she wins her bread by making artificial flowers or by delicately embroidering fine linen!

Less than a year ago a noted criminologist solemnly attributed the “crime wave” to the “scandalous dress of our women,” and no one laughed. It has since dawned upon us that such utterances bespeak great folly. Perhaps we risk folly as great by suggesting that—conceivably, at least—the return of long skirts indicates a reinstatement of temporarily demoded standards in other realms besides those of fashion. But it is not fashion alone that shows change. From many sources come testimonies that “flapperism” has “passed the peak.” Moreover, a change in fashion reflects a change in mood. Not all new fash-

ions succeed; the trouser-skirt of 1911 failed ignominiously; when a fashion succeeds, it is because it finds an honest welcome, and the mood that welcomes a return to long skirts would seem to be a reaction against what a popular novelist has termed “this freedom.”

Doubtless the world will never again behold the “elegant female” of our grandmothers’ day, but the tendency at present is toward a recovery of discarded dignities and refinements. If women have learned that they are free to dress as they choose and behave as they choose, they have also learned that an element quite apart from a more or less obscure morality (or pseudo-morality) enters in—the element, that is to say, of good taste. Half our principles, when you come to think of it, rest, not upon moral considerations, but upon æsthetic considerations.

ROOSEVELT AND THE NAVY

THE selection of Roosevelt’s birthday, October 27, as Navy Day was a distinctly happy thought. No American President ever had greater interest in our Navy than Theodore Roosevelt, and no one has had a better comprehension of the value and principles of naval power.

Many men manifest an understanding of the function of agencies for which they have a personal liking and inclination. Mr. Roosevelt was not a sailor by

instinct. The reins of a spirited horse fitted his fingers more naturally than the helm of a vessel. But even as a young man naval problems concerned him deeply. It was while he was a college undergraduate that he prepared and wrote the “History of the War of 1812,” which has been accepted as part of the official record of the British Navy.

As Assistant Secretary of the Navy Roosevelt was a vital factor in the preparedness of Dewey’s Asiatic Squadron. It was on February 25, 1898, that he sent his brief but sufficient cable to Dewey, which read in part: “Keep full of coal. In the event of declaration of war [with] Spain your duty will be to see that the Spanish Squadron does not leave the Asiatic coast, then offensive operation in Philippine Islands.” This message sums up in brief almost the whole of the doctrine of Admiral Mahan, whose celebrated work on “The Influence of Sea Power Upon History” has become the Bible of naval statesmen. In less than forty words Mr. Roosevelt gives the essence of naval strategy. Prepare in time of peace. Strike at the enemy fleet to gain control of the sea. Let the war of position wait upon the attainment of naval supremacy.

This policy was sound in the days when Hannibal and Hasdrubal were forced by Roman naval supremacy to strike at the Republic on the Tiber across the difficult passes of the Alps. It was sound when Britain and France struggled half blindly for the Empire of India. It was sound when Washington urged the admirals of France to move upon the British fleet. It was sound when the pressure of the grand fleet at Scapa Flow, controlling the seas even while it lay at anchor, drove the German navy to futile and murderous warfare of a type which has crippled many nations but defeated none.

Sound in naval principle, Mr. Roosevelt was equally sound in naval practice. “The shots that hit are the shots that count,” wrote Mr. Roosevelt in his autobiography, and it was to his credit that Sims was given the opportunity to introduce modern methods of target shooting into our Navy—methods which resulted in tripling the gun-for-gun effectiveness of our fleet in the years between 1902 and 1908.

Perhaps almost the greatest service which Roosevelt rendered our Navy was his order to the battleship fleet to proceed around the world. How this voyage aroused the interest of America in our Navy, the manner in which it impressed the Governments of Europe, and the expressions of friendship which it evoked from Japan are facts of recent

history with which every one is familiar. We have forgotten, however, the croaking pessimists who predicted the dissolution of the fleet and the imminence of warfarce with the most powerful of Asiatic nations. Forgotten too are the words of Congressmen who attempted to withhold appropriations for the cruise until Mr. Roosevelt characteristically informed them that he "had enough money to take the fleet around to the Pacific anyhow, that the fleet would certainly go, and that if Congress did not choose to appropriate enough money to get the fleet back, why it would stay in the Pacific."

Mr. Roosevelt knew what his critics did not know, that the Navy was a peace power of the first magnitude. He knew the spirit of its men and of its officers. He trusted them, as to-day the Nation should trust and support their successors.

There is a framed letter hanging in the Outlook office signed by President Roosevelt and written from the White House in 1903 which sums up Roosevelt's doctrine of justice and strength as succinctly as the cable to Dewey summed up his understanding of naval power. The letter referred to reads in part as follows:

Good for you! Important though it is that we should get the Hague Tribunal to act in this case, where it can properly act, it is very much more important that we have a first-class navy and an efficient, though small, army. No Hague court will save us if we come short in these respects.

Navy Day ought to mean more than the celebration of the feats of those who go down to the sea in ships. It ought to be a time for searching out the fundamental principles of international justice and a renewed comprehension of the fact that strength is compatible with righteousness.

THE "MONEY POWER" IN ACTION

SPECIAL CORRESPONDENCE

BY STEPHEN BELL

FOREIGN EDITOR OF "COMMERCE AND FINANCE"

THOSE who desired to do so could have seen the "Money Power" in action at the Hotel Commodore, New York City, in the week beginning October 2, the occasion being the forty-eighth annual Convention of the American Bankers' Association.

There are those who entertain a very low opinion of the "Money Power," attributing to it all manner of base and ignoble designs on the prosperity of the country for its own financial profit. I once held some such views myself. A closer acquaintance with banks and bankers has brought to me the understanding that unsound banking methods do not succeed, while sound banking depends for its success on the prosperity of the country at large. When business goes to pot, bank loans follow. Also, I have learned that bankers themselves are very human, even though their contact with businesses of all kinds usually develops in them a breadth of view not often shared by other business men. Indeed, I am beginning to believe that it is this very breadth of view, in which small objectives are merged in the general *ensemble* of things, which is the source of much of the popular suspicion in which they are held.

As a proof of which I submit the attitude of the great international bankers toward the international debts. Vast profits might be realized by their funding and the flotation of the immense bond issues this would entail. Yet these bankers regard these debts as almost impossible of payment, as choking the economic recovery of the world, and look favorably on the proposal to write them off—at least in great part—while popular opinion is against their cancellation.

Many great speeches were made at

P. and A. Photos

REGINALD MCKENNA, FORMER BRITISH CHANCELLOR OF THE EXCHEQUER, ARRIVING IN NEW YORK TO ATTEND THE BANKERS' CONVENTION

this Convention on the all-engrossing subject of aiding in European economic revival—speeches which for solid merit would have stood out among those made at any international financial conference yet held—but the address of the Hon. Reginald McKenna, chairman of one of the world's greatest banks, the London Joint City and Midland, Ltd., and former Chancellor of the Exchequer of the

British Empire, was easily the most important event of the meeting. He chose for his subject "The Reparations and the Interallied Debts." The simplicity to which he reduced the complex factors of international financial relationships, the exactness of his data, and the authority with which he spoke carried unwilling conviction to many that the methods heretofore applied to the untangling of the international web in which trade and finance are enmeshed are all wrong.

He set forth that Great Britain alone of the debtor nations is in a position enabling her to pay her foreign debts. Such debts can be liquidated only from assets accumulated abroad or by an excess of exports over imports. Britain alone possesses the assets abroad in volume sufficient to pay.

And the payment of the German reparations is by the very nature of things limited to the same methods!

His estimate of German assets held abroad, and therefore available for reparation payments, is in substantial agreement with that of John Maynard Keynes—about a round billion dollars. Germany has already paid about twice that amount, largely by the sale of marks. Beyond this she cannot pay except by the extension of her export trade, which would enable her to accumulate other assets only to the amount by which her exports exceeded imports.

He described with great minuteness the method by which France discharged her indemnity to Germany fifty years ago, partly in gold and partly by the transfer of commercial bills of exchange and other foreign assets, unduly extending her own export and Germany's import trade. The gold transfused into Germany's circulating medium disar-

EXECUTIVE COMMITTEE OF THE AMERICAN BANKERS ASSOCIATION

Left to right, front row, James Reingold, of Denver; John R. Washburn; Donald A. Mullen, Secretary. Back row: Charles H. Meyer; Francis Coates, Jr., of Cleveland, Chairman; C. W. Allendoerfer, of Kansas City; T. J. Hartman, of Tulsa, Oklahoma; John R. Downey; Raymond F. McNally

ranged her price level. The great influx of imported goods depressed her industries. French trade and industry boomed, and he almost believed the remark attributed to Bismarck, that the next time he defeated France he would insist on Germany's paying an indemnity.

He believes the question of what Germany can ultimately pay is capable of being answered, but "the answer runs counter to the popular hopes, the popular passions, and to something more formidable still, a popular sense of natural justice which prescribes that the defeated enemy which planned the war should make good the damage suffered by the victors."

It is worth while to note that Britain's foreign investments which Mr. McKenna proposes to turn over to the United States are not to any great extent American investments, such assets having been sold early in the war to purchase war supplies here. They are mostly investments in other lands and payable in sterling. The problem of converting their sterling proceeds into dollars would still remain to plague the exchange market.

Regarding the implication that payment of the reparations and international debts by exporting goods must necessarily depress industry in the countries receiving the same, I hope to some time take a day or two off from my job of keeping tabs on foreign affairs, and clear up this paradox of a nation being impoverished by an inundation of desirable commodities, the mere statement of which is an affront to common sense.

Mr. McKenna had able assistance. President John McHugh, of the Mechanics and Metals Bank of New York, one-time head of a projected \$100,000,000

foreign trade financing corporation which looked over the foreign trade field and decided there was too much risk and too little prospective profit therein to justify the venture, prepared the ground for the former Chancellor by laying bare the fact that much of the present commercial chaos was the result of selling goods abroad on credit in such volume that the international scale pans had become hopelessly unbalanced. He believed that without a revival of European production and export there was no remedy for the situation. He urged the cancellation of such part of the foreign debt as was incurred in prosecuting the war as a measure to restore world commercial and financial stability. He deprecated financing exports beyond balancing imports, but would give Europe a chance to pay for her purchases.

Thomas W. Lamont spoke in similar vein, condemning the action of Congress in so tying the hands of the Debt Refunding Commission that the only proposition it can make to the debtor nations is to "sign on the dotted line" agreements to make impossible payments. Of the new Tariff Law, he said it protects a lot of industries which do not need protection while cutting off from our farmers and manufacturers a lot of markets ready to buy our commodities.

Alvin W. Kreh, President of the Equitable Trust Company, of New York, speaking on "Keeping Faith with Europe," asserted that this faith would be kept when Europe "replaced the snarling and bickering and quarreling with sound principles, mutual understanding, and mutual co-operation." The thought that we might assist in allaying this quarreling may be detected in his criticism of our trade policy.

The following resolution adopted by

the Convention can do no harm, and it may do some good:

We believe that the time has come for the Government of this country to formulate the principles on which it will be able to co-operate with other nations to bring about the needed rehabilitation of European countries and peace in the world.

Some of the speeches merit friendly criticism. The retiring President of the Association, Thomas B. McAdams, in an address marked by broad liberalism, chided the banker who fears to speak his mind lest some depositor disagree with him. This is hardly applicable to the present situation. The banker in charge of other people's money is scarcely to be blamed for being timorous about condemning a universal superstition which, like trade obstruction, blocks the progress of the world but is devoutly believed in by the great mass of business men. His advice to bankers to take a more active part in politics is economically sound, but I am not so sure of its practical wisdom, because I know the disposition of a large part of the people, influenced by yellow journals, to suspect any and all measures recommended by bankers as inspired by sinister motives.

While the spirit of liberalism was dominant in this Convention of the "Money Power," there were discords. The address of L. F. Loree, President of the Delaware and Hudson Railroad Company, was one of these discords. His criticisms of "Labor Unions" were undeniably sound, but marred by his very obvious hostility to them. Unions are very democratically organized, and officials hold their positions by producing results, or they go out. The unions will no more accept Mr. Loree's plan of State supervision than will some associations of capitalists, as, for example, the New York Stock Exchange. Really, it were better to demonstrate to them in a more friendly way the futility of their uneconomic methods, the real source and limitations of wages, and how a smaller money wage, with a fair readjustment of rents and prices, might purchase a better standard of living than they now enjoy. They are not the only people who believe prosperity is to be found in scarcity of and high prices for the thing they have to sell. Mr. Lamont's speech was a good antidote for that of Mr. Loree.

Despite the numerous expressions of optimism heard at the Convention, I thought I detected beneath the hopeful words a feeling of pessimism—an apprehension that, after all, the fears of an economic collapse in Europe repeatedly expressed by Frank A. Vanderlip may be well founded. This is not to say that the international bankers have no idea of how Europe may be saved, but they are by no means sanguine of getting done the things that must be done, which, as Mr. McKenna pointed out, run so contrary to the popular idea. It is reported in the papers that "Washing-

ton is cold to the suggestion of debt cancellation." It does indeed seem improbable that anything said in the speeches will affect American official action or public opinion for a considerable time to come, and they may produce an effect the opposite of that intended. Washington sees, not the impossibility of collecting the debts, which has been demonstrated before, but only that they are valid debts. It believes not Moses and the prophets; why should it believe mere bankers?

Mr. McKenna's subsequent remark that from her South African mines Great Britain could pay the interest and sinking fund on her debt in gold reminds me of the perfectly valid threat of another Englishman: "We'll pay the debt in gold until you are up to your

necks in it and cry for help." The prospect of such enormous additions to our present stock of gold is simply terrifying to the economist who sees its inevitable effect on our price levels.

Some interesting personages were among the 9,000 bankers from all parts of the country assembled there. John A. Stewart, with a century of life behind him, who was one of the Government's trusted advisers in the days of the Civil War, was among them. George F. Baker, reputed to be the only surviving charter member of the Association and now perhaps the most powerful financial magnate of them all, was another.

A lot of work of interest to bankers was done. The Convention recorded itself strongly against the extension of branch banking to the National banks,

though Walter E. Frew, President of the Corn Exchange Bank and newly elected head of the New York Clearing House Association, is quite as strongly in favor of it. Mr. McKenna in the course of his address, comparing the American and British banking systems, stated that the ten thousand or so banks in Great Britain are branches of thirty-nine central banks, five of the latter controlling three-quarters of them.

John Huegin Puelicher, President of the Marshall & Ilsley Bank, of Milwaukee, who took an active part in our war finances and has been prominent in banking and educational work through the American Institute of Banking, is the new President of the Association, succeeding Mr. McAdams.

New York, October 5, 1922.

BRITAIN AND THE DEFENSE OF THE STRAITS

SPECIAL CORRESPONDENCE BY MAJOR-GENERAL SIR GEORGE ASTON, K.C.B.

THE friendship between Field Marshal Sir Henry Wilson and Marshal Foch made its mark upon the world's history. I had the little story which follows from Sir Henry Wilson's own lips, when we were serving together on the Directing Staff of the Army Staff College at Camberley. There, as at all similar establishments for the higher training of staff officers, in Britain and abroad, it was the practice to work out academically the possible military results of the policy of our own and other countries should that policy lead to war. The possible use of the British Expeditionary Force alongside the French army under the conditions which subsequently materialized in 1914 was one of the most interesting of our academic schemes.

Wilson used to talk it over with his friends at the French Staff College (Ecole Supérieure de Guerre). One day he said to Foch: "How many British soldiers would the French army want alongside it at first?" Foch replied: "One. He will be killed;" meaning of course that, if so, Britain would be in it to the last man. About 80,000 British troops stood at Mons in August, 1914, guarding the left of the French army against von Kluck's turning movement. Over 8,000,000 were in arms by the date of the armistice, four and a half years later, and over 800,000 had sacrificed their lives to the cause.

In one of Wilson's last public speeches as Chief of the General Staff, a post that he gave up a few weeks before he was murdered, he warned his country that when once a military force, however small, is sent to a foreign country it is impossible to foresee the extent of the military commitments involved. The position in Turkey reminds us of those words, and it is interesting to recall the events which led up to the present situation (September 28, 1922).

THE NEUTRAL ZONES

Having served in Whitehall during the momentous years 1918 and 1919 when peace terms were being considered, I can vouch from personal knowledge for the fact that Britain did not wish to undertake the responsibility for guarding the Straits and for occupying Constantinople. It was hoped that America, known to be closely interested in the protection of minorities in Turkey, and not having been at war with that country, would have been willing to accept the charge; but soon it became clear that this hope was not to be fulfilled. The period intervening between those

days and the present can be dealt with briefly.

Just before the terms of the still-born Treaty of Sèvres were published, Mr. Lloyd George announced that the guardianship of the Straits was to be "our charge." Neither France nor Italy could spare the necessary troops. Guardianship of the Straits presumably means keeping the channels open for the safe passage of the merchant vessels of all nations. The position about warships is more complicated. The Straits were closed to them by an agreement between the European Powers which followed

the Turco-Egyptian War of 1832-41, in which Prussia, Austria, Russia, and Great Britain bore their part. They remained closed until the Great War. In August, 1914, the Turks opened them to the Goeben and Breslau, and the Germans abused their hospitality by hoisting the Turkish flag on these vessels and bombarding Russian Black Sea ports, thus bringing Turkey into the war. This question of the free use of the Straits by men-of-war is in need of settlement. It has been brought to a head of late when Greek war-vessels passed into the Black Sea and bombarded Samsoun.

The Turkish forts, mine fields, and mobile ordnance which defended the channels have been destroyed, but in order to insure security for merchant ships it is necessary to prevent any mobile ordnance likely to fire upon them from being mounted within range either of the Dardanelles or the Bosphorus. The method, under the Treaty of Sèvres, of insuring this condition is to establish "neutral zones" on both sides of each of these channels, and upon Britain has fallen the chief burden of the defense of these zones. Those on the European side we can call the Constantinople and Gallipoli zones, those on the Asiatic side the Scutari and Chanak zones, covering the Bosphorus and the Dardanelles, respectively. Their defense has been conducted impartially. The Kemalists were

driven off when they first invaded the Scutari zone last year, but, unfortunately, we could not ourselves provide sufficient troops for the purpose at the time, and, in conjunction with France and Italy, we called in the aid of the Greeks. Immediately afterwards, on their own responsibility, they embarked upon operations far into the interior of Asia Minor, which have ended in disaster, culminating in the sack of Smyrna by the Turks. We also kept the Greeks from violating the zones. When the Greek army in Thrace recently threatened the Constantinople zone, it was warned off by the British, French, and Italian High Commissions. The latest development, as I write this, is that the Kemalists, flushed with their victory over the Greeks, have invaded the Chanak zone, and the French and Italians (who for some time have been supplying war material to the Kemalists) have withdrawn their detachments from that zone, leaving the British, unsupported, to defend an area which measures about thirty miles in width by ninety in length, extending from the Sea of Marmora to the Aegean.

The future is in the lap of the gods. When the Kemalists violated the Chanak zone, they had already been told by Sir Charles Harington, the British general commanding the Allied forces, that any attempt at such violation would be "resisted by all the naval and military

forces available," as the Greeks were told when they approached the Constantinople zone. The latest news is that the Turks are mounting guns at Erenkeui, south of Chanak, and within range of the channel. Let us hope that wise counsels will prevail and the zone will be reneutralized (to coin a new word). If not, it may become the scene of a conflict in which Britain—at present unsupported, but with assistance promised from Australia and New Zealand—will again bear the brunt of a conflict embarked upon, not in her own interests, but in the interests of other nations.

From the purely local point of view, it is clear that, given sea command, it is easier to pour troops from the sea into the zone than it is to reinforce an opposing army from Asia Minor, a country deficient both in communications and supplies. But the real point at issue is not the neutrality of the Straits or the sovereignty of the Turk over Constantinople (these points have been conceded), but the future Turkish frontier in Thrace.

If the League of Nations, with the help of America, can settle that question, it will come into its own by putting out a spark which may otherwise kindle a blaze in the Balkans, spreading into a conflagration likely to extend over Europe and Asia.

Woodford, Salisbury, England.

DOWN WITH THE GOLDEN RULE

SPECIAL CORRESPONDENCE BY W. C. GREGG

RADICALISM is rebellion against the golden (capitalist) rule.

How strange that the golden rule, which means to us the rule for man's best conduct, may be used by some to mean the hated rule of gold or capitalism. One means fraternal good will, the other tyranny.

The world is full of strange contradictions. The Jew who has both oppressed and been oppressed is to-day as active as ever and as much feared and hated in Europe.

Propagandists, who bribe and are bribed, preach Christian charity and pass the hat for the benefit of human haters.

Countries which rest on a corner-stone of liberty and equality make strenuous efforts to foster classes and organizations which are pledged to destroy liberty of opportunity and freedom to labor.

Our souls are wrong because of the hard fate of European nations, but if we loan them money they fight over it and what is not divided up in commissions is appropriated for the demands of the day and not to build a solid to-morrow.

The good man left his quiet home in 1914. After eight years of absence he is wreck. He has fought and suffered a principle, but he has become vain,

greedy, lazy, full of advice for others and excuses for himself, extravagant, corrupt, and drunken.

Something must save him, restore him in mind and soul, make him again the honest, kind, truthful, peaceful citizen.

In our pride we have been prescribing medicine when it is a case for surgery. Something must reach his heart and soul.

The theory of the Christian religion fits the case perfectly, but we have seen how poorly it works in modern times. We are most of us nominal believers, but the fires have died out on the altars of the churches and the homes. The priesthood are interested in comfortable living and in self-preservation for themselves and their flocks. This preservation is only partially related to salvation. Salvation is only needed to offset damnation, which is no longer feared.

If we turn to the Old Testament, we find the Lord sending warnings to nations against too much prosperity, threatening to send wars, famines, and pestilence. The next pages tell us that he kept his word, the captains of industry went broke; the money lenders (oh, Isaac!) were ruined, and the midnight frolickers were one with the grafter in

begging bread. A multitude died, the rest went to work. Thus ended a chapter. Several other chapters relate the story with hardly enough variety to make interesting reading.

That is all old stuff. History repeats itself, perhaps, but really there isn't such a God, and he doesn't actually send warnings, does he? We must admit that we have risen above religious superstitions! We now approach all questions of the future with well-poised minds; but we don't like to break a looking-glass, and we positively will not sit thirteen at a table. Some one is smiling at us; perhaps it is the devil, who credits himself with doing a good job.

I did not intend to write on a religious subject, but what is the use of beating around the bush? The world is to-day without authority. It cannot exist, as at present organized, without authority. Unless some preacher comes to the front who can tell us of our sins and of a judgment to come; unless some Christ can, with whip in hand, drive us money-changers from the temples of corruption, force us looters, liars, and diplomats back to work; unless some God will have pity on us miserable sinners, and incline our hearts to keep his laws of industry, sobriety, and fair dealing, we are done

for, and modern civilization, with its class graft, and idleness, vanity and viciousness, dishonest propaganda and pompous virtue, will jazz itself to destruction. Listen to the music! The world is on its way.

And now come a few tedious details to add to what you already know.

It is practically impossible for an honest man to compete for business now being placed by European nations. From ten to fifteen per cent must be paid to go-betweens; even then some one may bid higher.

A recent transaction was closed for a large lot of Government supplies; the price was one-third higher than the regular price. The terms were cash, and it was paid for. It is not always easy to know where material goes. Recently an order was placed in London by a Swedish company; the goods were shipped to Germany, and forwarded to Russia. Was it Russian gold, German gold, or Swedish gold that went to pay for it? How much "commission" fell to the lot of the officials and introducers along the route?

There is so much competition among

the sellers that all too often conscience is superseded by expediency. The easy way is to accept the suggestion of the buyer—it is also the rotten way. Munitions in some form are moving from Allied countries to Russia via German correspondence and influence. The things that Germany will need for military organizations either at home or in Russia are being procured, regardless of peaceful reasons. Some mechanical elements, some parts of explosive mechanisms, are going in quantities. An English electric manufacturer told me that some things in his line bought recently could be used only with munitions of war.

If you and I know this now, Poincaré has known it for some time. You say, "If the French had been less insistent Germany would be less defiant." The probable fact is that Germany is deliberately wrecking her finances and her prosperity rather than pay indemnities to France. France had two very plain courses—cancel claims on Germany or insist on their payment. The first involves ignominious retreat, national degradation, and a revolution at home. The second means carrying out the Ver-

sailles Treaty, with or without Allied assistance. This may bring on war, but war is probably more welcome than the triumph of the Teuton.

The British have a detached but negative attitude toward France. Not all are pro-Boche by any means, but in their present security they are impatient of impediments to business restoration. It is little to them to ask France to forget and forgive. I passed the Edith Cavell statue to-day. If it had not already been built, I doubt if anything of the kind would be proposed just now. It would be considered as needlessly provocative.

Candidly, there is little hope of co-operation in the near future between France and England. Their conditions of security and interest are almost opposite. If a war breaks out on the Continent, England is not more apt to get into it than we are. Nobody has much with which to pay, and neither England nor America would profit by it. Indeed, the strain would probably burst some of our bubbles of inflation and we should illustrate the consequences of the wrath of God.

London, England.

THE WORLD'S GREATEST DEBATING SOCIETY

BY RALPH M. CARSON

THE visit of an Oxford Union debating team to American shores, as Mr. George Moore pointed out in these columns, is a new thing in the relations of English and American universities. It is a new thing for the Union. The visit is bound to start comparisons of standards and values. That these may be just and fruitful it is necessary to understand something of the unique place which the Oxford Union enjoys in England, both as a school for speakers and as a preparation for public life.

I have participated both in American intercollegiate debates and in the debates of the Oxford Union, and as a means of pleasure and development I incline to prefer the latter. But here I need only point out that the two systems are different. As ours is calculated on the basis of a public competition and outside judges and set discussion of a defined issue, so the English is fitted to the needs of a student debating society and cut to the parliamentary model. The Oxford Union is this society at Oxford. Founded in 1823, it is a general students' club, like the university unions in this country. But Oxford goes further, and adds a debating hall, modeled upon the House of Commons, a long galleried room with a high president's chair and Government and Opposition benches. Here the Union debates are held every Thursday of term, in a style, after a tradition, which belong to Oxford and Cambridge alone.

The Oxford procedure is that of a de-

bating society; but the caliber is that of our best forensic work, and the atmosphere is the incommunicable one of a fine parliamentary tradition. At every meeting a motion, usually political, is debated "in public business" from half-past eight to half-past eleven. It is phrased in general terms, and is accepted with no quibbling intention but in its broad issues. Two members propose it, and two oppose. These four, whose names appear on the notice paper, are, like the officers, in evening dress. They speak throughout to "Mr. President," and refer to other members always in the third person and never by name. They speak for or against the motion on any ground that pleases them, and with much or little reference to what their colleague has said. They occupy ten to twenty minutes, but are not sharply limited. After the fourth speaker, the motion is open for debate by the house generally; and fifteen or twenty more members will have time for brief speeches before the hour arrives at which to close the debate. Then the question is put. The remaining members range themselves on the Government or Opposition benches, to be counted. Their total, together with the votes of those who have gone out through the Aye door or No door, makes the division and settles the fate of the motion. The average division is between 150 and 400, all Union members. Visitors attend only in the gallery.

The whole procedure has the stamp of individuality upon it. Within the outer

wall of ceremony, it is free and informal. No one is there to teach speakers how to stand or gesture. There is no rigid time limit. Humor flows freely, and almost always from out the argument. The audience, composed largely of the speakers, pronounces judgment. As an audience it is the most critical (in no captious sense) that I ever spoke to. Though usually good-humored and always fair, it has a mind which must be grappled. And the point is, that every advance which one makes in power of speaking, every step in technique, is made in relation to the big central problem of driving an idea across that mind.

So much for the outlines of a Union evening. Its color is always different. The most personal humor and the best repartee come in question time, when the President announces: "The officers will answer questions concerning the discharge of their official duties." At once a saturnine individual in a dinner coat rises from a back bench and drawls in his most insinuating tone, "Mr. President, can you tell me where flies go in the winter time?" The President can only say that there are none on him. "Mr. President," sings the slim Irishman who rises from the Committee bench, "may I ask you a question?" "Certainly, sir." "Will you come to tea Saturday?" The air of jaunty and sweeping generosity thrown into this query justifies the shouts of laughter which greet it. But the house is getting weary of the absurd. "Sir," says a tall man who is to speak on the paper, "may I ask you a sensible

question?" The President is all solicitude as he returns in a low and balanced voice, "You might try, sir."

Question time is a great developer of *finesse* and discretion. I remember the first meeting of a new President. He seemed to have no past, and no one could think of a question to put. The pause had grown noticeable when one who was both the best heckler and the noisiest member arose. "Mr. President, has your presence struck this house with such reverence that I am the only one to venture to ask a question?" The President had an air of perfect command as he replied, "That seems to me the correct definition of reverence;" and it was five seconds before he got his reward.

Oxonians seem to work a spontaneous humor out of their speeches more than we do, just as they deal more in choice language and wayward fancy. Last term at the Union an acid Scot defined democracy as "a government of the fools by the fools for the knaves." On the occasion of the Cambridge visit the Union punster was showering things like this: "Cambridge is not a patch on this ancient seat of learning; since we, having abolished Greek, can make our own breeches with tradition." The eloquent Hindu who described Mr. Lloyd George as a Horatius on the wrong side of the bridge went on to picture the League of Nations in language which was enthusiastically applauded. "It is," he said, "a beautiful beneficent angel beating her wings in a luminous void, while Lord Robert Cecil blows continually into the vacuum in the effort to waft her heavenward."

Real eloquence, founded on conviction and fired with passion, is not absent from the Union, and often prevails. I

recall the debate on British reprisals in Ireland, where Mr. W. B. Yeats, the poet, was to speak fifth. The fourth speaker, a Tory ex-president, with powerful diction and delivery breathed fire and slaughter against the treasonable Irish. When Mr. Yeats arose, the house welcomed the emotional tremor of his voice and broke into cheers as the fine face flashed into ardor and the well-set figure paced down the aisle in an Irish passion of denunciation. I do not remember how large a majority he got. Again, during the debate on American foreign policy, when Mr. Beck, the American Solicitor-General, was to close the debate, an undergraduate from Christ Church made the most moving plea of his Union career. He appealed to the better genius of America for construction and co-operation in language which swept up the whole sympathy of the house, and ended pathetically on the old hope of El Dorado in the West. To vindicate American foreign policy by a majority of 8 in a division of 366 then required all the power and conviction of Mr. Beck.

There is much of the trivial and schoolboyish in these anecdotes, no doubt, and in the Union. It is a students' society. But it does worlds to keep up at Oxford the vein of solid political thinking which we so much lack in our universities. And its great men give it a historic dignity. Over against the wall on the Government side of the house stand three busts of Prime Ministers, ex-officers of the Union. They are Lord Salisbury, Mr. Gladstone, and Mr. Asquith. Lord Rosebery, also Prime Minister, was a member, but not an officer. The list of distinguished ex-presidents includes Lord Robert Cecil, one of the fathers of the League of Nations;

Lord Bryce, the great apostle of Anglo-American friendship; Lord Birkenhead, present Lord Chancellor and one of the positive figures in British politics; Lord Milner, the constructive Imperialist; Sir John Simon, now perhaps the leader of the English bar; Hilaire Belloc; John Buchan; and many others. These men, whose pictures look down from its walls, are not mere names in relation to the Union. They are solid evidence of its place in English life. Because they have come out of the Union to rule England, and have sent their sons to the Union again, they give its tendencies meaning and make its debates and its training almost a part of politics.

I have tried to convey a little of the atmosphere and tradition of the Oxford Union as I experienced it. Nothing in our universities is so characteristic of us as the Union is of England, nor so colorful, nor so individual. By comparison with our debating methods, it seems more real, more informal, and more sensible in many ways. It does not give equally good technical training; but the problem of the speech in relation to the audience it forces upon the speaker's attention from the outset. For one reason or another, it produces speakers who are more complete and better balanced, who use a finer language and a more subtle humor, than speakers in our colleges. Those who come best out of its training begin and end upon personal belief, making statistics and authority secondary. Great personalities are its true fruit. The brilliant and earnest men graduated from the Oxford Union into English public life are, to one who loves Oxford, a fit crystallization of her spirit. Range and power of mind, individuality of expression, belong both to Oxford and to the Union.

IOWA ON THE RAMPAGE

BY FREDERICK M. DAVENPORT

MEMBER OF THE SENATE OF THE STATE OF NEW YORK
PROFESSOR IN LAW AND POLITICAL SCIENCE AT HAMILTON COLLEGE

WE think of Iowa as one of the conservative States of the Union, much more so than Nebraska or Kansas, for example. Just now there is probably more reasonable as well as unreasonable unrest in Iowa than anywhere else in the central part of the country. Iowa farmers complain, of course, at the great deflation of agricultural prices following the war and charge the Federal Reserve authorities with the blame. There is a rising fury at the alleged speculative activities of Wall Street. The Esch-Cummins Railway Law, which bears the name of one of Iowa's own Senators, is unpopular in the extreme. The demand is State-wide for its absolute repeal, as indeed is the case in Nebraska and elsewhere in the West. Iowa is outraged particu-

larly at the six per cent provision of guaranty to the owners of the roads. Why a guaranty of six per cent to the owners of the roads, they say, when the farmers who furnish the freight and the railway laborers have no guaranty to protect them? The public man who points out that the Esch-Cummins Law has some very good features of Government regulation in the general welfare, and perhaps needs amendment rather than repeal, meets with short shrift. He is a tool of Wall Street. The railway workers have no confidence in the Labor Board provision of the law, which their recent experience leads them to think is calculated to take from them their free rights and privileges. The rail brotherhoods think that they have the capacity to exercise a share of control in the

management of the roads. The farmers would like to restore competition in the railway field.

Iowans think that the Government should have held on to the railways longer after the war. They say that their Senator Cummins, who was once a radical, but has grown conservative with age and time, came before their Legislature in January of the year the bill was passed with a plan for dividing the country into railway zones, eliminating waste, establishing unity and adequate financial control by government. And then, they say, he went down to Washington, and by June he was pressed into being the sponsor for a very different kind of bill of which a very large number of them disapprove.

The fact seems to be that many agri-

cultural Iowans are suffering severely from their own shortcomings. Especially the more enterprising of them prospered mightily during the war. Prosperity seems to have turned the heads of a great number. It is declared by those who should know that no less than two hundred million dollars were lost by the people of Iowa in unwise investment in bad securities. The farmers far and wide were the victims of smooth security salesmen. All this is charged up somewhat illogically against Wall Street. Furthermore, the war prices of agricultural products brought on a great land boom, and the men of Iowa proceeded to lay field to field in their eagerness to take advantage of financial opportunity. Now prices have fallen below the cost of production, the land boom has burst, landed indebtedness seems an intolerable burden—and Iowa blames the Government. Government may be partly to blame, but evidently not altogether. There is one level-headed farmer who is going around to agricultural assemblages telling the truth. He says in his speeches: "I bought land beyond any reason, I bought securities that I didn't know anything about, I bought luxuries, I was a damn fool; and if I lose out, me and the old lady will go back to where we were when we started, and we won't blame the Government!"

An Iowa banker who has gone into the figures told me that there is an automobile in Iowa for every four and one-half people in the State. So, if a great economic flood comes, and the people hear of it in time, everybody in the State can be transported out of it in a motor car. This same banker reckoned that the automobile depreciation and upkeep costs for a year amount to five hundred dollars a car, and eats up in the aggregate two or three hundred million dollars. It has brought a lighter heart and a greater volume of pleasure to the farmers of Iowa and their families than they ever knew, and there is a good deal of pure utility in it besides, but, by and large, it is one of the heavy economic burdens.

The plodders in Iowa appear to be about where they were before the war. The more enterprising of the population have been nipped by the economic frost, and of course the outcry from the more enterprising is very effective in its influence upon public judgment in the State; and yet if the people had not committed the errors which I have enumerated, thoughtful persons in Iowa believe that the State actually would be better off than at any time in its history. The plodder with his eighty acres is as well off as he ever was. The corn crop in Iowa is wonderful at this harvest. And the farmers are feeding the corn to vast quantities of live stock, which they are shipping out at a good profit to Eastern markets. Much to the alleged disgust of the Iowa farmer, the demand from the East is for his lambs and little two-hundred-pound pigs and baby beeves

weighing eight or nine hundred pounds. He raises them and ships them, but he will take you out where the cattle are, and, patting one of the beautiful baby Herefords on the forehead, he says: "There it is, you see; Wall Street is even robbing the cattle cradle for its own luxury, while Iowa fights for a livelihood!"

And this is where Brookhart comes in, the radical Republican candidate for United States Senator to succeed Kenyon, who has become a Federal Judge. Brookhart is a country lawyer, of good average ability, according to all accounts, of tremendous determination and sincerity. He is past fifty, but they say of him that every tooth in his head is as sound as in his boyhood. He is the Middle Western sort who never touched a drop of liquor or an ounce of tobacco in his life. He is dead in earnest. The conservative Cummins was once a radical, but is so no more. Kenyon often spoke radically but was reasonable conservative in action. But the belief about Brookhart is that he means his radicalism as mercilessly as La Follette does. He is probably not as able as La Follette, but he seems to be fully as determined. He has fused both the farmers and the laborers behind him in Iowa, just as La Follette has in Wisconsin. He claims the farmers, the laborers, the drys, the women, and the soldiers. He says that his opponent is welcome to the rest of the electorate. His Democratic opponent is Herring, of Des Moines, the head of the Ford agency for the State, a man of some social cultivation and wealth acquired through energy, foresight, industry, and honesty, according to his neighbors. The discussion between the two men is acrimonious in the extreme. Brookhart maintains that railway attorneys write Herring's speeches, and that his opponent is allied with all the crooked big business of the country. Herring retorts that Brookhart poses as a farmer in overalls when he is not a farmer at all, but a wild-eyed lawyer-politician; that he has his picture taken while feeding the hogs, and that his hypocrisy should be held up to scorn.

Brookhart insists upon having seven billions of water eliminated from the railway capitalization of the country at one fell squeeze. He is a radical railway reformer who represents quite exactly the temper of a large part of Iowa at this time. He is against what he calls the non-partisan league of Wall Street and all its works. He favors a soldier's bonus, to be paid out of war profits and excess profits generally. He is opposed to ship subsidies. He attacks "predatory blocs," but favors the farmer bloc, the labor bloc, the soldiers' bloc, the mothers' bloc, and any business bloc which is willing to co-operate with his favored list. He is the Republican candidate, but every Republican paper but one in the State is fighting him. When I was in Iowa, nobody seemed to think that regular Republican opposition will make any difference. The people gener-

ally seemed to be for him, including the Democrats in droves. More recently many of the regulars have organized against him and the tide of opposition has risen somewhat. The conservative Republicans will vote for Herring. They are afraid of Brookhart. They thought he would not get thirty-five per cent of the primary vote, as required under the Iowa law, and that the choice would therefore go to a convention. But Brookhart got nearly forty-five per cent of the primary vote. It is the Republicans who are on the rampage in the West, not the Democrats.

There is one reason why Brookhart seems as good as elected. He has been in two wars, the Spanish-American and the World War, and he is the finest rifleman in the State of Iowa and one of the best in America. He was a National Guardsman, and when the World War broke out he was put on the Rifle Commission by the Federal Government. He soon fell afoul of the views of the West Pointers and the army bureaucrats in Washington. They said that there was no use in training the millions of young Americans to shoot at a target, that if a thousand men stood up and fired at the enemy together they were sure to hit somebody; and the practice of accurate shooting, under the circumstances, was a waste of time and money. Brookhart said that it was very important that every American boy should learn to shoot straight. His theory was that a man who knew he could shoot straight and that the nearer the enemy came the better his chances would be of picking him off, would be more stable as a soldier in battle and more likely to stand without flinching or fleeing. He made himself so disagreeable to the army bureaucrats that he was put off the Commission, so I am informed. But high State influence got him a thirty-minutes' interview with Secretary Baker in Washington, and in thirty minutes he convinced Baker that he was right, and Baker took two brigadier-generals off the Rifle Commission and put Brookhart and a friend of his back on the job. And Brookhart set scores of thousands of young men in every army camp in the country shooting at a target every day. And Iowans claim that it helped at Chateau Thierry and elsewhere in France. When American soldiers began to pick off Germans at eight hundred yards, it was a new and discomfiting experience on the western front.

It seems to me that it will be hard to beat for public office a man with a record like this, especially when he fits into the temper of his State at the moment and into the economic circumstances of the time. Brookhart seems exactly the kind that the people of Iowa want to go to Washington for them just now. And the more cavorting about he does in Washington, the better they will like it. If he metaphorically kicks the roof off, they will applaud. That's what they are sending him there for. Two years from now it may be different.

SECRETARY HUGHES, KING NEPTUNE, THE QUEEN AND PRINCESS ON BOARD THE MARYLAND

ROLLING DOWN TO RIO WITH HUGHES

BY WILLIAM W. MORRIS, CHIEF YEOMAN, UNITED STATES NAVY

PROBABLY because the most of us speak only English and unconsciously assume a superior attitude toward Latin countries we are inclined to overlook the tremendous growth of our sister republics in South America. Few of us realize that Brazil has been an independent nation for one hundred years, and few indeed take more than a passing interest in events that are really important in that rich and growing country.

But our Government in Washington was wide awake to the importance of promoting better friendship and closer relations, not only with Brazil, but with the other Latin-American republics. Consequently when Brazil invited the United States to participate in the centennial celebration of her independence it was a graceful recognition of the increasing importance of South America in international affairs that prompted President Harding to send our Secretary of State, Charles E. Hughes, as an Ambassador Extraordinary to represent us at the opening of the Exposition in Rio. Secretary Hughes, Representative Stephen G. Porter (Chairman of the House Foreign Relations Committee),

Judge Finch (of the First Judicial District of the State of New York), Admiral H. P. Jones, U. S. N. (Commander-in-Chief of the Atlantic Fleet), and Major-General Bullard, U. S. A., constituted the Commission. They sailed from New York on the Shipping Board liner Pan-America on August 23, 1922.

During the trip Secretary Hughes participated in the time-honored ceremonies incident to crossing the equator. When hauled before King Neptune and his Court, the Secretary was accused of having scrapped the Navy, but he appeased the wrath of King Neptune by promising to send what was left of the Navy across the equator more frequently than in the past. This so pleased King Neptune that he let the Secretary off with a light sentence—"Life service to your country."

The Navy Department had been ordered by the President to provide a suitable naval escort for our mission, and also to represent the United States suitably in the harbor of Rio during the Exposition. Accordingly the superdreadnought Maryland, Captain D. F. Sellers, U. S. N., commanding, and the Nevada, Captain D. E. Dismukes, U. S.

N., commanding, had preceded the Pan-America, and fifty miles out of Rio they hove to and awaited the Pan-America. Presently the Pan-America stopped close aboard the flagship Maryland and the Admiral's motor barge was lowered from the man-of-war and sent to the liner for Secretary Hughes and his party. No time was lost in making the transfer, and as the Secretary stepped over the gangway to the quarterdeck he was greeted by a splendid-looking crew in immaculate dress uniforms and by a salute of nineteen guns and the breaking of the Secretary of State's flag at the fore-truck.

When the Maryland, followed by the Nevada, steamed into the beautiful harbor of Rio and received the national salutes from the British superdreadnaught Hood and from the French, Japanese, Brazilian, Italian, Mexican, and other men-of-war, Secretary Hughes undoubtedly felt a thrill of pride in the knowledge that his country was participating in a manner befitting the home of the Monroe Doctrine. It is well to remember that foreign countries are more impressed by the display of rank and so our position in the world d

EN ROUTE FROM RIO TO NEW YORK**

mandated that we be represented in the best possible manner by high officials of the country and by an adequate naval display.

When Secretary Hughes landed in Rio on September 5 he was escorted to Guanabara Palace, which was placed at his disposal. Since then this same palace has been placed at the disposal of the President of Portugal. No other representatives have been so highly honored by the Brazilians.

The following day, September 6, Secretary Hughes and other members of the American mission presented their credentials to the President of Brazil.

On September 7, the one hundredth anniversary of the independence of Brazil, the Exposition was opened by an international parade participated in by soldiers and sailors from fifteen countries. Our American bluejackets and Marines led the parade, and were beyond doubt the finest-appearing men in it. This was attested by the great applause that greeted them all along the line of march. After the completion of the parade the President of Brazil congratulated Secretary Hughes, who was sitting beside him, on the magnificent appearance of our men.

During the following days Secretary Hughes was extremely busy with the many ceremonies and official calls, luncheons, banquets, and public speeches. Among these ceremonies was the official opening of the Exposition by the President of Brazil and the dedication by Secretary Hughes of the new American Consulate in the Exposition Grounds.

Meantime our three thousand blue-

jackets were acting as unofficial representatives of the United States, and they made a fine impression wherever they went. The principal sporting event was an international boat race, participated in by pulling cutters from the men-of-war of eleven different countries. The crew from the Maryland was unfortunate in getting off to a bad start, but somehow they felt that the prestige of the United States was just as much at stake in the race as in the ceremonies participated in by Secretary Hughes, and so they pulled their hearts out, and at the end of the two-mile race flashed across the line a boat's length ahead of the next best—England.

It had been originally planned for the Secretary and his party to return on the Shipping Board liner American Legion, but at the last minute it was decided that the Secretary would return on board the Maryland. The Nevada was left in Rio for the duration of the Exposition.

The Maryland got under way late in the afternoon of September 12, and, demonstrating the flexibility of her American motive power—electric drive—gathered headway rapidly and in a few minutes was steaming at over eighteen knots without a particle of smoke from her funnels. With men standing at attention on deck, and with the band playing the national airs of each country as she passed their foreign men-of-war, she steamed majestically out of the harbor, a fitting representative of the power and dignity of the United States. The Maryland maintained this speed, and even better, all the way to New York, even during a

two days' gale, and succeeded in shattering all records for the run between Rio and New York.

On the way back Secretary Hughes was again hauled before King Neptune on crossing the equator and was presented with a handsomely engraved Neptune certificate which made it known to all men that he had become a trusty "shellback" and had been duly initiated into the mystic and ancient order of the Deep. During the ten days' voyage Secretary Hughes inspected the crew, their mess tables, where they slept, the engine-room, fire-rooms, and all parts of the ship and made himself very popular with the men by the interest he displayed in their work. They had expected to find him rather austere and dignified, but, on the contrary, they found him to be a regular fellow and a good shipmate. This favorable impression was mutual, for upon landing in New York Secretary Hughes stated to the press that his trip on the Maryland had been the most enjoyable and instructive voyage he had ever made and that he had great admiration for the officers and the men of the Maryland.

It is safe to say that the visit of Secretary Hughes under such auspicious circumstances as attended his trip to Rio has done much to strengthen the ties of friendship between the United States and Brazil and to bring about a clearer appreciation in both countries of our kindred aspirations. Secretary Hughes has added greatly to the prestige of this country by his visit, and it is hoped that our Government will continue its efforts in this direction.

THE AMERICAN NAVY AND THE TURKS

BY COMMANDER ROBERT A. BACHMAN (M.C.), U. S. N.

WITH events in the Near East bursting suddenly from an apparently peaceful condition into a state of war, the United States Navy found itself once more so placed as to make it the center of the entire Nation's eager interest.

In order to clear up the official status of our official representative in Turkish waters and to make plain just what part the Navy is playing to-day, when the situation between England and Turkey is so strained, it may be well to state exactly in what capacity Rear-Admiral Mark L. Bristol is acting, and how he is representing our Government.

When the Allied Governments concluded the armistice with Turkey, they established an Allied High Commission to deal with whatever problems might arise in connection with the Near Eastern situation. During the World War the United States had broken off diplomatic relations with Turkey, although war had never officially been declared.

On this Allied High Commission the United States had no representation, and, as our relations with Turkey still precluded the sending of an ambassador, it eventually fell to Admiral Bristol, as Senior United States Naval Officer in Turkey, to handle all diplomatic business.

This official designation, however, left him without adequate power and authority to deal with the many phases of our foreign relations which demanded his attention. In all common councils a greater voice than his was exercised by the other Powers on account of being represented by diplomats with higher credentials. To correct this situation—and our interests at that time were of the greatest variety and importance—the President, upon recommendation of the State Department, on August 11, 1919, appointed Rear-Admiral Bristol High Commissioner of the United States, and the negotiating of all matters between the United States and

Near Eastern countries was carried on through him. Although since then diplomatic relations have been resumed, the office of High Commissioner proved to be so desirable that it has been continued to this day. By this change of rank the importance of Admiral Bristol's position was properly emphasized, and consequently the usefulness of his office proportionately increased.

In brief, the duties of the High Commissioner include the following appointments: He is diplomatic representative of the United States, Senior United States Naval Officer in Turkish waters, representative of the United States Shipping Board in the Near East, Chairman of the Constantinople Chapter of the American Red Cross, General Assistant of the Near East Relief Committee, and General Director of all United States Consular Offices in Turkey.

With the despatch of twelve additional destroyers to Constantinople, the naval

REFUGEE CHILDREN IN THE NEAR EAST CLOTHED IN OLD UNIFORMS BY OFFICERS OF AN AMERICAN DESTROYER

forces of the United States there will be augmented to twenty destroyers, the small station ship *Scorpion*, and some supply ships and tenders.

Vice-Admiral Long on the cruiser *Pittsburg*, his flagship, will be in command of the entire United States naval forces operating in European waters. Admiral Long will make an inspection trip to Turkey to look over the situation and determine the disposition of the forces under his command. The immediate handling of the vessels at Turkey will remain with Rear-Admiral Bristol.

To set down in detail all the matters which must of necessity claim Admiral Bristol's attention in such unsettled times as these would take too much space. But one fact should not be forgotten—that, first of all, relief work carried on and the protection given to Americans constitute the bulk of his affairs.

Destroyers have steamed from port to port, carrying stores, transporting members of the Near East Relief Committee, assisting in every way the efforts of the Red Cross and other relief organizations, evacuating Americans, non-combatants, and wounded from Black Sea ports, and helping American business keep on its feet.

When in 1920 communication lines in Turkey, Bulgaria, Russia, and Rumania were badly shattered, and at times even totally destroyed, Admiral Bristol was able, through stationing his destroyers advantageously, to keep up communications with London and from there to the United States by means of their

radio equipment. But for the naval communication office which he established ashore it is difficult to imagine what our Near East Relief, Food Administration, Red Cross, and commercial men would have done. The last were

especially handicapped by the military control of cable lines and the frequent total paralysis of mail facilities. All messages sent out via commercial cable were more or less open to the scrutiny of foreign competitors, and the saving of American trade became almost completely a question of communications. At one time the Navy handled as many as two thousand incoming and outgoing messages a day.

In the transacting of official duties a sharp line was drawn between state and naval matters. When Admiral Bristol took over the Embassy and established the headquarters of the High Commission there, two files were begun—one known as the Navy file, and the other as the State Department file. In this way it was arranged that whenever the time came for the Navy to withdraw the Embassy files would be left complete.

Now, with the eyes of the entire world focused on Turkey, it may be apropos to quote a despatch recently sent to one of our metropolitan dailies by its staff correspondent:

"The humanitarian work done by Admiral Bristol and his small naval force," he says, "cannot be overrated. He has demonstrated that the American Navy is not only a fighting machine in time of war, nor a mere ornament in time of peace. While other naval forces are chiefly concerned with evacuating their own nationals, American destroyers are practically the only forces devoting themselves wholly to the unfortunate Greeks as well as to the Americans."

AN AMERICAN GIRL IN CONSTANTINOPLE, "the only unmarried American woman, outside of the relief organizations," wrote some intimate letters home about the life there during the past year, and about some of the outstanding figures in that Near East storm center. Notable among the figures she describes is

ADMIRAL BRISTOL

But she does not stop with these high personages. She describes also the "soft-eyed Turkish doll," the prize beauty, Little Baala; the Princess Sabailheddin, a "Turkish princess with blond bobbed hair;" the Spanish Jew, "who scurries in and out like a rabbit;" and others who do not get into the papers. Best of all, she tells how Americans and Europeans pass their time "where every meal is a party" and where "it's a delirious life for a British or American girl."

She writes with zest of her experiences and observations, which she characterizes as "Turkish Delight."

*First installment in
next week's Outlook*

ALWAYS ON GUARD

THE NAVY—IN PEACE

BY CAPTAIN L. M. OVERSTREET, U. S. N.

THE Navy is a constructive and a humanitarian as well as a fighting organization. The general impression that the men of the Navy are idle in time of peace, save for necessary war drills, and that money appropriated for the Navy is expended entirely in preparing for future battles, is incorrect.

The men of the Navy are so active in time of peace governing certain of our island possessions; protecting our citizens abroad; promoting and safeguarding our foreign trade; assisting all merchantmen in approaching our coasts; and in developing shipbuilding and engineering industries, that money appropriated for the Navy is well invested.

NAVY GOVERNS OUR ISLAND POSSESSIONS

Virgin Islands. These islands, which we obtained from the Danes in 1917, are governed by an American Admiral, assisted by a staff of some twenty other naval officers, of whom fourteen are doctors. In the early days St. Thomas was a pirate stronghold. Here exists the famous "Bluebeard's Castle," built in 1700. The native guides point out the many black crosses on the inner walls of the Castle, which indicate the number of wives the old pirate killed. At one time St. Thomas was the most important transshipping port in the West Indies, where slaves and cargoes were redistributed and where steamers were coaled. In the good old days our men-of-war were prone to drop in at St. Thomas to fill up their wine lockers.

The islands have an area of 142 square miles, a population of 26,000 (largely Negroes), and a trade valued at \$4,000,000 annually. The largest island, St. Croix, exported nearly \$2,000,000 worth of sugar in 1921, with small amounts of molasses, cotton, and cattle. Two other islands, St. John and St. Thomas, used to make valuable exports of bay rum, but prohibition has now crippled this as well as the real rum industry.

The Naval Governor has given education an impetus by revising the school laws; by raising from thirteen to fifteen years the age limit for compulsory education; by requiring parents and guardians to keep the children in school; by increasing the number, salary, and quality of the teachers; by introducing nurses and dentists into the schools; by increasing night school facilities; by establishing libraries; and by organizing schools for nurses. In February, 1921, the first native girl graduates in the history of the islands were given diplomas as nurses. Baby shows are held monthly, at which a Navy band plays, pink lemonade is served, and the Governor awards prizes to the proud

mothers of the islands' finest infants. Infant mortality has been reduced from 325 to 207 per thousand in the Virgin Islands as a whole, while in the capital the rate has been reduced to 86 per thousand. Improved sanitation has eliminated typhoid and reduced the evil effects of other diseases.

The Navy allots \$340,000 of its money outright to govern the Virgin Islands. Many additional thousands are expended maintaining the naval force, improving sanitation, and furnishing medical treatment to the natives.

Samoa. A naval captain, assisted by some twelve other naval officers, governs American Samoa. We took over this group of South Sea Islands from the natives in 1899 by an agreement with England and Germany. The rest of the Samoan group went to Germany, but it is now governed by New Zealand. The group has an area of 77 square miles, and a population of 8,000 people. These natives belong to a fine type of the Polynesian race. These islands have a great strategic value to the Navy. Pago Pago is the best harbor in this region of the South Seas, is *en route* from San Francisco to Australia, about 4,200 miles from the former and 2,400 from the latter, and 2,300 miles to the southward of Honolulu.

The laws have been revised and issued in both English and Samoan. For the first time in history the natives have laws in their own language. Fifteen school districts have been established, and schools increased from two to six. Nine more will be started when capable teachers can be obtained.

Public health has been improved by issuing sanitary regulations in Samoan to each family and by using copies in English in the schools. Navy doctors and nurses are training native girls for nursing, while Navy pharmacists have been put in charge of dispensaries which have been established on two outlying islands and in a distant part of the main island of Tutuila. A free dental clinic is run for the natives. An excellent native female nurse, a graduate of a naval hospital in America, delivers lectures continually in the native villages. A sanitary inspector travels from village to village to lecture and give instruction.

The chief export is copra. The crop is valued at about \$175,000 annually. The natives used to pay their taxes in copra. This method required the collection of an excess amount in order to allow for shrinkage and to realize a definite sum of money. Excess cash was returned to the chiefs of districts, and trouble followed. The Governor has therefore changed this to an exact cash

taxation, based on the annual budget, with satisfactory results. Good roads are being cheaply built by sending out prisoners daily to work on them.

Guam. A naval captain, assisted by some twenty naval officers and a force of marines, governs Guam. This island is a small one (area 225 square miles, population 1,500, mostly Chamorros of the Malay type), which we obtained in 1898 from Spain. Guam has great strategic value. Guam is *en route* from San Francisco to the Philippines. It is 5,000 miles from the former, 1,500 miles from Manila, and some 2,300 miles to the westward of Honolulu.

The balance of trade is against Guam, as the copra exported annually is valued at some \$40,000, while the imports, mostly foodstuffs and cotton goods, are valued at over \$400,000. The island revenues amounted to over \$112,000 in 1921.

As in the Virgin Islands and Samoa, great attention is given to education, sanitation, and health. In addition to regular academic schools, there is an industrial school and an experimental farm. Two new schools are being built, while two native students are kept in the United States in agricultural schools. Improved sanitation has reduced disease. The birth rate now is more than double the death rate. There were no cases of leprosy last year. There are no local doctors or dentists, so the Navy medical force, consisting of nine doctors, two dentists, forty hospital corps men, and eleven female nurses, assisted by a few native nurses and midwives (whom our doctors have trained), must care for the health of the entire island population. There are numerous outlying medical stations, with additional dressing stations, while all school teachers and patrolmen are given first-aid training. Due to the native habit of betel-nut chewing, a Navy dentist spends two afternoons a week in schools; tooth-brush drills have been introduced in the schools in order to combat the betel-nut chewing evil. All schoolboys are given physical training for four hours a week, including Swedish setting-up exercises to music. The boys join the militia from the age of sixteen to twenty-three, are then transferred to the first reserve with monthly drills, and finally to the second reserve, with semi-annual drills. The result of this training has been very satisfactory and has improved the health and strength of the male population.

The Navy allots \$20,000 outright to the care of lepers, who are sent from Guam to the leper colony at Cullion in the Philippines. In addition, many thousands of dollars are expended in maintaining the naval force and in im-

proving education, sanitation, and health throughout the island.

The Navy is proud of the results of its work in these island possessions. Some stress has been laid upon these naval activities since they are not generally known. Naval officers, during their forty years of active service, are constantly caring for the education, health, and recreation of their men in order to provide happy, healthy, and efficient crews for their men-of-war. They are, therefore, well qualified to govern these islands, where questions of health and sanitation are of the greatest importance.

NAVY PROTECTS COMMERCE

In order to protect our citizens abroad and our foreign interests, the whole world is divided into sea areas. An admiral is held responsible for the area allotted to him. In the Asiatic area the admiral must keep a force of gunboats on constant patrol on the Yangtze River. This patrol extends nearly 2,000 miles up the river into the very heart of China. At least one gunboat is kept in the river between Hongkong and Canton. The present war at Canton has made it necessary to reinforce this gunboat by a destroyer. A cruiser is kept in Vladivostok. The rest of the Asiatic fleet, consisting largely of destroyers and submarines, is generally in the Philippines.

These small cruisers and gunboats doing patrol duty have little value in time of war, but they protect American interests and even save the lives of Chinese merchants from their own brigands. Our exports to China in 1920 were valued at over \$145,000,000, and this trade, together with the Americans handling it and our missionaries, needs protection. This patrol work costs the Navy some \$3,000,000 annually. During the recent crisis in the vicinity of Peking cruisers and gunboats were rushed to North China and extra Navy men landed to reinforce the Marine Guard which the Navy keeps at all times on duty in the Chinese capital. By international agreement, we are pledged, during internal Chinese wars, to co-operate with the other Powers in keeping the railway lines open from Peking to the sea.

The Navy also keeps a patrol force on duty throughout the Caribbean Sea to protect our interests. The fruit alone we import annually from this region is valued at over \$50,000,000. This trade, as well as our citizens, must be protected throughout these troublesome West Indian countries. It costs the Navy some \$3,000,000 annually to maintain this patrol. This amount does not include the cost of maintaining the force of sailors and marines who are temporarily on duty in Haiti, San Domingo, and Nicaragua.

The Navy maintains a considerable force of ships throughout the eastern Mediterranean and the Black Sea. Americans have important oil and tobacco interests in the Near East; in

fact, the annual shipments of tobacco from the single port of Samsun in the Black Sea to America are valued at over \$15,000,000. Due to the present Greco-Turkish war, a destroyer is constantly on duty at Samsun to protect our interests. After the collapse of General Wrangel's Russian army our destroyers helped to bring the remnants out of Sebastopol. One destroyer, in fact, picked up in the Black Sea a broken-down merchant ship which was crowded with Russian refugees and towed it into Constantinople.

An American admiral is our High Commissioner in Constantinople, as we have no ambassador there. With a force of eight destroyers he has been able to protect our trade in the Near East to the extent that it has increased over 1,000 per cent in the past two years. It costs the Navy about \$4,000,000 annually to do this work in the Near East.

During a revolution in South America, some years ago, a rebel gunboat fired on an American merchant ship while it was proceeding to land a cargo of our products. An American cruiser at once fired a single shot, and our merchant ship was not again molested. There have been many special instances of commerce protection similar to this one. In 1920 our oversea imports were valued at nearly five billion and our oversea exports at over seven billion of dollars. When we have abolished our city police, our State constabularies, and our National Guard, and are living peacefully among ourselves; when we are safely shipping our own mail and freight across the United States without protection; then (if other nations have done the same) we can consider eliminating the men-of-war now needed to protect our twelve-billion-dollar sea-borne trade.

Our very first men-of-war were built in 1794 in order to protect our commerce. When the pirates on the Barbary Coast seized the wheat we were sending into the Mediterranean, we paid tribute until these ships were completed. Payment of tribute stopped as soon as our newly built men-of-war reached the Mediterranean. Two of these first famous ships, the *Constellation* and the *Constitution*, still exist.

Some may exclaim: "But we do not have pirates to-day." Is not China forced to pay huge sums in futile efforts to buy back her own territory? This huge nation of 400,000,000 peace-loving people does not have an efficient navy, and it cannot drive off its aggressors.

The State Department is constantly calling upon the Navy as a strong right arm to assist in carrying out its foreign policies and to protect our citizens and our commercial interests. One of our ablest Secretaries of State, John Hay, said in 1902, after some troublesome revolutionary events in the Caribbean: "I have always felt relieved when a naval officer had arrived on the scene, because he always kept within the situation." Later, in 1904, John Hay said: "We have had a number of difficult in-

ternational situations in the West Indies in the last two years, and they have all been handled by naval officers very well. They have not made one single mistake."

NAVY OPENS PORTS TO TRADE

Commodore Perry opened Japan to the trade of the world in 1854. This is so generally known that it seems superfluous to give the details.

In 1811 the Navy took steps to open Turkey to our trade. At that time we were sending exports valued at \$1,000,000 annually to Turkey, but as it was not generally open, our products had to be landed in Smyrna. The commanders of our squadrons worked with the Turkish Government until a treaty was consummated which opened Turkey fully to our trade, and an ex-Naval officer was made our first Minister to Constantinople.

After the opium war in China in 1842 the British forced the Chinese to make the "Treaty of Nanking," whereby the five Chinese ports of Canton, Amoy, Fuchau, Ningpo, and Shanghai were opened to British merchants. The alert naval commander of our Chinese squadron at once secured a copy of this treaty, and arranged with the Chinese Viceroy at Canton to give our merchants all the privileges accorded to the British.

NAVY BUILDS UP INDUSTRY

The late Andrew Carnegie said that the great steel industry of America was built up by the United States Navy, whose contracts, specifications, and inspection work made steel what it is today. In the Act of August 5, 1882, Congress wisely provided for the construction of two men-of-war to be built of steel of domestic manufacture. There was no steel industry in our country at this time, and the shipbuilders opposed this project vigorously. However, the Navy insisted, and experiments were made, with the result that the great American steel industry was founded. The price of steel ship plates dropped from 8½ to 4½ cents a pound.

On board ship it is necessary to save weight as much as possible, and with this end in view, the Navy has constantly drawn up specifications substituting lighter materials for heavier. Large Navy orders have put the Monel metal industry on its feet. The manufacture of armor plate has caused exhaustive research in treating and alloying steel. A large order for light-weight Navy pumps to be made of naval brass, of tensile strength of 30,000 pounds, resulted in tests which produced a high-grade material having a tensile strength of 50,000 pounds. The Navy has been able to increase steam pressures, to produce turbine engines, internal combustion engines, reduction gear drives, and even electric drives for our ships. The merchant marine, many shore industries, and the people at large have had the benefit of the Navy's engineering work.

The Navy operates two ships for the

THE GOVERNOR OF SAMOA, A U. S. NAVAL OFFICER, GREETED BY SOME OF THE NATIVE CHIEFS OF THE ISLAND

Bureau of Fisheries to enable scientists to carry out research work. This has resulted in the location of fishing banks, oyster beds, etc., and has been a great benefit to our fishermen and to our consumers. It costs the Navy some \$175,000 annually to maintain these ships.

Three gunboats have been loaned to the three States (Massachusetts, New York, and Pennsylvania) having marine schools for the training of officers for the merchant marine. In addition to the loan of the ships, the Navy contributes some \$75,000 annually to help maintain them.

Many Naval Academy graduates resign and enter civil life. These men, such as Homer Ferguson, President of the Newport News Shipyards, use their nautical and engineering education to advantage by managing our shipyards and our engineering plants. Hundreds of sailors, who have been taught trades on our battleships, are returned to civil life annually as trained mechanics.

NAVY ASSISTS MERCHANT MARINE

Hydrographic Office. The Navy began making ocean surveys off Cape Cod in 1837. The Hydrographic Office was established so the United States, through the Navy, could supply charts, sailing directions, navigation manuals, and other navigation data to the ships of our Navy and to the merchant marine. The Hydrographic Office, therefore, issues the following publications: "Sailing Directions" (fifty-eight volumes) which contain data needed by mariners to enable them to cruise along foreign coasts or enter foreign straits, seas, rivers, or harbors throughout the world; "Light Lists" (six volumes) which contain lists of lightships, lighthouses, and other navigational lights along all foreign coasts; "Azimuth Tables," a book

which gives the true bearings of the sun needed for correcting ship's compasses; "Bowditch," a book containing logarithmic tables with full instructions for working navigation at sea; "Notices to Mariners," which are pamphlets issued weekly giving changes in lighthouses or buoys throughout the world; monthly "Pilot Charts" which give the best ocean routes for the month, the probable cyclone and other storm areas, probable location of icebergs and derelicts, percentage of fog to be expected, location of Navy radio compass stations, and other important information; and charts of foreign waters. The Navy issues some 2,600 foreign nautical charts and has plans to issue 1,150 more in order that American ships may get all the foreign charts of the world, at cost price, at home. The few charts, some 650, for our own coasts with sailing directions and light lists are issued by the Commerce Department.

The Navy sells all these charts and publications mentioned at cost prices in all our seaports through the local dealers in ship supplies. To further assist the merchant marine, hydrographic offices are maintained in all our principal seaports where sea captains can get latest information, bulletins, pilot charts, notices, etc., free. They are required, however, to send in weather reports and other observations made at sea. Some 6,000 sea captains co-operate with the Hydrographic Office in the exchange of valuable hydrographic information.

Naval Observatory. The Naval Observatory was established in Washington, in 1842, in order that astronomical observations needed to determine the exact time and the position of certain heavenly bodies used by mariners might be made in America. From astronomi-

cal observations made here, the exact time and the position of certain heavenly bodies are determined. Time signals are sent out twice daily through the naval radio service to ships at sea, which enable navigators to correct their chronometers. Chronometers are high-grade clocks, which must show the exact time required in working navigation problems. Time signals are also sent out daily over land wires to enable the people on shore in the United States to set their clocks. The positions of the heavenly bodies used by mariners are issued in an annual publication called the "Nautical Almanac."

In order to ascertain his position at sea, the mariner must take the following steps. Measure the angular altitude from the horizon to some heavenly body (sun, moon, planet, or star) with a sextant; note the exact chronometer time of the observation; pick out from the "Nautical Almanac" the exact position of the observed body in the heavens at the instant of observation—that is, the declination (angular distance from the equator) and the right ascension (angular distance round the world from the first point of Aries); and, by means of logarithmic tables, solve the problem to find the position of the ship at sea—that is, the latitude and longitude. These tables, with a full explanation as to the proper method of working out all kinds of observations, are found in a book called "Bowditch," a publication of the Hydrographic Office.

The mariner now plots this position on a chart, draws a line to his port of destination, and picks off the compass course along this line. To check the correctness of the compass he now looks over the compass and reads off the bearing (direction) of the sun. He notes the chronometer time, turns to the "Azimuth Tables" (a Hydrographic Office publication) and calculates the true bearing of the sun from the ship. The difference between the compass bearing and the true bearing shows the error of the compass which must be allowed for in steering the ship on a compass course. If the ship is heading for New York, the mariner now turns to the "Monthly Pilot Chart" (issued by Hydrographic Office). He finds that while crossing the Gulf Stream the ship may be set ten miles to the northward, or far enough to cause the ship to run ashore in a fog on Long Island, so allowance is made for this current. If, on approaching New York, the weather is foggy, the captain has merely to ask the Navy radio compass stations to guide him safely into port, as will be described later.

The Observatory also issues chronometers, compasses, sextants, and other navigational instruments to ships of the Navy. Its publications, however, are on sale for the benefit of all mariners.

Some feel that we should have a noted astronomer at the head of the Naval Observatory instead of a naval officer in order to do scientific astronomical re-

search work. Such a change would be a blow to mariners. The mission of the Naval Observatory is to supply mariners with the exact time and with the annual "Nautical Almanac." This requires constant routine astronomical observations. There are some thirty-two private observatories in the United States. Several of these have better equipment for special research work than the Naval Observatory. The largest of the private astronomical observatories are those of Harvard, of the Chicago University (Yerkes), of the University of California (Lick), and the astrophysical observatory at Mount Wilson, California, which is supported by the Carnegie Institute. The Mount Wilson Observatory cost nearly a million and a half dollars, or twice as much as the Naval Observatory. Harvard has a branch observatory in Peru, South America.

Radio Stations. A chain of Navy radio stations encircles the globe. These stations broadcast to ships at sea daily weather reports, special reports of storms, location of ships in distress, location of icebergs and wrecks, and Naval Observatory time signals.

During the Boxer outbreak in China the Legations in Peking were cut off from the world. However, while the recent battles were raging around Peking, there was little danger that our Legation would be cut off. Since the Boxer outbreak our Navy has installed the most powerful wireless now existing in that city. Our admiral can keep in constant communication with our Legation from his flagship.

The Navy Department in Washington can communicate with Peking by flashing a message from the Navy radio station at Arlington through the chain of Navy radio stations at San Diego, Honolulu, Guam, Cavite, and to Peking, or by another route from San Diego to Alaska, to Vladivostok, and thence to Peking. Recently, when it was thought that General Wood might be in a shipwreck in the southern Philippines, it took little over four hours for the Navy to send a wireless from San Diego through Honolulu and Guam to the Philippines, and to get back the report that he was safe.

The Radio Compass. Within the last few years the Navy has installed a number of radio compass stations along the coast. These stations would, in time of war, be able to locate and trace the course of enemy ships. In time of peace they guide our men-of-war and merchant ships safely into port in spite of fogs and storms. A ship approaching New York in a fog, for instance, has merely to call up the Navy radio station and ask for bearings. The radio compass stations listen to the radio signals made by the ship and determine the direction of the ship from each particular station. For instance, the Fire Island station may find that the ship bears 194°, while Mantoloking on the Jersey coast may find that the ship bears 82°. These bearings are sent by radio to the captain

THE NAVAL RADIO COMPASS GUIDES SHIPS THROUGH FOG INTO PORT

of the ship, who merely has to draw two lines on his chart showing these bearings. The intersection of these lines gives the position of the ship. If the captain sees from this plot on the chart that the ship is about to run ashore on the Jersey coast, he heads to the northward and soon asks for another "fix." Fire Island and Sandy Hook may now give him new bearings. Radio compass stations are located in the vicinity of all our great seaports both in the Atlantic and Pacific, and are rendering valuable service in guiding ships in through fog. During the recent month of May the Navy radio compass stations at New York gave bearings to 37 men-of-war and 298 merchant ships, or over ten ships a day, entering that port. The saving of one ship will save enough property to pay the cost of the radio service for the year, not to mention the saving of the lives on board. Only recently the operator at the Otter Cliffs compass station found a ship that was in danger, so he sent a radio "Stop! danger ahead." The captain stopped the ship, and, when the fog lifted, saw rocks just ahead.

Submarine Cable. The Navy has recently laid a cable along the bottom of the channel leading into New York. A destroyer, through the use of a listening device on each side of the ship's bottom, was able to follow this cable (through which there was an alternating electrical current) up the channel, although the man steering was blinded from looking ahead.

New Sounding Devices. Our destroyers are now making extensive tests endeavoring to get the depth of water as they cruise along by using certain wartime devices, such as were used in listening for submarines. A sound signal sent from the bottom of the boat strikes the bottom of the ocean. A man at a submarine listening device catches the echo as it comes back. By getting the interval of time for this return echo, as sound travels slowly through the water, the depth of water can be calcu-

lated. This apparatus will enable captains of ships approaching the coast to get the depth of water at all times. Few ships would go ashore if the captain could know the depth of water at all times.

The Navy has eleven high power radio transoceanic stations, ninety smaller shore stations, forty-six stations on light vessels, and fifty-four radio compass stations. It costs the Navy over \$2,500,000 annually to maintain this splendid radio service. This is money well invested, for thousands of dollars and many lives are safeguarded as the radio guides merchant ships safely through the fog into port.

NAVY A CONSTRUCTIVE FORCE

There are some 3,000 naval officers (men specially trained in navigation and in radio engineering) cruising on 300 naval vessels (battleships, cruisers, gunboats, destroyers, submarines, mine layers and sweepers, colliers, tankers, supply ships, and hospital ships) in all parts of the world, from Halifax to Hongkong and from Alaska to the Straits of Magellan. These officers do the work outlined in this article as a part of their regular duties. No other department of our Government could maintain ships and technical men all over the world to do the essential work done by the Navy.

The Navy is proud of its constructive work in shipbuilding and engineering. In opening foreign ports to our commerce, in protecting our trade and the lives of American citizens throughout the world, and in improving sanitary, health, and educational conditions in our insular possessions the Navy has been eminently successful. By its astronomical, hydrographic, and radio work lives and property on the high seas are regularly safeguarded. The men of the Navy are glad to feel that, in addition to a constant readiness to defend the flag, they are useful citizens in times of peace.

ETCHINGS OF OLD ANNAPOLIS: THE

A VIEW OF THE STATE HOUSE

These etchings are by Eugene Paul Metour, a native of Brittany, who has been professor of languages at the United States Naval Academy at Annapolis, Maryland, for the past five years. During this time he has found delightful recreation in studying old Annapolis and recording in his

RECREATION OF A NAVAL TEACHER

THE SCHOONER'S DECK

etchings the atmosphere of its streets, shipyards, quays, and Colonial architecture. The etchings here shown are from a current exhibition of Mr. Metour's work at the Brown-Robertson Gallery, 415 Madison Avenue, New York City

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER VII—HARRISON AND MCKINLEY

WAVES of Russian-Jewish immigrants were pounding our shores in the spring of 1891. In Russia pogroms and other forms of mob persecution had become so persistent that refugees were arriving in pitiful droves at our ports. Sinister circumstance had hurled them from one country into another. Many had been compelled to abandon their employment or even their own established businesses in Russia, due to the enforcement of the Ignatieff laws and the consequent prohibitions, restrictions, and persecutions.

Determined to lay the facts before President Harrison, a committee was formed of prominent Jews from New York, Cincinnati, and Chicago, headed by Jesse Seligman. Among others on the committee were Jacob H. Schiff, of New York; General Lewis Seasongood, of Cincinnati; and myself.

The President listened to our story with sympathetic interest, and then turned to me and asked what, in the light of my international and diplomatic experience, I thought should be done. I told him that any nation with which we were on friendly terms, as we were with Russia, and which by special laws forced groups of its people, in pitiable condition, to seek refuge in another country, and that country our own, should, in my opinion, be remonstrated with for committing an unfriendly act.

HARRISON PROTESTS AGAINST RUSSIA'S TREATMENT OF JEWS

The President agreed with me, but suggested that our Government ought to have before it an official statement of the facts. I replied that this could easily be obtained by sending a competent commission to Russia to make inquiry. Promptly Colonel John B. Weber, Immigration Commissioner at Ellis Island, admirably qualified by his experience in office and sympathetic interest in immigrants, together with Dr. Walter Kempster, a physician, famous for his studies of the pathology of insanity, were sent abroad to make an investigation and report.

Their investigation was thorough, and they embodied their findings in a report that is a model of its kind. It was the first authentic and official report on these Russian restrictions and persecutions, and, when published, it roused the indignation of America and of enlightened parts of Europe. The distinguished English historian, Lecky, refers to it in his own work, "Democracy and Liberty."

George Jones, of the New York "Times," also had an investigation and report made by his London correspondent, Harold Frederic. These findings "Times" published as articles and

Roger Williams, pioneer of religious liberty in America, and the subject of a book by Mr. Straus entitled "Life of Roger Williams"

syndicated them to several other papers of the country, and later Frederic brought them out in book form under the title "The New Exodus."

President Harrison was much impressed with the report of the Commission, and through diplomatic channels undertook to reason with the Russian Government. His reference to this action in his annual message of December, 1891, so clearly states the principles of international relationship and constitutes such an authentic recognition of humanitarian diplomacy that I quote it:

This Government has found occasion to express, in a friendly spirit, but with much earnestness, to the Government of the Czar, its serious concern because of the harsh measures now being enforced against the Hebrews in Russia. . . . It is estimated that over one million will be forced from Russia within a few years. . . .

The banishment, whether by direct decree or by not less certain indirect methods, of so large a number of men and women is not a local question. A decree to leave one country is, in the nature of things, an order to enter another—some other. This consideration, as well as the suggestions of humanity, furnishes ample ground for the remonstrances which we have presented to Russia, while our historic friendship for that Government cannot fail to give the assurance that our representations are those of a sincere well-wisher.

The President's Message was quoted and praised in this and many European countries. All of this produced a de-

cided reaction in Russia itself. No matter how autocratic a government may be, as Russia then was, it could not free itself from "a decent respect to the opinions of mankind." For the time being conditions in Russia for the Jews were ameliorated.

WHERE ROGER WILLIAMS WENT TO SCHOOL

During Cleveland's second Administration I seldom went to Washington. At that time I was occupied also with the writing of two books, but was not, of course, relying upon my pen for a living. I should not have survived long if I had! Historical writing, which has been fittingly called the aristocracy of literature, requires long and patient investigation and yields meager returns. For me it made a fascinating avocation.

My "Roger Williams, the Pioneer of Religious Liberty," was published by the Century Company in 1894, and "The Development of Religious Liberty in the United States" appeared in a limited edition, published by Philip Cowen, New York, in 1896. The latter was a slim volume, an amplification of an address I had delivered in New Haven before the Yale College Kent Club, and elsewhere; the former grew out of studies I had made in preparing my first book, "The Origin of Republican Form of Government." "Roger Williams" was well received and had a generous circulation, being several times reprinted. Brown University, under the presidency of that eminent historian and scholar, E. Benjamin Andrews, conferred upon me the honorary degree of Litt.D.

When I was again in London in 1898, I carried out a purpose I had long had, to visit Charterhouse School, earlier known as Sutton's Hospital School, where Roger Williams received his early education. I met the Rev. Dr. William Haig Brown, master, who showed me the register of the school for 1624 containing the inscription of Roger Williams. When he saw that I was much interested in Roger Williams, he told me of a recent life of him that had been written, which he considered very fine and with which he wanted to acquaint me. He went to his library on the floor above, and when he returned he handed me my own work! (I had not previously told him my name.)

I observed in the main hall of the school a number of tablets commemorating distinguished scholars who had attended there. There were represented Thackeray, General Shakespear, Archdeacon Hale, Sir Henry Havelock, and several who were sacrificed in the Crimean War and the Indian Mutiny. I asked Dr. Brown whether he did not think it fitting that a tablet should be

added in memory of Roger Williams, and told him that I should be glad to defray the expense thereof. He agreed, and I authorized him to have the tablet made. He employed Howard Ince, a well-known architect, to design the tablet, which contains the following inscription:

In memory of
ROGER WILLIAMS

Formerly a Scholar of Charter-house, Founder of the State of Rhode Island, and the Pioneer of Religious Liberty in America. Placed here by Oscar S. Straus, United States Minister to Turkey, 1899.

I did not wish my name on it, but Dr. Brown quite definitely preferred it so.

Of all my books, the "Life of Roger Williams" contains the greatest amount of research work and study; but the amount of pleasure it gave me in the doing was commensurate.

THE FIGHT FOR ELECTION REFORMS

In politics I had become more impressed year by year with the importance of a reform in our electoral system, especially in our large cities. The bosses in the two big parties were the "invisible powers" who dictated the nominations. Primaries were primaries in name only, and were so conducted as to strengthen the power of the bosses.

In Chicago a campaign to purify the primaries had been carried on by the political committee of the Civic Federation, whose organizer and secretary was Ralph M. Easley. This organization now enlarged its scope in the political field and issued a "Call for a National Conference on Practical Primary Election Reform," in the name of some two hundred and fifty of the leading men of New York, Chicago, San Francisco, and thirty-five cities in between. Prominent in this list I remember Mayor William L. Strong, of New York; ex-Mayor Abram S. Hewitt, of New York; Darwin R. James, President of the New York Board of Trade; Andrew B. Humphreys, of the Allied Political Clubs of New York; Mayor Josiah Quincy, of Boston; Mayor James D. Phelan, of San Francisco; ex-Mayor George W. Ochs, of Chattanooga; Albert Shaw; Nicholas Murray Butler; Carl Schurz; Lyman Abbott; Lyman J. Gage; Melville E. Stone; Myron T. Herrick; Albert J. Beveridge; and Robert M. La Follette.

The meeting was held in the rooms of the New York Board of Trade, on January 20, 1898, and we organized the National Primary Election League. I was elected president; Josiah Quincy, first vice-president; Charles Emory Smith, of Philadelphia, second vice-president; Walter C. Flower, of New Orleans, third vice-president; Ralph M. Easley, secretary; and Darwin R. James, treasurer.

The conference gave a distinct impetus to primary reform all over the country, and in many of the States led to

President Harrison, at the suggestion of Mr. Straus, sent a commission to Russia to investigate the persecutions that were driving multitudes of Jewish refugees to America. In the above picture, Harrison is at the left of the first row, and James G. Blaine at the right

the passage of laws providing for such reforms.

In the Presidential election of 1896 I voted for McKinley, despite my former political affiliations. The outstanding issue between the Republican and Democratic parties was the money question, and I was an advocate of sound money.

ADVISING WITH MCKINLEY TO AVERT WAR WITH SPAIN

Early in the new Administration our relations with Spain were rapidly drifting to a crisis over conditions in Cuba. My friend General Stewart L. Woodford was appointed Minister to Spain, and I gave him a letter of introduction to Sir Henry Drummond Wolff, who was now British Ambassador at Madrid. Wolff was very sympathetic toward America, and Woodford later informed me that the letter had been very serviceable, especially as his audience had been delayed for several weeks on account of the Queen's absence from the capital.

He very frankly laid before Wolff the American position and attitude with regard to Cuba, which Wolff asked permission to detail to his Government. Based on that information, the British diplomatic representatives were advised by Lord Salisbury: "The American cause is absolutely impregnable; govern yourselves accordingly."

President McKinley had frequently invited me to Washington and encouraged my writing to him, especially on international matters; and my letters always received prompt reply over his own signature. Accordingly on March 12, 1898, I wrote him at length stating that perhaps the impending war with Spain could be averted if we proposed to Spain a plan of suzerainty. I quote from my letter:

We have no need for Cuba; our destinies point to the Continent; to leave it to make conquests will weaken our rights, . . . and will place us against our will on the world's chess-board, from which we have

From a newspaper cartoon published at the time President McKinley sent Mr. Straus on his second diplomatic mission to Turkey

happily kept clear. The Cuban insurgents are imbued with a spirit of belligerency, but have neither past training nor the knowledge to maintain freedom and to accord to each other individual liberty.

The great problems, I take it, are, first: to stop the war; secondly, to find a solution which will bring independence to Cuba and at the same time preserve the *amour propre* to Spain. . . . The proposition to which I have given considerable thought . . . is the following:

That we insist that Spain accord, and Cuba accept, the position of suzerainty such as are the relations between Egypt and Turkey. This will give Cuba self-government, and will at the same time preserve the *amour propre* of Spain by retaining a semblance of a claim of sovereignty without power to interfere with self-government on the part of the Cubans. . . . We could much better afford to help Cuba with a number of millions, which would, after all, be a small fraction of what a war would cost us. . . . especially when the end attained is the independence of Cuba, and attained in such a way as not to entail upon us unending responsibilities full of care and entangling obligations.

Immediately upon receipt of this, the President asked me to come to Washington for a conference. He was very much interested in the idea, and requested me to write out the plan in more detail. This I did. I discussed with him the suzerainty plan as developed in Europe and as it was working in Egypt. I expressed the opinion that, as the leading nations of Europe were familiar with the idea, it was not likely to meet with any serious objections.

He was impressed with the feasibility of my proposal and was in favor of some such arrangement, but said he was having difficulty because of the jingo agitation in Congress and the storming for war of the American press. He felt that when the report of the Board of Inquiry on the Destruction of the Maine was made public, as it would be in a few days, nothing could hold back Congress

and the press, and matters would be pushed to an issue.

McKinley immediately communicated the plan, however, to Minister Woodford, who brought it to the attention of the Spanish Government, and General Woodford reported that he had every reason to believe it would be acceptable to Spain. But meantime things moved with lightning speed and war was declared.

McKINLEY URGES ACCEPTANCE OF ANOTHER MISSION TO TURKEY

Our relations with Turkey at this time were also not going very smoothly. At a conference with McKinley one day he showed me a communication from Dr. James B. Angell, Minister at the Porte, suggesting that the only way to bring Turkey to terms was to send warships up there and "rattle the Sultan's windows." The President was much disturbed. He felt the sending of warships might result in another incident like the blowing up of the Maine. He said the situation had worried him so that it interfered with his sleep, and he begged me to accept again the appointment of Minister to Turkey, adding in an appealing way that he regarded me as the only man who could adjust the situation.

I frankly explained to him my business obligations and that it was very difficult for me to drop them at this time; but under the circumstances that he had outlined to me, I felt I had no right to interpose my personal affairs as a reason for refusing, for I certainly regarded no sacrifice too great to make in the service of the country when it was needed, as in this instance. I said that I had been too young to shoulder a gun in the Civil War, as he had done, but, with a full understanding of my personal affairs, if he should feel it necessary to call upon me, I should be at his service.

Dr. Angell was a distinguished scholar and not lacking in diplomatic experience. He was President of the

University of Michigan, at Ann Arbor, and had been special envoy to China. He was also an adviser and one of the trustees of the American Board of Commissioners for Foreign Missions. However, in some public utterance he had criticised Turkey unfavorably, and the Porte was having its revenge. Every request Dr. Angell made was declined; exequaturs were refused to our consuls appointed at Erzerum and Harpoot. Dr. Angell, discouraged and incensed, was about to resign.

Finally, one day I received a telegram:

Executive Mansion,
Washington, D. C.,
May 27, 1898.

Honorable Oscar S. Straus,
New York:

Remembering our talk of a few months ago, I would be glad to have you accept the post of Minister to Turkey. Dr. Angell has resigned, to take effect 15 of August. I would be pleased to nominate you before Senate adjourns.

WILLIAM McKINLEY.

And I telegraphed back that same day:

President McKinley,
Executive Mansion,
Washington:

Your request that I should accept the post of Minister to Turkey, with which you honor me, I regard as a command, and deem it my patriotic duty to you and to the country to accept.

OSCAR S. STRAUS.

Among the telegrams and letters of congratulation I received was one from William L. Wilson, now President of Washington and Lee University at Lexington, Kentucky, reading: "Washington and Lee greets you as Doctor of Laws."

The National Civic Club of Brooklyn gave me a dinner and reception, presided over by my friend and college mate, Frederic W. Hinrichs, and at which the leading speaker was Dr. St. Clair McKelway, editor of the Brooklyn "Eagle." During the evening a letter was received from my former chief and Secretary of State, Thomas F. Bayard, saying:

It was my good fortune to be associated with Mr. Straus when he first took up the tangled web of Turkish diplomacy, so that few persons can so well attest as I his possession of those talents and high personal characteristics which give him weight everywhere.

Ex-President Cleveland, who was prevented from being present by another engagement, wrote:

I would be glad to join those who will do honor to Mr. Straus . . . and thus show my appreciation of his usefulness and the worth of his good example in recognizing the demands of good citizenship and responding to the call of public duty.

And there were also messages from many others, including President McKinley.

Bain

President McKinley called Mr. Straus to Washington in 1898 to confer with him regarding the latter's plan to avert war with Spain

I did not leave for my post for several months. Meanwhile I had more conferences with the President regarding the Spanish situation, and early in August, in discussing pending Spanish peace negotiations, he wanted my ideas regarding them and regarding the Philippines—how much we should take. I strongly advised that we take as little as possible—nothing more than a naval and coaling station; that otherwise to appropriate the Philippines would in the long run entail endless obligations without commensurate benefits. I told him I believed these to be the views also of many of the thoughtful citizens, and that I had spoken with a number of prominent men, such as ex-Postmaster General Wilson, ex-Secretary of the Treasury Carlisle, and Clifton R. Breckinridge, formerly of the Ways and Means Committee, all of whom agreed with me.

The President seemed to appreciate my view, but again feared the jingo spirit of Congress. He complained also of the attitude of the Cuban insurgents, who were exaggerating their numbers as well as their demands.

Turning for a moment to my appointment, McKinley said: "I don't know whether you know it, but your nomination has been received with more praise by all parties throughout the country than any nomination to office I have made since I am President."

I assured him that I was gratified, but

NEXT WEEK— NEW IMPRESSIONS OF ROOSEVELT

Before Mr. Straus became a member of the Roosevelt Cabinet he was in Roosevelt's "kitchen cabinet," as the President called his group of unofficial advisers. Intimate glimpses of the strenuous statesman at his work are briskly presented by one who had hundreds of opportunities for the closest observation. Next week's installment of the Autobiography describes how Mr. Straus dissuaded the Administration from sending a punitive expedition into the Philippines. It recites the inside story of a piece of diplomatic strategy rebuking the Czar of Russia. It describes the interesting origin of the famous "covenant running with the land" idea used so effectively by John Hay in dealing with the Panama dispute.

realized the emphasis this put upon my responsibilities. Of course, as I had been a Cleveland Democrat, my appointment by a Republican President created a great sensation in the press; it was heralded as a step toward the merit system in our foreign service.

"SECRETARY OF STATE FOR TURKEY"

John Bassett Moore was now Assistant Secretary of State, and with him I spent several days in the preparation of my instructions. I considered him even then the best-equipped authority on international law in the country, and I thought it was a pity that his services could not be retained in the Department of State; but his salary there was \$500 a year less than as professor, and he had a family to support. He told me that the President and Secretary Day wished him to accompany the Peace Commission to Paris, and subsequently he went as secretary and counsel.

While I was with the President for a final conference a week before sailing, Attorney-General Griggs came in all aglow and announced with much enthusiasm that he had just had a telephone message from Justice White (Associate Justice of the United States Supreme Court, later Chief Justice), and that White would consent to be one of the members of the Spanish-American Peace Commission. That specially pleased the President, because White was a man of great ability, and, being a Catholic, might make a more favorable impression upon Catholic Spain, and he immediately directed that the names be given to the press. Shortly thereafter, however, White reconsidered his acceptance, for reasons which were not made public, and former Senator George Gray, who was serving as a member of the Quebec Commission, and who, like White, was a Democrat, was prevailed upon by the President to accept in his stead. The other members were all Republicans. The Commission as finally constituted was: Secretary of State William R. Day, Senator Cushman K. Davis (Chairman of the Foreign Relations Committee of the Senate), Senator William F. Frye, George Gray, and Whitelaw Reid.

There was considerable clamor, from missionaries and others, that we send warships to Turkey. Of this I entirely disapproved and so told the President. He answered me:

"I shall be guided by you; I shall support you; I have confidence in your ability and foresight. No vessels will be sent to Turkey unless you demand them, and then, only then, will they be sent. And when you get to London I wish you to see Ambassador Hay"—Hay was about to return to take up the post of Secretary of State—"and tell him that I have not only constituted you Minister to Turkey, but Secretary of State for Turkey, and that both he and I will be guided entirely by your judgment and advice."

ALLENBY TO THE RESCUE!

BY W. D. McCRACKAN

HOBBY-HORSES in the Jordan Valley, hobbled in the Plain of Jericho! Make-believe horses, put together of sticks and canvas, hitched in long rows on either side of drinking-troughs to deceive the Turks and their instructors, the Germans! Dummy camps and dummy tents; mules drawing heavy drags around at random to make a big dust and suggest traffic! What a joke! German airmen were allowed to draw near enough to see all this and were then driven off and never allowed to return. They reported to enemy headquarters that the Jordan Valley was full of British cavalry and that the British push north would doubtless advance that way.

All the while Allenby was shifting every horseman who could be spared over to the coast of the Philistines to make his great rush up that way, leaving the mock cavalry in the Jordan Valley and smuggling his real cavalry by night onto the broad bosom of the Plain of Sharon, hiding them by day in the deep clefts as they crossed the Judean Highlands. It was a neat trick. It worked wonderfully. In the daytime all was quiet, but at night everybody was on the move. The real cavalry was glad to get out of the awful Jordan Valley, stifling at 120°, and leave the mock cavalry behind to blister and warp. Every night, until the dawn set for the great race, masses of troops and transport kept moving towards the front, to get near the gate of the opening which was to be made in the Turkish line. It was a host pressing forward to sure victory, edging up every night closer, getting into firmer position, orderly according to plan.

Allenby and his brainy little chief of staff had worked it all out: At dawn on September 19, 1918, the artillery was to break up the Turkish trenches, the infantry was to make a hole and the cavalry would pour through and dash up the coast to the Plain of Esdraelon, and so get behind the Turks whom the British drove through Samaria into their arms. It worked like a charm. It was the neatest maneuver in the World War, and it brought about the beginning of the end of the World War.

The night before the orange groves of Jaffa and Saron, the apricot and nectarine orchards of Ludd and Ramleh, were full to suffocation. Infantry, cavalry, artillery, Peerless trucks, Fords, and camels, amid the cactus hedges, everybody and everything was getting into final position, wrapped in clouds of dust, advancing like clockwork, on schedule time, pushing in perfect discipline towards the starting post of that terrific race, that epic ride which was to rid the Holy Land forever of its fearful Turkish taskmaster and bring the Oriental ally of the Central Powers to his

International

VISCOUNT ALLENBY, NOW BRITISH COMMISSIONER TO EGYPT, WITH HIS PET STORK
One of the hobbies for which General Allenby is well known is his love for birds

knees. The horses champed at the bit and pawed the dust. They shook their heads impatiently. Their time had come at last in the World War to show their mettle. The men beside them were on tiptoe, every man set on the mark, waiting for the pistol shot. It was going to be a clean job. That was the night before.

Allenby said afterwards: "I was up at 5:30 in the morning, when the division was ready to attack. By a quarter past six three divisions of cavalry began to pour through the gap made. They were told to go right away through the Turkish army"—and they did. It was the prettiest stroke in the World War. Without an error made, the ball was hit square and landed on the green; the club followed through. Turks, Germans, and Austrians fled or surrendered or lay on the field. British Yeomanry and Australians with flashing swords, Indians with sparkling lances, swept by, swept on, squadron by squadron, trotting, galloping, holding the line as on parade, irresistible as law, determined as righteousness, over the land of the Philistines, acting a drama, fulfilling prophecy, racing against time into the Plain of Esdraelon, the Plain of Armageddon, back of the Turks.

The next afternoon by five o'clock the British cavalry had ridden into Nazareth, seized El Afule, Beisan, Megiddo (Armageddon), and was waiting for the beaten Turks to issue from the defiles

of the mountains of Samaria. They came, fleeing in broken bits of an army, shot to pieces, without food or drink, helpless, hopeless. They had been trapped as prearranged in the land of Ephraim. The British wireless had called up the bombing fliers from the airdromes, and they had come, like birds of prey, in flocks to rain destruction on the moving columns of the Turks below. They would bomb the leading troops in the defiles, and presently the whole column would be piled up, a medley of men, guns, and transport. We turned away so as not to see. Wretched Turks, wretched rulers of the Holy Land! The survivors stumbled into the fateful Plain of Esdraelon, into the arms of the British cavalry. All that remained to be done was for the umpire to sound the trumpet. The maneuver was over and the prisoners could be counted.

On September 20, 1918, the Seventh and Eighth Turkish Armies were destroyed, the power of the Turkish Empire was broken. "This way, please," muttered the irrepressible Tommies, as they conducted the Turks into the vast barbed-wire inclosures hastily erected for their reception. There was no resentment in this police work. Just another day's work done in this curious task of regulation, administration, and organization which seems to fall to the British in outlandish places. The significant thing about it was that this particular police work took place in the

Plain of Armageddon. When given a peerage Allenby took the title of Viscount of Megiddo, or Armageddon. Watch this Lord of Armageddon; he is among the great men who have great work to do for mankind.

But that was not all. Haifa fell, the British swam and fished in the Sea of Galilee, then Damascus fell, the Fourth Turkish Army was destroyed, Beirut was taken, Tripoli, Aleppo, and the head waters of the Euphrates. Far into Asia Minor British order penetrated. The Turks were obliged to withdraw their remnants to harmless distances. They were discredited, beaten, without equipment, without money. The Pax Britannica brooded over the Near East in 1918. Why does the Turk trouble the nations again in 1922? Why should he return to-day to vex the world, to massacre, as is his wont, to suck up the moisture of the Near East, to turn back the clock of progress, to make a desolation

of every spot he touches? He was once undone, finished, *khalass*, as the Arabs say. What is it that has given him arms again and money to buy arms? What secret shame hides behind his resurgence into power after his power had been stripped from him by Allenby, Lord of Armageddon? Must Allenby meet him again in the Plain of Armageddon and defeat him a second time? Will the world wait until the Turk has gathered the vultures from out of Russia, Afghanistan, Persia, India, and the farthest East and raised rebellious hordes at the back of the Western Powers? The Holy Land is a sacred trust. The danger comes from the north. Let those whose right it is stand by, fully armed to overturn and overturn.

Allenby told me in the spring of 1920 that if the Turkish Peace Treaty was not signed soon we would have another war. The war came. Turkey is still in

Europe. France, Italy, and Greece jockeyed each other for the position at the gate-post where Britain stood first; they scrambled for the heritage which was that of the men from the Isles of the Sea, from the antipodes, from the West Indies and India, of the men who had rid the Near East of the Turk. While his neighbors haggled, after his conquerors had returned to the ends of the earth, the Turk armed himself from a secret source and to-day he is still in Europe.

America was offered the mandate over Syria by its people. America was requested to take over Asia Minor. It was not ready. To-day its relief workers are exiled, their stores burned, their girl protégées stolen for Turkish harems. Oh, for an Allenby! Allenby is a name, and that name means in Arabic, in the language of the Koran, *Allah-neby*, Prophet of God.

Allenby to the rescue!

LET'S GET TOGETHER

BY A TEACHER

LAST June a great many children and parents and teachers faced disappointment and discouragement, and wondered why. The children for the most part agreed that their teachers expected too much of them and "never explained anything;" also that their parents "didn't understand." The parents with equal unanimity charged the children with being "so difficult these days" and the teachers with "being a mighty low-grade set." The teachers for their part comforted each other with the reflection that "the modern child simply doesn't know what real study means," and that "if parents would stop jazzing around and pay a little more attention to their main job of bringing up children teachers might have a chance."

Thus ended the last school year—substantially as the last fifty school years have ended—with each party of the educational triangle inwardly or outwardly throwing the blame for failure on the other two. Shall we begin this year in the same way? Perhaps we shall; but do we have to? Can't we get together and talk it over? Can't each of us get the other two points of view? Let's try.

Boys and girls, think back a bit. You know perfectly well that we teachers have offered you at least three times as much information as we have ever asked you to give back to us on final examinations. You say we never explain things. How about that time last winter when the arithmetic teacher was explaining just how it happened that you couldn't add three-fifths to seven-eighths and get ten-thirteenth? Do you remember what you were doing then? If you were not in some form of undetected mischief, then you were thinking of the

coming snowball fight at recess or of some other equally unmathematical subject. And when the teacher said, "Does everybody understand? Is there any question?" you remained silent. She had explained and had offered to explain again, but you wouldn't listen. You wouldn't give her a chance.

And do you remember when dad looked over your report card and scolded you for having so many low marks? You thought he was pretty harsh and unsympathetic. Have you thought that perhaps his heart is so wrapped up in your success in life that your failure to do your best has been like a bit of cold steel entering that very vital part of him? Have you thought how you may perhaps feel some day when your children don't do their best? You say now that dad and mother "don't understand." Think it over. Perhaps they are actually looking back at their own childhood failures, and understand only too well what the habits of slackness acquired then have meant in their later lives.

Parents, you say that children are "so difficult these days." Why are they difficult? Is it not perhaps chiefly your own fault? Are you giving them a square deal? Have you learned to be loving but not indulgent? Have you learned to be inexorably firm but not harsh? Have you learned to give them the liberty that the child of to-day is rightfully coming into without failing to demand a concomitant sense of responsibility? Have you learned to listen to their confidences without tirades of criticism? Have you learned to be a pal without insisting upon being the boss pal? How much, in short, have you tried to get in touch with these "difficult modern children"?

And how about the "low-grade set of teachers" that you complain about? What makes us "low-grade"? Will you "high-grade" ladies and gentlemen come and take over our jobs for a little while, including the forty or fifty restless children, and the gloomy, stuffy rooms, and the hard, immovable benches, and the antiquated courses of study, and the rigid methods of discipline? Oh, yes—and including our salaries? If you could only take our places for a little while, gentle parents, you might see how even the best of us cease to be as "high-grade" as we should like to be. And after you had tried to teach the children now in our care you might think that our results do not measure up quite so badly, after all. Consider also that, if we are actually low-grade to start with, it is because you who have the power of the almighty dollar in your hands have offered so little remuneration that too few really high-grade persons can be tempted to enter the teaching profession. Also think over the amount of moral support you have given us when your children came home and criticised us. How often have you met such criticism with the loyal answer that there must be some misunderstanding which you can clear up by coming frankly and in friendly spirit to us? How often, instead, have you said, "Well, of all things! I never heard of such methods!"

And, fellow-teachers—for it is our turn now to examine our own hearts—how about the difficulties of teaching this *enfant terrible*, the modern child who has so many outside distractions and who "doesn't know what real study means"? Do the difficulties really lie in the child? Or do they lie in our failure to keep pace with the expanding nature of child life, our failure to un-

derstand the new relationship between child and world, our failure to apply the best principles of education to the job of to-day? When the child of to-day rebels and says, "Why do I have to study that dry old stuff?" how many of us have ever answered, "I'm not sure. Let's talk it over and see why"? And if in talking it over with the child and his mates we come to see that there is something of justice on the side of the child, how many of us have been square enough to modify our course of study where it really ought to be modified? Again, when a whole class has been lethargic over our presentation of a really interesting and worth-while subject, how many of us have admitted to ourselves that we must be the ones to blame? How many of us have strenuously gone about casting out the beams from our own eyes before railing against the motes in the eyes of our children?

And how about our attitude toward the parents whom we declare to be "not on their jobs"? Have we ever thought how little we really know about whether the parents are "on their jobs" or not? We don't like parents to judge us by the tales our children tell of us. Is it fair to judge the parents by their children? There is a gulf of black ignorance lying between us and these parents. And we have been deepening it and widening it with each generation. What do we do when a parent appears at the school-room door? Is it not true that inwardly we sigh or curse according to our natures, while outwardly we preserve an attitude of chilly courtesy or hypocritical delight—unless we break loose and use the opportunity to inveigh against the child of that parent? How often do we say, frankly and in a truly friendly spirit: "Well, Mrs. Blank, I am glad to see you. Won't you sit down and visit us this morning and then come and talk with me after the children have gone home? No, Jimmy is not doing as well as he could, but I believe we can solve his problem if you'll just come and give me what light you have on the subject." I warrant that not many of us greet our parents in any such spirit. But we ought to. That is our salvation—getting together with the parents in behalf of the children.

Failure to get the other fellow's point of view—that is the great stumbling-block in the way of educating our children. And, after all, it is we teachers and we parents—for the writer has children himself—who are to blame. At least we are old enough and ought to be wise enough to reform. Our children cannot be reached until after we have reformed. Possibly their reformation will go hand in hand with our own. Yes, probably it will, for they are wonderful little persons when it comes to responding to the influences about them. By all means, then, let us begin to hunt the other fellow's point of view.

In thinking of our children let us remember that from the moment of birth

THE problem of Johnny and his sister, whatever their real names may be, is one which is never far from the mind of the public. Hubert V. Coryell has given us another article dealing with Johnny and his favorite authors, which is a sequel to his widely read article on Johnny and his favorite books.

Mr. C. K. Taylor, whose articles on height-weight standards for boys and girls were one of the notable features of *The Outlook* during the past year, discusses in another article the problem of finding out what Johnny is good for and how he can be helped.

they begin to have rights of individuality which grow and expand month by month, and that never in all the life of a child has any parent a right to invade the individuality of his child by his own individuality, or to try to shape the life of his child for the carrying out of parental ambition. We must help our children to find themselves. But for our protection, the protection of others in the world, and for the child's own benefit, we must teach a child not to invade or violate the rights of others. We must be firm and constant in our efforts at this sort of discipline. And we must be reasonable—checking childish impulses only when we can show clearly that the safety of the child or the rights of others demand the check.

But it is in getting together as teachers and parents that we can perhaps accomplish the most immediate good. So let us consider ways and means. In the first place, we must frame our minds without antagonism. Each of us must assume that, while the other has probably grave faults and is perhaps not thoroughly competent, he is nevertheless really eager to do the right thing. Each of us must admit to himself that, while he is trying to do the right thing, there is no doubt that he is often failing. Each of us must realize that just as he could give good advice to the other so the other could give good advice to him. And then in humble but frank and friendly spirit each should seek the other.

For instance—and I am taking a real case that has come within my experience—Johnny is falling further and further behind in his lessons. He seems dull and uninterested. Yet now and then there is a flash of unusual intelligence. The teacher is puzzled and doesn't know quite what to make of it. After much consideration of the problem on the part of the teacher, a letter goes to Johnny's father: "Dear Mr. Blank, will you call me up soon and make an appointment to talk with me about Johnny? We don't seem to be getting

the best out of him, and I want your advice." The father comes.

"I want you to understand," says he, "that Mrs. Blank and I are mightily pleased with what you have already done for Johnny. We know he is still not doing all he can, but we don't blame you a bit. Probably it is our own fault mostly. What have you to suggest?"

"I don't want to suggest anything," says the teacher, "until you tell me what you think I can do that I'm not doing."

Whereat the father laughs deprecatingly, hesitates, but finally admits two things: First, that Johnny can't seem to understand the grammar work required of him; and, second, that Johnny has a notion that teacher is down on him.

The teacher considers, resolves to have a quiet personal talk with Johnny, and makes sure that these two obstacles to Johnny's progress shall be removed.

"And now," says Johnny's father, "how about us? What can we do?"

It is the teacher's turn to hesitate deprecatingly, but Johnny's father looks friendly and eager to be advised, so the teacher speaks:

"It seems to me that Johnny eats altogether too much candy. Has he perhaps too much pocket money not earned by himself?"

The father thinks a bit, admits the probability, and plans reform. The teacher goes on:

"Johnny is often late. He looks sleepy. Does he get to bed early enough?"

Johnny's father blushes.

"I'm afraid not," he says. "The evening is the only chance I get to talk with him, and I guess I let him sit up too late. What do you think is a proper hour for a twelve-year-old?"

The teacher gives his opinion modestly; the father agrees and promises to set forward the bed-time hour; they talk over a few more points about Johnny's régime; and finally they begin to talk about Johnny himself—what his chief interests are, how cleverly he has constructed his wireless set from almost nothing, and what a really intelligent conversationalist he is. The teacher and father separate greatly encouraged, resolved to improve in their handling of Johnny and, above all, inspired by the discovery of a very real common interest in Johnny.

This was not a super-teacher or a super-parent. It was a pair of average human beings blessed by the sane impulse to bury antagonism and to co-operate for the benefit of a perfectly average boy whom they had been mishandling because they didn't know all points of view. And the co-operation is equally as valuable when it is initiated in a friendly and frank way by the parent as when it comes from the teacher.

Let us hope that more such average parents and teachers will be blessed this year with the impulse to co-operate, to get together for the benefit of more average boys and girls.

THE BOOK TABLE

BOOKS I HAVE LOVED AND LOST

BY BRANDER MATTHEWS

IT is best to be off with the old love before we are on with the new; and this is as true of books as it is of girls. Until modern science can supply a book-lover with an elastic house adorned with an extensible library as easily adjusted to an unexpected company of guests as is a dining-table, until this devoutly-to-be-desired guerdon is granted to us, we have to clear out our shelves now and again to make room for newcomers. We have perforce to get rid of the volumes which have ceased to please and to provide shelf-room for the volumes which have more recently attracted us. Yet as soon as the discarded tomes have been irrevocably dispersed—sold or given away—we begin to doubt our own judgment and to yearn over the dear departed. But it is in vain that we wish them back and that we wonder why it was we were foolish enough to let them go. Of all sad words of tongue or pen, the saddest are these: It ought not to have been.

Although I was not born in a library, as Lord Beaconsfield boasted he had been, I grew up in a home where books were made welcome and where I was encouraged to read them and to own them. I can recall that I was not yet proficient in the art of reading when I became the owner of the ten volumes narrating the adventures and misadventures of Rollo in Europe; and as soon as I was able I read them again and again. Before I was seven I had crossed the ocean four times, twice over to Europe and twice back; and I retained vivid visual recollections of the places to which Rollo and his sister traveled. (What was the name of that sister? I remember that she took her canary with her—but, although this fact is adhesive in my memory, her name I cannot now replevin after more than threescore years.) What most delighted me then was the unsuspecting visit of the boy and girl to the Hippodrome in Paris one Sunday afternoon when they had followed the crowd and made their way fortuitously into the huge circus tent—which (in their American innocence of Parisian manners and customs) they mistook for a camp-meeting. They discovered where they were only when the splendidly adorned horses pranced into the arena; and then they decorously withdrew. Or did they remain? Really my septuagenarian memory plays me strange tricks. I can see the pair of them slipping in, merged in a flock of French children; but I cannot now follow them out.

Where are those ten volumes now? I wish I had them. They were cased in wine-colored cloth, with an embossed side-stamp of a fashion now no longer seen. And where are the entrancing

tomes of Mayne Reid—"Osceola" and the "Scalp-Hunters"? They are lost, strayed or stolen, long years ago, and my five-foot shelf of boy's books knows them no more. Do the boys of to-day know them, I wonder? If not, my grandson is not now as fortunate as I was. Only a decade after I had become acquainted with these masterpieces I had the joy of meeting the author at a round-up of men of letters (at Mr. Hamersley's, I

TITLE PAGE OF ONE OF THE ROLLO BOOKS,
BY JACOB ABBOTT

think)—a gathering to which I had then no claim to be admitted, for I was only a college boy. I saw Mayne Reid face to face, and I noted that one of his shirt studs had fallen out. I did not have speech with him; but my eyes paid him the tribute of boyish admiration. He had recently returned from England on the same boat with a friend of mine, who told me later that when the ship ran into a storm, so severe that the passengers were ordered below, he had heard Mayne Reid say almost under his breath, "I led the forlorn hope at Chapultepec, and am I now to be drowned here like a rat in a box?"

It was a Christmas before or a Christmas after I had "Osceola" and the "Scalp-Hunters" given to me that I received the "Gorilla-Hunters" and the "Coral Island" of Robert Michael Ballantyne—the "Ballantyne the brave" whom Stevenson companions with "Cooper of the Wood and Wave." I fear that the years have dealt hardly with his fame

and that the younger generation does not now share the pleasure I had in his pages threescore years ago. When my friend Clayton Hamilton was editing and annotating "Treasure Island" as a school text-book for supplementary reading (painful words, indeed), he came to inquire if I knew who this Ballantyne might be that R. L. S. held in honorable memory. But when I read the "Knights of the Joyous Venture," one of the best of the tales of "Puck of Pook's Hill"—if it is possible to make a choice where all are transcendent—I rejoiced to observe that Puck's young friends, Una and Dan, had enjoyed the blessed privilege of reading the "Gorilla-Hunters." But I have not seen this book these many years, nor the "Coral Island" either. All, all are gone, the old familiar faces.

I drop a silent tear; and then I ask why it is that no American publisher has seen fit to reprint these cherished classics of my boyhood—the best of Mayne Reid and Ballantyne, the "Green Mountain Boys" of Judge Thompson, and the thrilling "Nick of the Woods" of Richard Montgomery Bird, that fearsome tale of the mysterious and appalling Jibbenainosay. Of a truth such a publisher would reap a rich reward.

How it was that these books of my boyhood deserted me I cannot guess. All I am sure of is that they are no longer mine. Like Hans Breitmann's party, they have gone "away in the ewigkeit." I do know what happened to some other books that were mine a little later in my youth, treasured tomes dealing with the art and mystery of conjuring. Before I was fourteen I was the happy possessor of the "Magician's Own Book," published by Dick & Fitzgerald, generous benefactors of boyhood; and a year later in Paris I found the French treatise on prestidigitation which had been the font and origin of this American manual of magic. Soon I also acquired the memoirs of Robert-Houdin, master of the art. In the decades that followed I kept on adding to my collection, delighting in the succession of clever dissertations by "Professor Hoffmann" and enjoying hugely "Our Magic" by Maskelyne and Devant. I gathered volume after volume year after year, and I guarded them jealously, grateful for the pleasure I had had in their perusal; and I am glad to know that they are now safe on the shelves of the library of the Dramatic Museum of Columbia University.

There are other collections, begun in the early years of my manhood, when I was allured into rambling along the byways of the curiosities of literature. In time I had got together nearly a dozen volumes devoted to macaronic poetry, and a dozen or more devoted to the art of the fan-maker and a score devoted to the art of the bookbinder. I must have picked up here and there in Europe

more than a score of volumes setting forth the history of playing cards, catalogues of collections of them, and discussions of their use and abuse in games of chance. These several accumulations I sold, pitilessly ousting them, one after another, as my affection waned and as I moved along to worship at new shrines. I cannot deny that I have more than once had occasion to regret my cruel treatment of these lost loves, maidens all forlorn, dispersed at random, and deprived of the congenial companionship to which they had perhaps become accustomed. My deeds be on my head; and I can blame no one but myself.

There are, however, a host of other books for which my shelves now yawn and which I did not part with voluntarily. They have unaccountably vanished. Like Catiline, they have gone, departed, escaped, broken out. Even to my best friend I have never been rash enough to say, "Come and take a choice of all my library"—as Shakespeare makes a feeble-minded creature say in "Titus Andronicus." I may have lent one or another in a trusting moment and after dinner; but I can never have consented to the abstraction of all of the disparate volumes for which I now yearn. Where are the two little paper-covered sixteenmos (or *infra*) in which I first read "Daisy Miller" and "An International Episode"? I have recently re-read with renewed approbation these first fruits of Henry James's cosmopolitan investigations; they are now to be had in a single seemingly tome in the "Modern Library" with an appreciation by Howells as cordially enthusiastic as it is keenly critical. But I cannot help wishing I had them again in their original form, as members of "Harper's Half Hour Series"—a series which contained a heterogeneity of lively tales, including, if my memory does not play me false (as perhaps it does), the "Tender Recollections of Irene Macgilllicuddy," which Laurence Oliphant wrote in the hospitable home of S. L. M. Barlow at Glen Cove.

There was then—forty years ago, alas!—another paper-covered series, the so-called "Standard Library." I find I still have the "Essays of George Eliot" collected by Nathan Sheppard and containing several articles not included in her "complete" works. But I have lost another volume of that series that I once possessed, the "Archibald Malmaison" of Julian Hawthorne, the story which witnessed that he was the son of his father. Nor have I been able to find what I once owned, the "Fables" of George T. Lanigan—"anywhere, anywhere, out of the World." Who was bold enough to borrow that little volume? Or did a false friend steal it? It was small enough and thin enough to hide itself in a felonious pocket. It had illustrations by F. S. Church—illustrations worthy of the delectable text. Also missing and unaccounted for is my copy of Stockton's "Rudder Grange," with its illustrations by Arthur B. Frost, little masterpieces of pictorial humor, at once

firm and delicate. Is it because these favorite authors were makers of light literature that their volumes have been so volatile? Or am I the victim of deliberate and indefensible villainy? He who steals my purse, steals trash, but he who robs me of my books is—well, I do not dare to print my opinion of him. My sentiments were voiced nearly half a century ago by Laman Blanchard in his quatrains on the "Art of Book-Keeping:"

How hard, when those who do not wish

To lend (that's lose) their books,
Are snared by anglers—folks that fish
With literary hooks. . . .

For pamphlets lent I look around,
For tracts my tears are split;
But when they take a book that's bound,
'Tis surely extra-guilt. . . .

If once a book you let them lift,
Another they conceal;
For though I caught them stealing
Swift,

As swiftly went my Steele. . . .

I Prior sought, but could not see
The Hood so late in front;
And when I turned to hunt for Lee,
Oh! where was my Leigh Hunt? . . .

But all I think I shall not say,
Nor let my anger burn;
For as they never found in Gay,
They have not left me Sterne.

THE NEW BOOKS

FICTION

BREATH OF SCANDAL (THE). By Edwin Balmer. Little, Brown & Co., Boston. \$1.90.

A novel of contemporary American family life, sometimes uncomfortable in its realism, but in its happenings a strong argument against conventional ignorance. In this case it is the father of the family against whom the breath of scandal stirs, and the volcanic results teach his daughter that innocence is not safety from injury.

INSTRUMENT OF THE GODS (AN). By Lincoln Colcord. The Macmillan Company, New York. \$2.

Tales of the sea and its ships and sailors, enlivened by "chanteyns" and ballads of the sea. The volume has variety of scene and incident.

NORTHWEST. By Harold Bindloss. The Frederick A. Stokes Company, New York. \$1.75.

"A tale of endeavor, of mystery, and of love, in the wilds of the Canadian Rockies. A weakling, idling away his life and fortune in drinking and gambling, easy prey to the professional crooks into whose clutches he falls, is given his chance to become a man"—thus the publishers correctly describe this volume.

**HISTORY AND POLITICAL ECONOMY
LARNED HISTORY.** By J. N. Larned. Vol. I. The C. A. Nichols Publishing Company, Springfield, Massachusetts.

This is the first volume of a twelve-volume compendium of history put together on an original plan. It is based on a five-volume reference work prepared about thirty years ago by Professor Larned, called "History for Ready Reference," and now very much enlarged in

It is not the standard authors that I mourn, for them I can find in the club library. It is for books of less outstanding fame, which are not so easy to get at. When I had finished the "Age of Innocence," I looked in vain for three other novels of New York with stories set in the same innocuous epoch; Orpheus C. Kerr's "Avery Glibun," Dr. Mayo's "Never Again," and William H. Bishop's "House of a Merchant Prince."

In like manner, after I had feasted on the hinted but untold horrors of Henry James's "Turn of the Screw," I looked high and low for the "Green Tea" of Sheridan Le Fanu, for the tales of FitzJames O'Brien, and for Jean Richepin's "Morts Bizarres." Nor could I find Mrs. Oliphant's "Little Pilgrim" or her "Beleaguered City." Once I had a rich collection of tales such as the Fat Boy in the "Pickwick Papers" would have revealed in, tales that "would make your flesh creep." As it is, I must go to bed shiverless, with no hope of a nightmare, despite my former ownership of a nest of them. It is small consolation that I have at last laid hands on Bayard Taylor's delightful "Diversions of the Echo Club" and on Frederick Beecher Perkins's "Devil-Puzzlers." What do these trovers profit me, if all their lovely companions are faded and gone? Unlike the Cheshire cat, they have faded away and not left even the grin behind them.

scope and contents. It is arranged in encyclopædia form and the articles appear in alphabetical order. They are chiefly composed of extracts from histories, newspapers, magazines, and textbooks, and in this way are chosen to represent "the better and newer literature of history." It is evident at a glance that a great deal of pains and hard work have been put on the preparation of this work, and the first volume indicates that it will be valuable. It is fully illustrated with reproductions of photographs and with maps.

TRAVEL AND DESCRIPTION

CALL OF THE MOUNTAINS (THE). By Le Roy Jeffers, A.C., F.R.G.S. Dodd, Mead & Co., New York. \$5.

Exceptionally well printed photographs of some of America's most beautiful scenic attractions accompany the interesting textual descriptions of this volume. The author, who is Librarian of the American Alpine Club, is thoroughly conversant with this theme and has made a valuable addition to the works descriptive of the continent's wonderlands.

TALES OF LONELY TRAILS. By Zane Grey. Harper & Brothers, New York. \$3.

One scarcely expects the accounts of real adventure by a writer of "thrillers" in fiction to be as absorbing as his efforts in imaginary description, but Zane Grey in these pages keeps his readers' pulse-beats going fast. Bear-fights, lion-hunts, and exploring and hunting trips in little-known regions of the West are described with a zest that imparts its spirit to the reader.

Thrift and Prosperity

WITH FACTS BEFORE YOU, it is a question of conscience—of patriotism—of the honor of Uncle Sam—of justice for ALL who toil with hand or brain.

There are not "two sides" to such questions. That is why we meet no opposition but "silence"—side-stepping—camouflage. The book more than confirms every claim of the advertisements.

Incidentally, it is a question of dollars in your pocket—many of them—reduced taxes, better business, because of general prosperity.

The Gist of It All

The nation has had a Postal Savings Bank since January, 1911.

Every other savings bank in the world makes at least the pretense of serving the interest of depositors, getting for them the largest possible returns consistent with safety and availability.

The Postal Savings Bank has been shackled by the opposite rule, attempting to get from depositors as much money as possible for the least possible interest, paying them only 2 per cent per annum, on money left in the bank at least one year. In practice this return is less than 1½ per cent. Furthermore, the law permits the funds now in the Postal Savings Bank to be loaned to commercial banks at 2¼ per cent, the banks loaning it to the Government, and to the people, at anywhere from two to four and five times that rate, and yet at no time has the mar-

ket price for money on the solidest security been less than 3½ to 4 per cent, and today, as everyone knows, is 6½ to 8 and 9 per cent. It is now proposed:

First—The Postal Savings Bank shall be open and accessible to all without limit as to amounts that may be deposited, and interest thereon paid for any period of time, as is customary with commercial banks.

Second—These deposits shall be loaned at the market price for money on security that is good beyond question. This should make, in these times, the net income for deposits at least 6 per cent, gradually diminishing to 5 or less as world prosperity returns.

Third—Four per cent semi-annual compound interest will go directly to depositors.

Fourth—The balance of the profits shall be paid twice a year into the United States Treasury, thus making possible the reduction of taxes and thereby benefiting the whole citizenship, including, of course, the depositors. This, it is estimated, should bring into the U. S. Treasury, without taxing anybody one cent, an annual income of at least \$120,000,000, to possibly \$300,000,000 or more.

Fifth—Every banking institution in the United States in good standing may become an agent for the Postal Savings Bank, both to receive deposits

and to make loans, receiving for such service a small commission on both deposits and loans.

The Postal Savings Bank will thus become the greatest and strongest bank in the world, one vast national reservoir of the people's savings, available for loans to all who furnish proper security. There will be no favoritism to any class or interests—practically no limitation to loans except the limitation of good security and use in harmony with public good.

Sixth—The present gold standard is not affected and will be permanently maintained, yet gold is made no longer either fetish or a scarecrow.

Seventh—The Postal Savings Bank will be placed beyond the power of domination by any interest or class. It will have no power of either inflation or contraction, these powers being left in the exclusive possession of the existing Federal Reserve Banks.

Eighth—It will quickly mobilize and put into ordinary bank channels over three billion dollars (\$3,000,000,000) of money not now in any bank—the identical kind of money that is now the foundation resource of all banks.

Ninth—With this bill in operation there will be scores of millions of depositors, instead of half a million as at present, with deposits exceeding thirty billions, possibly soon nearer one hundred billions, instead of one hundred and fifty-five million deposits as when this is written.

To Men of Business

To men of business, "big" and "little." To farmers—to all who toil.

To stimulate "thrift and saving" among the millions who labor—such as the world has never before seen.

To stabilize business, build confidence, pour the oil of peace and prosperity on the troubled waters of unrest.

To get for YOU who are now "thriftily" 4 per cent, compounded semi-annually, on your "daily balance" of every surplus dollar you possess—even the dollars in your pocket, cash drawer and safe.

Unfetter the existing Postal Savings Bank, now "shackled"—"hamstrung"—by cunning, short-sighted greed.

Bankers with Brains, Vision,

Conscience and Patriotism (plenty of all four cordially recognized) will see, not antagonism, but co-operation in an unshackled Postal Savings Bank.

Bank prosperity goes naturally with industrial prosperity which the freed Postal Bank will enormously stimulate.

PATRIOTISM—the freed Postal will absorb the entire National debt and provide resource practically unlimited for National emergencies, at low interest, without perceptibly trenching on commercial funds.

CONSCIENCE—It is not believable that honorable bankers approve of

To get for YOU whenever you want to "borrow" money, all you want and can adequately secure, for "long time" or "short time," at the "market price for money."

Without an iota of "flat" fallacy, without an atom of "inflation."

Without a shadow of "injustice" or of "favoritism" to any "class" or "interest." To do all this:

the way Uncle Sam has been "used" to get the money of Postal Bank depositors at one-third to one-fifth of the "market price for money"—85 per cent of it going to bankers' use.

PROFIT—legitimate, honorable, in return for economic service, will go to bankers in commissions on both deposits and loans of the Postal Bank—profits 100 times greater than had in the past from "skinned" depositors.

Three Billion Dollars

"REAL MONEY"—INTEREST FREE

No "bluff" about it, no "magic," no "flat" fallacy, no "inflation"—nobody disputes the facts in the case.

One hundred and twenty million dollars or more in taxes, yearly, saved right in your pocket and mine!

All made available quickly by a little "practical sense" and **JUSTICE**—unfetter our existing Postal Savings Bank, now "hamstrung" by short-sighted selfishness and greed.

Balking Bandits and Burglars

No more U. S. mail robberies; no more pay-roll "hold-ups;" **INCIDENTAL** results of an unfettered Postal Savings Bank, now "hamstrung" by cunning, short-sighted greed.

Every certificate of deposit, whether \$1 or \$1,000, is "to order," or "to bearer" at the option of its owner; if "to order" bandit or burglar can't "cash" or "pass" without identification and consequent arrest—no inducement to steal or rob.

Another **INCIDENTAL** result is, certificates of deposit are good anywhere in the United States—or world—the same as "gold certificates," thus doing away with present enormous cost of "bank exchange," and risk of money transportation.

An unfettered Postal Savings Bank, now "hamstrung" by cunning, short-sighted greed, would bring billions of dollars to bankers—bring tens of billions of dollars to men who toil—justly, expediently, bring prosperity and "peace"—in exchange for the "economic war" of the past—and of the present.

For details, facts uncontroverted, arguments unanswered—unanswerable—see "THRIFT AND PROSPERITY," by Senator Morris Sheppard, of Texas, and John B. Alden, Neshanic, N. J., farmer, ex-editor and book publisher; \$1 at book stores, or free at Public Libraries.

PUBLIC OPINION is irresistible. YOU help make it. READ the book for facts, simple, overwhelming logic. SEND THIS to Congressmen, Senators, Editors, Public Men; ask them "Why not?" Tell your thought. Inclose in all letters. Discuss with neighbors. These slips for letters at rate of 5 for 1c, postpaid, from Alden.

Honesty is the best **POLICY**. Godliness is **PROFITABLE**—economic truth, not buncombe, not cant. Pleased customers more **PROFITABLE** than "skinned" customers. Dropping water wears stone—Keep at it. Ink beats dynamite. Pen mightier than sword—swing it!

At Book Stores, or of The Outlook, or of Alden, Neshanic, N. J.

A Human Life

vs \$10

IN more than a million homes little boys and little girls will go to bed tonight with the hidden danger of fire in every room—and no protection.

A Pyrene Fire Extinguisher is the ideal fire fighter for the home—always ready—always effective.

This great enemy of fire has saved many lives, many homes.

Is a human life worth \$10? What do you think your little boy or little girl is worth to you?

Fire doesn't wait — get a Pyrene at once! Even a little child can operate one.

A TALK ON PICTURE MAKING¹

BY HENRY HOYT MOORE

Art Manager of The Outlook

Member Executive Committee Pictorial Photographers
of America

THERE is a distinction between making a picture and making a photograph with a camera. A picture must please us with an element of beauty; a photograph may be merely a record of a fact. It sometimes depends on our point of view whether we regard a photograph as belonging in the first classification or the second. I once made a photograph of a shoemaker at his bench. I was much pleased with it. When I showed it to him, he said: "Heavens! is that me?" The light and shade in the little shop, the modeling, and even the wrinkles on his face, were most agreeable in my sight and made the photograph to me a picture; but to him there appeared only the fact that he was getting old. Leaving the personal element aside, perhaps this *was* a picture; but, at any rate, the thing I want to emphasize is this—the difference between making mere records and making photographs that have an art element.

Lots of people say, "It's all in the lens." If they see a photograph that is at all unusual, they say: "What a good lens you must have!" It's a little like saying to an artist who paints fine landscapes, "What good brushes you must have!" The truth is, you don't need an expensive lens to make good pictures. A costly lens will make sharp and mathematically correct photographs and it will make them in the thousandth part of a second; but it won't make a real picture any better than the lens in your brownie. There! I suppose I ought not to use any word that sounds like advertising an article; but if I say brownie or kodak in this talk, please understand that in using those words I refer to small cameras of any make. These small cameras in their cheapest form are perfectly capable of making pictorial photographs. When you buy one of them that is fitted with a costly lens, you can take better snap-shots of race-horses and railway trains with it, and sometimes you can get photographs with it on rainy days, but otherwise you are no nearer to making pictures than with the cheap lens. The man or boy or girl who goes into a store and buys a lens costing \$400, in a "box"—that is, a camera—costing \$200 (and you can easily spend that amount for your outfit)—is really no better equipped for picture-making under ordinary conditions than the possessor of a little film camera costing \$2. That seems a strong statement, but listen. A man I know who has traveled all over this country and taken charming photo-

¹ Mr. Moore's Talk on Picture Making has already reached the many thousands who "listen in" on the broadcasting from WJZ—the Newark station of the Westinghouse Electric Company. In the thought that it would have an equal interest for Outlook subscribers it is published here.

graphs to illustrate his fascinating books carried an old camera with a cheap, old-fashioned lens and a home-made shutter. I once asked him, "How do you make quick exposures with that shutter?" He answered, "I put a lot of extra rubber bands on it." His books are filled with attractive and in many cases admirable pictures that he made with this simple outfit. You can find his books in almost any public library and judge for yourselves as to their merit. You naturally ask his name. Without consulting him, I take the liberty of saying that his name is Clifton Johnson and the books bear the title of "Highways and Byways" in many parts of our country and in foreign lands.

And, to draw a leaf from my own experience, let me say that a few years ago I went up to the State of Maine with an expensive photographic outfit. I had an 8 x 10 camera, and an anastigmatic lens, double-coated plates, color filters, and so on. I carried this heavy outfit around the rocks and up the hills of Maine till I was weary—and got some fairly good results; but one day I shook this outfit and borrowed a brownie from a friend and with it got what the critical ones called a real picture—a snap that caught a fleeting impression of sand and sea and sunset clouds and a human figure, that couldn't have been captured with a big view camera.

Another amateur photographer, whose work can be seen in almost any of the current exhibitions of photographic art, gets his original negatives with a film camera of the $2\frac{1}{4} \times 3\frac{1}{4}$ sort. He works them up into larger negatives and prints and gets effects that are properly described as "stunning."

Well, how are these things done? In the first place, you must, as a rule, learn how to develop your own films or plates and make prints from them. Is this troublesome and expensive? When I began to do my own developing, after an apprenticeship of the "you press the button and we do the rest" variety, I asked an experienced friend what I needed. "It's easy," he said. "All you need is a five-cent developing powder, a pound of hypo, a graduate glass, and two small trays. On second thought," he added, "I'll say you don't need the graduate. You can mix the developer in one of the trays. After you develop the film in one tray and fix it in the other, tell the missus you want to borrow her kitchen, and then wash your film in the sink." This man made two mistakes. First, he didn't realize the fascination of photography, which makes you want to buy more and more material. Second, he didn't know my missus.

Nevertheless, the initial expense of a developing outfit is really small and the satisfaction is large.

When you have learned to develop and print your snap-shots, you should get an enlarging outfit. You can pay \$450 for this, or you can get one for \$3.71. You can make exhibition pictures with either kind. The majority of the pictures shown in the photographic exhibitions are what are called bromide enlarge-

Magic Lies in pretty teeth—Remove that film

Why will any woman in these days have dingy film on teeth?

There is now a way to end it. Millions of people employ it. You can see the results in glistening teeth everywhere you look.

This is to offer a ten-day test, to show you how to beautify the teeth.

Film is cloudy

Film is that viscous coat you feel. It clings to the teeth, enters crevices and stays. When left it forms the basis of tartar. Teeth look discolored more or less.

But film does more. It causes most tooth troubles. It holds food substances which ferment and form acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

You leave it

Old ways of brushing leave much of that film intact. It dims the teeth and, night and day, threatens serious damage. That's why so many well-brushed teeth discolor and decay. Tooth troubles have been constantly increasing. So dental science has been seeking ways to fight that film. Two effective methods have been found. They mean so much that leading dentists the world over now advise them.

A new-type tooth paste has been perfected, correcting some old mistakes. These two film combatants are embodied in it. The name is Pepsodent, and by its use millions now combat that film.

Two other foes

It also fights two other foes of teeth. It multiplies the starch digestant in the saliva. To digest starch deposits on teeth which may otherwise cling and form acids.

It multiplies the alkalinity of the saliva. To neutralize mouth acids which cause tooth decay.

Thus Pepsodent brings to people new conceptions of clean teeth.

Lives altered

Whole lives may be altered by this better tooth protection. Dentists now advise that children use Pepsodent from the time the first tooth appears. It will mean a new dental era.

The way to know this is to send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

See and feel the new effects, then read the reasons in the book we send.

If you count such things important, cut out the coupon now.

THE INNER SECRET

The Most Remarkable Book of the Year

Special Edition

Regular Edition
Handsome Leatherette
Cover Sells For

\$1.00

"The Inner Secret" or "That Something Within" is a remarkable book which explains the inner power each one possesses, which, if understood, will give you the things you want—*health, wealth, fame and personal power*. It shows plainly why one man gets the things which make life worth while—motor cars, fine homes, personality and rugged health, while others must grub along year after year with hardly the bare necessities of existence.

Through the generosity of a wealthy man who read and admired "The Inner Secret" we are enabled to print and distribute a Special Edition of this remarkable \$1.00 Book for 10 cents.

Your rapid climb to greater success will date from your reading of "The Inner Secret." It will awaken your latent forces and give you a new viewpoint on life. Don't delay. Send for a copy **NOW**. It may be the most important step of your life.

A TALK ON PICTURE MAKING

(Continued)

ments, and they are made with these enlarging cameras.

Before you get into the exhibitions, however, you should attend some of them and see "what's what." Many of the art museums throughout the country have within the last few years given space to photographic exhibitions, and the beauty of the prints shown will be surprising to people who have been accustomed to seeing only the ordinary snap-shots. Then perhaps there is a camera club in your vicinity which holds exhibitions from time to time. These are often good to see.

In making enlargements there are some tricks to learn—I use the word in no disparaging sense. The most important of these, perhaps, is the use of what is called a soft-focus or diffusing lens. This is a lens which is so constructed that it does away with the wiry sharpness that the beginner in photography admires. It gives "atmosphere" to a picture when properly used—either in an enlargement or in making the original negative—something of the quality of impressionism which makes the paintings of the great modern masters so much admired. But you don't have to begin with the soft-focus lens in making your enlargements. Learn to see pictures around you and try to get them in your original negatives and you will have good results with any enlarging lens. When you take a portrait, don't have the subject stand stiffly erect, hands at side, staring into your lens. When you try for a landscape effect, don't take it at noon, in a strong, hard light, but get plenty of soft afternoon shadows in your picture. Don't be afraid of photographing against the light, provided you don't have the sun shining directly into your lens. Try photographing your best girl on the shadow side of her face and see how beautiful she will look—though of course she'd look beautiful anyway. That reminds me that women often make the best photographers as well as the best subjects for photography. A woman amateur photographer last year won from a field of over a thousand competitors the \$100 prize offered by a Seattle firm for the best picture, and women and girls are represented in all the best photographic exhibitions. It's a good thing to have a woman criticise your pictures. The only fault I find with her as a critic is that too often she thinks it impolite or unkind to use the word "rotten."

I'll close with telling you how a woman helped me in a photographic emergency. I was photographing scenery on a New England lake for a magazine—you know you can sell your good pictures to the magazines and newspapers, don't you?—but that's another story. Well, when I was getting off the rowboat I dropped my camera into the water. I said, "Oh dear!" My dear fished the camera out and I put it in the sun to dry. It seemed not badly damaged when I later examined it, but the

shutter refused to work. I fussed over it a while, then gave it up. Some carpenters were at work near by and got interested in my trouble. One of them, an ingenious young chap, worked over the shutter for an hour. Nothing doing. I took it to the wife and said, "Guess I'll have to send it to New York. Goodness knows when we'll get it back—and my work only half done." I went to the hotel desk and wrote a letter to the camera people about it. Came back to get the camera. The lady said, "Do you know, this shutter works all right now! I fixed it with a hair-pin."

AN APPRECIATIVE READER

I AM sending you a snap-shot of one who probably ranks among your youngest appreciators, Jean Stewart Navarre. She represents the third generation in a family which has for many years weekly turned to your magazine

for information and for inspiration. I sometimes wonder why she always selects The Outlook when she sits down to "read," but it is so gratifying to have her seem instinctively to choose good company. Your magazine is a constant refreshment to my spirit, which seems so often to be growing worn and discouraged in this battle of earning a living and of trying to make the living worth the earning on a Michigan farm in these last years. It reassures me of the happy truth that the world is as full of people fine, brave, and big as it seems to be of the gossipy, the ignorant, and the greedy. And for that, words are inarticulate to tell you how deeply I thank you. Most cordially yours,

LILLIAN S. NAVARRE.

Monroe, Michigan.

Perhaps to some men the most appealing feature of the Pentagon is its practical shape. Others no doubt admire the sheer beauty of it—or possibly its striking individuality. In any event, the Pentagon—Gruen's newest achievement—has attained national vogue almost overnight. At the leading jewelers.

No. X-101—Ultrathin Pentagon, (shape patented) solid green gold, Dietrich Gruen *Extra Precision* movement, \$275; solid 18 kt. white gold, \$410; solid platinum, \$650. Verithin Pentagon, solid gold, *Precision* movement, \$100 to \$175; ultra quality gold, \$70 to \$75.

BY THE WAY

THE author of the "Chimmie Fadden" stories, Edward W. Townsend, tells in the New York "Herald" how he got the idea of the stories. He was at a news-boys' dinner and saw a young woman serving a hungry youngster. She leaned over him and whispered, "Jimmie, how would you like another piece of pie?" "Great!" he answered. She brought it, and as she placed it by his plate he lifted up one of her hands and kissed it. Afterwards he saw the same young woman walking on the Bowery with a "masher" following her. A boy—perhaps the hero of the dinner—told the gallant to "beat it." "The boy explained to me when I questioned him," says the author, that "De bum had a right not to be folleyin' a loidy, a silk-haired dame, what done good for de boys and goils 'round here." Out of these incidents grew the famous stories.

Lord Northcliffe saved "Notes and Queries" from extinction shortly after the war, as a tribute to its influence in his personal fortunes, according to an English writer. It is said to have inspired him with the idea of his own "Answers," which gave him his start in his newspaper career. "Notes and Queries" has been published for more than seventy years. It is a small-sized magazine, and Lord Northcliffe is said to have predicted that the future newspaper will have a page no larger.

The San Francisco man was speaking. "Pickup" says. "I do not believe in all this 'boost' business," he said. "There is too much brag about it. Especially I do not believe in running down other cities, other parts of the country. It is making claims to excellence that do not need to be made. We should not do it. It is not modest and is likely to arouse jealousy. But I will say this much for San Francisco: Wherever you go from here it is worse."

Intern (to flapper), as reported by the "Journal" of the American Medical Asso-

Sept. 12, 1922

Advertising Manager,
The Outlook,
381 Fourth Avenue,
New York City

Dear Sir: An advertisement inserted in your "Help Wanted" column for two weeks brought 187 replies from all parts of this country. It was possible to see personally only a dozen or more of these applicants, but, besides the large number, the quality of the applicants impressed me. Evidence has been given me, as the advertiser, of the excellence of The Outlook as a medium for reaching a very fine class of applicants for positions.

Yours very truly,

Try an Outlook "Want Ad." The rate is only Ten Cents a Word.

Department of Classified Advertising
THE OUTLOOK COMPANY, 381 FOURTH AVE., NEW YORK

We will be pleased to send you our book, "The Care and Feeding of Infants," also a Free Trial Bottle of Mellin's Food.

Mellin's Food Company, Boston, Mass.

BY THE WAY

(Continued)

clation—"I think you have acute appendicitis." Flapper—"Oh, thank you, doctor."

Under the head "And Cooling?" a house organ reprints this advertisement from the New York "Times":

Neat, attractive girl wanted to do billing. Address Box 362, etc.

"Your column of August 30 quotes from a newspaper of 1783 a note about Byrne, the famous Irish giant, saying that his friends planned to take his body to Ireland for burial." So a subscriber writes, and proceeds to tell the story's sequel: "Dr. John Hunter, the famous surgeon of those times, succeeded in obtaining the body, as he wanted the skeleton for the Museum of the College of Surgeons in London. Byrne, it seems, dreaded dissection by Hunter, and shortly before his death arranged with several of his countrymen to have his body buried at sea. The undertaker, who had been offered £500 for the giant's body by the great anatomist, managed that while the escort were drinking at a certain place on the journey seawards, the coffin should be locked up in a barn. There some men he had concealed speedily substituted an equivalent weight of paving-stones for the body, which was at night forwarded to Hunter." The giant's skeleton, 7 feet 7 inches high, may still be seen in London, it is said.

From giants to dwarfs is an easy transition. The same day the above note was received the following paragraph appeared in a New York newspaper:

Peppino Magro, aged twenty-nine, who is twenty-two inches high and weighs only forty-five pounds, appeared yesterday at the Federal naturalization bureau, Brooklyn, to make application for his final papers to become a citizen. They were granted and he will come into full citizenship in ninety days. He gave his occupation as a freak. Asked if he was married he said: "No, but sometimes I think I would like to be."

General Tom Thumb, it will be remembered, who became probably the most famous freak of history under the management of P. T. Barnum, was twenty-four inches high when he was first caught by the famous showman, but grew to nearly forty inches.

As a refinement of luxury, a foreign motor car firm advertises that the windows in its car are "made of Purdah glass, which renders the occupants of the car invisible, although they can see outside in a subdued light."

Visitor to very quiet seaside place (as reported in "Punch")—"And what ever do you people do with yourselves in the winter?"

Landlady—"Oh, we talks and laughs about the people what stays 'ere in the summer."

HONORARY VICE-PRESIDENTS

Admiral Hilary P. Jones
*Commander in Chief, Atlantic Fleet*Rear Admiral William S. Sims
*Naval War College*Major General John A. LeJeune,
*Commandant, U. S. Marine Corps*Vice Admiral John D. McDonald,
*Second in Command, Atlantic Fleet*Rear Admiral Carl T. Vogelgesang,
*Commandant, Third Naval District*Rear Admiral James H. Glennon,
Retired

October 27th has been appointed as Navy Day.

The purpose of the Navy Club of New York is to take care of the Navy ashore by furnishing them with a suitable shore home or headquarters in New York, where they can have when on liberty, sleeping accommodations, a club room where they can read and write, check room and post office, and a canteen where they can get food at cost price.

The medal is a symbol of your interest in the welfare of the boys in the Navy,

As this is the port most frequented by ships of the Atlantic Squadron, and as we take care of the boys from every State in the Union, this appeal is of more than local interest.

As a symbol of your desire to co-operate, we are asking you how many medals you will take for the members of your club, or employees, to be worn on Navy Day, and how many you will underwrite. Price 25c for the size shown above and 10c for a smaller size. The medal is done in bronze by Sally James Farnham, the sculptress who patriotically gave her services for the production of the original of this model, and as a work of art, it is a valuable souvenir of the cause.

Telegraph at our expense, the number of large and small medals you will underwrite and where they are to be delivered.

We hope that at least two hundred thousand of these medals will be worn on Navy Day.

Yours very truly,

President

Nation-wide support for the National Navy Club is earnestly solicited. Will you be one of a hundred in your State to back the Club with a supporting membership?

Golden Hours for Children

GIVE them a healthy, vigorous incentive to absorb the foundation ideas in science, literature, history and sport, now, while they are young. Develop their initiative and originality. Increase their possibilities for the years that are to come. Do this with St. Nicholas.

St. Nicholas has been a most important factor in children's lives for years. Its clean, healthy stories, its vivid articles on history, its interesting accounts of science, hold and train youthful minds. Contests in writing, photography and other subjects supply a stimulus for the development of resource and originality.

There is no other children's publication that exerts such a dominating influence on their development as St. Nicholas. It is a guide, a companion, a tutor—a specialist in child culture. Do not deny it to your children.

One year's subscription is only \$4—half what you pay for your morning paper. Send check or money order to St. Nicholas Subscription Department, N-22, 353 Fourth Avenue, New York.

for Boys and Girls

Life-Insurance Benefits Traced

+

*Who'll Win the
Money Awards*

+

LIFE INSURANCE has become an Institution. It is performing a great service. But how many of us have really noted the benefits conferred by it in our own communities? We accept life insurance quite as we accept the public school and the church. Yes, such institutions are benefiting the public to a wonderful degree; but who can say as to A, B, C, how he has been benefited? The influence of the church and the school are rather intangible. Life insurance speaks with the dollar-mark, and its trail can be traced.

Let us follow up the proceeds of an insurance policy and see what has become of the money.

There is Dora Briggs, for instance, who was the recipient of \$5,000 from her father. How has she used the money? How has she been benefited?

There is Albert Southwick. He was left \$10,000 by his uncle. What use has he made of the money? Has he been benefited? By its result you can tell.

The Postal Life Insurance Company has asked to have made known to it instances of specific benefits performed by life-insurance money. We want our policyholders to locate the instances and write statements about them.

The ten instances judged (a) to be the best and (b) told best in 800 words, or less, will entitle the writers to money awards, graded for the points of excellence from \$5.00 to \$50.00. These awards are open only to the class of 1922 (those holding policies dated in the present year), including those who will take out policies between now and January 1, 1923.

How such money saved the family from distress, due to the loss of the breadwinner, should be shown. How the child was educated, and what happened to him in later life, should be most interesting. How a widow in her later years was saved from penury and was enabled to help others ought to make a fine story. How debts have been paid, and valuable property, and perhaps a business, saved from bankruptcy proceedings, would contrast with the unprotected business and the foreclosure that might have followed.

Important details should be given.

The judges will be selected from among our own official staff.

All manuscripts must be in hand by January 1, 1923.

Applicants for new insurance should furnish the Company (a) full name, (b) age and (c) occupation.

*Whenever soap comes into
contact with the skin
—use Ivory*

Teaching without words

LOVELY CHILDREN! What a struggle it seems, sometimes, to keep them so!

Yet mothers can give them a momentous start toward cleanliness and beauty—merely by suggestion and example.

•We know one understanding mother who teaches cleanliness by this simple plan:

She talks about how good it makes *her* feel to be clean. She leaves her *own* cake of Ivory Soap where the children can easily reach it. And she leaves other cakes *wherever* they wash.

This mother knows how quick

youngsters are to imitate, and she finds that these cakes of Ivory do their gentle, but thorough, cleansing with hardly a word from her to the children.

Ivory is the nicest soap you can imagine for your children and for you. It *cleans safely*—that is what all soaps *should* do. And while it is *cleaning*, you experience with Ivory all the delightfulness of the seven most desirable qualities of fine soap—purity, mildness, whiteness, fragrance, rich lather, rinsing promptness, and “It Floats.”

With *all seven* of these desirable qualities, Ivory is naturally the favorite soap of most mothers.

Ivory Soap comes in a convenient size and form for every purpose

IVORY SOAP
99 $\frac{44}{100}$ % PURE IT FLOATS

Medium Cake

For toilet, bath, nursery, shampoo, fine laundry. Can be divided in two for individual toilet use.

Large Cake

Especially for laundry use. Also preferred by many for the bath.

Ivory Soap Flakes

Especially for the wash-bowl washing of delicate garments. Sample packages free on request to Division 24-J, Dept. of Home Economics, The Procter & Gamble Co., Cincinnati, Ohio.

The Outlook

OCTOBER 25, 1922

MASTERS OF THE AIR -

IN American aeronautical circles the year 1922 will always be known as the renaissance year of aviation. For, with the winning of the world's speed records at Detroit, Saturday, October 14, America's leadership in the science of aeronautics and the art of flying is unquestioned. We now hold the endurance, altitude, and speed records for heavier-than-air machines, and these records were made by American pilots in American-built machines designed throughout by Americans.

It had been expected in Army and Navy aviation circles that the Pulitzer speed race at the National airplane meet at Detroit would bring home to the United States the international speed bacon. Lieutenant R. L. Maughan, of the Army Air Service, in his Curtiss army racer lived up to those expectations when he flew over a closed course of 155.34 miles at the rate of nearly three and one-half miles a minute! Maughan's average speed for the entire distance was 206 miles an hour. As a close second to this performance came Lieutenant L. J. Maitland, also of the Army, who drove his Curtiss racer over the same course at an average speed of 203 miles an hour. During some of the laps of his flight Maitland made better time than Maughan; for 50 kilometers he flew at a rate of 216.1 miles an hour and for 100 kilometers at 207.3 miles an hour.

Both of these fliers beat the 100-kilometer record of Le Cointe, famous French pilot, whose average speed last September was 202 miles an hour. They also beat the record of Kirsch, another Frenchman, who flew 200 kilometers in October, 1921, at an average speed of 174.8 miles an hour. Five other contestants at Detroit also beat this last record. Thus three world's records fell before American brains, skill, and endurance. And of the eleven pilots who finished in this race, none made less than 149.3 miles an hour average speed.

Watching this race were two middle-aged men: one, Orville Wright, the father of heavier-than-air flight, who on December 17, 1903, with his brother Wilbur gave aviation to the world; the other, Glenn H. Curtiss, foremost aeronautical engineer in the world to-day, who designed and built the successful

machines. Both men saw the fruition of their dreams and their labors, American supremacy in all departments of heavier-than-air flight.

After this race Lieutenant Maughan drove a Curtiss machine over a short distance at the incredible speed of 248.5 miles per hour.

Aside from the performance of the machines and pilots in the numerous races during this Detroit meet, another

International

LIEUTENANT RUSSELL L. MAUGHAN, WHO WON THE PULITZER TROPHY AND ESTABLISHED NEW SPEED RECORDS AT DETROIT. HE FLEW ONE KILOMETER AT A RATE OF 248.5 MILES AN HOUR

event took place which is of tremendous import to the growth of commercial aviation in this country. An American Aeronautical Association was formed, which is Nation-wide in its scope, and which begins its life of usefulness with a tremendous membership. Men and women from all walks of life are enrolled in this great movement for the establishment of commercial aviation on a grand scale in America. For, after all, the real mission of aviation in this world is commercial. Were it for military and naval purposes only, it would have been ten thousand times ten thousand times

better for the world had flying remained an unknown art.

This year's results in aeronautical effort, then, reaching a climax at Detroit, may be said to be the dawn of a new era in American aviation. We have reached the highest development in planes, engines, and equipment; we have produced the world's most skillful pilots; we have laid the foundation for public support of commercial aviation through the medium of a Nation-wide union of enthusiasts and practical, experienced airmen.

One thing remains to be done to place commercial aviation before the Nation as a useful adjunct to present methods of transportation; we must have Congressional laws for regulating and fostering its establishment—laws which will safeguard the public, which will do away with recklessness, which will prohibit dangerous equipment, which will provide air navigational facilities similar to shipping facilities, and which will permit the most complete co-operation between private and public aeronautical enterprises. The enactment of the Wadsworth-Hicks Bill for a Bureau of Aeronautics in the Department of Commerce, a bill now before Congress, will bring about this desirable condition of affairs in American commercial aviation.

SECRETARY HOOVER'S OPPOSITION TO THE CANCELLATION OF DEBTS

BANKERS, who are supposed to know a great deal about finance and ought to know a good deal about economics, have been represented lately as being disposed toward canceling all, or at least a large part, of the debts which European countries owe us. So we may judge from their chief spokesmen. The impression, for example, given by the recent Convention of the American Bankers' Association as reported by Stephen Bell in last week's Outlook is that the most influential bankers regard the payment of these debts as practically impossible.

Flatly opposed to any such conclusion is, however, the American who has earned the reputation of knowing more about international economic relations than any other American and quite as much as any other man in the world. Herbert Hoover, Secretary of Commerce,

has explicitly stated that those debts (except for a negligible five per cent) can and should be paid.

As may well be imagined, Mr. Hoover rests the duty of payment, not upon a merely selfish consideration of American interests, but on a consideration of world stability and confidence. He points out that the economic problems of the world should "not be obscured by fluctuation in exchange or by calculation of trade balances in terms of war and depression." Many commentators on these economic conditions cannot see the woods for the trees; Mr. Hoover certainly has better vision than they have.

He points out, too, that these debts are not so much debts to our Government as debts to our taxpayers, and that the repudiation of them "would undermine the whole fabric of international good faith." He declares that the annual payments would vary in their burden upon the various debtor countries "from two to twelve per cent of their governmental incomes." Naturally, the American taxpayer regards other things as of more importance for stability than the repudiation of that amount of debt—and among them the reduction of armaments, the balancing of budgets, and the cessation of inflation. In comparison with the waste and destruction of armaments, extravagance, and inflation, the burden of the loans due to us is, says Mr. Hoover, trivial.

In detail he meets the argument that the payment of these balances means shipments of either goods or gold, that these shipments would have to be direct to us, that they would embarrass our industries, that they would depend upon the ability of a country to produce a surplus for export, and that present trade balances are an indication of future paying power. All these assumptions he examines and finds faulty. For instance, sources of money supply from which European countries can draw for paying their debts are to be found in the amounts spent by American tourists abroad, the remittances of emigrants, the investments abroad, etc., amounting in all to three times the interest on the debts. Moreover, even in payment of goods, shipments need not be direct; they may consist in shipments of manufactured goods to tropical countries and then shipments to us of tropical products which we need. Before the war the rest of the world owed Europe over thirty billion dollars, and that debt was borne without a ripple. The creditor situation has been shifted, but only partly.

Mr. Hoover rightly concludes that we should have more experience with economic forces before we jump to the idea

that there is any necessity for putting irretrievable burdens upon the American taxpayer by canceling the debts.

THE PRESIDENT'S COMMENDATION OF CONGRESS

WITHOUT any reference to the approaching election, and without even a hint of partisan appeal, but evidently in recognition of the fact that as the election approaches the people of the country have a right to expect an account of stewardship from the party in power, the President has reviewed the work of Congress for the past two years and has called it good. Though he has addressed himself to the majority leader in the House of Representatives, he obviously intends his informal report for the whole people.

No one can expect, much less require, the President to emphasize the faults and shortcomings of a Congress in which his party has control. There is no reference, for example, in the President's letter to the passage of the Bonus Bill, which the President vetoed. Nor is there any suggestion of the tendency, discernible even in his own party, to the formation of such a group as the farm bloc, which the President has openly deplored. Naturally, too, the schedules of the Tariff Act which have been under attack are not mentioned even for the purpose of defense, as it is too soon to forget the effect of President Taft's approval of Schedule K.

On the other hand, President Harding's commendation is not emotional or excessive. The contrast which he draws between the record of reconstruction after the Civil War and that after the World War is striking and true. Certainly the convulsions of the early period of which President Harding reminds his readers—"the impeachment of one President, an embittered National election contest, and a prevalent conflict between legislative and executive branches"—have been conspicuously absent during these recent months. Similarly, his comparison of our own experience with other nations after the World War is fair and reasonable, and should lead to confidence in our own Government apart from party considerations.

Though it may be said that the reductions which we made in our expenditures, particularly for military purposes, which the President cites were made much more safely than they could have been if we had such close neighbors as France or Britain has, nevertheless the record is commendable. A reduction of annual public expenditures of over three billions in two years is one for which Congress should have credit—and all

the more credit because it is in part the result of a budget system created by Congressional enactment.

The feature of the tariff which the President selects for special praise is its provision for administrative adjustment that makes the tariff flexible and adapted to changing conditions.

Many people who are concerned with our apparent isolation from our former Allies will welcome the President's statement that—

The last thing in our thoughts is aloofness from the rest of the world. We wish to be helpful, neighborly, useful. To protect ourselves first and then to use the strength accruing through that policy for the general welfare of mankind is our sincere purpose.

There will be by no means unanimous assent to the approval which the President gives for the extent of the provision which has been made for disabled veterans; and there are signs that people in certain regions of our country are by no means satisfied with the agricultural advancement which the President cites; but on the whole the President is not without justification in expressing gratification at the progress made toward normal conditions. Certainly as a measure of economic health it would be hard to find anything better than the advancing value of Liberty Bonds. After all, that tells pretty well of the confidence which the people of the country have in the soundness of their Government.

THE FEDERAL COAL COMMISSION

THE country will welcome President Harding's appointment of the United States Coal Commission. The Commission proposed has been pretty generally called a Fact-Finding Commission; it will be also, we hope, a fact-selecting commission. There has been a vast amount of statistics, averages, and the like put forth by the leaders of both sides of the recent coal war. What most of us would like to see would be an intelligent and wise selection and presentation of those things that are of vital importance—the things that will aid the consumer to get fair treatment from the industry, the operator to carry on his business with some security, and the working miner to have steady employment for reasonable hours at a fair wage.

There has been nothing but approval, so far as we have observed, at the list of seven names in the President's Commission. Its chairman is John Hays Hammond, who has no superior as a mining engineer and is thoroughly acquainted with the practical as well as the financial aspects of mining; the

From Rev. W. S. Rainsford, Ridgefield, Conn.

others are, Thomas Marshall, Vice-President during the Wilson Administration; Judge Samuel Anschuler, who arbitrated the labor dispute in the packing industry; Clark Howell, editor of the Atlanta "Constitution;" George Otis Smith, head of the Geological Survey; Dr. Edward T. Devine, economist and philanthropist of New York City; and Dr. Charles P. Neill, formerly Commissioner of Labor.

The duties intrusted to this Commission are numerous, but we see no mention of a report on the desirability of establishing a permanent National Coal Commission. That is a step which most impartial students of the question believe should be taken, so that the coal industry, like the railway industry, should have a permanent body prepared to consider and act within reasonable limits in the case of disputes within the industry.

Among the subjects to be reported by the Commission are all facts which should make it possible to stabilize the industry, to insure a steady supply of coal to consumers, and to indicate remedies for possible future strikes. This would of course include all facts of large importance regarding ownership, wages, production, labor cost, distribution cost, and the profits of owners, transporting railways, controlling coal companies or wholesalers, and retailers.

Since the miners in both branches of the coal industry have been back at work the opinion has been frequently expressed that the settlement is merely a truce and that there is great danger that the war may begin anew in April, 1923, when the entire wage question must be taken up again. One example of this opinion is found in an address by Mr. C. E. Maurer, Vice-President of the American Mining Congress. He is quoted as saying that the whole industry should "organize its household for self-examination, self-expression, and self-government," that the mine workers have got the upper hand, and that the operators have managed their own business so badly that Federal control is imminent.

If this condition of things exists, there is certainly great need for intelligent and thorough investigation by the new Coal Commission. The time between now and April 1 is short for such an investigation and for legislative action by Congress. All the more reason that the work should be pressed with vigor and sound judgment.

AGAINST LIFE-SAVING

COPIES have been sent us of so-called anti-vivisection bills introduced in Colorado and California; we are told in the latter State an attempt is to

be made to secure indorsement from the voters at the coming election. We strongly urge any voters before whom the question may come to refuse to indorse the measure. Certainly they should not do so unless they know just what it means.

The California bill bears the misleading caption "An act prohibiting the vivisection or torture of human beings or animals." But in the text we find that "the causing of any deformity, sickness, or disease in or to any living creature for experimental purpose" is punishable. Now, it may be wrong to give a mouse a new drug or inject in him a new serum, but it certainly is not "vivisection or torture" unless it is "vivisection" to inject the new diabetes serum in a human patient or "torture" to give him a dose of calomel. The major part of the anti-vivisection argument is based on the horror caused by the sound of the word vivisection, although the thing sought to be restrained is not torture but mild experimentation from which (as has been demonstrated beyond question) both the human and the animal world have benefited enormously.

The present California law allows "properly conducted scientific experiments or investigations performed under the authority of the faculty of a regularly incorporated medical college or university of this State." The new bill repeals this provision, and thereby brands all the State's colleges and medical schools as cruel. Could fanaticism further go! An attempt is made to get the trapper and farmer vote by allowing amateur barnyard operations and ignoring the suffering or starving of tortured trapped animals.

The Colorado bill has a mild title referring to "experimental operations or administrations;" but the text defines among the things included anything which may "cause pain or suffering in any part or any organ"—a wide-open definition.

A refreshing contrast to these bills comes to us simultaneously. It is a resolution passed by a vote of about 600 to 20 by the Pennsylvania State Federation of Women putting on record "their gratitude to medical science for past discoveries so profoundly beneficial to human beings and to animals, and we believe that such beneficent researches should be continued and encouraged."

A valued correspondent calls attention to the benefit of animal experimentation in saving animals from death and suffering and in food values. Thus in six years through the use of a serum discovered by animal experimentation the loss from hog cholera was cut down by

about \$47,000,000. The illustration might be multiplied.

If there is any real cruelty or malicious torture going on, by all means let it be stopped. But don't be misled by hysterical language.

SIMS, THE UNMUZZLED

THERE are times when retirement laws seem to work against the public interest. The thought is brought about by the news that Rear-Admiral William Snowden Sims has been placed upon the retired list of the Navy merely because he is sixty-two years old. Age may be a matter of record, but the record does not always correspond with the spirit.

Rear-Admiral Sims has always been a center of discussion and controversy. His enthusiasm, his drive, and his eagerness for results have not always been recognized for their true worth by more placid souls in the Government.

He upset tradition by appealing directly to President Roosevelt for reforms in American gunnery. If tradition was broken in this instance, so also were American gunnery records.

Later he caused another storm and received a Presidential reprimand for a speech on Anglo-American friendship made in England long before the World War. According to naval tradition, the rebuke was deserved, but his prophecy was nevertheless to be fulfilled.

The New York "Times" in its editorial on Rear-Admiral Sims's retirement says that for the "commander of the Navy in European waters and liaison officer between the United States and British Governments . . . a better choice could not have been made by President Wilson." The "Times" is manifestly right in this statement, but it fails to record the fact, so amply shown in Ambassador Page's biography and in Admiral Sims's own story of the American Navy in the war, that the Navy Department failed lamentably in the early days of the war to give to Sims the support and co-operation which was his right.

When the war was over, Rear-Admiral Sims again was a storm center in the controversy over the question of the award of naval honors. His recommendations to Washington were largely ignored and a policy of distribution of honors was adopted by Secretary Daniels which seemed so unfair to Admiral Sims that he declined to receive the honors which the Navy Department was ready to accord him. Both informed and popular opinion sided with Admiral Sims in this controversy.

When Admiral Sims retired, he was President of the Naval War College at Annapolis. Our Navy is a better Navy because it has enjoyed the lifelong de-

votion and service of Rear-Admiral Sims.

THE NATIONAL NAVY CLUB

LAST week *The Outlook* devoted a large amount of space to the constructive work of the United States Navy in times of peace. The courage and self-sacrifice of American naval officers and bluejackets in times of war is spread upon the records of the great European Continent, notably in Admiral Sims's remarkable book. During their term of service the home of our bluejackets is on the sea, and when they touch at American ports they are to a certain extent strangers in a strange land. Everything possible should therefore be done by their grateful countrymen to minister to their comfort and welfare while in port. New York City is the port most frequented by ships of the Atlantic Squadron, and the National Navy Club of New York is performing a service which ought to enlist the interest, not only of New Yorkers, but of people all over the country, for our bluejackets come from all over the country. We know from personal inspection what this Club is doing, but in order that our commendation may not be tossed aside as the opinion of mere landlubbers, we quote from a letter which we have recently received from a lieutenant commander of the Navy:

It is not generally realized how important to the enlisted men of the Navy and Marine Corps is the work undertaken by the Navy Club. There is no other club of this kind to compete in this special field of activity, and, consequently, there is no duplication of effort. The Naval Y. M. C. A. in Brooklyn (so generously sponsored by Mrs. Finley J. Shepard) does a very fine work, but it is not located in the heart of New York City. I know from my observations and talks with men under my command that fully ninety per cent of them instinctively would choose association on shore with the same kind of girls and women as they left in their own home, but, unfortunately, it is very difficult for a bluejacket to make the

proper kind of friendships in New York or other large cities. This need is met at the Navy Club, where ladies of the highest standing in New York volunteer their services to help make the club a home for the men.

There is a reading-room, library, writing-room, pool-room, and a small café where simple meals are served at cost; there is also a limited dormitory space. The principal handicap that now confronts the club is the lack of dormitory equipment, where men on liberty or furlough can find a clean, pleasant place to spend the night at a minimum charge.

The drive which is to be inaugurated by Mrs. William H. Hamilton and others interested in the Navy Club deserves the support of friends of the Navy throughout the United States, for its benefits are given as freely to the boy from Kansas as to the one from New York—in fact, the Kansas boy, being further from home, really benefits more than his shipmate whose home may be near New York.

The American public may have an honest difference of opinion as to the size of the Navy, but there should be no difference as to the wish for having a Navy of the highest quality as regards officers and men. To attract and hold the clean-cut, manly high school boy and the ambitious young man who enlists to learn a trade it is necessary to have contentment in the service. The Navy of to-day is making a sincere and effective attempt to build up and insure contentment on board ship; but on account of the restrictions imposed by law, the Navy Department can do very little to insure its men against homesickness and discontent while ashore on furlough or on liberty ashore.

We urge those who are interested in the efficiency and welfare of the American Navy to write to the Hon. Franklin D. Roosevelt, the National Navy Club of New York, 15 East 41st Street, New York City, for full information about the activities and work of the Club. Mr. Franklin D. Roosevelt was Assistant Secretary of the Navy during the European War under the Administration of President Wilson, as his cousin, Mr. Theodore Roosevelt, is now Assistant Secretary of the Navy under the Admin-

istration of President Harding. In this very striking fashion the Roosevelt name is still intimately associated with American naval progress, and our readers may be assured that any welfare enterprise with which Franklin Roosevelt associates himself is worthy of the fullest confidence.

GREAT BRITAIN AND THE NEAR EAST

THE political crisis in England largely, but not entirely, grows out of the recent situation in the Near East. Lloyd George's address at Manchester before the Reform Club was both a call to his supporters to enter the political battle and a defense of his administration's conduct of affairs in the Near East.

A general election is, as we write, considered imminent; if it is averted, it will be because the meeting of Unionist leaders planned for October 19 will have indicated such a large support for the continuance of the coalition under Lloyd George's leadership that his resignation and appeal to the country will not be needed. He summed up his defense in two sentences: "I cast myself upon the people; the people will see fair play," and "We have not been war-mongers, but peacemakers."

Americans who do not follow English politics closely have often expressed surprise that the coalition of parties formed when the war broke out should continue four years after the end of the war. The chief reason is the potential power of the Labor Party. Austen Chamberlain laid great stress in his recent speech, which was only less important than that of Lloyd George, on the danger that an increase of strength in the Labor Party would mean its domination of the Coalition through its power to throw its solid vote one way or the other. It is a mistake to suppose that the Conservatives, or Unionists, are united against Lloyd George. He is supported whole-heartedly and aggressively in the present situation by such

International
THE YALE-IOWA FOOTBALL CONTEST, WHICH IOWA WON BY A SCORE OF 6-0, ONE OF
THE MOST INTERESTING OF THE EARLY SEASON'S GAMES

The photograph shows Minnick of Iowa punting

of their leaders as Austen Chamberlain, the Earl of Balfour, Winston Churchill, Marquis Curzon, Viscount Birkenhead, Bonar Law, and many others. The real question is whether an Opposition made up of men and of parties who dislike Lloyd George and distrust his policies will so combine after the proposed general election as to form a working majority and to be intrusted with the Government. To an outsider this would seem somewhat like a Cave of Adullam party.

"WHAT BUSINESS IS IT OF BRITAIN'S?"

LOYD GEORGE'S speech varied from passionate earnestness to free and easy facetiousness; an instance of the latter was his sardonic remark in reply to the opinion that "What the country wants is less brilliancy and a change to something a little more dull and ordinary." He said: "There ought to be no difficulty in supplying from among my critics any number of suitable candidates that would fulfill that description." The personal and familiar note was struck again when he said: "I have been treated by some of the London press as if I were an old actor whom fashionable circles in London have no use for. But, gentlemen, I can still go touring the provinces."

There was no jocosity in Lloyd George's treatment of the Eastern situation. Astonishingly direct and open to attack was his remark:

Our critics say: "Why didn't you have an understanding with your allies?" We did. Only a few weeks ago we received a message from the French Government that if the Greeks or the Turks invaded the neutral zone they would have to be resisted by force by the Allies. We accepted that. We thought they meant it. How were we to believe it was only intended for one side?

Nothing was more earnestly put in the whole address than Lloyd George's reply (after his statement that since 1914 the Turks had slaughtered 500,000 Armenians and 500,000 Greeks) to the supposed question, "What business is it of Britain's?" He said: "That was not the old Liberal policy. It was not the policy

certainly that I was brought up in. It was not what I was taught in my youth—that Englishmen, Scotchmen, and Welshmen should every morning repeat reverently the litany of the cynic: 'Am I my brother's keeper?'—that Great Britain should face the world with the brand of Cain upon her brow." In line with this the Premier pointed out the vital importance of securing the Straits against what happened in 1914: "Vital to us, vital to humanity, we could not have those Straits barred without giving away the biggest important prize we had won by the victory over Turkey in the Great War, and which had cost us so much in life and treasure."

Mr. Chamberlain, who was no less outspoken in his defense of the British action in the Near East than was the Premier, declared that there were moments when danger of attack on the British forces at Chanak was imminent and that the criticism of opponents included language "the only effect of which could be to weaken the Government authority, encourage the Kemalists, and present the British Empire to France as a humble satellite in the orbit of French policy, bound to exercise no independent judgment or take independent action."

These two addresses and that of Mr. Bonar Law, who declared that withdrawal from the neutral zone would have been regarded throughout the whole Mussulman world as defeat for the British Empire, certainly show that the most prominent leaders of the Coalition are ready to enter a political contest with an undivided front. If the Opposition should win, Mr. Lloyd George will have the opportunity to criticize from the side-lines. He indicated some skepticism as to whether his opponents would find their job an easy one: "I've had a long spell and a pretty hard one," he declared, and added: "I'll watch, for instance, to learn how to forgive Germany her reparations and yet make France love us more than ever. I'll watch how we are to pay the United States, yet forgive every other country

everything they owe us. I'll watch how you work the educational system, giving more to the unemployed, yet lightening taxes."

THE HONOR OF JAPAN

ON December 2 next the port of Tsingtau will be turned over by Japan to China. The announcement of the forthcoming transfer has been made by the Japanese Government. The prophets of evil, who have tried to discredit Japan's word, have only about six weeks in which to hope for some accident to thwart this honorable act.

If this proceeding were the aftermath of a war between the two countries, it would signify a great victory for China. As it is, the withdrawal of Japan from this Chinese port signifies as well a great and notable victory for Japan. It virtually completes the settlement of one of the most perplexing and irritating of recent international questions—the question of Shantung. Nothing in the Versailles Treaty aroused more irritation in America than the provision which, by recognizing Japan's succession to the German lease of territory on Kiaochau Bay and the control of the railway from Tsingtau to Tsinanfu, gave to Japan virtual economic control of the most sacred and one of the richest of China's provinces. On the other hand, nothing which occurred at the Armament Conference at Washington was more of a diplomatic achievement than the agreement reached between China and Japan for the restoration to China of the rights which Japan held in Shantung by virtue of conquest over Germany and of international law.

It would be hard to find in all diplomatic history a problem more complicated by a snarl of moral rights, legal rights, national sensitiveness, economic considerations, and Oriental intrigue. That it has been settled without clash of arms, without even recourse to arbitration, but by mutual agreement, with the friendly counsel of other nations, is creditable alike to China and Japan, and is as favorable an omen of peace and

justice among nations as is to be found anywhere in the world to-day.

FOOTBALL

THE football season has brought with it the usual amount of space-filling comment from the legion of sport writers. The oracle of Delphi could have learned much from many of these writers concerning the fine art of non-incriminating prophecy. To many of these writers should also be apportioned due share of the blame for the championship mania which has undermined our amateur standards.

It seems to us that the chief function of the football writer should be the effort to make the game as intelligible as possible to the public which has not had the benefit of playing the game. Real football experts could find ample material in this field to fill any number of newspaper columns. But probably it is much easier to fill their space with such statements as "undoubtedly the Hoozis Wildcats will be weaker than the Whatsat Bohemoths if the Whatsat Bohemoths are not stronger than the Hoozis Wildcats, but on the other hand . . ."

We need "quote" no further—the formula can be repeated to infinity, like the pattern on a wall-paper.

THE ABUSE OF THE CHILD

TWO earnest attempts to abolish the abuses of child labor have failed because the Federal laws enacted for that purpose have been declared unconstitutional by the United States Supreme Court. Therefore the only way of bringing the Federal power to bear is to amend the Constitution. This is the ground now taken by the friends of the movement against excessive child labor. The Secretary of the National Child Labor Committee some months ago announced his belief that it would now be folly to attempt to deal with the matter in any other way, and his position has been sustained by utterances from others all over the country, including some from the South, where State's rights feeling is so strong.

It is evident that if an Amendment to the United States Constitution is to be passed it should be permissive, not compulsory; that is, it should give Congress power to pass an enforcing law which should meet the requirements of the United States Constitution as amended, but it should not require that such a law should be passed.

There seems to be a tendency among those who have not looked into this question to suppose that agitation has

led to such regulative State legislation as to reduce the evil substantially. This is a mistake. There are only two ways of making child labor conditions what they should be. One is that already indicated—namely, by an Amendment to the Constitution; the other is by the growth of public sentiment in the States to such an extent that the Legislatures shall pass really satisfactory and uniform laws and that the people shall then insist upon their enforcement.

Recent reports as to actual conditions show that the laws are lax in no fewer than twenty-eight States; that, for instance, in Georgia children twelve years old may be worked ten hours a day and children fourteen and a half all night long, while none of the twenty-eight States referred to come up to the reasonable standards fixed by the two Federal laws which have been discarded. The United States Children's Bureau has quite recently issued a special report relating to excessive child labor in the anthracite mining districts. In one area of about half a mile square all the living conditions were found to be such that they were injurious to the health of the children, while the schools were deficient and about 1,350 out of 3,000 of the boys and girls between thirteen and sixteen years of age had left school for work. Moreover, more than five hundred of the boys employed in connection with mining were, says the report, employed contrary to law because below the legal age, while a considerable number of them not yet sixteen years of age were employed underground.

These facts, and very many others that might be quoted, certainly show that the child is urgently in need of protection from the United States Government. The form of Amendment which has been suggested by the National Child Labor Committee is certainly moderate. It reads as follows:

Congress shall have power to regulate or forbid the labor of minors at an age, or under conditions, deemed injurious to their health or morals. Such power shall be concurrent and not exclusive and the exercise thereof by Congress shall not prevent any State from adopting other or further regulations, not inconsistent therewith.

Reports show that an enormous number of young children are now engaged in work unsuitable for them who would be in school to-day if the last Federal act had stood the test of the courts. The form of amendment which the Child Labor Committee proposes is too specifically confined to one aspect of protective welfare legislation, and is therefore not the best that can be devised; but there is need of doing something, and of doing it soon. As Mr. Lovejoy, of the National Committee, says: "A nation

that cannot protect its own children from industrial exploitation should be ashamed of itself. It should at least have the power to do so. There is no democracy in permitting backward localities to use up childhood. We might as well speak of a democracy of robbery, of murder."

WANTED: CONSISTENT PACIFISTS

PEOPLE who are inconsistent are always a disappointment. They are particularly disappointing when one happens to be looking for sincere opponents with whom to argue.

We know of one man who lost a valuable friendship because his "preachin' and practice" didn't "gee." And he lost his friend by doing something which that friend was willing to die for.

It happened during the early days of the war. The inconsistent gentleman was a pacifist. His consistent friend was a devout believer in the cause of the Allies—we shall therefore adopt momentarily the pacifist nomenclature and call him, for the purpose of this editorial, Mr. Militarist. Before the United States had entered the war Mr. Militarist had served in France in the Ambulance Corps and had returned to America only in the hope of enlisting under his own flag. While moving heaven and earth to get into the service he roomed with Mr. Pacifist, who had for many months been preaching the avoidance of military duties. Mr. Militarist, believing in the sincerity of his friend, gave him counsel as to the proper occasion for registering his protest against the draft—whether the fight should be made at the time of registration or on the day he should be called to the colors. When the call came, however, Mr. Pacifist meekly donned the uniform and went off to camp. Mr. Militarist, we believe, has never spoken to him since. He lost his friend, not because he differed from him in opinion, but because he found him lacking in the courage to be consistent. Similarly, we find that some of the pacifists who are still working for that very desirable end—the abolition of war—are appealing to convictions which they themselves shrink from following to the end.

On the back of a recent issue of the "Nation" we find a page advertisement appealing to American citizens in the following words:

You are conscious of the concerted effort of the schools, the press, the movies, the church, the government, to make us a slavish-minded people and to create as the pattern of the loyal citizen the man who obeys, conforms and never analyzes or criticizes

the existing order. Have you failed to revolt against this? . . .

Those of us who know that war is always wrong will work together.

At the bottom of this appeal is a pledge which the reader is asked to sign, which reads as follows:

I affirm that it is my intention never to aid in or sanction war, offensive or defensive, international or civil, in any way, whether by rendering military service, making or handling munitions, subscribing to war loans, using my labor for the purpose of setting others free for war service, helping by money or work any relief organization which supports or condones war.

The inconsistency of this pacifist appeal is to be found, we think, in the pledge which we have just quoted. It covers much, but it does not cover enough. If the philosophy of the preceding appeal is to be carried to its logical conclusion, it demands absolute non-resistance. A man or a woman who accepts this philosophy cannot say, or rather should not say: "I will resist some things and will refuse to resist others. I will not resist the attack of a nation, but I will resist the attack of a thug. I will not support soldiers, but I will support policemen." The pledge, it seems to us, should have an additional clause. This clause might read: "I will pay no taxes either directly or indirectly to any National, State, or municipal government which uses force for the purpose of maintaining law and order."

Only by extending the pledge to this limit can its demands be made logical and complete. A subscriber to such a pledge would at least not be inconsistent in declining to follow in the wicked footsteps of Florence Nightingale. Surely the breed of martyrs has deteriorated if our present variety is willing to ignore the logic of their principles for the sake of avoiding the inconvenience of refusing to pay taxes.

THE LEGACY OF THEODORE ROOSEVELT

IT is right and proper for Americans this week, which includes the anniversary of Theodore Roosevelt's birth, October 27, to consider how and why his spirit has still a potent influence upon his countrymen. For that reason both in prose and verse special emphasis in this issue of *The Outlook* is laid upon his life and work.

The test of a democracy lies in the leaders that it produces. A nation which within little more than half a century produces a Lincoln and a Roosevelt need not fear the verdict of pos-

terity. In literature, in music, in sculpture, in painting, in architecture, we have produced no men of equal eminence. We are a nation of action rather than of artistry. When Theodore Roosevelt published his volume, "The Strenuous Life," he prefixed to it a quotation from Tennyson's "Ulysses" containing these lines:

How dull it is to pause, to make an
end,
To rust unburnished, not to shine in
use.

The English artist summed up the energy of an irresistible and permanently inspiring American statesman. No such driving force had emerged in our public life for many decades. Indeed, it begins to appear that Theodore Roosevelt was and is the greatest exponent of American spiritual energy. It is still less than four years since his death—and here one thinks of Browning's words, "Never say of me that I am dead"—yet his fame seems already secure and his birthday is sure to be more and more widely celebrated as the years go by. "They must needs be men of lofty stature," says Hazlitt, "whose shadows lengthen out to remote posterity." Roosevelt was one of those men.

No better proof of his unquenchable energy for righteousness could have been supplied than during the period, six years after he had retired from the Presidency, from May, 1915, to April, 1917. It is no exaggeration to say that during that bitter time he was the great awakener of his country's soul, the real leader of our spiritual forces. The moral indignation of his writings recalled a Carlyle or a Swift. His capacity for action went into his pen; its results were cumulative and sure. While men of lesser stature were counseling timidity and profits from munitions, he foresaw the part which America must perforce assume. And he did not die until the triumph was won. Figuratively but none the less actually he carried the flag and led the charge.

Like all great fighters, he loved a fight only for its results in righteousness. In these days of unsettled policies, of fierce industrial conflict, it is salutary to remember that Theodore Roosevelt was a statesman, not a politician. He never vulgarly asked, "What is there in it for me?" but, "How can I serve my country and my time?" With mean struggles for financial advantage he was never in sympathy. He regarded "malefactors of great wealth" and of labor unions with equal abhorrence. He called American citizens to service for their country—which in the end means true advantage for themselves. He looked beyond the hilltops, not into the slime. The man with a muckrake, the man who lights

the destructive torch or loosens railway ties, he considered a low type of human animal. The forces of unrighteousness had good reason to fear his tremendous energy and his searching intellect. The feeble poison of their attacks on him had small effect, however, upon the public mind—and still less upon his own mind. He knew that his country would remember his services, whether in the matter of settling a coal strike or acquiring a Panama Canal or putting America on record as participant in the greatest of historic struggles to overthrow a ruthless military tyranny. Such an example of leadership as his is not dimmed in death; it does not rust unburnished, it shines in use. For it is the sword of the Republic, which he kept bright and handed on.

The astonishing thing about Roosevelt, however, was that he was not only a great man of action but a mirror of the best in American culture. An indefatigable reader, observer, and talker, he absorbed information and inspiration in the same manner, one thinks, that Shakespeare absorbed them. At one moment he was lunching in the White House with a noble leader of the Negro race; at another he was encouraging a poet who since has risen to the foremost rank among us. Like Goethe, he looked once into a book and twice into human nature; like Arnold, he felt that it is conduct which makes up three-fourths of life; like Emerson, he believed in a kind of mystical common sense which can hitch a wagon not merely to a horse but to a star. There was no useful and noble side of American life that he did not touch. If he lacked the austere and Scriptural simplicity of Lincoln, he had the same magical understanding of the common people, the same enduring sympathy with them. He walked with kings or with plowmen with the same easy stride and the same born comradeship. No name since Lincoln's evokes such popular enthusiasm; and none is so worthy of it. We have no Westminster Abbey in which are buried the best of those that served their country and mankind; but in our American temple of silent admirations we have merely to mention the name of Theodore Roosevelt to awaken echoes of his greatness.

"The end of a man," said a remarkable writer, "is an action and not a thought, however noble." In these United States we have not yet retired to the library to compose masterpieces. Our greatest men are still in the open, under the sun or the stars. They build industrial empires, structures of steel or of statesmanship. They make ready a vast territory for later leisure and for perfection of culture. They serve a country still young and with the head-

long impetuosity of youth. They have found that "something lost behind the ranges" which has always waited for ex-

plorers, for pioneers. The best reminder of Roosevelt's spirit which his death evoked was a drawing, by a Western

artist, of a fiery rider up the trail toward the mountain ranges which hold our hopes and our dreams.

THE TURK IN THE NEAR EAST

WHAT WOULD ROOSEVELT HAVE DONE ABOUT IT?

BY S. RALPH HARLOW

TWO anecdotes in which Theodore Roosevelt centers may be of interest, especially because the second has direct relation to the present world situation.

The first incident took place when I was an undergraduate at Harvard. There was a serious question at the time as to whether intercollegiate football might not be abolished by the College Faculty. Very strong opposition to such a move was felt by the student body. It was when this subject was the main topic of discussion in the college halls at Cambridge that President Roosevelt spoke to us in the Harvard Union. The great assembly hall of the Union was packed with undergraduates, and when Roosevelt came in and waved his hand to the crowd he was received with a fine ovation. In the middle of his speech he turned to the subject of intercollegiate athletics, and, with that vigor and enthusiasm which he threw into any cause in which he believed, he said, "I believe in *intercollegiate football*." A great roar went up from the crowd that shook the very roof. When the applause had died away, he leaned forward and said in a clear, quiet voice: "And I also believe in good hard study. I believe in *scholarship*." Raising his hand to his ear, as though listening, he said: "I don't hear so much enthusiasm about that. Where are your *cheers*?" This produced a good deal of laughter and hand-clapping.

The next time I met Roosevelt was on the platform of the railway station at Syracuse. With a group of friends, I was coming to Boston from the West. The conductor told us that Roosevelt's car had been attached to ours during the night, but he added, "Roosevelt had given instructions that he does not wish to see any one." It happened that I was the only Harvard graduate in the group in our car, though there were several Yale men. I suggested that there was a way by which we could easily get Roosevelt, but that they must be willing to give a Harvard cheer. So we all piled on the station platform under the windows of Roosevelt's car and there we gave a good rousing Harvard cheer with "Teddy" three times on the end. In five seconds there he was climbing down the steps to the platform, both arms reaching out to us, and that wonderful smile of his, with the old familiar "de-lighted" on his lips.

At that time I had just returned from Asia Minor, where I had witnessed the fearful deportations on the Bagdad Rail-

road, and could give him first-hand information of the awful atrocities going on. He asked me a number of questions, continually shaking his head and saying, "Terrible," "Terrible," "Terrible." Then, with a tense expression on his face, he said: "Mr. Harlow, the greatest regret that I have as I look back on my Administration is the fact that when that awful Adana massacre occurred this Government did not take steps against that outrage on civilization."

My readers may remember that when Roosevelt gave his inspiring message to the American Army he was criticised in some places because he included the Turks in his address and urged our boys to do all in their power to defeat the Germans and the Austrians, *and the Turks*.

I wonder what Theodore Roosevelt would say to-day, when in the name of *humanity* we drew the sword and sent our sons to France, when we declared that, though we were the "last to come, we will be the last to stay, till right has had her crowning day."

I have just listened to the contents of a letter sent by one of our boys on an American destroyer at Smyrna. He tells of having to stand by while the brutal Turkish soldiers seized beautiful Christian girls and tore them screaming from their mothers and outraged them right on the public quay of Smyrna. He saw these brutal soldiers shooting down helpless women with children in their arms, unarmed men beaten to death by the gun butts of these Turkish soldiery. And then he tells of his anguish that the orders of our Government were such that he had to stand by, helpless, before such atrocities.

America to-day is the strongest and most powerful nation in the world, the richest nation in the world. We pledged (in terms of idealism such as had never before been attained by a people on a nation-wide scale) to lay all our treasure and manhood on the altar of *freedom and humanity*. Those were not idle words then.

When the war came to an end, those great problems which most affected the happiness and welfare of countless thousands—yes, millions—waited to be solved. We were definitely asked to accept responsibility in the Near East. The Harbord Commission said that it might take two divisions of men and some millions of dollars. We could have disarmed the entire population. Turks, Greeks, and Armenians longed for our coming, yes, prayed for it. As the Har-

bord Commission stated, if justice, humanity, and a great opportunity to render service on a wide scale were taken into consideration, there was only one path to follow. As the Chairman of the Near East Commission at the Versailles Conference declared: "The greatest opportunity that ever came to a nation to render humane service on a large scale knocked at America's doors. The zero hour struck, and America refused to go over the top." As Dr. Conrad declared in Symphony Hall, Boston, this week, and as Harry Fosdick in the very same words declared in New York City recently, America's attitude in the present world situation "smells to heaven."

Yesterday five hundred thousand helpless Christians were done to death, and not a single protest against the cruelty, the inhumanity, and the injustice has been raised by the American Government. We have expressed sympathy; we have sent relief "for Americans only;" but we have not uttered a word of warning as a Government to the criminals, and we have asserted again and again as a Government that we do not intend to interfere. Nearly two million helpless, unarmed Christians await massacre and death in Constantinople and Thrace. The Near East Relief has all the evidence that the massacre in Constantinople has been definitely planned, that the city has been even divided into areas, with the amount of money the Christians in each area possess. It is not *Turkey*, or the *Allied nations* who stand to-day alone at the bar of justice. *America* stands there too, and when history is written may God help us! Our statesmen, our leaders, call themselves Christians. Many of them are officers in the Christian Church. They are supposed to have pledged their loyalty to the God of humanity above their loyalty to any party or any policy. And yet to-day, I ask, where is the voice in America of any statesman or of any Government official that is sounding out, not sweet nothings of sympathy, but stern denunciation and warning to the Turkish Government against these unspeakable atrocities? The only voice I can think of from a man who has held a high Government position is that of Henry Morgenthau; but when I think of Roosevelt, and of what this situation would have stirred him to, I cannot help but repeat those familiar words—

"O for the touch of a hand that is gone and the sound of a voice that is still!"

This group of veteran fire fighters of Chicago, who aided in fighting the great fire of 1871, also aided in the Fire Prevention Drive just held. These ten men were the guests of the Chicago Retired Firemen's Association. Seated, left to right: I. M. Adler, J. C. Pazen, C. Schimmells, Nicholas Wienard. Standing: F. W. Gund, G. Teady, A. J. Calder, C. Schroeder, C. Steimagle, Thomas J. Cauty

"TURKISH DELIGHT"¹

AS IT APPEARS TO AN AMERICAN GIRL IN CONSTANTINOPLE

Constantinople,
November 18, 1921.

DEAR SAM: Didn't you just shriek when you heard that I had gone to Constantinople? Returned to my native land, as it were—I and my Oriental tendencies. I'd always dreamed, and this time "dreamed true." And it's a hundred times more fascinating than I ever imagined. I love it!

It happened suddenly. My brother Cleveland has lived abroad so long we thought he had forgotten he had a family; and the last two and a half years he had been in Constantinople. He cabled for me to come direct by water, and go home with him across the continent, after perhaps a year. I just flew, for fear he would change his mind, and sailed in ten days.

Everybody said: "Oh, but aren't you afraid? The bugs and diseases in those dreadful Eastern places!" But truly, I never saw one really objectionable bug! Only cockroaches; but what are they to an ex-Greenwich Villager? The rest must have been there, but I simply ignored them.

I left New York on a Greek steamer early in September. It took three weeks. The passengers were a rather unexciting lot—Middle-Western missionaries bound for Smyrna; a tobacco man on his sixty-fourth trip across; a sweet mother and literary daughter, who took me under their care when we stopped; a Russian girl (being, I suspect, deported from the United States) who played the piano with such passion that its strings broke.

My table companions were two nice boys going into our consular service, and Leo, a young Greek of Bolshevik tendencies. Leo was rather amusing on deck, where he could argue his very advanced views on life and letters; but he wielded a wicked toothpick at table all the time except when in the very act of gorging himself with everything in sight. He would look up, find me lost in wonder at him, and say, "What's the matter—you sick? You eat too few!" I afterward found that toothpicks are quite the thing in Greece, and that throughout the Near East it is a sign of appreciation and good breeding to make a great noise with your soup and coffee.

We stopped one day at Naples, and saw Vesuvius at dawn against trailing pink and purple clouds. Pompeii, and had heavenly glimpses of gardens, with the blue sea beyond, through open white-washed doors, as we tore through the streets.

Then three perfect days in Athens. We did the bazaars and the ruins and had a picnic on the Plain of Marathon, and spent most of the time at the Acropolis, drinking it in. I know now what phrase "immortal beauty" means.

This will be followed by another letter from Constantinople in an early issue.

It was a miserable, cold morning when we anchored in the Bosphorus. The famous picture—the minarets of Stamboul, the forest of masts in the Golden Horn, outlined against the gray sky—looked ghostly and dead. I shivered.

Then before any one else had thought of going ashore came my darling Clee. He took me and all my possessions. We stopped at an American destroyer on the way ashore, where I was given a warm welcome and American coffee and toast.

Have you ever seen a little paper called the "Far Seas," published by our Navy in Turkish waters? It ran from the time of the Crimean evacuation (November, 1920) until now, but I hear that it is being threatened by the present Economy Wave in Washington. It is a healthy and interesting thing in a place which is too interesting but not at all healthy for the grown-up children that are our sailors.

Going ashore, the beautiful, ghostly picture of Constantinople vanishes. One plunges into a vortex of fighting, shouting people, either bullying or cringing, pushing you off the narrow sidewalks unless you have a cane and push them first. Raucous voices of street peddlers deafen you. Whining beggar women with borrowed babies pull at your sleeve and tell you how beautiful you are and pinch the baby to make it cry. Hideously deformed creatures crawl along under your feet. Allied officers, haughty and immaculate, tear through the streets in motors, and the Turkish traffic policeman draws up at salute, then jumps to get out of the way. There are new Turkish ladies with painted eyes and lips displayed to the world below a thrown-back veil; old-fashioned ones with the *charchaf* down (but very thin, if they are pretty); Greek girls with thick ankles; starving Russians with hopeless dull eyes selling paper flowers or pitiful little dusty cakes; a camel train lurching down the street; a *hamal*, or human express wagon, carrying a piano on his back; spahis (French Moroccans) striding, tall and handsome in turbans and red-lined cloaks; fat sleepy Turks sitting in café windows all day long, smoking narghilehs and drinking endless cups of coffee. Dirt, disorder, and poverty everywhere. Fairytale palaces, falling in ruins. Refugees without a roof over their heads. This is hardly the romantic, languorous life, with its undercurrent of tragedy, of Pierre Loti's tales, of our imaginings. The tragedy is nakedly apparent. The "Sick Man" is dead, and little pieces of him are being devoured by all sorts of parasites. It is life spread out on the dissecting table that you may see in Turkey now. I have nothing to do but watch it, study it from the inside, meeting Turks, Russians, Greeks, Armenians, as well as the British, French, and Italian

Forces of Occupation, socially. Living in a hotel and keeping house in my own apartment give different angles on life.

Of course Clee knew everybody, and very soon I did. I went to the Pera Palace at first. That is one of the two good hotels. I slept in linen sheets, had breakfasts in bed, shoes shined, bath water drawn, without so much as lifting a finger. But private baths are unknown, and the public conveniences are places to shut your eyes and nose in. You pay fifty piasters (thirty-five cents) for a bath, and if there are too many mad English or Americans staying there, who will bathe every day, you must make an appointment, hours ahead of time, and then have to threaten to leave, before you get it. Water is very precious.

I registered of course as "Miss," but neither the proprietor nor any one else there ever called me anything but Madame. When Clee would bring me home from a party, the porter would avert his eyes and smile discreetly as we said good-night. Old ladies would beam upon us and whisper, "*Nouveaux mariés! Comme ils sont contents!*" I must be either a bride or a sweetheart. Attractive young men simply do not wander about the East with their sisters. It isn't done!

The first feeling you get is of a confusion of nationalities that never can agree because of different religions, ignorance, corrupt government (until the British took things in hand). There is no census kept; you can have a dozen children, or get sick of it all and drop into the Bosphorus, and probably never be noticed. The newspapers are miserable affairs with no real news in them. If the British organ, the "Orient News," is any standard. Constantinople is a perfect Babel of different languages. I am now living with my brother in an apartment. Our household staff consists of Anna, a dear motherly German-Serb, who speaks every known language except English and Chinese; Rosa, the Armenian scrubwoman, "nothing but an animal," according to Anna; old one-eyed Mehmed, a Turkish patriarch over whom I stumble in the hall mornings as he sits on the floor cleaning our shoes; he has a deadly fear of Rosa, who could "put an evil eye on him" if she got angry. Our landlord, a Spanish Jew, keeps a room for himself on the outer hall, where he scurries in and out like a rabbit. He gives himself a thorough wash once a week, when he is going to call on his Russian sweetheart, and invariably leaves the water running and floods the whole place.

It seems to me that there must always be one strong power to hold this mélange together. The Turks are too indolent and too weak. The English have cleaned up the city considerably,

they say. What must it have been before they came! Its picturesque dirt and rags must have been too highly flavored even for my romantic imagination!

The famous street dogs are gone; some years ago they became too numerous and were put on a barren island in the Marmora to eat each other and gradually die. Of course a Turk could not actually kill one himself! One day, looking out of my window, I saw a dog lying on the sidewalk below, surrounded by a group of Turks. One held its head, another ran for water, the rest looked on with expressions of solicitude. I thought, "These people have hearts, after all! Nobody anywhere could be kinder to a sick animal!" Suddenly the dog stiffened, died—the crowd melted. The dead dog lay there, walked over unnoticed, until a street-cleaner finally swept him up. If it had been a man, it would have been the same. I saw a Russian lying dead on the street one morning. Nobody paid any particular attention. Human life is very cheap out here.

To a resident on the spot Turk, Armenian, Greek, Jew, are all rascals and barbarians according to our code of living; the Turk perhaps appears a shade more civilized. He is a poor business man, and is rather more honest than the rest. An American business man here told me that he would take the word of a Turk any time in preference to that of a Greek or an Armenian. And the Jews are completely outclassed. There is an old Levantine proverb, "It takes three Jews to cheat a Greek, and three Greeks to cheat an Armenian." The Turk is an agreeable rascal, anyway. I was very much amused by an experience that I had with a charming young Turk, Osman Bey. Osman belonged to a very aristocratic family, had lived for some years in America, and was married to a pretty American girl. I had often visited their house in Stamboul, and they had called on us. I was selling tickets for a Russian Relief tea-dance at our Embassy, and called to sell some to the Osman Beys. He said that charity was a corner-stone of the Mohammedan faith. He was very glad to help the suffering Russians, although he did think that the Americans might consider that the Turks, too, had their refugees in the city—26,000 of them, starving quietly and with dignity, and nobody was making any fuss over them! At any rate, he bought some tickets, and gave me a check. When presented for payment, it was returned marked, "No Funds." I have seen Osman several times since. His manners are beautiful; always agreeable and entertaining. Very curious people!

Some tourists in Athens asked me if it really was safe to go to Constantinople now. They had heard all sorts of things. It certainly is. An American, I believe, is the most popular person anywhere in the Near East at present. Everybody else has an ax to grind. After long doubting they've begun to be-

lieve that we haven't. They laugh at our simplicity, but love us. I can walk into any shop and take home anything I like, without money or guaranty. The shopkeepers urge me to. I did not understand at first. "But you are an American!" They will send rugs on approval, to try as long as we like.

Of course we don't have to trust entirely to their love. We have six destroyers now in the Bosphorus, under command of Admiral Bristol, our High Commissioner to Turkey. Our destroyers protect American interests here, on the Black Sea, and down along the coast of Asia Minor.

Admiral and Mrs. Bristol are absolutely perfect for their position. The Embassy is "my home" while here, as the Admiral says, so I see a great deal of them. He is very handsome, and has an eye that looks straight through you. Every one adores him. Under him, our Embassy has become the friendliest spot in Constantinople—a meeting-place for all nationalities. The Admiral can dance or play bridge all night, and be at the breakfast table at eight, go through the daily papers, have a French lesson, and be at his desk at nine. And his aides are expected to do the same. Mrs. Bristol is just as energetic. She is also beautiful, and talented socially; just the mistress for an Embassy. She is the heart and soul of the Disaster Relief Committee, formed at the time of the Crimean evacuation, which is tireless in its efforts for the helpless Russians—some 35,000 of them, stranded in Constantinople because no other country will have them.

There must be about four hundred Americans in Constantinople—the Embassy, Consulate, and Navy; the American College people; the Y. W. and Y. M. C. A.; Near East Relief; the Standard Oil and Tobacco people. There are no theaters; one or two respectable restaurants. The Russians have brought good music, but most of the entertaining begins at the Embassies. In spite of the fact that ours is small, that Congress allows practically no funds for entertaining (one must pay for the privilege of being an American diplomat), ours is the gayest of all.

The British Embassy affairs are a bit stiff. The French and Italians only have a few big balls during a season. They are poor, and do not go to parties (excepting at the Embassies) because they cannot return them.

It's a delicious life for a British or American girl. *Thousands* of British officers (the most handsome creatures on earth—so slim and straight, and just poured into their uniforms); fiery Italians and French; the mad, impulsive, pathetic Russians; all lonely for women of their own class to talk to, all new and strange and exciting. Our own Navy admire the beautiful Russians, just take a brotherly interest in us. Our Near East Relief girls are marrying the British officers at an alarming rate. One girl—a new arrival—was asked what im-

pressed her the most about Constantinople. "Being cut in on twelve times during one dance," was the candid reply. You can imagine what a good time I have, being the only unmarried American woman, outside of the relief organizations. It will be hard to come down to earth when I get home.

Every meal is a party. This is an average day: Breakfast in bed, at ten. Ready for lunch at one. Clee doesn't come home at noon, but I am never alone. Probably lunch at the Muscovite, with a party of from two to eight, until 3:30. You, like almost any other good American, will turn a bright green when I tell you what we would have for an average little luncheon party. Cocktails first. Then vodka with the caviare; white wine with the fish; Burgundy with a pheasant; champagne with the dessert; coffee and a liqueur; and whisky-sodas to taste the rest of the afternoon. Thus strengthened, one dresses for tea. If it is a tea-dance, it lasts from five to eight. But any missing brother or husband may be found at the "cocktail hour"—from six to eight—at the Constantinople Club, enjoying a little bridge or the latest rumor. Around 9:30 dinner begins; and is served in a leisurely fashion until midnight. Then we wonder what we will do this evening. Perhaps there is a dance somewhere; if not, bridge; or Rector's (a dancing club, with American music); or Maxim's (a wilder place, but everybody goes), kept by an American Negro with a titled Russian wife. And so, home and to bed, just before dawn.

Motherly old Anna gets utterly worn out with us once in a while. She says we will die. Last night she said she was going to get a big string and tie me to my bed for twenty-four hours. I told her I had every intention of going to bed at sunset to-night. She said, "*Non—non. Après le dîner, quelqu'un vient—heidi! heidi! vite! vite!*" "*Heidi!*" being Turkish for "go."

It sounds like an utterly useless existence—and of course it would pall after a while. But it's the people that I meet that make it worth while; people who know so much, and yet don't take life so solemnly as it's taken in America. To know people who will be figures in history: General Wrangel; Sir Horace Rumbold, British High Commissioner; Sir Charles Harington, Commander-in-Chief of British Forces here; Baron Uchida, Japanese High Commissioner; members of the reigning Turkish house; Mr. Thomas, a vice-president of the Standard Oil, representing Standard Oil interests in Europe, and a very powerful influence during the war. To see these people at play; I'm just absorbing it like a sponge. Has any girl ever had a happier life than I? Why should I be so lucky?

More, later. Must run and dress now for a party. I'll tell you all about it, and about some of these fascinating people, in my next. As always,

FRANCES.

THE PENDLETON ROUND-UP

A CLASSIC OF AMERICAN SPORT

BY GEORGE PALMER PUTNAM

"ARE you going to the series?" A friend asked me that just after my return from a month's jaunt to the Pacific coast.

"What series?" I asked.

"The World's Series, of course," he replied. "The baseball championship."

"Probably. . . . But I have just seen the settling of another World's Championship that makes the Polo Grounds show look like a censored classic."

Which of course was saying a good deal, but at least it focused the attention of my baseball-enthusiast friend, to whom forthwith was told the story of another really great epic of American sportsmanship, the Round-Up at Pendleton, Oregon—a superspectacular championship of which he, like many another Easterner, had never even heard.

Each year there are a number of these rodeos, or round-ups, throughout the West, perhaps the most notable of them being held at Pendleton, Oregon. Thither, with a group of Nationally known authors, I went this autumn. Our itinerant writers, who ranged from Frederick O'Brien and "Dr. Walter E. Traprock" of rather dissimilar South Sea fame, to Wallace Irwin and Charles Hanson Towne, were inevitably forthwith dubbed the "rough writers." In honor of the literary visitors the slogan of the Pendleton show, which normally is "Let 'Er Buck," was paraphrased to "Let 'Er Book."

The Round-Up is a great deal more than a merely "Wild West show." It is wild and Western enough and reminiscent of the picturesque past. But it is much more than an exhibition. It is a competition. It is a pennant race in which America's best horsemen and most competent cowboys compete.

Pendleton itself is a prosperous town in the heart of the wheat and cattle country of eastern Oregon. Normally, I suppose, its population is some fifteen thousand. But during the three days of the Round-Up, when it is the focus of interest for most of the Pacific Northwest and an increasing number of Eastern seeing-America-first-ers, it expands miraculously to thrice that size. Well over thirty thousand enthusiasts paid admission on the last day of this year's show. Which at that compares pretty well with a Polo Grounds attendance, especially considering that Pendleton is some three thousand miles from Eastern population centers and that the whole State of Oregon hasn't as many people as Brooklyn.

Consider, then, a frontier town—albeit a modern one with paved streets, porcelain tubs, elevators, and all the metropolitan trimmings—entirely turned over for three hectic days to the show, which the town itself owns and conducts, not

"THE GREATEST WRESTLING IN THE WORLD"

for profit but for the downright glamour of it and the glory of the West that was and is. Cowboy clothes are the order of the day—woolly "chaps," swashbuckling spurs clinking from leather boots, broad-rimmed Stetsons, gay-colored silk shirts and scarfs, and, above all, gaudy vests hued like unto the aurora borealis.

"Assuredly," as Charles Hanson Towne punned it, "here is where the vest begins."

There is a saying, epitomizing generosity, that one "would give you his shirt." Just that happened in Pendleton, for our hosts at once insisted that we exchange our becollared drab affairs for their own giddy silk creations. In celebration of which hospitable transfer Wallace Irwin perpetrated a song that forthwith became the popular Round-Up hit and doubtless by now echoes merrily throughout cowland, to the tune of "Tourelay:"

When I was in Oregon scratching the dirt,

I met a young cowboy who gave me his shirt.

The shirt it was silk, and the shirt it was red,

So I held out my hand and these fine words I said:

"Cowboy, O Cowboy, I hope you do well,

You're a good-natured, bulldogging son of a swell."

So I put on the shirt, and I tucked in the tail,

And beat it back East on the Oregon Trail.

The show itself is staged on a quarter-mile track and in an arena at its center, the whole surrounded by bleachers and grand stands. There is, of course,

racing of all kinds—bareback, pony express (where the riders shift the saddle from one horse to another at each change), Indian squaw, and, most picturesque of all, the wild-horse race, which last is an unexampled epic of concentrated excitement. A score of absolutely unbroken horses—animals who have felt neither bridle nor saddle—snorting, raging, are turned into the track. At a signal a group of mounted cowboys go after them, each ultimately roping one. Then, in a welter of wild-eyed, fighting, biting, rolling, bucking creatures, the rider and his assistant somehow contrive to get a bandage over the horse's eyes, which, after frantic struggles, quiets him enough to make saddling possible. Then off with the eye bandages and on with the race—and often enough, off with the rider! Remember, no horse ever has been ridden. Their one interest is to get rid of saddle and rider. They have no intention whatever of going around the track. Instead they buck and "sunfish," actually roll over on the ground, and generally mill around like four-footed demons gone mad.

A wonderfully unforgettable sight is that concentrated inferno of insane horseflesh and rolstering fearless manflesh. This year, just to see a lean buckaroo named Punch Guyette ride the bereft cayuse which luck wished on him—ride him right side up and upside down, horse and rider somehow somersaulting quite completely, with Punch remaining in the saddle, all with a whoop and a laugh, was in itself quite worth the trip from New York.

And that wild-horse race was, of

course, only a detail, a sort of curtain-raiser, a tasty appetizer for the big events. The contests for bucking, bull-dogging, and roping are the top-line attractions. And working up to the championship decisions of the last day are a welter of hair-raising elimination trials, so that the fifty or so riders are put through their paces, under all sorts of circumstances, and the crowd is fairly saturated with a veritable saturation of exciting sights.

Those Round-Up names mean little to us back here. Suffice to say that Yakima Canutt (who this year rode third in the bucking) is a Babe Ruth of cowland. Howard Tegland, world champion, and Ray Bell—who wears a neat white collar even when astride twelve hundred pounds of horse-hided insanity—are every bit as well known out there as Dempsey and, say, Harold Bell Wright; while the Western reputations of marvelous women riders like Mabel Strickland and Bonnie McCarroll rank right up with Mary Pickford and Elsie Ferguson.

The bucking horses which supply the motive power, so to speak, for the riding contests are the pick of the untamable "bad" animals of all the West. Their names become historic. There are "Lena" (no lady, she!), "U-tell-Em," "Bill McAdoo," "Wiggles," "Angel," and others. This year two especially bad-mannered beasts were christened "Doc Traprock" and "George Putnam." Neither, we regret to state, succeeded in unseating his rider!

The matter of getting the saddle on a "bad horse" is a problem in itself, solved by the "wranglers." Ultimately the rider gets aboard, but not necessarily for long, for those horses know every trick imaginable likely to encourage an immediate divorce between themselves and the unwelcome stranger perched upon their hurricane deck. Be the horse a trained buck or an outlaw, he can be counted upon for all sorts of gymnastics, ranging from the "side wind" and "sunfish" and "weave" to the straight buck and the high dive, not to mention the pleasant trick of rearing and falling back on the rider.

They ride with only a halter, no reins or bridle being used. And they must ride with style—ride "slick"—that is, straight up, with a close seat, and "no daylight showing." And really to impress the judges the rider must "rake" the shoulders and rump of his horse with his blunted spurs, and "fan" the animal at every jump, swinging his hat with a full arm sweep. And, above all, he must not "pull leather" or touch the saddle with either hand.

And then the roping. That means to ride after a wild Texas long-horn steer, get a lasso around his horns, throw him, and "hogtie" him by fastening his four feet together while the cow-pony at the other end of the rope holds the steer helpless on the ground. And it must all be done under two minutes.

But, from the standpoint of individual muscular prowess and sheer human grit, "bulldogging" is the showiest event of

all. The steer is driven out of a chute, and he emerges much as a limited mail train comes out of a tunnel. They give him about thirty feet start, and then the man starts after him on a horse running like a scared jack-rabbit. The horse draws alongside and the man leans over, hooks an arm around the steer's horn, and slides from the saddle. The horse goes on, so does the steer for a few jumps, the man dragging through the dust and acting as a brake. Finally the two come to rest. Then the man reaches for the steer's nose and, clasping his hands around it with the horn between his arms, leans backward and tries to throw the animal. Sometimes the steer shakes him loose, sometimes it whirls and tosses him, but we have seen a man bring down an animal in seventeen seconds from the time he started after him. They call it bulldogging, but it's the greatest wrestling in the world.

And let this be clear: there is no cruelty to animals. The broken bones—and necks too—are the lot of the two-legged contestants. Not an animal this year was injured. It is the men and the women who take the big risks and get the real hurts.

"Let 'er buck!"

"Ride 'em, cowboy!"

Those cries of the Round-Up echo still in our ears, and the memory of all that goes with them is a magnet that inevitably will draw us again westward to this courageous competition—an epic of sportsmanship so essentially American.

FREEDOM OF SPEECH AND FREEDOM TO WORK

BY FREDERICK M. DAVENPORT

MEMBER OF THE SENATE OF THE STATE OF NEW YORK
PROFESSOR IN LAW AND POLITICAL SCIENCE AT HAMILTON COLLEGE

This is the fourth of a series of letters from the Middle West written by Senator Davenport in an interpretation of economic and political movements in that section of the United States. Kansas thinks she has a remedy for strikes

in essential industries. Senator Davenport comments on the good and bad effects of the political experiment, so far as they appear to the people of the Middle West up to the present time.—THE EDITORS.

"HENRY and me," Governor Allen of Kansas and William Allen White, the famous editor and publicist of the same State, have given dramatic publicity to the Industrial Court experiment in the famous sunflower commonwealth. Henry is at the moment haling Bill before the high courts of the State to determine whether Bill's theory of free speech under the law is or is not sound. We all have a right to speak of these fine personalities in this undeferential manner, because that is the way they do it in Kansas, and Henry and Bill do it themselves. Their recent legal controversy has undoubtedly ruffled their nervous systems, but it doesn't appear to have shattered their friendship.

As I understand it, it all came about over the railway strike. Bill is an instinctive and militant idealist and lives in Emporia. Emporia is a railway shop

town on the Santa Fé. The shopmen there are neither aliens nor secessionists nor men who love violence or anything of the sort. They are just plain Americans whose children are in the high school and who sit on the school board and are generally a part of the backbone of a very democratic community. Bill is universally respected in the highest degree in his home community, as he is by everybody in America who knows him and his influence for the right. When the strike started, he got in touch with the shopmen in the town and was a sort of guide, philosopher, and friend. He was anxious for them to pull through without violence of any kind. He expressed fifty per cent of sympathy for them. He said it was a good cause because living conditions had not reached the point where wages should have come down, but it was a bad strike because it was likely to inflict a heavy loss upon

the farmers of Kansas and the West. But he was willing to go with them fifty-fifty, and he wanted them to be men of peace.

In an important railway shop town the shopmen are apt to be a very dominating part of the population. In time of strike the merchants carry them on credit, and it is to the advantage of the merchants in the long run to display a kindly bias toward the men who have temporarily left their jobs. One of the methods adopted at Emporia of exhibiting kindly feeling was the posting of placards in the windows of the merchants expressing a hundred per cent sympathy with the strikers. Bill came down to the "Gazette" office one morning and he passed the placards on every block. When he got to his desk, he said to one of the boys, "Go out and get me one of those posters." Bill marked out the one hundred per cent and put forty-nine per cent just below it and hung the

poster in the window. He announced that he would raise his sympathy one per cent a day as long as the men kept the peace.

And here is where Henry comes in. The Governor for a year or two has been conducting a difficult laboratory experiment in compulsory arbitration of disputes in the essential industries generally in the State. The new Industrial Court Law forbids picketing altogether in case of a strike on an essential industry. A railway is an essential industry, and the recent strike was putting the new law to a new test in the State of Kansas. In many of the shop towns, what the Governor believed to be subtle forms of picketing were resorted to. Merchants, at the behest of strike committees and strike sympathizers, were refusing to sell the necessities of life to the strike-breakers. One hardware dealer told a detachment of the State police that he thought it inadvisable to sell them metal watering-troughs for their horses. The Industrial Court said this was a form of intimidatory picketing and forbade it. Then in various shop towns the placard in the window of the merchant was resorted to. "We are one hundred per cent against the strike-breakers," and the Court forbade this as intimidatory picketing. Then came the friendly placard such as appeared in Emporia, expressing one hundred per cent sympathy for the strikers. This also the Governor and the Court put under the ban, as the last step in a conspiracy, as they viewed it, to make the drastic picketing provisions of the new law of none effect.

And thus arose the clash between freedom of speech and the freedom to work, between Henry and Bill. Henry said to Bill: "You must take that placard out of your window. You are joining in a conspiracy, and your luster as a citizen only adds to the menace of it." Bill said: "All right. You bring action against me in the courts, and we will see if you can drive free speech so far into a corner in the State of Kansas; and in the meantime I will take the placard out of the window and ask every other merchant in the State to do likewise."

You see, it may be quite possible that legally and practically Henry is right, and at the same time that instinctively Bill is right. The question of how far we should go in a country like ours, even in essential industries, in suppressing freedom of speech and all picketing is a delicate one, and nobody contends that a thoroughly wise statute has as yet been framed in Kansas or anywhere else in the country. A measurably perfect statute we shall no doubt grow into, as they have in England, and perhaps we shall get a better one than in England. In the meantime these instinctive flashes of good red-hot American indignation against what may have the look of oppression or suppression are not by any manner of means altogether unhealthy. There is room for it on the planet as well as for Henry.

It was the same resurgence of the American sense of right which arose in many parts of the country at the late Daugherty injunction. It was not that men objected to the use of the injunction in some phases of labor dispute, although many felt that the criminal phase could better be dealt with by other process; but it was because of the drastic and seemingly unnecessary lengths to which the phraseology of the injunction seemed to reach. It seemed to a great number to be a touch of Russia and Prussia which boded no good for industrial America. It will not do for men who wish wisely to defend both property and public right to go to such lengths in the suppression of a rational freedom that they may furnish both example and incentive to a more radical dominant class some day to go and do likewise against property and the general welfare. Such practice is not good public training for the growing mass of workers of any land. As Bill White puts it, "I've got all the freedom of speech I want. But I would like to see this country grow into so clear a sense of what is right and just that my children and my children's children will have all the freedom of speech they want."

It yet remains to be seen whether Davies Warfield, the enlightened President of the Seaboard Airline, with his human strategy and his able spirit of fairness and conciliation, has not done more to break the railway strike than the Daugherty injunction. And it is the Warfield method which has in it promise of a permanent settlement. Far be it from me to decry the use of force to the limit by Government when the general welfare is gravely threatened, but force which is not rooted in wisdom and justice is only the opposite pole of anarchy. And I think we need to remember that as long as the essential industries remain at least semi-private, and have in them still the element of purely private management and profit, and sometimes very serious evils of such management, it is especially incumbent upon Government to recognize those evils and clear them away, because compulsory arbitration or injunction which leaves a bad *status quo* in the essential industry is not a permanent remedy at all. Permanent stabilization of essential industries should, save in exceedingly exceptional cases, precede the discussion of a permanent programme for the compulsory settlement of strikes and follow hard upon compulsory settlement in the exceptional cases. This stabilization will be opposed by narrow-minded operators and managers, on the one hand, and by narrow-minded labor leaders, on the other, but there is no peace until it is done.

To return finally to Kansas and the Industrial Court. I think Governor Allen is entitled to great credit for making the experiment. As a matter of fact, contrary to much prevalent opinion, the Court has done some admirable things. My information is that if the law were put to referendum in Kansas, probably

two-thirds to three-fourths of the State would vote to retain it. The Court has put some men in jail, but it has been reasonably fair. And its decisions on the side of labor have been numerous and noteworthy. It has not been a capitalistic court. The impression that it has seems to have grown partly out of misrepresentation and partly out of the somewhat belligerent attitude of the Governor toward the labor leaders in his addresses before Chambers of Commerce and other such bodies. The Governor is a born fighter, one of the best in the country, and the labor leaders have hit his idea hard. And he has struck back in like manner. But this has not been the temper of the Court. As a matter of fact, the fiercest opposition to the Court seems now to come from the group of employers in Kansas known as the Associated Industries, who by propaganda and lawsuit are doing everything possible to break its morale and reputation and get rid of it.

A great deal can be learned for the whole country by experimenting with the idea in Kansas. I am not at all sure that compulsory arbitration of disputes even in essential industries will be widely successful until pretty close to the industrial millennium. The experience of Australia with compulsory arbitration in businesses affected with a public interest is not very hopeful. The penalty falls down. Just as you cannot indict a whole people, so the State will always have great difficulty in putting, it may be, several hundred thousand workers into jail because in a crisis they failed to obey the law. And in Australia the daily struggle before the courts of the two classes in interest seems to have strengthened class consciousness instead of softening it. The old natural cleavage of Conservative and Liberal in party politics seems to have vanished and in its place a dominating majority working group has established Labor Party rule. Compulsory arbitration has brought little that is reassuring in Australia.

Kansas as a State is peculiarly constituted for the experiment. It is very predominantly agricultural, and a State administration can have the farmers, who are not in love with the mine and factory laborers, anyway, right at its back. Politically in Kansas it is not an extraordinarily difficult problem. But it is a constantly worrisome problem at best and does require patience and firmness and sound sense in its outworking. During the railway strike things in Kansas have been pretty tense at times and the effect of the decisions of the Court and of the pressure of authority for law and order has often been in doubt. I suppose that is one reason why Henry felt that Bill's sudden incursion into the fray was a bit gratuitous and harassing.

I think it is a mistake for the Governor to urge the plan so vigorously upon other States, as if it were of universal application and a completed

product. I can think of nothing more fantastic, for example, than attempting to put it into operation in the State of New York. Politically it would be incomprehensible, chiefly because public sentiment would, I think, regard it as an unfair thing to do. Take, for example, the transportation situation in New York City, with its record of enormous watering of stock, of mismanagement, of

disorganization, of lack of unity. The attempt to impose compulsory arbitration and establish forcibly wages and living conditions and hours on the basis of such a *status quo* would be unthinkable. The first great job would be to do what the Governor Miller administration has done in New York, namely, to appoint a transit commission to clean up the evils of the transportation monopoly

and lay the foundation upon which a policy and programme of at least conciliation and co-operation may be built up. The same thing is true, it seems to me, in many other instances of essential industries of the country.

Kansas is conducting a valuable experiment, but the time is not ripe to accept it at full value or to imitate it widely.

ROOSEVELT

BY HERMANN HAGEDORN

THE breakers pound the rocks and the combers pound the sand.
Thunder echoing thunder, the white horns charge the land.
And the wind, the gaunt night-herder, wheels on his pony white
And drives his panicky cattle on through the fog and the night.

But high on the bleak, black headland the beacon flares to the sky,
And the flames like banners clap and like bugles in battle cry.
And the sparks roar to the stars, with a roaring louder than fame;
And the hearts that they strike as they fall tremble and burst into flame.

THE NEURASTHENIA-BREEDING SMILE

BY MARIA MORAVSKY

IN some of the Prussian sanitariums the consumptive patients are forbidden to cough. This measure is based on the right principle—coughing irritates the lungs and makes the disease worse. But the efforts to stifle coughing often exhaust the patient much more than would the most violent cough.

This sample of Prussian discipline comes to my mind when I am thinking about American optimism. It is at times harder to stop crying than to stop coughing. But your optimism demands that you smile even when you feel like an ocean of tears. Everybody smiles here, more frequently than in any other country I have visited, with, maybe, the exception of Japan. Yours is such a serene, cheerful smile! And yet, more and more often I see in your papers popular articles on "NEURASTHENIA, THE GREAT AMERICAN DISEASE."

I studied both your smile and your neurasthenia, till I connected them. It seems to me that the first breeds the other.

Psychologists state that it is dangerous to suppress anger, sadness, spite. It sinks down into the depths of your soul and lies there like a heavy stone. It helps forming inhibitions. At times it drives one insane.

Now, with all the blessing of American civilization, you still have lots of things to be angry about. You want to swear and cry at times like every normal human being, but—you are taught extreme reserve. Often you would frown at your capricious customer, swear at your exacting boss, stamp your feet at your lazy employee. But no, you must

smile. For it was repeated to you over and over again:

"Say it with a smile."

"The voice with a smile wins."

"Hurray for optimism!"

This optimism of yours is the most remarkable sentiment I ever saw upsetting human lives. You even grow insane—optimistically. On Ward's Island, in one of the largest insane asylums in the States, there is a section called Millionaires' Ward. It is the biggest one. Its inmates consist mostly of people who failed in life. But so strong was their optimistic belief that sooner or later they would succeed that, after innumerable cheerful efforts to conquer fate and circumstances, they went insane—cheerfully.

To be sure, most of them are happy. The administration kindly furnishes offices for the most persistent of the "millionaires," in which they make their enormous business transactions, each one bringing more millions. Among these "successful business men" there is a gentleman who thinks himself a benefactor of humanity; he hands every visitor a check "according to his needs." This man looked to me a symbol of your optimism: It continues to hand to you one worthless check after another. And on each is written: One Million Hopes!

I have watched a striking example of ravages wrought by hopes on a friend of mine. She is a capable fiction writer, contributing to many a leading magazine. She often reproached me for my eternal "kicking," for being "horribly pessimistic," and believing in the strength of circumstances. She herself was optimism embodied.

Two years elapsed, as they say in novels. The business in this country went from bad to worse, contrary to the assurances of the daily cheerful editorials in your leading newspapers. Naturally, it was reflected on fiction magazines. The editors began to buy less and pay less. Things grew so dark that many brilliant free-lance writers had to go into the advertisement game, instead of following "free creation."

During these times of literary famine I cursed our fate in my most somber Slavic fashion, and waited for the worst to come, while my poor optimism-poisoned friend was daily expecting the sky to clear and success to blossom out. And here we are, with about the same material results, which are far from what we think we are worthy. I remain in my usual mental state of well-balanced pessimism, contemplating life with more or less critical look, while she is having hysterics every day and professes a desire to "end it all in the East River."

I believe it was her exaggerated optimism which brought her to despair. When you expect too much from life, the slump your hopes take is usually more or less violent. It often brings severe nervous breakdown.

Personally, however, I consider my friend's neurasthenia the lesser of two evils. If she continued to force herself into smiling much longer, she might have ended in the Millionaires' Ward.

Beware of the Millionaires' Ward. I am afraid that every one of your forced smiles is a brick added to building up insanity.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER VIII—EARLY RELATIONS WITH THEODORE ROOSEVELT

(C) Underwood

THEODORE ROOSEVELT

"He had the quality of vitalizing things—a situation or condition coming within his executive ken became so charged with life and imagination that men wanted to put their hands and minds to it"

BEFORE I became a member of President Roosevelt's official family I was in what he termed his "kitchen cabinet." My experiences in both cabinets are among the treasured recollections of my life.

We were the unofficial advisers who met round the luncheon and dinner table and afterwards in the White House study, where the President spoke without reserve of his executive problems and read for our criticism and counsel his rough drafts of Congressional messages, speeches, and notes to foreign governments.

Holding no portfolios of state, these "kitchen cabinet ministers" yet gave of their best; were always prepared to toil to any extent to be of assistance to the President. He had the quality of vitalizing things—a situation or condition coming within his executive ken became so charged with life and imagination that men wanted to put their hands and minds to it. They served Roosevelt as energetically and loyally as if the grave

responsibilities of state were upon their own shoulders.

International relations and labor arbitration were the public activities which interested me most. The President had appointed me a member of the permanent Court of Arbitration at The Hague to succeed the late Benjamin Harrison, and shortly thereafter in his charming manner had designated me as a member of his "kitchen cabinet." Thus there had commenced for me a memorable series of conferences.

We met usually at the White House table. The President commenced the discussions by speaking frankly of whatever problems of state were occupying his attention. In explaining he had a manner of addressing his remarks directly to the man from whom he wanted an opinion. This gave his guest the opportunity to devote the highest possible concentration to the subject while the President was speaking. An opinion, if it won his approval, was greeted with a "Good! Fine!" and

he incorporated it immediately into his plans.

I never knew any one whose mind was more open to suggestions. I never knew any one who acted upon suggestions with more promptitude. Yet it was not simply impulsiveness. It was not a matter of taking the first advice that was offered, but of being quick to see and act upon the right advice.

ROOSEVELT, THE IMPULSIVE

There is much misapprehension regarding Roosevelt's so-called impulsiveness. This was evident to those who had an intimate view of the man at work. He was quick. He was a prodigious worker. He was so constituted and so self-trained that he had to do things immediately, get them out of the way. What people called his impulsiveness might have been more aptly termed his preparedness.

I had hundreds of opportunities to observe his methods. When he accepted an invitation to deliver an address or write an article, he would prepare it immediately, even if the occasion were two, three, or six months off. He revised considerably, showed his work freely to friends and associates for criticisms, but completed it at the earliest opportunity. He never waited. This method served to perfect his thought and expression on a given subject. His promptness left him free for other things.

The President never seemed to be hurried, though he always worked with a wonderful driving force. He seemed never to waste any time. It was play or work, and both with his whole heart.

During his last few months in the White House, while making preparations for his African trip, for instance, he accepted the invitation to deliver his now famous address at Oxford University. The address was not to be delivered until after his return from Africa, yet immediately after accepting he began writing it, and revised and completed it before he left America. He practiced the same method with his Nobel Peace Prize address, which he delivered at Christiania. It left him free for play. He did not want to think about Oxford addresses while in Africa.

His public addresses were almost invariably the result of preparation. It was seldom that he spoke extemporaneously. The fire and animation which he imparted in the delivery of his speeches certainly conveyed no impression that they might have been carefully prepared and considered at a desk in a study. His papers were so small and inconspicuous that they did not interfere with his natural gestures. The

The Roosevelt home at Oyster Bay, where Mr. Straus and other distinguished statesmen were frequently in conference with the President

effect was almost as if he spoke extemporaneously. The notes, printed on sheets about 3 x 6 inches, and held in one hand, were completely lost sight of by the audience in those moments when Colonel Roosevelt became emphatic. In those moments he also interspersed extemporaneous remarks which brought out his arguments more vividly and forcefully.

"A DIABOLICAL PLAN"

During 1902 a number of public matters brought me into frequent consultation with President Roosevelt.

When Germany, backed perfunctorily by Great Britain, sought to hold Venezuela to certain agreements by blockading her ports, which constituted an infringement of the Monroe Doctrine, Roosevelt took prompt steps to prevent it. There was a disposition on the part of Germany to ask Roosevelt to arbitrate between her and Venezuela.

Secretary of State Hay seems to have favored this plan, but I advised against it. It was better not to become involved in the muddle, especially because the machinery of the Hague Tribunal provided for just such arbitration. By the terms of that treaty the signatory Powers were morally committed to arbitration. Roosevelt took my view and succeeded in having the subject referred to the Hague Tribunal.

During the same year I was able, by reason of my previous experience in Turkey, to advise the President regarding a critical situation in the Philippines. An American soldier had been killed and several others wounded by

Mohammedans in the southern Philippines. It was announced in the press that a punitive expedition of twelve hundred men was to be sent to the scene of the killing.

Negotiations which I had had with the Sultan during the McKinley Administration were instrumental in pacifying the Philippine Mohammedans after the Americans assumed control of the islands. Fearing that the good relations promoted through the agency of the Sultan might be disturbed and disrupted by a punitive expedition, I advised the President against resort to force of arms. Instead, I recommended that it would be wiser to send a commission to treat with the Moros.

Upon receipt of my letter, the President wrote me to come to Washington for a conference. I arrived after a Cabinet meeting. With the President in his study were Mr. Taft (newly appointed Governor-General of the Philippines), Adjutant-General Corbin, and Acting Secretary of War Sanger.

Again, and in fuller detail, I gave reasons why military force in this matter was inadvisable. After I stated my case, the President showed me a copy of a telegram despatched to General Chaffee the day before, instructing him to send a peaceful diplomatic mission to the Moros. As a result of the conference, Adjutant-General Corbin was directed to advise General Chaffee to use the offices of friendly *datos* to obtain the desired redress.

The investigation revealed that the disorders had been due, not to the Moros' aggressiveness, but to panic.

They had seen the soldiers laying a telegraph line, which in their ignorance they had regarded as some diabolical plan to destroy them. The matter was adjusted. The slayers were surrendered and punished.

ROOSEVELT'S DIPLOMATIC STRATEGY IN REBUKING RUSSIA

The Kishineff massacres in April, 1903, shocked the civilized world. In all countries and among all faiths meetings were called to express indignation and protest. On May 28, 1903, there was a notable mass-meeting at Carnegie Hall in New York, presided over by Paul D. Cravath and addressed by ex-President Grover Cleveland, Mayor Seth Low, President Jacob G. Schurman of Cornell University, and Edward M. Shepard. The meeting was called by several hundred leading New Yorkers of the Christian faith. Resolutions were adopted that the United States "should exercise such influence with the Government of Russia as the ancient and unbroken friendship between the two nations may justify to stay the spirit of persecution, to redress the injuries inflicted upon the Jews of Kishineff, and to prevent the recurrence of outbreaks such as have amazed the civilized world."

Roosevelt's diplomatic tactics in bringing the Kishineff subject to the attention of the Czar of Russia won the approval of all students of international affairs.

Members of the American Jewish fraternal order B'nai B'rith, under the leadership of their president, Leo N. Levi, presented Secretary Hay with a statement regarding the massacres, to-

gether with a petition which they asked to be forwarded to the Government of the Czar. Secretary Hay made a speech expressing sympathy and accompanied the committee to the White House, where they presented the President with facts regarding the oppression of their coreligionists in Russia. The President made a lengthy reply, expressing the deepest interest and sympathy.

On July 8 I received a telegram from Oyster Bay, the President's summer residence, inviting me there for luncheon the following day, together with Simon Wolf, of Washington, and Mr. Levi, of the B'nai B'rith. Present also at Sagamore Hill were Dr. Albert Shaw, editor of the "Review of Reviews," and his friend Morris Sheldon Amos, an Englishman. After a discussion of the question during lunch, the President suggested that a note should be sent by Secretary Hay to John W. Riddle, American Chargé d'Affaires at St. Petersburg, and that this note should embody the entire petition Mr. Levi and the committee had drafted. Dr. Shaw added that the embodying of the petition to the Czar, together with full publicity for the note, would have all the effects of a presentation even if he should refuse to receive it.

After lunch we went to the President's study. He said, "Now let us finish this thing up." Secretary Hay, he said, had been to see him the day before and had left a memorandum. Roosevelt took his pen and began drafting the note, incorporating part of Hay's memorandum.

The note, sent as a cable, was as follows:

Riddle

St. Petersburg.

You are instructed to ask an audience of the Minister of Foreign Affairs and to make to him the following communication:

Excellency:—The Secretary of State instructs me to inform you that the President has received from a number of prominent citizens of the United States of all religious affiliations and occupying the highest positions in both public and private life a respectful petition addressed to His Majesty the Emperor relating to the condition of the Jews in Russia and running as follows:

Here the petition is set out. The note concludes as follows:

I am instructed to ask whether the petition will be received by your Excellency to be submitted to the gracious consideration of His Majesty. In that case the petition will be at once forwarded to St. Petersburg.

The President wished the cable to be sent at once and was in a hurry to have it go from Washington. He stated as one of his reasons that the late Russian Ambassador, Cassini, who had been dismissed, had gone back to Russia, and he wanted the petition to reach the Russian Government before Cassini arrived at St. Petersburg. Mr. Wolf, who lived in Washington, was asked to take the

Brown Bros

John Hay, former Secretary of State, whom Mr. Straus provided with the "covenant running with the land" idea which Hay used effectively in the Panama dispute

draft of the cable to Secretary Hay, but, as he could not return there that night, the President asked me if I could take it.

At ten o'clock the next morning I placed the President's draft in Secretary Hay's hands. It was cabled immediately. Hay thought that, instead of embodying the petition in the cable, it would be better to ask first if it would be accepted, but this was precisely what the President did not want. He anticipated that the Russian Government would not accept it, and yet by making the cable public it would for all intents and purposes be a presentation, not only to the Czar, but to the entire world.

The President was right. The Minister of Foreign Affairs informed our Chargé that he could not receive it.

On July 17 Secretary Hay wrote me that, as anticipated, the Russian Government declined to receive or consider the petition. However, the purpose in view had been accomplished. The officials of the Russian Government had read the petition, and through press despatches it was known throughout the civilized world. According to subsequent reports, it had a most salutary effect in bringing about the trial and punishment of some of the leaders of the massacres, and exerted a restraining influence in other places in the Empire where similar outrages were threatened. In addition, it was another notable instance of humanitarian diplomacy.

ALASKAN BOUNDARY SHOVED DOWN

Reverting to the Sagamore Hill luncheon of the previous day, the President, Albert Shaw, and I conferred about

the Alaskan boundary question after the Russian note had been drafted. The President brought forward the maps showing the disputed boundary and explained that the six commissioners, three from the United States and three from Great Britain, would investigate. He said that they were not arbiters, as he refused to sign an arbitral agreement. If they did not agree, he would take the matter into his own hands.

The whole trouble, he said, arose from the fact that the Canadians had shoved down the boundary-line after the discovery of gold.

"It is just as if a man pitches a tent on my grounds and claims the grounds," Roosevelt explained. "I want him to get off. He says he will not get off, but will arbitrate the matter."

He then turned to me and said: "Straus, you are a member of the Hague Tribunal; don't you think I am right?"

I replied: "As a member of the Hague Tribunal, I must hear what the other side has to say, and therefore must reserve judgment," and we all laughed.

"IN THE TEETH OF OPPOSITION"

After the historic anthracite coal strike of 1902, in which President Roosevelt opposed the autocratic, unreasonable attitude of the mine operators, he became the pivot in another controversy, in which he was obliged to reprimand organized labor for an unreasonable attitude. This was the Miller case. Miller was dismissed from the Government Printing Office because he did not belong to a union. Roosevelt reinstated him. This brought a protest from the American Federation of Labor.

Samuel Gompers and several members of the Federation's Executive Council appeared at the White House on September 29, 1903, and protested that Miller was a non-union man and incompetent.

This was a case that appealed to Roosevelt's innate sense of justice, and he liked to decide such questions regardless of political consequences. Miller's fitness, he told the delegation, was a matter of administrative routine that must be decided by his superiors. In no way could it be regarded as an issue for such a protest. The real issue was whether the Government should practice discrimination between union and non-union men, and on this issue the President's decision was final. The reinstatement stood. No further action would be taken.

I wrote him that his decision and statement were consonant in principle with the position he had taken in the anthracite coal strike. In answer he wrote me the following letter, which in a few lines presents clearly his determined stand to do justice to capital as well as to labor:

October 1, 1903.

White House

Washington.

My dear Mr. Straus:

I thank you heartily for your letter. When you can get on here I

should like to tell you for your own information some of my experiences in connection with this Miller case. I feel exactly as you do—that my action was a complement to my action, for instance, in the anthracite coal strike, and that I could no more hesitate in the teeth of opposition from the labor unions in one case than I could when the opposition came from the big monied men in the other case.

Sincerely yours,

THEODORE ROOSEVELT.

THE PANAMA DISPUTE

Panama has been a subject for discussion and controversy for almost a score of years. The Panama Canal will ever be linked with Roosevelt's name. Roosevelt's handling of the Canal problem forms one of the most notable chapters in American history.

As with other problems, the President consulted members of his "kitchen cabinet." My first participation in the Panama conferences was on November 6, 1903. In the President's luncheon party, besides Mrs. Roosevelt, were Cornelius N. Bliss, former Secretary of the Interior; John Clark Davis, of the Philadelphia "Ledger;" Mr. Kohlsaat, of Chicago; Lawrence F. Abbott, of The Outlook; and the President's brother-in-law, Lieutenant-Commander Cowles.

Panama had separated from Colombia. The indications were that we were about to recognize Panama. The President in his informal way, as was his custom at luncheons, opened discussion of the situation, referring to our treaty of 1846 with New Granada, afterwards the United States of Colombia and later the Republic of Colombia. In this treaty we had guaranteed to protect the transit route. One of the questions involved was whether the treaty still held us to that obligation notwithstanding these several changes of sovereignty.

The President, in his usual manner of indicating that he expected a reply from a certain individual, addressed his remarks to me. When he finished, I suggested that the change of sovereignty, according to my reading of the treaty, did not affect either our obligations or our rights. Our guaranties I regarded in the nature of "a covenant running with the land."

"That is fine! Just the idea!" exclaimed the President. "I want you to explain that idea to Hay after lunch."

At first he was for going to the office and telephoning the Secretary. Instead, he took a correspondence card and scribbled a note to Mr. Hay, asking him to discuss my suggestion with me and work into the treaty the "covenant with the land" interpretation.

Secretary Hay, with whom I conferred at his home that evening, seized upon the idea at once, and said he would make use of it in a general statement he was preparing for the press.

The next day it was announced that the President, following a meeting of the Cabinet, had decided to recognize the

(C) Underwood.

Andrew Carnegie, with whom Mr. Straus was closely associated for many years in the promotion of world peace

de facto Government of Panama. I will not go into much further detail here, for the Panama Canal story is well known. Roosevelt in his Autobiography devotes considerable space to a presen-

IN THE CABINET

CHRISTMAS at the White House and social life at the "Venetian Palace" are described by Mr. Straus in next week's chapter of the Autobiography. He recounts some of his memorable experiences in Roosevelt's Cabinet, as a colleague of Messrs. Root, Garfield, Cortelyou, Taft, Bonaparte, etc. Mr. Straus, who was Secretary of the Department of Commerce and Labor, describes the scope and work of his Department, his trip to Hawaii, his efforts in connection with the Japanese question, his idea of harmonizing human and business interests.

tation of reasons for his official actions.

Secretary Hay's statement said in part:

It must not be lost sight of that this treaty is not dependent for its efficacy on the personnel of the signers or the name of the territory it affects. It is a covenant, as lawyers say, that runs with the land. The name of New Granada has passed away; its territory has been divided. But as long as the isthmus endures, the great geographical fact keeps alive the solemn compact which binds the holders of the territory to grant us freedom of transit, and binds us in return to safeguard for the isthmus and the world the exercise of that inestimable privilege.

On November 12 I received the following letter from the President:

My dear Mr. Straus:

Your "Covenant running with the land" idea worked admirably. I congratulate you on it.

With warm regards,

Sincerely yours,

THEODORE ROOSEVELT.

Viewing the situation with his expert professional eye, John Bassett Moore, the distinguished authority on international law, derived considerable entertainment from the "covenant running" feature, and wrote me a few days later as follows:

So you had a finger in the pie! I find a great deal of amusement in reflecting on the end reached from the premise of my memorandum; and almost as much on the conclusion reached from your suggestion. Perhaps, however, it is only a question of words; that is to say, it is, indifferently, a question of the "covenant running with the land," or a question of the "covenant running 'away' with the land."

A NOTE FOR MY GRANDCHILDREN

The President took occasion later to refer publicly to my interest in international activities. In January, 1904, a number of peace societies had a conference in Washington and passed resolutions urging enactment of treaties with Great Britain and other Powers providing for formal arbitration of disputes in the event of diplomatic negotiations failing. A delegation from the conference called upon President Roosevelt. The resolutions were presented by former Congressman Henry St. George Tucker, of Virginia, after which there were a few brief remarks by Andrew Carnegie and myself. The President, in reply, expressed himself very fully upon the subject. He greeted it cordially and spoke of the good work of the peace societies; then, referring to me, he said:

I have had from Mr. Straus aid that I cannot overestimate, for which I cannot too much express my gratitude, in so much of the diplomatic work that has arisen in this Administration—aid by suggestion, aid by actual work in helping me to carry out the suggestions; and Mr. Straus

was one of the two or three men who first set my mind, after I came in as President, in the direction of doing everything that could be done for the Hague Tribunal, as that seemed to be the best way to turn for arbitration.

When the President finished his remarks, we gathered around him. Mr.

Carnegie meanwhile had congratulated me upon receiving such compliments, and now in speaking to the President referred again to his remarks about me. Mr. Carnegie said to the President that he suggested I should get a copy of the President's remarks to preserve for my children and grandchildren.

Roosevelt immediately turned to his secretary, William Loeb, Jr., and instructed him to send a copy of the Presidential references to me. That is how I happen to have this extract, and I trust I may be pardoned for the egotism which induces me to incorporate it here.

MAKING GERMAN SCHOOLS EDUCATIONAL

BY JOSEPH DANZIGER

VERBOTEN!

UNAUTHORIZED PERSONS ARE FORBIDDEN FROM ENTERING THESE PREMISES UNDER PENALTY OF FINE AND IMPRISONMENT

EVERY pre-revolutionary public school in Germany had a notice to this effect over its gate. Parents were the particular "unauthorized persons" whose presence was banned in the school building.

"Mothers must bear sons, for the Kaiser needs soldiers," was a dictum which even otherwise intelligent men and women repeated as though it were a truism. Parents were expected merely to provide the physical presence of children. Pastor, schoolmaster, policeman, and drill sergeant—all government employees—saw to it that youth was trained in the way it had to go. The schools were primarily intended to perpetuate established conditions and curb all progressive tendencies that might contaminate the budding intelligence.

There was a "Kultus" Ministry, in charge of education and public worship, whose chief function it was to throttle dangerous ideas in schools and churches. Heterodox opinions were jealously quarantined in the schools and universities.

It was taught and believed by high and low that republics were a failure everywhere. The Swiss were longing for annexation to the Empire, and were only being thwarted by the wicked French. A common question often raised by otherwise well-informed men was whether we of America could find no way to satisfy our national longing for a monarch. I was frequently asked whether I had completed my military service. My interlocutor would regard me with incredulous amazement when I told him that we had no compulsory military duties. How could such a thing be in a civilized state?

Such being the mental equipment of the better educated, the intellectual abasement among the masses was abysmal. In the rural schools the children of peasants and agricultural laborers were taught just enough to enable them to sign the muster rolls and decipher the numerous *verboden* notices that gladdened their lives.

In the vital statistics of Germany they were not classed as illiterates. Actually, they were less educated than

the most illiterate hillbilly of Alabama. They demonstrated the truth of Josh Billings's philosophy: "It is better not to know so much than to know a great many things that ain't so."

The urban schools for the working classes were a shade better. A machinist or grocer's clerk had to know more arithmetic than a farm-hand. But in all degrees of society pupils were taught just enough to equip them for their stations in life. Labor unions maintained continuation schools for their members, and in this way a bright, ambitious young mechanic was given a chance to study history, mathematics, science, and languages. The possibility of satisfying their thirst for knowledge created many self-educated men among the unionists. Their political and economic training was entirely along Marxian lines. It is no wonder, therefore, that the German workman is class-conscious. The system made it inevitable.

Young lads of nine or ten destined to be officers were thrust into uniforms and sent to cadet schools. Their education was very one-sided, and not so high as the standards set at West Point. Its fundamental purpose was to alienate the cadet's sympathy for other classes. The latter condition was likewise true of the *Gymnasien* where the civilian boys of the middle class and aristocracy received their education. These schools prepared for the universities, and graduation from one of them was a prerequisite to serving for one year as a volunteer, instead of two or three years as a conscript. This was a very valuable privilege. The volunteer for one year did not have to live in barracks, but had private quarters like an officer and was exempt from all policing duties. Every family that could possibly afford it sent their sons to the *Gymnasien*. Pathetic stories are told of widowed mothers and their hard-working daughters making the utmost sacrifices in order to keep a son and brother in a school that would guarantee him exemption from the inhuman brutalities of the garrison. Many a German boy who failed at graduation has preferred suicide to facing the degrading manhandlings of the notorious Prussian drill sergeant.

The *Gymnasien* included nine years of Latin, six of Greek, and four of French and English. Mathematics was taught

entirely by memorizing set rules. If a boy had no natural talent for mathematics, his case was hopeless so far as any practical application of the science was concerned. When properly taught, mathematics is sure to develop the logical faculties, and reason was anathema to the old system. I have watched boys above the average intelligence try to solve a problem in the third year of algebra. It was in simple equations, such as we have in about the first three months of high school or the last year of grammar school. When I tried to analyze the equation for them, they fell into utter confusion. Their analytical faculties had been deliberately atrophied.

A review of the old German school system is necessary to a correct estimate of the herculean task that faced the revolutionary reformers. One of the first acts of the revolution, even before the Constitutional Assembly was called, was to declare that all schools were free to the elective preference of all children, regardless of class. The Constitution abolished class privilege, but it could not abolish class spirit. The old system had implanted it too deep in the consciousness of the nation for the present generation to rid itself. The chief votary of class distinction was the university.

Professional men and Government officials were recruited exclusively from university graduates. *Gymnasien* teachers were likewise elected from these circles. They had all been held strictly aloof from any contact with workingmen from earliest childhood. As children, they even followed the mediæval custom of affecting a distinguishing dress to denote their classes. This alone served to segregate them in public, and under no circumstances were boys and girls of different social strata ever known to mix.

A democracy segregated into classes cannot stand, to paraphrase Lincoln. Germany is not a democracy—except on paper. It became apparent to all real democrats that the first essential to democratization was its application to the schools. *Gymnasien* and university faculties, saturated as they were with monarchistic and feudal sentiment, opposed any movement toward abolishing class distinction.

The mother of a six-year-old boy had

to start him to school at Eastertide. According to law, he was obliged to attend the common preparatory school for the first three years, after which he could elect between the *Gymnasien* or grammar schools. The only way to avoid sending him to the common school was by showing that his health would not stand it. However, this particular boy is a superb specimen, better grown than most German boys of ten or eleven. The mother bribed a doctor to certify that the child is neurotic and needed special attention. The school physician accepted the document, although when the boy was stripped before him he could not help remarking about his perfect physique. I asked the mother why she had gone to all of that trouble instead of sending the boy to a common school.

"What! And have him associate with children of the proletariat!" she cried. "Never! I would rather keep him out of school altogether!"

She sent the child to a private school that is so overcrowded that the pupils are taught in three-hour shifts, beginning at seven in the morning and ending at 5 P.M. The last shift is compelled to work under artificial light all winter long. Parents submit to such discomforts rather than have their children "associate with the proletariat."

The school reformers put up a hard fight against such notions, and are slowly making headway. The first step was to abolish the autocratic rule of the principal. This functionary was always a man who was "right." A democrat need not apply. Under the new rules, a principal may not suspend a teacher without preferring charges. The teacher, therefore, has a chance to exercise his individuality, especially in teaching history. The perversion of history in the old German schools was, and often is now, notorious. German history particularly was confined chiefly to a list of battles and the names of the Prussian kings who fought in them or were responsible for them. Classical history was perverted from its true significance whenever the facts turned upon some fight against tyranny in ancient Rome or Greece. Although Prussia is a Protestant country, John Huss was pilloried as a scoundrelly traitor, not because of his relations to the Church, but for the real, but camouflaged, reason that he fought for the self-determination of his native Bohemia.

The severest fight for democratization turned on the question of religion in the public schools. Objections were not raised against teaching Christian doctrine. The fight was directed against the peculiar organization of the Prussian State Church, which was antagonistic to any democratic movement. Although nominally Christian, the Church was under the authority of the Kultus Minister, and actually constituted a powerful machine for sustaining the existing order. A pastor who was properly subservient

PARADE OF BERLIN SCHOOL-CHILDREN, ARRANGED BY THE PUPILS' COUNCIL.

The banners carried by the children, whose ages are from ten to fourteen, demand the abolition of whipping and the secularization of the public schools. Good order was maintained during the parade by the children's self-appointed marshals.

to the All-Highest—not the Supreme Being in this case—was sure of some desirable appointment and a magnificent title, such as Supreme Councillor of the Consistory.

If some honest-thinking Christian layman, incensed at the perversion of his faith to political ends, ventured to withdraw from the Church, he became a social outcast. His sons could never be appointed to any Government position nor even become reserve officers in the army. So far as possible his business or professional career was ruined by machinations from above. Therefore only workingmen who had nothing to lose separated from the State Church, although since the revolution the desertions from its membership amount to a veritable exodus.

The Centrist or Catholic party is the chief opponent to dispensing with religious training. They favor free election or, at most, separate schools, and their influence is strong enough to put over one or the other plan.

The common-school teachers welcome the chance of teaching religion as Christ preached it and without any Hohenzollern trimmings.

I attended a meeting where this subject was up for discussion. It was testified that the masses are in favor of some kind of religious instruction. It is believed that religion is needed now more than ever as an ethical rule to supplant the policeman's broadsword, which the revolution took from him. Most of the teachers held that the instruction should be confined to Bible readings or lectures. Old Testament stories are told the smaller children, or Luther's wonderfully devout and simple translation of the Bible is read from to them. The older pupils are given instructions from the Gospels with special

reference to the Saviour's teachings of brotherly love, peace, and kindness. All testified that this sort of instruction was much more suited to the imagination and conscience of children than the lessons they had been getting from the pastors of the State Church.

During a discussion as to the best answer to give to children of eight or ten in reply to questions regarding the origin of life one teacher said that he had found a satisfactory symbol in the egg. He told about a particularly inquiring mind who wanted to know how life got into the egg. "I explained that this was the great mystery of life which no sage had ever been able to understand. The child went away satisfied, and at the same time awed at having been brought face to face with the veil before the Holy of Holies."

It seemed to me as I sat among these public school teachers that they were well suited to teach the principles of Christ's doctrines. They are devoted to service and not salary. The latter is inconceivably small. Most of them were obviously poor. Their clothes were made over from field-gray uniforms. They displayed none of the pride and supercilious contempt for the common herd that characterizes university professors and pastors of the established Church. They spoke humbly and with devout earnestness of the great task that lay before them of creating a new and better nation from amid the coming generation. There were only a few who favored the exclusion of the Bible and the substitution of abstract moral lessons.

These gray-clad men are being assisted by some choice spirits from the *Gymnasien* and universities. The number of these is increasing, as pressure of public opinion enables democratic men

and women to get appointments on the faculties of the higher institutions. Among the leading liberals are Professor Paulsen, of Hamburg, and Professor Julius Scheve, of Berlin. They have created a new type of school, the *Gemeinschafts-Schule*—freely translated "fellowship school." It is representative of the new educational idea in revolutionary Germany. Twenty-nine schools of this type have been started in Hamburg, which is a free city with autonomous government. In Prussia the schools are all under the jurisdiction of the Ministry of Education, Arts, and Sciences. The old bureaucracy of the Kultus Ministry still holds forth there, and so far as possible impediments are placed in the path of progress.

In fact, this is the great weakness of the German revolution. A clean sweep should have been made of the old bureaucracy. This was not done. When I visited Wilhelmstrasse, I found the same old *Gehcimrats* occupying the same old desks they occupied during and before the war. A revolution does not merely consist in overturning the throne and putting the monarch to work sawing wood. It must go down to the roots of the old system, and this is only very slowly going on in Germany.

The fellowship school is based on the fundamental idea that individuality should be developed and encouraged to express itself through democratic control. Schools of this type are governed by three branches: teachers', parents' and pupils' councils. As much autonomy is given the pupils as they can safely be trusted with. Under the old system, the principal and, through him, the teacher were irresponsible autocrats. In the new order the pupils' council is responsible for discipline in the schools, and is given a voice in the nomination of teachers for the several branches and classes. While the choice of the pupils cannot always be accepted, it serves as an excellent test for the fitness of a teacher for a given subject.

Pupils' councils have not always worked smoothly. There were strikes in some of the schools in Chemnitz (Saxony) and in an industrial suburb of Berlin. It usually developed that such disturbances were founded in protest against some reactionary teacher and reflected the child's natural sense of democracy and fair play. However, this was not invariably the case.

In Lichterfelde, a suburb of Berlin, the Government conducted a free boarding-school for former military cadets. Under the Peace Treaty this school had to be closed as a military academy. The votaries of the officers' caste protested at the proposal to place the former cadets in regular schools. Their objection that the previous training had unfitted the boys for regular schools was admitted by the authorities, and so the school was reorganized on a civilian basis.

A matron supplanted the former commandant. During some public function in the assembly hall this lady declined to stand up when the boys chose to sing "Deutschland über Alles" or "The Kaiser is a Beautiful Man," or some other patriotic ditty of the old régime. Whereupon the boys resolved to make it too hot for the matron. They visited her with every kind of covert and open insult that boys of their sort are ingenious in devising. In the course of another celebration, where her presence was required, she was greeted with catcalls and the demand that she retire. As the lady refused to do so, some of the boys attacked her with physical violence. They were merely living up to the old Prussian standard of what constituted an officer and "gentleman." About sixty of the leaders, boys of eighteen or older, were expelled. At this the militarists denounced the pusillanimity of a democratic government in breaking its promise to support these young men to maturity. The mere incident of beating a woman was no very great concern to men of their caliber. They created so great a disturbance by their vociferous agitation that it became impossible to restore discipline in the school and it was closed. This is the only case where the pupils' council idea was a total failure.

The parents' councils are chiefly advisory. It is a radically new idea to consider the opinions of parents. Most of them are at sea with regard to pedagogic measures. The teachers must encourage an active interest in the administration and urge frequent visits to the school-rooms. In this way they hope to enlighten the elders with some of the practical questions that arise and secure their aid in accomplishing further reforms.

The teachers' council legislates for the school. The principal has been deposed as an autocrat and become an executive. This removes an important obstacle to the introduction of democratic measures. The school curriculum is as elective as possible. The rudiments of education are of course insisted upon, but beyond that the pupils' natural leanings are considered. Advancement does not depend upon qualification in every branch. It is well known that a pupil may be excellent at mathematics but backward in languages. In the fellowship school such a deficiency would not militate against promotion if the pupil were otherwise fit. It is believed best to develop the mind along its natural bent. There is no use wasting a pupil's time with drawing if he has no eye for line and form, or retarding his progress in natural sciences and mathematics simply because he has no mind for grammatical construction or languages.

Manual training, nature studies, and physical culture are important departments. The labor unions do not oppose manual training the way the New York unions objected to the introduction of

the Gary system. Labor leaders hold that, besides being an excellent training in itself, it inspires many middle-class children with respect for manual dexterity. Some men regard their inability to manipulate tools as a thing to be proud of. I have heard them boast that they never so much as drove a tack in the wall.

Manual training in the fellowship school is not restricted to mere routine knowledge of tools or the making of useless things. The child takes pride in creating something that is a useful part of the world he lives in. It makes him feel that he is actually participating in life instead of merely preparing for the future. Pupils are given many things to make that can be used in the class-room.

One day I chanced upon a full-page rotogravure from a New York Sunday supplement. I took it around to a school I was visiting.

"Who is this?" asked the teacher.

"Abraham Lincoln," shrilled an enthusiastic chorus.

"Who was he?"

"He freed the slaves," "He was a man of the common people," were the two facts about Lincoln that seemed to have made the strongest impression.

"What shall we do with his picture?"

"Let's frame it in oak. He was a sturdy oak," suggested a twelve-year-old.

"And carve oak leaves on it," added a more artistic lad.

"And Uncle Sam too!" piped a childish treble whose owner must have had relatives in America. "He sent my mother a big box of food last winter."

"I hardly believe Uncle Sam would like that," the teacher interposed. "But we will have the frame." Then he suggested that the boys nominate committees for securing the wood, making the designs, working up the materials, etc. The incident was concluded with a short talk on Lincoln, his obscure origin, his early struggles and final triumph. When the teacher told of his tragic death, many a childish eye glistened in sympathy. The point of it all is that the fathers of many of these boys would not have been able to distinguish a chisel from a screw-driver, and their knowledge of Lincoln would have been equally vague.

The democratizing idea back of the fellowship school is slowly permeating society. Neither parents nor pupils are concerned with the social standing of their neighbors. All are comrades in a common cause—the building of a temple of social justice in which future generations may enter. This is the vitalizing principle at the root of its growth. It cannot fail.

Speaking of future plans and prospects, Professor Scheve said: "We have no rigid theory, but a democratic foundation on which we are building. We face a situation whose spirit alone we understand and approve, but whose methods we cannot entirely foresee."

NEVER TOO BUSY FOR A FRIENDLY ACT

PICTURE FROM AN OUTLOOK READER

**THEODORE ROOSEVELT ON A SPEAKING TOUR IN ARIZONA AUTOGRAPHING
A BOOK FOR ONE OF HIS LEGION OF ADMIRERS**

THE BOOK TABLE

A COLYUMIST HISTORIAN BY WILLIS FLETCHER JOHNSON

A CYNIC, regarding the recent agitation for more accurate writing of American history, and remembering the futility of similar movements for other ends, might well have applied to it the Horatian epigram, "*Parturit montes; nascetur ridiculus mus.*" But not even the most pessimistic of cynics would have been likely to anticipate the birth of a mouse quite so ridiculous, and withal so pernicious, as that which has actually appeared. It would, for very shame, be more agreeable to pass by in silence so gross a reproach upon American scholarship and letters were it not that fatuous friends have insisted upon touting into conspicuousness a work concerning which its author should have no desire save that for charitable oblivion, and that men of supposed discretion and authority have placed upon it the cachet of their high approval and have commended it to public confidence. The widely blazoned declaration of the publisher that it is "the one indispensable work" and "the most remarkable book of the century" may be passed by as a characteristic "blurb." But when the Children's Librarians Section of the American Library Association awards its first medal of honor to Dr. Hendrik Willem Van Loon for his "Story of Mankind" as "the most distinguished contribution to American literature for children" written during the year, more serious attention is prescribed.

WITH the actual work named I shall not here concern myself at length, because it purports to be a universal history, and my present theme is the history of the United States. "The Story of Mankind" has indeed been adequately disposed of by the discriminating editor of the New York "World" in reprinting it as a serial in connection with the comic supplement of his paper. It will serve the present purpose for me to cite two sample passages from that limited portion of it which relates to American history. One is his reference to the Pilgrims of Plymouth as "a sect of Puritans who were very intolerant." The other is his criticism of Emerson's "exaggeration" in writing of the first shot at Lexington as the "shot heard around the world," because "the Chinese, the Japanese, and the Russians, not to speak of the Australians and Hawaiians, never heard of it at all." In this amazing utterance he displays the lack of imagination and of humor which seems to be one of his salient characteristics. We may almost wonder that he did not say that it would have been impossible for them to hear it, because the wireless transmission of sounds, which has since reached from America to Hawaii, had

not then been invented. His lack of accuracy is shown in his verbal misquoting of Emerson's famous line, and in his attributing to Lexington the poem written specifically for Concord. He also in the same place refers to the Australians and Hawaiians as having "just been rediscovered by Captain Cook, whom they killed for his trouble." Cook did not discover Hawaii until 1778, three years after Lexington and Concord, and was not killed until 1779.

MORE pertinent for consideration in connection with the demand for revision of American history is the later work which Dr. Van Loon has brought out upon the strength of his medal-adorned "Story of Mankind," and which has been widely disseminated by a newspaper syndicate as a daily serial. This is entitled "America for Little Historians;" it purports to be a children's history of the United States, and there is much talk of securing its adoption as a reading text-book in schools in place of the American histories now in use.

It will, I assume, be generally agreed, as a basis of critical consideration, that a work of history should be accurate in statements of fact, just in its judgments, and serious—not solemn—in spirit. It need not be overlaid with dates and names of places, the bane of many histories; but those which it gives should be given correctly. It need not be a critical commentary upon all the incidents and processes which it records; indeed, there are those who advisedly hold that a history should be a statement of facts alone, and not of opinions; but certainly so far as it does express opinions these should at least be rational, judicious, and honest. It need not be dry and dull; indeed, it should, if possible, be vivacious, entertaining, and even touched with humor; but it should have a spirit so serious, or perhaps I should say so earnest, as to cause the reader to regard it as a veracious narrative and not as a burlesque composition. Moreover, there is the greatest need of these three qualities in a history designed for children, because they have not the knowledge and discretion necessary to protect themselves against errors which their elders would promptly detect and reject.

Now it must be said that in every one of these three essential qualities "America for Little Historians" is greatly lacking. It is replete with glaring errors as to concrete facts of record; it is profusely marked with implications and judgments which are perniciously misleading; and it frequently manifests a flippancy calculated to inspire contempt rather than respect for the history of the country, and better suited to a news-

paper "colyum" or comic supplement than to an informative book of reading, reference, and study.

THE inaccuracies of statement—to describe them with courteous euphemism—are of two major kinds. There are those which are misstatements in themselves and nothing more, their errors not affecting the general purport and teaching of the narrative, and which are presumably due to mere ignorance or carelessness; and there are those which, whatever their source or cause, almost inevitably lead to a misunderstanding or misconstruction of historical forces or tendencies far beyond their own literal limits. To cite a few samples of the former class:

"The West Indian Company . . . bought the island of Manhattan from the Indian tribe . . . and built a fortress called Fort Orange. This was in the year 1621 . . . It made New Amsterdam (the town which had grown up around Fort Orange) a hustling little city." Here are three glaring errors. Fort Orange was not built on Manhattan Island, but at what is now the city of Albany, a hundred and fifty miles away; and it was built, not in 1621, but in 1623 and 1624; and Manhattan Island was purchased and New Amsterdam was founded, not in 1621, but in 1626.

After an account of Howe's capture of Fort Washington and his advance upon Fort Lee, we are told:

"When he arrived, Washington and his men had vanished. . . . Washington had gone to Hackensack. . . . Washington sent an urgent message to Gen. Lee to join him with the 7,000 men whom he had at Northcastle. . . . At last, on the 3rd of December, sixteen days after he had been ordered to start, Lee set off with his army for Morristown, a short distance west of Hackensack. But he had hardly arrived there when a party of British dragoons captured him. . . . New York and the surrounding districts were now all in the hands of the British, and Washington began his famous retreat through New Jersey."

Here are four gross errors. Washington had not gone to Hackensack, but to West Point; Morristown was not "a short distance" west of Hackensack, but more than twenty-five miles, a long distance for those days of primitive roads and transportation facilities; Lee was not captured at Morristown, but at Baskinridge (now Basking Ridge), some miles distant; and Washington did not wait to begin his retreat until after the capture of Lee, but began it long before, having got as far as Princeton before Lee started from Northcastle, and being in Pennsylvania before Lee was captured.

"A representative from Pennsylvania, David Wilmot, had asked for an amendment to the Constitution prohibiting slavery in the lands acquired from Mexico," is the account given of the

¹ The Story of Mankind. By H. W. Van Loon. Holt & Liveright, New York. \$2.

famous Wilmot Proviso, which was a proposed amendment, not to the Constitution, but to a mere appropriation bill. At the beginning of Lincoln's Administration and the outbreak of the Civil War, "Edwin M. Stanton was Secretary of War." He did not become Secretary of War until the early part of 1862, more than ten months later. Fifty years ago, we are told, there was little transatlantic travel. But the largest number of immigrants that ever entered this country, in proportion to its population, came from Europe in the year 1850; and the Cunard steamship line was started in 1840, the Collins and Inman lines in 1850, the North German Lloyd in 1858, and the French line in 1861.

Again: "A Civil Service Commission was appointed (1883), and ever after that day if one wanted to be postmaster of his home town he had to take a civil service examination and await his turn." The fact is that postmasters were not put under the Civil Service regulations until December 1, 1908, more than a quarter of a century later than "that day."

It would be tedious and needless to cite further the multitudinous misstatements abounding in this work which are of a kind plausibly attributable to carelessness or ignorance. No less numerous and much more pernicious are those which are calculated to create false impressions concerning men, measures, and the whole trend of affairs, and from which mischievously false inferences are likely to be drawn. Thus:

"The events of the fifty years following upon the expulsion of the French seemed to put those pessimists in the right. . . . A grand and glorious game of mutual misunderstanding was inaugurated which lasted fifty years and ended only when the colonies had been recognized as an independent commonwealth." Now, instead of fifty years, as twice stated, it was exactly twenty years from the expulsion of the French in 1763 to the recognition of American independence in 1783. Obviously, much more is involved than a mere matter of dates. It made a very great difference whether the Revolutionary War was fought by the same colonists who had fought in the French and Indian War, as was, in fact, the case, or by a subsequent generation, as this misleading work pretends. That such a misstatement should have been made, even if quite inadvertently, is a matter far more serious than a mere numerical error in dates.

Referring to the "Intolerable Acts," which were among the provocative causes of the Revolution, we are told that in England "only one man spoke out against these laws. That was Edmund Burke, who afterward gained fame as the enemy of the French Revolution." It would be difficult to contrive a much more deplorable example of *suggestio falsi*. If it did so happen that in some one debate on some one act or group of acts Burke was the only

speaker against the oppression of America, it is a monstrous perversion of history to ignore the thunderings of William Pitt, Earl of Chatham; of Lord Camden, Lord Chancellor of England; of Colonel Isaac Barre; of Lord Cornwallis, who by one of the strangest ironies of fate was selected to be the last British commander in America; of John Wilkes, Lord Mayor of London; and other English champions of American liberty. Equally reprehensible is the sneer at Burke, who reached the height of his splendid fame long before the French Revolution. It is easy to see how readily this passage might create the impression that in all England there was only one friend of America, and he an obscure and discredited person. Of a piece with this is the statement that "there was little enthusiasm in England for this war," which, while true enough in its way, practically involves *suppressio veri*—of the facts that British regiments threatened to mutiny if ordered to America, that Lord Chatham's eldest son, Admiral Keppel, General Amherst, General and Field Marshal Conway, Lord Frederick Cavendish, the Earl of Effingham, and other distinguished officers resigned their commissions rather than serve against America, and that the Corporation of the City of London formally commended Lord Effingham for so doing.

Scarcely less mischievous are the elaborate implications that one of the chief causes of the Revolution was the British Government's interference with the wholesale smuggling in which the colonists were engaged; the characterization of the colonial patriots as "perfectly good people with the souls of flunkies;" and the explicit declaration that in the first Continental Congress, in the fall of 1774, "the Radical wing, under the leadership of Virginia and Massachusetts (represented by Washington and Adams), advocated a war for independence." In respect to the last-cited statement, it is quite certain that, whatever Adams and a few others may have thought, nobody "advocated" independence, but from beginning to end of that session of Congress not a word to that effect was spoken. On the contrary, the Congress adopted a formal resolution denouncing as a calumny the imputation that it was seeking independence, and declaring that, if America were permitted to enjoy the same freedom that prevailed in England, it would ever esteem union with Great Britain to be its greatest glory and its greatest happiness. It would be superfluous to enlarge upon the injustice done by these misstatements to that illustrious company of patriots.

Coming down to a much later date, within the personal memory of Dr. Van Loon himself, I find it stated that upon the outbreak of the war with Spain "a treaty of annexation was hastily signed and since 1898 the Hawaiian Islands have been a Territory of the

United States." The treaty of annexation was, in fact, signed long before the war began, and not at all "hurriedly;" but it was never ratified, and the most significant and interesting feature of that annexation was that—like that of Texas—it was effected, not by treaty, but by a mere joint resolution of Congress.

THERE are numerous other equally flagrant errors, which it is difficult to classify, whether as due to carelessness, ignorance, or misconception of the essential and indispensable spirit of true history.

I have spoken of a certain flippancy which frequently mars this work in a manner calculated to engender contempt for the whole subject of American history, instead of that earnest regard which is supremely desirable. Thus in an early chapter the author writes of "fishing smacks angling for whitebait off the coast of New Jersey (if whitebait grows there, which I do not know, being merely a historian and not a botanist)." It may be that some tolerant adult readers would be wearily amused by this feeble attempt at humor; but it is far more likely that the "little Americans" for whom the work is designed, and who are given to understand that it is an instruction book and not a joke book, would be unfortunately puzzled at the intimation that an expert on fishes is a botanist, and misled into supposing that people "angle" for whitebait and that those fishes are found in American coastal waters; while it is pretty certain that discriminating readers would feel a certain contempt for at least this particular history of America. Another lamentable attempt to be humorous occurs in connection with the account of the battle at White Plains: "So when the rainstorm came up, a battle was usually called off, and the contestants were doubtless given rain checks." That might pass muster in a comic "colyum." In a serious history it is as offensively incongruous as a jester's cap and bells on the bench of a court of justice.

Such are some of the errors of fact, of judgment, of taste, which are profusely scattered through a work which has in daily installments been widely issued to the children of America, for their instruction concerning the history of their own country, and for the determination of their mental attitude toward its eminent men and controlling events, and in a measure also toward the outside world. With the intellectual equipment or the conscientious motives of the author of it I am not concerned. Let it be conceded that they are both as high and as faultless as he would wish them to be thought. The work itself is its own most efficient and most convincing touchstone.

In its concluding chapter Dr. Van Loon recognizes the fact that it contains many errors; in attempted extenuation of which he says: "It is not easy to be a historian and a journalist at the same

moment, with a copy boy at one's elbow." No; and it is not incumbent upon any one to essay the task. His fault was in undertaking a work for which by both information and disposition he appears to have been conspicuously unfitted; in writing what purports to be serious history with the irresponsibility and in the fashion of a humorous newspaper "colyum;" in attempting to paint a panorama of a nation's life without background, without atmosphere, with-

out sense of proportion, without knowledge of color, and without accuracy of draughtsmanship.

But greater even than his fault has been the fault of those professed critics and authorities who, obviously on the most superficial inspection of his work, have exploited it into a prominence and a circulation which it could never have attained through its intrinsic merits, and have without qualification commended it and him to the confidence of

the history-reading public and history-studying public. It will be of more than passing interest to observe whether, in another year, the Children's Librarians Section of the American Library Association will, on account of "America for Little Historians," again bestow upon its author a medal of honor for "the most distinguished contribution to American literature for children." Though, to be sure, there are more ways than one in which literature may be "distinguished."

THE NEW BOOKS

FICTION
MARKET BUNDLE (A). By A. Nell Lyons. Dodd, Mead & Co., New York. \$2.

Mr. Lyons is recognized as one of the best of English short-story tellers. The East Side of London is his stamping-ground. Cockney fun and genuine feeling make these tales dramatic life-studies.

ON TIPTOE. By Stewart E. White. The George H. Doran Company, New York. \$1.75.

As a story this is amusing but slight. What really interests the author is the raising in a concrete form the question as to what would happen to capital and business if an inventor should discover a way to get endless electric power directly from the air. Here the hero does just that thing, but his machine is smashed with all his data and figures, and he is left vainly trying to rediscover the invention.

RED KNIGHT (THE). By Francis Brett Young. E. P. Dutton & Co., New York. \$2.

Beginning in an unpromising way, Mr. Young's new story soon becomes tense and exciting. "The Red Knight" of the story is a young man who has an inherent propensity to take the weaker side in all quarrels and in all political questions. He reaches the island of Trinacria at the peril of his life, and as a stoker in a steamer. He hopes to aid his old Socialist friend, Massa, to establish liberty through revolution. But he finds Massa already a dictator and despot, and the condition of the land is much like that of Russia after the Bolshevik success. He is forced to become a spy upon the imperialist leaders, runs into a romance, finds himself in an impossible situation between his love, his obligations to Massa, and his belief in liberty, and commits suicide. The story is on original lines, and is not only exciting in its plot and incident, but singular in its study of a character torn between conflicting impulses.

POETRY
POEMS AND PORTRAITS. By Don Marquis. Doubleday, Page & Co., Garden City. \$1.50.

So few of the popular newspaper columnists can become serious in a graceful manner that it is a pleasure to draw attention to Don Marquis's "Poems and Portraits." His poetic genius is not of the highest order, but it is authentic, and there is no small degree of felicity in the manner in which he handles such modest themes as "A Wood Fire," "A Gentleman of Fifty Soliloquizes," "The Towers of Manhattan" (not so modest,

after all), and "The Tom Cat." Concluding the book are thirty-four "Savage Portraits," which are quite the best part of the contents. Let one of them represent Mr. Marquis's book:

DIRK

Dirk gleams and twists sarcastic lips about

An epigram he's never uttered yet—
A mordant word! Edg'd phrase none might forget,

A spoken knife, did he but flash it out!

"We wait for it! Applaud, almost, or shout,

Or wince beforehand, at that epithet:—

It never comes. But fifty men I've met

Say Dirk is keen. 'Twere heresy to doubt!

Dirk glinted thus on me ten years or more

Ere yet he uttered, mantling with conceit,

His jets . . . poor ass! . . . I glowered upon the floor,

Ashamed for him; I stared down at my feet:

Then laughed, for Dirk's soul twinkled in his eyes,

Telling his world, "I am a wit and wise!"

HISTORY AND POLITICAL ECONOMY
CAUSES OF THE WAR OF INDEPENDENCE (THE). By C. H. Van Tyne. Houghton Mifflin Company, Boston. \$5.

A scholarly study by the head of the History Department of the University of Michigan. It examines closely the reasons and evidence that have brought about modifications of historical views as to the relative importance of the causes of our Revolution. It would be interesting to compare this book closely with Trevelyan's "History of the American Revolution."

TRAVEL AND DESCRIPTION
LAST DAYS IN NEW GUINEA. By Captain C. A. W. Monckton. Dodd, Mead & Co., New York. \$5.

Captain Monckton's earlier book, "Taming New Guinea," was one of the liveliest accounts of adventure ever written. He here continues the story. He knew the country when its people were savages; his experiences were thrilling and make an exciting and entertaining narrative.

SENTINELS ALONG OUR COAST. By Francis A. Collins. Illustrated. The Century Company, New York. \$2.

The recent development of the radio in safeguarding navigation makes this book, with its timely descriptions of the

new methods in use in lighthouses and lightships and on ocean carriers, of real interest. The style is entertaining and the pages are enlivened with many photographs.

-no winter
this winter

California
Santa Fe
ALL THE WAY

mail
this

You and your family should spend this winter out-of-doors in California

There are excellent schools for the children and golf links galore for you.

Then—for the week-end—motoring over perfect highways, along the base of green-clad mountains and by the sea.

There are luxurious resort hotels and cozy inns, or, rent a bungalow and enjoy your own rose garden.

The Santa Fe operates four daily trains to California. One of them—the California Limited—is exclusively for first-class travel and Fred Harvey serves all the meals "all the way."

Spick-and-span new steel equipment on the California Limited.

There are Pullmans via Grand Canyon National Park, to Los Angeles, on both the California Limited and the Missionary. We will arrange your Pullman reservations so you can stay at the Canyon any number of days and be assured of your space when resuming journey.

Why not visit Southern Arizona, going or returning? It is delightful at Castle Hot Springs, Ingleside and Chandler.

Hawaii afterwards

The men who operate the New York Central

THE character of the public service rendered by a railroad depends upon the character of the men who operate it.

New York Central Lines give dependable service over 13,000 miles of road from the Atlantic coast to the Mississippi Valley because they have built up through nearly a century of operation and growth a recognized *esprit de corps*.

New York Central men are carefully chosen, rigorously trained in the lesser tasks for the responsibilities of the greater ones, advanced on merit, and encouraged in a spirit of loyalty to the institution of which they are a part, and of devotion to the public they serve.

New York Central men are proud of the fact that 200 of their number have been in the service for more than half a century, 700 from 45 to 50 years, 1300 from 40 to 45 years, 3600 from 35 to 40 years, 6000 from 30 to 35 years—and many thousands for more than 20 years.

It is such a seasoned personnel, for example, that has for twenty years made possible the famous *Twentieth Century Limited* service between New York and Chicago.

NEW YORK CENTRAL LINES

BOSTON & ALBANY - MICHIGAN CENTRAL - BIG FOUR - PITTSBURGH & LAKE ERIE
KANAWHA & MICHIGAN - TOLEDO & OHIO CENTRAL - AND THE

FINANCIAL DEPARTMENT

The Financial Department is prepared to furnish information regarding standard investment securities, but cannot undertake to *advise* the purchase of any specific security. It will give to inquirers facts of record or information resulting from expert investigation, and a nominal charge of one dollar per inquiry will be made for this special service. All letters of inquiry should be addressed to THE OUTLOOK FINANCIAL DEPARTMENT, 381 Fourth Avenue, New York.

STOCKS ON MARGIN

WHEN a man buys stock on margin, he puts up only a part of the purchase price and borrows the balance from the broker. If he should buy a hundred shares of Steel at the present time, the cost would be approximately \$10,600. Possibly he would put up only \$2,000 himself, and in that case the broker would advance the balance of \$8,600 and the purchaser naturally would be charged interest on this amount, the rate being determined by the current price of money. Credited against this, however, is the amount of divi-

dends paid on the stock. Two thousand dollars margin on a hundred shares of stock is twenty points. Every time the stock declines one point in price the purchaser's margin is reduced by \$100, and if it declines twenty points his margin of \$2,000 is wiped out. Before this happens, however—probably when the stock has declined about fifteen points—the broker will call for more margin. The customer then has the option of putting up additional margin or running the risk of being sold out, for if he fails to put up more money and the stock declines twenty

points the broker will sell the shares and the customer's stake is gone.

It is of course true that a rise of one point in the stock means \$100 profit for the purchaser, and another \$100 profit for every succeeding rise of a point. And by buying on margin one's capital goes further. Two thousand dollars will buy less than ten shares of Steel if the stock is purchased outright, whereas it will purchase one hundred shares on a twenty-point margin. On a ten-point margin it will buy two hundred shares. Thus it is seen that by buying on margin the profits are very much larger if the stock goes up than they are when an outright purchase is made and the shares are paid for in full. It is well to bear in mind, however, that stock prices have been known to go down as well as up, and when they decline the loss to the man who buys on margin is as large in proportion as his possible gains. And suppose it is not possible for him to furnish additional margin. His money is gone forever.

A man invests \$2,000 in one hundred shares of stock selling at par. He buys on a twenty-point margin. If the stock goes up twenty points—and he sells—his profit is \$2,000. If it declines twenty points, he may have to sell, and his loss is \$2,000. Another man invests \$2,000 in the same stock, but buys it outright. He gets twenty shares, and a twenty-point rise means a profit to him of \$400. On the other hand, a twenty-point drop means only a "paper" loss to him; he is not obliged to sell, but can hold on in the expectation that the stock will go up again. In other words, this is the essential difference between a speculator and an investor: stock fluctuations mean everything to the speculator and little to the investor. And the moral is, don't speculate unless you can afford to lose.

There is, however, a safe method of buying stocks on margin, an excellent method, and one which would be to the advantage of the small investor to study. So far as we know, it was devised by five young business men, and is known as the club plan. It has proved itself a great incentive to saving for numbers of people and works out beautifully in almost every instance.

The way it operated in the case of the five young men was as follows: They agreed to buy five shares of stock, one share for each member of the group. The stock they selected was listed on the New York Stock Exchange, thus assuring them of a ready market on practically a moment's notice if at any time or for any reason they desired to sell. The stock they chose cost \$120 a share, so that the total cost of the five shares was \$600, and they agreed to pay for it in regular monthly installments of \$20 each. Their broker bought the stock, and each member of the group put up \$20.50, or a total of \$102.50 in cash. Previous arrangements had been made with the local bank, and one of them signed a note for \$500; the note was indorsed by each of the other four, and

When your shipment goes overseas

VALUABLE goods are sent overseas to a distant foreign customer you may never meet; to one whose business integrity is known to you only by good report. Hazardous? Not as commerce is organized to-day for safety, accuracy and speed.

Before the sale, you may have enlisted the help of this bank in locating desirable markets. After opening negotiations abroad, you request a report upon the reliability of prospective customers. Cables click; our direct representative investigates and submits credit data.

Boston offers your shipment the advantages of a shorter sea trip, favorable rates, and excellent port facilities for handling. Three important railroads have terminals at the docks. Upon arrival of goods here, The National Shawmut Bank supervises handling, insurance and forwarding.

In the numerous details of establishing new foreign contacts, transmitting documents, collecting and remitting promptly, there is ample opportunity to demonstrate that a bank widely experienced in export and import commerce is a decidedly helpful ally.

THE NATIONAL SHAWMUT BANK

RETURNING

The recuperative power of this nation is evidenced by its ability to return with unimpaired vigor from periods of depression to a condition of economic stability.

Like a seaworthy and well-manned ship, American business has sailed through the cross currents of bad business weather into fairer and more promising seas.

On the voyage of American business, through rough seas and smooth, The Continental and Commercial Banks have been a part of the crew and have borne a willing hand. This strong group of banks stands ready and prepared to contribute to the fair sailing of the Nation's business by extending constructive and comprehensive banking service.

bank, the face value of the note less one month's interest. The \$600 cash was then turned over to the brokers in payment for the stock, the stock certificate being left at the bank as security for the note.

When the end of the month came, each one of the five paid in \$20.40, or a total of \$102. The bank was paid \$100 plus \$2 interest on a new note for \$400. At the end of each succeeding four months another hundred dollars was paid to the bank and a new note for \$100 less given. When the loan was paid in full, the stock certificate was turned over to them by the bank, and was forwarded to the transfer office of the issuing company and five certificates for one share each obtained in exchange, each certificate registered in the name of one of the group of five.

The person who does not regard saving as worth while might object that this club plan is too much trouble. The answer is that nothing worth while can be too much trouble, and the whole transaction here described was designed, not for speculation, but to assist five young men to save some money, and it proved so well worth their while that they have continued to buy stocks in this way ever since. Their agreement provided further that in case any one of them wanted to sell out his interest before the stock was all paid for it would be offered at auction to the highest bidder among the remaining four.

In the case of the five shares of stock mentioned above the dividend rate was 8 per cent, and of course the group received the dividends while the stock was pledged with the bank. And the dividends in this instance exceeded the interest on the note by a slight margin, and also provided enough for the brokerage commissions.
